Mr. HEFLIN. Reserving the right to object, I want to ask if out of that time I can have 10 minutes. I want to discuss this question, as it is a very important one, and I want at least 10 minutes of time.

Mr. BURNETT. Mr. Speaker, the committee desires most of the time, and I can not agree to the gentleman's request, but I will agree that he shall have 5 minutes.

The SPEAKER. Is there objection?

Mr. ANTHONY. Reserving the right to object, I would like to ask if the gentleman from Alabama would have any objection to fixing the time for a vote. I think the House is entitled to know when it will vote.

The SPEAKER. It will vote at the conclusion of 5 hours and 20 minutes plus such little time as may be lost in the usual process of debate.

Mr. MOORE Mr. Speaker——

The SPEAKER. For what purpose does the gentleman from Pennsylvania rise?

Mr. MOORE. I am a member of the Committee on Immigration, and I rise to reserve my right to object in order that I may ask the gentleman from Alabama a question. The gentleman from Alabama has stated that an arrangement has been made by which 5 hours and 20 minutes are to be accorded to debate. He proposes that the time shall be divided between himself and the gentleman from Masssachusetts [Mr. GARDNER], who stands on all fours with the gentleman from Alabama [Mr. BURNETT], and that then a Democratic member of the committee shall divide the rest of the time. I would like to know whether the members of the committee on all sides of this question have been consulted with regard to the division of time?

Mr. GARDNER. I think the gentleman from Pennsylvania totally misunderstands the question. The gentleman from Alabama very fairly asked me what I would agree to on the Republican side, being on the same side. I said that one-quarter of the time should be controlled by the gentleman from Pennsylvania, Mr. MOORE, on the Republican side.

Mr. MOORE. Was "the gentleman from Pennsylvania, Mr. MOORE," consulted?

Mr. GARDNER. No; he was not; he was not here——

Mr. MOORE. Oh, "the gentleman from Pennsylvania" has been here regularly.

Mr. GARDNER. We did it this morning, and we thought it was exceedingly liberal, inasmuch as the preponderance of the House is not only Democratic, but also in favor of the bill. The gentleman from Pennsylvania [Mr. MOORE] gets exactly the same treatment that the chairman of the committee himself gets.

Mr. MOORE. Without consultation on the part of the gentleman who is presumed to represent the minority Republican side of the committee.

The SPEAKER. Is there objection?

Mr. MOORE. Mr. Speaker, reserving the right to object, do I understand that representing the minority of the Republicans on this committee I will get an hour and 20 minutes in this debate?

Mr. BURNETT. That was so stated by Judge SABATH, the ranking member of the minority of the committee, who is opposed to the bill.

Mr. MOORE. And who is not a Republican.

The SPEAKER. The request of the gentleman from Alabama is that there be 5 hours and 20 minutes of debate.

Mr. MOORE. My question is, Do I get an hour and 20 minutes of that time to divide among Republicans who are opposed to the bill?

Mr. BURNETT. Yes.

Mr. SABATH. That was my statement.

Mr. MOORE. I have no objection.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none, and it is so ordered. The gentleman from Alabama is recognized for one-quarter of that time.

Mr. BURNETT. Mr. Speaker, I yield 18 minutes to the gentleman from Indiana [Mr. ADAIR].

Mr. ADAIR. Mr. Speaker, I rise for the purpose of advocating the passage of this bill, the veto of the President to the contrary notwithstanding.

I sincerely regret I am compelled to part company with the President on this important question. For almost two years I have followed him religiously, supporting by voice and vote each and every administration measure presented to this House. I recognize and appreciate his splendid ability, his unquestioned honesty, integrity, and sincerity, as well as his earnest desire to give to the country the best legislation possible.

In fact, Mr. Speaker, I believe Woodrow Wilson is the greatest President this country has had since the pen dropped from the hand of Thomas Jefferson and the sword from the hand of Abraham Lincoln. [Applause.] Through his leadership Congress has given to the country more constructive legislation in the interest of the American people than had been given them during the past 50 years. Generations to come will be under everlasting obligation to Woodrow Wilson for the great service he has rendered in preserving peace, in protecting the rights of the individual, in bringing the day of special privilege to an end, and in fixing the doctrine of equal rights in national policies as well as in the hearts of mankind. [Applause.] But, sir, no man ever lived or ever will live who was absolutely infallible. Thomas Jefferson made his mistakes; Abraham Lincoln made his; and Woodrow Wilson will make his. The President in his veto message has expressed his honest convictions. I honor and respect him for so doing, but I know the President well enough to believe he will honor and respect me for voting my honest convictions, even though I disagree with him. In fact, in my judgment, no Member of Congress who either has no convictions or who does not have the courage to sustain his convictions will ever command the respect of any President of the United States or the confidence of the American people. I believe the safety of our Republic and the perpetuity of our institutions rest upon the combined judgment of all our people, and that any tendency toward the surrender of this individual, God-given right to think and act for ourselves will undermine the foundation upon which our Government rests. [Applause.]

Mr. Speaker, having been a member of the Committee on Immigration for eight years, having given a great deal of thought and time to the study of this question, having voted for this bill twice in the House, and having voted to pass it over the veto of President Taft, if I were now to reverse myself and vote to sustain the veto of President Wilson I would be ashamed to face my constituency. What reason could I assign or what excuse could I offer for voting to sustain a Democratic President when I refused to sustain a Republican President upon the same question? I can not, Mr. Speaker, even for party advantage, put myself in such a ridiculous position before the country.

Now, let us consider briefly the objections offered by the President in his veto message. First, he says:

> The bill embodies a radical departure from the long-established policy for this country, and would close the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of agitation for what they conceived to be the natural and inalienable rights of man.

So far as this objection is concerned, outside of the literacy test, the bill under consideration only emphasizes what is already existing law. In fact, the President says in his message—

> that this bill is in many important respects admirable, well conceived, and desirable.

He also says:

> I believe its enactment into law would undoubtedly enhance the efficiency and improve the methods of handling the important branch of the public service to which it relates.

Mr. Speaker, I see but little force in the first objection offered by the President, as that objection relates to the present law as well as this bill. His second and main objection goes to the literacy test, and I am aware of the fact that much can be said against this particular kind of a test. I am also aware of the fact that many men of foreign birth who were uneducated came to this country in an early day and have made good citizens and have contributed their part toward the development of our country. I do not contend that education is a test of morality or character, but I do say there is far less excuse the world over for being unable to read than there was many years ago. I have no objections to immigration that will not lower our standard of living, and I recognize the fact that much of our progress and many of our achievements are due to the ability, the capacity, and progressiveness of many citizens of foreign birth. I am proud of their achievements in both business and professional life. Their loyalty to our country and devotion to our flag have attracted the attention and won the admiration of all our people. But that is not the question. What we must decide upon is the best method of restriction. We all agree that immigration is coming faster than it can be assimilated; that we already have a surplus of unskilled labor; that American workmen of both native and foreign birth are being driven out of employment by the influx of thousands of illiterates from southern Europe, who are willing to live and do live in box cars or under the crudest kind of shelter, at an expense of 10 or 15 cents per day, and who, as a matter of course, eventually lower the standard of American wages and the standard of American living. You can not tell me that the dumping of 250,000 illiterates from southern Europe annually on our shores will not lower the standard of American citizenship. If this be not true, then our boasted system of schools is a failure and we are annually wasting millions of dollars of the people's money in their maintenance.

The test proposed does not require them to read the English language. It only requires them to read in the language or dialect of the country from which they come.

Mr. Speaker, I believe this bill is not only in the interest of all American citizens, both of native and foreign birth, but I also believe it is in the interest of illiterate foreigners who expect at some time in the future to make this country their home. It will have a tendency to stimulate and develop a better system of schools the world over, and will result in causing thousands of foreigners who desire to become American citizens to prepare themselves for admission.

Again, the President in his veto message says:

> Has any political party ever avowed a policy of restriction? Does this bill rest upon the conscience and universal assent and desire of the American people?

Mr. Speaker, in my humble judgment no legislative matter has ever received so much attention and discussion at the hands of the American people as the question of restricting immigration. It has been a prominent issue before the people for 15 years. It has been discussed for years by 30,000 labor organizations scattered throughout the country, representing a membership of 2,500,000, and all of these organizations have passed resolutions favoring the passage of this bill. It has been discussed for years by thousands of farmers' organizations, representing a membership running into the millions, and all have passed resolutions favoring this legislation. The President asks if any political party ever made a declaration upon this subject. As far back as 1896 the Democratic national committee made a platform declaration as follows:

> We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market.

The Republican national committee platform of the same year contained a plank as follows:

> For the protection of the quality of our American citizenship and of the wages of our workingmen against the fatal competition of low-priced labor we demand that the immigration laws be thoroughly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write.

And we all remember that President McKinley was elected on that platform. Let us go still further, and see whether this is a new question.

In 1896–97 the House and Senate passed a bill containing the literacy test, which bill was vetoed by President Cleveland. The House passed the bill over the President's veto, but in the Senate it failed by a few votes.

In 1898 the Senate passed an immigration bill containing the literacy test, but the bill got no consideration in the House because of the Spanish-American War.

In 1902 the House passed an immigration bill containing the literacy test.

In 1906 the Senate again passed a bill containing the literacy test. The House substituted a bill creating the Federal Immigration Commission.

In 1913 the Senate and House both passed an immigration bill containing the literacy test recommended by the commission, which bill was vetoed by President Taft. The Senate passed the bill over the President's veto, but it failed in the House by a few votes.

In 1914–15 the House and Senate passed, by more than a two-thirds vote, the bill before us, which contains a literacy test.

Mr. Speaker, in view of the consideration given this question by both branches of Congress during the past 18 years, it can be truthfully said that the chosen representatives of the people knew the sentiment of the districts they represented when they passed by overwhelming majorities the numerous bills I have mentioned.

Again, the President says:

> I am not foolish enough to profess to know the wishes and ideals of America better than the body of her chosen representatives know them.

Yet, by this veto he overrides the judgment of the House and the Senate, both of which expressed their approval of this bill by overwhelming majorities.

Mr. Speaker, I have great respect for the judgment of the President, and recognize the fact that he is within his rights under the Constitution when he exercises the veto power; but, so far as I am concerned, I would rather accept the judgment of 454 Members of the House and 96 Members of the Senate than to accept the judgment of any one man. The Federal Immigration Commission, appointed by Congress, spent four years studying this question both at home and abroad, and here is what that commission says about labor conditions:

> The investigation of the commission shows an oversupply of unskilled labor in the basic industries to an extent which indicates an oversupply of unskilled labor in the industries of the country, as a whole, a condition which demands legislation restricting the further admission of such unskilled labor.

Mr. Speaker, eight out of nine members of the commission recommended the literacy test as the most feasible single method of accomplishing the desired restriction. While this test may be regarded by some as a selective measure, the commission recommended it as a measure of restriction, the purpose, as indicated, being to relieve the harmful pressure of immigration on an already overcrowded unskilled-labor market. That the judgment of the Congress coincided with that of the commission is shown by the fact that in 1912–13 the House favored the literacy test by a vote of 178 to 52, and the Senate by a vote of 57 to 8, and on the bill now before us the vote in the House was 252 to 126, and in the Senate 50 to 7.

This overwhelming vote in both the House and Senate reflects not only the judgment of the representatives of the people, but it also reflects the judgment of the people themselves. We who occupy seats here come fresh from the people. We know the wishes of those we represent, and if we fail to carry them out we will not, and should not, represent them longer.

Even in districts where the population is largely foreign born, as it is in the district represented by Judge GOLDFOGLE, of New York, the sentiment against restriction is changing. No man on the floor has been more active against the literacy test than the gentleman from New York. He has never failed to manifest, during his entire congressional career, his intense interest and solicitude for foreign-born citizens, both in committee work and on the floor of the House, yet he was defeated for reelection, which indicates that the people he represents, who are 90 per cent foreign born, are beginning to realize that some restrictive measure is necessary.

This bill will not affect to but little extent, if any, the Scandinavian or the German or the Canadian or the Englishman or the Scotchman or the Irishman, as practically every adult in those nations can read and write. It might touch a few of the old folks from those countries, but we have provided a clause by which they can enter whether they themselves can read or not, so long as a single member of the family can do so. The bill also provides that all those who are fleeing from religious persecution, whether they can read or not, can be admitted. In fact, practically all who will be excluded under this bill are a few of the Sicilians and some of the Italians from southern Italy. It is not by any means a radical measure. While personally I am not wedded to the reading test, but no one has suggested a better one, and as it is the only method proposed which will protect our laboring men from being thrown out of employment, I feel it my duty to support it.

Mr. Speaker, I believe this bill is worthy of our support. I believe it is in the interest of America and American institutions. I believe it is in the interest of the illiterate foreigner who in the future desires to make this country his home. I believe it is in the interest of American workingmen, both native and foreign born, who are now being crowded out of employment by an oversupply of unskilled labor, and, believing this, I shall vote to override the veto of the President.

Let us be men. Let us not only show we have convictions of our own, but also show that we have the courage of our convictions. I appeal to you as the direct representatives of the American people to write this bill into law, and establish what Abraham Lincoln said should be, that this is a Government of the people, by the people, and for the people. [Applause.]

Mr. SABATH. Mr. Speaker, I yield to the gentleman from Massachusetts [Mr. GALLIVAN].

Mr. GALLIVAN. Mr. Speaker, I rise to express my approval of the message of our President on this bill, and I hope that this Congress will stand with him to-day. What I can not understand about the attitude of a majority of the Members of this House, who up to the present time have insisted upon the passage of this bill with the literacy test, is that they seem to make the fundamental blunder of forgetting that character, which is the only test that an immigrant ought to be obliged to meet, is not necessarily secured by education, but, as I have said in this Chamber on another occasion, if a man naturally bright has immoral tendencies the education which he has may, by the very fact, be used for the purpose of training these tendencies to the detriment of the community in which he is going to live.

We have a great public-school system in this country. America is called the melting pot, and our own Emerson has called it only another name for opportunity. If the inhabitant of a foreign land, prompted by the inspiration to improve his condition, turns his eyes longingly to America, are we going to deny him entrance simply on the ground that he is unable to read and write? If this is the test which you are about to impose to-day, how can you, in fond contemplation of the institutions that were builded so firmly by the fathers of this Republic, say that they builded better than they knew? [Applause.] And yet what were they? Men of character in most instances, but what kind of education did they have? I leave it, Mr. Speaker, to your own knowledge of the history of origins in this country to answer this question. What it is that makes foreign immigration a positive acquisition to our country is that no man wishing to come to this country does so except under the impulse of a disposition to improve his condition. He is dissatisfied with conditions in his own land. He is blessed with a wholesome discontent and this wholesome discontent is, so far as I know, the only measure of ambition. If an immigrant brings here a strong body, an acute mind, and fine moral sensibilities, we need have no fear of the influence of his presence upon our institutions. Nay, we may rather rejoice to think that he has those qualities which, found in the fathers of the Republic, enabled them to build a land which I verily believe is to endure as long as humanity has ambition to improve. [Applause.]

Mr. Speaker, let it never be said that within less than 150 years of the Declaration of Independence a Congress of the United States, so far forgetting the foundations of our own America, gave the lie to the hopes and to the aspirations of people struggling under the absolutism of Europe and other countries and who, yearning for opportunities for improvement for themselves and those that came after them, found closed upon them the doors of a country which in the providence of God had been reserved as a haven for the struggling aspiring manhood wherever found on earth. [Applause.] "The earth is the Lord's and the fullness thereof." All men are His creatures. Shall we dare to say that man, the image of the Creator, shall not have a share in the fruits of the largest land which the sun shines upon?

Why it was to these shores, Mr. Speaker, that Kossuth, the Hungarian liberator, came as a triumphal here on a vessel of the United States squadron offered by Congress to him and his fellow exiles who had surrendered to Turkey. They escaped their greatest danger, threatened extradition to Russia in accepting this offer of Congress—this same Congress which is now closing the doors to the oppressed and the unhappy of other lands. In gratitude Kossuth wrote, on March 27, 1851:

> May your example, noble Americans, be to other nations a source of social virtue; your power be the terror of all tyrants, the protector of the distressed, and your free country ever continue to be the asylum of the oppressed of all nations.

[Applause.]

Mr. Speaker, I beg the Members of this House to recall the story of other days and to consider again the history of this country. Ask yourselves whether this bill is not really a step backward. Surely, sir, this is no partisan measure. Two Presidents of the United States have already expressed their dissatisfaction with the literacy tests. Another, a great scholar himself, after most careful consideration, has followed their example. Our duty, as it seems to me, is absolutely clear in the premises, and I sincerely hope that the Members of this House, of whatever party, however much they may have hesitated up to the present moment, may consider the reasons assigned by the Chief Executive of this Nation compelling his veto of this bill, and that America, through its Congress, will declare to the aspiring immigrant, and through him to the world, that it is national character alone that makes a nation,

and that it is not intellect but morality that is a test of character. [Applause.]

Mr. Speaker, I can see influences back of this proposed legislation other than those exercised and controlled by organized labor; I can see influences which dare not come out into the light of day, but which, under the cover of an inky, slimy darkness, masquerading in the guise and garb of so-called "patriotic" orders, are ceaselessly endeavoring to divide the great body of American citizenship along lines of racial and religious prejudice. I ask every fair-minded man in this body to listen to this extract from one of these so-called "patriotic" publications; and when you have heard it, ask yourselves whether there be even the shadow of truth in its base references to "Rome and its lobby."

This paper said in its last issue:

On January 14 the Senate agreed to the conference report on the Burnett immigration bill without a record vote. Senator REED, of Missouri, after four weeks of talk and filibuster in opposition against this meritorious measure, finally tired of talking and allowed the Senate to take the vote resulting in agreement.

Among other things inserted in the CONGRESSIONAL RECORD as part of his remarks on the subject were telegrams and letters from Cardinal Gibbons; Edward Cummins, S. J. (supreme Jesuit); John Cavanaugh, C. S. C., president of the Roman Catholic University at Notre Dame, Ind.; John J. Glennon, archbishop of St. Louis; and the like. See CONGRESSIONAL RECORD of January 14, pages 1606 and 1607.

From this it is apparent who pulled the string that kept Senator REED'S tongue in motion day after day under the endless-talk privilege by which a Senator may talk a measure to death.

Rome's spokesman in the House seems to have been RUFUS HARDY, of Texas. HARDY'S speech in the House (see CONGRESSIONAL RECORD, p. 1531) contains HARDY'S declaration that he is against this bill and against all kindred legislation. We are informed that his remarks on the floor were more severe and harsh than they appear as revised in the RECORD.

The 60-page bill, containing the reading test and 300 other additional amendments to existing immigration laws, went to the White House January 15. The President has 10 legislative days, excluding Sundays and the day he received it, in which to sign the bill or return it to the House without his signature. Failure to do either results in the bill automatically becoming a law.

It is expected that President Wilson will veto the measure; but it can be passed over the veto if all the supporting Senators and Congressmen are present and counted on the final vote. Rome's lobby is there in force, and friends of this bill should not delay in writing their Congressmen and Senators and urge them to do their duty at the critical moment.

Mr. Speaker, may I call to the attention of this House that it would be well worth the time of those who seek the light to read some extracts from an article from the pen of Rev. Washington Gladden, recently published in Harper's Weekly. It represents the viewpoint of a broad-minded, courageous, and well-known Congregational clergyman. Dr. Gladden writes:

THE ANTIPAPAL PANIC.

It is evident that we are in for another fierce anti-Catholic crusade. These visitations are periodic; the term has not perhaps been calculated, but we shall be able one of these days to give the formula. The period is probably a little longer than that of the 17-year locusts. Whether the pupa of the Cicada papaphobiana burrows in the earth during the time of its disappearance is not known; there are those who think that it goes deeper.

* * * * * * *

To those to whom the happiness and peace of their native land is dear these visitations of religious rancor and intolerance are most unwelcome. An epidemic of smallpox or yellow fever is a light affliction compared with these seasons of religious contention and suspicion and enmity. What we are going to see during the next few months is something like this: The great mass of the Protestant Christians of this country arrayed against the great mass of the Roman Catholic Christians, each party thinking and saying hard and bitter and violent things about the other; each party cherishing the worst suspicions about the motives and purposes of the other; each party believing that the other is plotting to take away its liberties, and perhaps to exterminate it by assassination or carnage. Not all the Protestants and not all the Roman Catholics will give room in their hearts to such dark thoughts and fears and enmities, but most of them will; and the mob mind, which always dominates these epidemics, will reduce to silence the majority of those who know that this is mainly insanity.

The first mutterings of this eruption of mud and slime are audible already. Those of us who have passed through this misery two or three times know what to expect. It is being whispered now in Protestant circles that the Catholics are meeting by stealth from night to night in the basements of their churches to drill for the impending insurrection. If the church has no basement, it matters not; the story is just as freely told and just as readily believed.

* * * * * * *

Here is the program of "Six Sunday evening lectures on Roman Catholicism" recently delivered in a church in the heart of the best residence district in my own city:

"1. Why preach against the Roman Catholic Church? (A shotgun load.)

RIFLE BALLS.

"2. Popedom. This lecture will expose the most palpable fraud of human history.

"3. The priesthood. Testimony of history, ex-Catholics, and first-hand information.

"4. The auricular confession. An iniquity that ought to be prohibited by law.

"5. Rome's bloody hands. No man-eating tiger ever thirsted for blood as has the Roman Catholic Church.

"6. Romanism and American institutions. If red blood flows in your veins the Pope's ambition to rule our beloved country and reduce it to the level of Italy and Spain will set your nerves atingle and cause you to engage in the great fight that is on."

This is the sort of entertainment sheet which will soon be offered in many American cities.

Rumors will be heard of consignments of arms being delivered by night to Roman Catholics; they are apt to come in coffins.

Forged documents of various sorts will be printed and privately circulated—documents purporting to have been issued by the Roman Catholic hierarchy, giving instructions to the faithful, in which they are authorized and instigated to commit various crimes against their Protestant employers and neighbors, and intimating that mother church will absolve them from the guilt of all such offenses.

Old bulls and decretals of the dark ages will be dug up and exploited, and it will be insinuated, or perhaps boldly asserted, that the policy indicated in them is still ruling the Roman Catholic Church. In the last of these epidemics a forged papal encyclical, with all the formal phrases belonging to these documents, and signed by the name of Pope Leo XIII, was kept standing for weeks in the columns of many of the papers representing the anti-Catholic crusade and was published in leaflet form and circulated broadcast. In this stupid fabrication Pope Leo was represented as saying:

"We proclaim the people of the United States to have forfeited all right to rule said Republic, and also all dominion, dignity, and privileges appertaining to it. We likewise declare that all subjects of every rank and condition in the United States and every individual who has taken any oath of loyalty to the United States in any way whatever may be absolved from said oath, as also from all duty, fidelity, or obedience, on or about September 5, 1893, when the Roman Catholic Congress shall convene at Chicago, Ill., as we shall exonerate them from all engagements; and on or about the feast of Ignatius Loyola, in the year of our Lord 1893, it will be the duty of the faithful to exterminate all heretics found within the jurisdiction of the United States."

* * * * * * *

It is an astounding fact that such a fiendish document could be forged and published by Protestant Christians in the United States of America; it is more astounding that they should believe that it would impose on any considerable number of Americans; it is most astounding that thousands and thousands of the members of our Protestant churches, including many ministers, should accept it as genuine and aid in its circulation. In Toledo, Ohio, the "councils" of the secret anti-Catholic orders united in ordering several hundred Remington rifles to protect themselves against this threatened slaughter; on the night named in the "encyclical" numbers of them were up all night in the engine houses, waiting to give the alarm by which the Protestant hosts were to be rallied to resist the massacre. In the meantime their Roman Catholic neighbors were sleeping soundly in their beds, all unaware of the carnage which was expected of them.

In how many other places such vigils were kept I do not know; but in Toledo there was a dispute about the payment of the bill for these Remington rifles, which brought the business into court, and the facts related above are a matter of court record.

Such hysterical fears will soon be agitating hundreds of thousands of breasts in this enlightened land. It is quite impossible for anybody to forge a tale of horror or treachery or villainy which will not be eagerly believed by millions of Christians in this country concerning their fellow Christians, when these religious lunacies begin to be epidemic.

* * * * * * *

The demand for instances of the enmity of our neighbors becomes in appeasable, and imagination is busy inventing them. Most of these harrowing tales will come from other communities; the dreadful things that are happening in your own community you will learn about through letters of inquiry from distant places. Intelligent persons from other towns in Ohio wrote me 20 years ago that the report was current among them that all the police in Columbus and all the school-teachers and all the county officers were Roman Catholics; the truth at that time was that 5 out of 20 county officials, and 45 out of 112 policemen, and 12 out of 349 school-teachers were of that faith. But Columbus at the same time was believing similar tales about many other towns and cities.

* * * * * * *

The fact is that we have got to learn to live together in this country—Protestants and Catholics. If either party should undertake to exterminate the other, the process would be somewhat difficult. The only question is whether we shall live together in peace or in enmity. If we are to have peace, we must study the things that make for peace; each party must be ready to see the good side of the other; must learn to put the best and not the worst construction on the words and deeds of the other; must avoid all bitter and uncharitable judgments; must put away all thoughts of domination. We must be friends, Protestants and Catholics. No other relation is conceivable. And there is no worse enemy of Christ or of his country than the man who seeks to inflame and poison the minds of either Protestants or Catholics with suspicions and fears and resentments and enmities toward the other.

* * * * * * *

This conflagration of hate is already well-started, and it will probably sweep over the land. No argument could extinguish it. There are millions of Protestants who are incapable of believing anything but evil of Roman Catholics. Traditional rancor colors all their vision wherever the name of the Pope is mentioned. But there are a good many other Protestants, I trust, who are capable of reason and justice, and to them I venture to make two or three suggestions:

1. Whenever you hear any of these harrowing tales about the sinister and sanguinary plots of the Roman Catholics never let one go unchallenged. Insist that the narrator give his authorities and furnish his evidence. See that the matter is thoroughly investigated, and publish the facts with the names of those who have reported the charges.

2. Take every opportunity you can get to talk with your Roman Catholic neighbors and friends about the relations of the churches. Don't shun them or cast suspicious glances on them when you meet them; don't treat them as if they were spies or emissaries of some malign power; shake hands with them; get acquainted with them and talk over the whole situation in a friendly way. We may have some difficult problems to settle in our relation with them, but let us meet them not as enemies, but as friends.

3. Instead of listening to horrible tales of what the Catholics are doing in distant places sit down and make out a list of all the Catholic men and women you know in business, in professional life, in the philanthropies, in society, in the shops and factories, in the kitchens; put down their names and think them over, and see whether you will be able to convince yourselves that these men and women are capable

of doing the kind of things which these tales attribute to them. How many of these people, do you think, are plotting to rob you of your liberties or to murder you in your beds? These are Roman Catholics, the Roman Catholics not of the dark ages of the sixteenth century, but the Roman Catholics of to-day. And whenever you talk about Roman Catholics in public or private remember that these are the people you are talking about.

* * * * * * *

4. It might be well for people who are capable of putting two and two together to remember that the danger of the clerical domination of this country, whether by Congregationalists or Catholics, is not imminent. The last Roman Catholic paper I opened alleged that there are 75,000,000 of non-Catholics in the United States. That would mean that there can be no more than 20,000,000 or 25,000,000 of Catholics. In any attempt to impose clerical rule the Protestant forces would find themselves strongly supported by the great majority of the secret orders and by the entire socialistic contingent of our population. There does not appear to be any adequate reason why 75,000,000 should be shuddering with fear that 20,000,000 are about to subjugate or exterminate them. The mood which yields to such a panic is the reverse of heroic.

* * * * * * *

Now, Mr Speaker, I want to read here the appreciation of an eminent Catholic layman, Prof. Condé B. Pallen, who recently carefully and honorably analyzed Dr. Gladden's article in the Columbiad. Prof. Pallen says, among other things:

We have but to read over the program of the "Six Sunday evening lectures on Roman Catholicism," quoted by Dr. Gladden, as recently delivered in a church in the heart of the best residence district of his city (Columbus, Ohio), to appreciate the character of the people for whom they were intended and the turpitude of the expounder. Their folly, their falsehood, their viciousness would seem incredible, were not the damnable evidence vouched for by Dr. Gladden himself, and were not similar evidences scattered broadcast throughout the land in a number of periodicals through the United States mail, whose officials seem impotent to rectify so flagrant an abuse of a great national agency, whereby 15,000,000 American citizens are daily vilified and calumniated.

* * * * * * * *

That this anti-Catholic agitation is widespread and maliciously active is evident enough. Is its influence as a disturber and disrupter of the peaceful relations between Catholics and Protestants and of the amity, which sane and liberal men entertain toward each other as citizens of the same fatherland, as malign and weighty as Dr. Gladden predicts? Will it bring about that mutual suspicion and distrust, that hard, bitter, and violent feeling which Dr. Gladden depicts and deplores?

It is here that we take issue with Dr. Gladden. We believe that the vast majority of American citizens are above the sinister influences of a propaganda so vile in its methods, so base in its principles, so contrary to the basic character of our Constitution, so flagrantly stupid in its accusations, and so wanton in its purpose. Our faith in the integrity and intelligence of the American character is based upon the history of the past. The American people, as a whole, have triumphantly resisted such vicious agitation for the past 125 years, and this when they were much less better prepared to yield to the iniquitous influence than at the present day. In the decade between 1850 to 1860 it manifested itself in its most virulent form and crystalized in the Know Nothing Party, which went down to shame and a just oblivion under the sturdy repudiation of the American people. The noxious growth could not live in the open air. Under the form of APAism in the nineties, the scorched reptile again raised its venomous head to be crushed again under the heel of real Americanism. APAism was repudiated by the great political parties, and evoked strong denunciations from prominent leaders, such as Theodore Roosevelt; Speaker Henderson; United States Senators Hoar, Vest, Hill, and Vilas; Gov. Peck, of Wisconsin; Gov. Altgeld, of Illinois; and Gov. Stone, of Missouri. Its influence was limited to a few localities and that evanescent. By the year 1900 the A. P. A. agitation had practically ceased, and as a political factor disappeared from the horizon.

* * * * * * * *

Each successive manifestation of anti-Catholic bigotry in this country has shown itself weaker and weaker, and with good reason: Catholicity has constantly demonstrated itself as in perfect congruity with American principles and institutions. Non-Catholics have mingled with Catholics in every-day life, and learned that the latter have neither Government of the United States to a feeble old man in the Vatican, horns nor tails. There have been no Catholic conspiracies to seize the Government and place it under the domination of the Pope. The often-reiterated charges against them have proved silly bogies. They have never stored arms in the basements of churches with which to massacre their Protestant fellow citizens. The accusations against them have invariably evaporated in their own weltering silliness. There is even a certain sense of humor in the situation. To imagine that a small minority of citizens even contemplated turning over the who has neither army, navy, nor funds, is more bizarre than opera bouffe, and ought to move wild laughter in the throat of death. What must be the mental condition of the people who are prepared to swallow such a concoction of bedlam?

Beyond all this, Catholics have been living side by side with their non-Catholic fellow citizens for a century and a half, engaged in the same pursuits and enterprises, and have been clearly discerned to be ordinary, normal human beings. In the professions they have, just as others, left their mark and demonstrated their achievements; in business they have contributed their quota of success and failure as others around them have done. In the Army and the Navy, both in rank and file, they have served as others have served, and their record has been clear. They have rallied to the flag when occasion required it, and shed their blood as freely as others have done. In the fields of industry, invention, and enterprise they have not been laggards; in short, they have been citizens as others have been and just as human as others have been. The others have recognized all this, and with American sanity and honesty seen for themselves that Catholics are just as keen for their country's welfare and glory as they themselves are; just as ready to defend it, work for it, and shed their blood for it as any in the land. The others have realized all this by constant daily intercourse, and as they are not fools, they are not going to swallow the foul and silly accusations against Catholics by which fanatics and knaves would destroy the mutual trust and understanding between citizens of a common country and with a common cause.

* * * * * * *

We do not believe that there is any reason for alarm. Dr. Gladden's apprehension that the present anti-Catholic agitation is going to lead to bitterness, estrangement, and mutual misunderstanding has no justification on the Catholic side. We Catholics are not going to cherish the worst suspicion about the motives and purposes of our Protestant fellow citizens. We never did and we are not going to begin now, for we know that the vast majority of our Protestant fellow citizens are level-headed enough to see through a doughnut, especially when it is a political doughnut. There are, of course, the agitators and their deluded followers; these we pity or despise. But they are a constantly diminishing minority. They are fewer and count less and less in value year by year, and the American public has grown tired of bogus encyclicals and false oaths, which would strain the credulity of imbeciles. Our civic and social and business integrity has become too well established to be injured by a propaganda of lunacy. Dr. Gladden believes that "there are millions of Protestants incapable of believing anything but evil of Roman Catholics." We hesitate to estimate so many of our fellow citizens at so low a grade of intelligence and honesty. At any rate we believe that there are tens of millions of Protestants whose mentality is still sound and whose hearts are in the right place. We harbor no suspicion against them, and the bigots are not going to rouse us to recrimination, resentment, and enmity. We are not going to be made fools by the folly of some fools nor malicious by the malice of some knaves. We believe with Dr. Gladden "We must be friends, Protestants and Catholics. No other relation is conceivable."

* * * * * * *

Far be it from me, Mr. Speaker, to charge any Member of this House with being under the thumb or under the heel of these "patriotic" organizations which are spreading the gospel of hatred and religious anarchy. But every man within the sound of my voice has been either petitioned or threatened by these very organizations or their agents or their publications that their action on this immigration bill will be watched and their political future has been dangled before their eyes should they dare to incur the wrath of the "antipapal" press—this press, Mr. Speaker, which has so wickedly, yes, so foully, within the recent past given wide circulation to a most heinous, ungodly, un-Christian, yes, a murderous and illegal oath as the one required by the Knights of Columbus from its members. It is an attack against the Catholic and his church, a creation of Know Nothings, A. P. A.'s, and their allies and successors.

Bigots have read this foul libel and gloated over its expected destruction of the Knights of Columbus; they have passed it to others, circulated it, approved it.

Some honest men have read it and been sorely troubled in consequence. It seemed unlike the Knights of Columbus they knew as honest men; yet would men dare publish such a thing if it were untrue? If untrue, would not the Knights of Columbus prosecute their defamers?

What, then, was the duty of the society to itself, to its members, to the host of men who were in doubt?

Mr. Speaker, permit me to quote from a recent publication issued by the commission on religious prejudice of that great, truly American order just what actions have been taken to expose these libels. May I ask the Members of this House to give these lines most careful consideration?

CONGRESSIONAL RECORD.

Before giving the history of the various prosecutions and activities above referred to for criminal libel in printing or publishing or defaming by means of the alleged oath, we want to answer the foul charge intimating that the CONGRESSIONAL RECORD of the United States is authority for its genuineness.

Much has been printed by those circulating the bogus "oath" tending to mislead the public into the belief that in some way Congress had found it to be true. So they have referred to the CONGRESSIONAL RECORD of February 15, 1913, for proof of the genuineness of this "libel."

THE FACT.

In the CONGRESSIONAL RECORD of February 15, 1913, pages 3215 et seq., appears a report of the Committee on Elections No. 1 on the contested-election case of Eugene C. Bonniwell *v.* Thomas S. Butler. The contestant had alleged that the circulation of the "oath" against him was libelous, and a use of means not to be recognized, etc.

A FALSE AND LIBELOUS OATH.

After reciting the "oath," which decency and respect for our order forbid reprinting, the committee in its report says:

"This committee can not condemn too strongly the publication of the false and libelous article referred to in the paper of Mr. Bonniwell, and which was the spurious Knights of Columbus oath, a copy of which is appended to the paper. It also condemns the publication of editorials to excite religious prejudice in a political campaign. No man should be persecuted for his religion, whether he be Catholic or Protestant."

PHILADELPHIA CASE.

COMMONWEALTH OF PENNSYLVANIA AGAINST CHARLES MEGONEGAL AND CLARENCE H. STAGE.

Over a year ago (to be exact, February 20, 1913) two men were held in bail for appearance in court to answer charges made by local Knights of Columbus. Charles Megonegal, a printer of 4201 Brown Street, was charged with printing and causing to be printed libelous matter (the bogus Knights of Columbus oath) willfully and maliciously exposing the Knights of Columbus as a body; Charles B. Dowds, upon whose affidavit the arrests were made; James A. Flaherty, the supreme knight; and Philip A. Hart, master of the fourth degree, to public hatred, contempt, and ridicule, to their great damage, disgrace, scandal, and infamy.

Megonegal and Clarence H. Stage, a barber, were charged jointly with conspiracy to defame and oppress the aforesaid members and others of the order by causing said matter to be circulated.

At the hearing it was elicited from Megonegal that he had bought copies of the bogus oath in bulk from the Menace before starting to print it on his own account.

A THREAT.

In its March 1, 1913, issue, the Menace, after reproducing a press dispatch reporting the result of the hearing before the magistrate, at which the accused were held for trial, said:

"Further than what is given here we do not know the particulars in this case, but we do know that these men are American citizens, and that they will be defended in their constitutional rights of free speech and free press. The press dispatch, as usual, lies when it says the Menace has printed the so-called Knights of Columbus oath, as the files of our paper will show. But if the Knights of Columbus want to start anything with the Menace for what it really has printed they have our permission to do their worst, as we are ready to defend every utterance we have ever made about the Knights. And if they don't want their complete ritual and secret work printed and distributed to a million men in this Republic they had better leave the Menace out of this controversy."

THE TRIAL.

On Friday, January 30, 1914, in the quarter sessions court, before Hon. Robert N. Willson, appeared Megonegal and Stage to answer the true bills of indictment found against them by the grand jury. Joseph Taulane, Esq., assistant district attorney, appeared for the Commonwealth; Owen J. Roberts, Esq., and Joseph P. Gaffney, for the private prosecutors; Peter F. MacLaren, Esq., for Megonegal; and Leroy N. King, Esq., for Stage.

The trial judge, the assistant district attorney, in charge of the prosecution, the senior counsel for the private prosecutors, and both attorneys for the defendants are non-Catholics.

James A. Flaherty, Esq., supreme knight of the Knights of Columbus, having been sworn, testified as follows:

"This alleged oath is a tissue of falsehoods from the first word to the last—absolutely false. This prosecution was brought simply to vindicate the Knights of Columbus on account of the wide circulation given to this vile and scurrilous circular, the purpose of which was to breed strife and arouse religious bigotry. The alleged oath is absolutely baseless, and of such a flagrant character that it is indeed surprising that anyone would give it the slightest credence. It was so persistently circulated that the Knights of Columbus were compelled to take some steps to refute it, and we thought criminal prosecution would be the best way to do it."

GUILT ADMITTED, SENTENCE SUSPENDED.

Megonegal having pleaded guilty and Stage nolo contendere, which means that the truth of the charge is not contradicted, the district attorney stated that the prosecution was willing that sentence be suspended.

Attorneys MacLaren and King, counsel for the defense, joined in this request to the court, pleading good faith on the part of their clients, who, they said, had received the "oath" from the Menace, of Aurora, Mo.

As evidence that their clients had been deceived, they presented to the court a copy of a letter sent to the Menace by Mr. King, asking the paper's aid in the defense of Megonegal and Stage, and the original of the reply received from the Menace.

The text of Mr. King's letter follows:

PHILADELPHIA, *February 27, 1913.*

MENACE PUBLISHING CO., *Aurora, Mo.*

GENTLEMEN: Mr. Peter M. MacLaren and myself are associated in the case of libel and conspiracy brought by the Knights of Columbus against Clarence H. Stage and Charles Megonegal, of this city.

We notice in your issue of March 1 that you are prepared to print and distribute the complete ritual and secret work of the Knights of Columbus, and we desire to obtain an authentic copy of said ritual and secret work for use in the trial of our clients, since the prosecution alleges that there is no oath taken by candidates for any of the Knights of Columbus degrees. Can you supply us with what we desire and need?

Our clients have no knowledge of the authenticity of the Knights of Columbus oath, having received them in the first instance from your company, and they naturally rely upon you to aid them in their present difficulty.

An early reply will be greatly appreciated.

Yours, very truly,

LEROY N. KING.

The answer of the Menace was as follows:

AURORA, MO., *March 5, 1913.*

Mr. LEROY N. KING,
Philadelphia, Pa.

DEAR SIR: Replying to your letter of February 27, we wish to state that we are not in possession of the ritual and secret work of the Knights of Columbus, but we believe we are in fair way to get it; and the statement in a recent issue of the Menace which led you to believe that we had it in our possession, while somewhat of a bluff on our part, was based on the fact that we know that it can be had. You will note that we printed in our No. 99 the ritual and secret work of the Hibernians, and we are positive that it is authentic. The alleged oath which your clients in Philadelphia were arrested for distributing was circulated in practically every State during the late campaign, and the demand upon us for this document was something great, and we had received copies of them from so many sources we simply printed and handled them as we would any other job of printing—to supply the demand—and while we have no apologies to make for so doing, we do not have any evidence that the oath is the one which is taken by members of the Knights of Columbus.

We feel sure that it would be folly for you to undertake to base your defense on the authenticity of this document.

We note that some of the officials are claiming that it is not an oath-bound order, which, of course, is a subterfuge and untrue. You can depend on them resorting to any method which they can contrive to bluff away their critics, and if they are so bent on vindicating themselves, why not ask that they present in court the obligations which they do take. This would be the quickest way to clear the matter up in the minds of the people.

We are filing your letter and will be on the lookout for anything which we think will aid in the defense of these men.

Trusting that this will be satisfactory, we beg to remain,

Yours, sincerely,

THE MENACE PUBLISHING CO.

STATEMENT FROM THE COURT.

Agreeing to the proposal that sentence be suspended, Judge Willson, who is one of the most prominent Presbyterian laymen in Philadelphia, said:

"I think that these cases have reached a very proper conclusion, and it is, in my judgment, quite suitable that, in accordance with the desire of all the parties concerned, sentence should be suspended in the cases.

"Great care ought to be taken that no injustice should be done by written or spoken words to either individuals or institutions. It is not at all strange that the prosecutors in these cases should not have been willing that the opprobrium which would naturally arise if the publications complained of had been founded in truth should be allowed to exist.

"I am personally glad to hear from the head of the order or society referred to what he has said in regard to the matter.

"Though not of the same faith, I realize fully and without reluctance that the church with which that society is affiliated accomplishes a vast deal of good. Its activities should be protected from misrepresentation.

"I may add that my personal acquaintance with Mr. Flaherty, the head of the order in question, leads me to accept his statement without hesitation."

ANOTHER CASE.

STATE OF MINNESOTA AGAINST A. M. MORRISON AND GARFIELD E. MORRISON, EDITORS AND PUBLISHERS OF THE MANKATO (MINN.) MORNING JOURNAL.

A trial of the greatest interest to Knights of Columbus and to the Catholics of this country and of Canada, as well as to non-Catholics—and among them, to none more than to the small band of loud-mouthed bigots who rail against the church—was held in Waterville, Minn., Wednesday, July 29, 1914. This was an action of criminal libel brought by E. M. Lawless, editor of the Waterville Sentinel, against A. M. Morrison and G. E. Morrison, father and son, editors and publishers of the Mankato Morning Journal, of Mankato, Minn. The libel consisted in the charging of Lawless with having taken the bogus Knights of Columbus oath, which has been so largely circulated in this country and in Canada during the past year and a half. We will not attempt to reproduce this oath, but suffice it to say that it has been published as the Knights of Columbus oath and as the fourth-degree oath and is, in letter and insinuation, one of the foulest libels imaginable. It is in some respects a revamp of the old hoax which has for many years passed muster in the press of bigots as the Jesuit oath.

OBLIGATION PUT IN EVIDENCE.

The outcome of this trial is of more than local interest. It is of national and international importance. The Knights of Columbus have often been accused of taking an alleged oath which, if the charge were true, would forever condemn them to the merited execration of their fellow men. But this was the first time that an individual knight was directly charged with the offense. It furnished the order the first opportunity it has had to put the real obligation of the fourth degree in evidence and make it a matter of court record which any citizen may read for himself. Herein lies the importance of the case which establishes a precedent in the history of the order.

Knights of Columbus and Catholics generally have been astounded at the conditions which make possible the publication and circulation by millions of copies of this foul libel. Well-meaning non-Catholics have been shocked by these accusations against Catholic men and Knights of Columbus whom they knew to be high-minded citizens and ideal neighbors. The bigots working in the darkness, as of old, have pressed on the accusation and argued that if the "oath" was not true the Knights of Columbus would soon, by prosecution or otherwise, prevent its further circulation.

A SENSATIONAL TRIAL.

The fact is that the trial was a most sensational one from many points of view. It was presided over by Judge George J. Dressel. The district attorney who prosecuted the case was Francis J. Hanzel, of Montgomery, prosecuting attorney for Le Sueur County, who was assisted by Attorney Thomas Hessian, of Le Sueur. The defendants were represented by Owen Morris, of St. Paul. The small country court room was crowded to the very limits of its capacity, and the spectators filled every available inch of space, having come in from the surrounding country to hear the case tried. A jury was finally selected, and it is of more than passing importance and a matter of gratification to the order, as it is a compliment to him, that the Rev. Thomas Billing, the resident Methodist minister of the town, was chosen on the jury and was not challenged by the complainant, and, as the result showed, voted with the other 11 men to convict the two defendants.

The jury in this case were: William Callies, Emil Hehl, John W. Gish, Thomas McGovern, Vince Roessler, Rev. Thomas Billing, Joseph Miller, jr., H. J. Luther, V. R. Wood, Chris. Ruedy, Steve Hoban, Ed. Zinbrich.

The proceedings were taken down in shorthand by C. G. Bowdish, court reporter of the judicial district.

After each juror had been questioned in turn, the defendants waived any challenge.

The following witnesses were called by the State: P. J. Gutzler, Rev. H. E. Chapman, pastor of the Congregational Church; I. N. Griffith, deputy postmaster of Mankato; E. M. Lawless, Dr. E. W. Buckley, supreme physician of Knights of Columbus; William J. McGinley, supreme secretary of Knights of Columbus.

SUPREME OFFICERS PRESENT.

The surprise of the trial to the Knights of Columbus themselves and to all those whose curiosity had whetted their appetite to learn some of the secrets of that great order, was the calling of two of the supreme officers as witnesses. The first was the supreme physician, Dr. E. W. Buckley, of St. Paul, who testified in effect that Mr. Lawless had received initiation in the fourth degree under his direction as master. Upon cross-examination Dr. Buckley was asked as to the nature of the "oath" administered in the fourth degree, and most emphatically denied then, as he did in answering subsequent questions of the defendants' counsel, that the order had any oath in any part of its ceremonial or degree work. He freely admitted that the order had a pledge or obligation which is administered to candidates. To the great surprise of all present, however, when interrogated as to the nature of this obligation, Dr. Buckley very fully answered the question and gave the substance of the obligation as administered to candidates on being initiated in the fourth degree of the Knights of Columbus.

William J. McGinley, of New Haven, Conn., supreme secretary of the Knights of Columbus, also testified as to the nature of the obligation, as the official custodian of the original manuscripts and of all matters pertaining to the ceremonial of the society. He placed a copy of the obligation in evidence, and it was made part of the records of the trial. He emphasized the fact that the Knights of Columbus was not an oath-bound society, and that no member was asked to take more than an obligation which any gentleman might take. Both Dr. Buckley and Mr. McGinley testified in no uncertain words that

the bogus oath which was the subject matter of the prosecution, was, neither in letter nor in spirit, a part of any of the ceremonial of the Knights of Columbus in any of its degrees.

The following is a portion of the direct and cross examination of Dr. Buckley and Mr. McGinley:

"Direct examination by County Attorney Hanzel.

"Cross-examination by Attorney Morris.

"Q. Your name is Edward W. Buckley?—A. Yes, sir.

"Q. You are a practicing physician and surgeon in St. Paul, are you not?—A. Yes, sir.

"Q. Now, you are also a Knight of Columbus?—A. Yes, sir.

"Q. Member of the Knights of Columbus, and a member of the fourth degree?—A. Yes, sir.

"Q. On January 27, 1907, did you hold any position in the order?—A. I was master of the fourth degree for Minnesota and North Dakota.

"Q. As such master did you have charge of the giving of that degree?—A. I did.

"Q. Did you have charge of the giving of that degree on January 29, 1907?—A. What date?

"Q. January 27, 1907.—A. I did.

"Q. That was the time that Mr. Lawless said he took that degree; do you remember of his taking it?—A. Well, he says he took it, and I think I remember his taking it, but I had 160 candidates in that class from Minnesota and North Dakota; I feel pretty certain Mr. Lawless took it at that time.

"Q. Did you hear me read and have you heard that purported oath credited to the fourth degree of the Knights of Columbus read here in court?—A. I did.

"Q. Did any of those candidates, including Mr. Lawless, take such an oath as that?—A. Not that I know of.

"Q. Is there any such oath in the order?—A. There is not.

"Q. Is there any oath in the order?—A. There is not.

"Q. What do the members take in the order?—A. They take an obligation in the degrees—first, second, third, and fourth.

"Q. Do you know the obligation of the fourth degree?—A. Well, I know what it is in a general way. Now, the master doesn't give any part of the degree; he has charge of it and the degree team under him, and he is supposed to give to each one of the members of the degree team the special charge belonging to their office; and one of the officers of the degree—it is the duty of one of the officers of the degree to give the obligation; and, in a general way, of course, I remember what it is. I am not master now, and haven't been for some years.

"Q. You are the supreme physician of the order?—A. I am supreme physician, medical director, of the order.

"Q. Well, give us your general idea of that fourth-degree obligation.—A. The fourth degree is a patriotic degree; it exemplifies patriotism, and the candidate affirms that he will support the Constitution of the United States and the constitution of his own State; that he will protect the purity of the ballot; and that he will remain a good member of the Catholic church. He also agrees to remain a good, law-abiding citizen of the United States.

"Q. Is there any part of the degree work that resembles anything like that that appeared in that article that has been read here?

"(By Mr. Morris.) Objected to as calling for the opinion or conclusion of the witness. The proper way to do is to tell what they have and then put this beside it, and let the jury say whether there is any resemblance.

"Objected to as incompetent, irrelevant, and immaterial, calling for a conclusion.

"Q. Is there any such oath taken in any of the degrees?—A. No, sir.

"Cross-examination by Mr. Morris:

"Q. Are there obligations taken in each of the degrees?—A. In each one; yes, sir.

"Q. Are each of the four obligations different one from the other?—A. Yes, sir. There are only two principal obligations, the one following at the third degree and the other in the fourth.

"Q. Is there anything in those oaths—— A. Which oaths?

"Q. Well, we are all wrong about calling them oaths; we all mean the same thing.—A. That is right, if you mean it, but I can't answer the question with the word oath in it.

"Q. Well, I'll try to call it obligation.—A. All right.

"Q. You stated that in some of those oaths there is a requirement—or in some of those obligations there is a requirement to remain members of the Catholic Church?—A. No; was that my wording?

"Q. That's the way I took it down.—A. That's the intent, but that's not the wording. Well, yes, I'll take it back; they do really insist they must remain members of the Catholic Church in order to retain membership in the fourth degree.

"Q. Yes; of the Knights of Columbus?—A. Yes.

"Q. That's true as to each one of the obligations?—A. Well, it isn't so specifically stated; but the constitution and by-laws of the order provide that.

"Q. Is there anything in those oaths—— A. Again.

"Q. Oh, those obligations—which has a denunciation of others of other denominations—which was—— A. Nothing.

"Q. Will not spare age, sex, or condition; anything of that kind in any of the oaths?—A. No, sir.

"Q. Is the word 'spare' in any of the oaths?—A. In what? Well, now, is that done purposely?

"Q. It is not.—A. Well, I take it as an insult, because you are trying to trap me into saying 'oath.'

"Q. Well, it isn't intentional; I inform the court and jury it isn't intentional at all. Is the word 'spare' in any of the obligations?—A. In the sense that you mean, spare somebody from injury?

"Q. Well, the word 'spare'?—A. Well, it might be; I don't recall, but in the sense of sparing anybody, or not sparing, no, sir.

"Q. Which has the sense of not sparing?—A. There is no such word nor no such sense in it.

"Q. Are the words 'these infamous heretics,' or words of that import, in any of the obligations?—A. No, sir.

"Q. Doctor, you say one officer gives the obligation. You yourself, now, couldn't give verbatim any one of the four obligations, could you?—A. No, sir; I wouldn't attempt to.

"Q. Is that oath written or unwritten?—A. I don't understand your question.

"Q. Oh, is that obligation written or unwritten?—A. It is printed.

"Q. And can you tell me where I may procure, where a copy of that obligation can be procured; give me the name and address of the person in whose custody one is?—A. Yes, sir. Now I understand; you ask two or three questions there together. I can tell the name of the person in whose custody the ritual of the order, the unwritten work and the written work of the order, is kept.

"Q. Well, you may do so.

"By Mr. HESSIAN. Well, I object to that as immaterial and incompetent. What has that got to do with this case?

"By Mr. MORRIS. Well, if we find the oath as printed, we can compare it with this.

"A. Compare with what?

"Q. The obligation.—A. You mean, I think, to use that word purposely. It isn't my first time on the witness stand. I know when an attorney is asking a witness questions fairly and when he isn't. Now, I object to the word 'oath,' because it would charge us inadvertently with having taken such an obligation.

"Q. We don't charge you with it.—A. You do by using the word 'oath,' and then comparing it with some other oath. We take no oath.

"Direct examination of William J. McGinley:

"Q. Your name is William J. McGinley?—A. Yes.

"Q. Where do you reside, Mr. McGinley?—A. New York.

"Q. In New York—in the State of New York?—A. City of New York.

"Q. You are a member of the Knights of Columbus?—A. I am.

"Q. Do you hold any position in the Knights of Columbus?—A. I do.

"Q. What is that position?—A. Supreme secretary.

"Q. Supreme secretary of the Knights of Columbus?—A. Yes, sir.

"Q. As such secretary, are you custodian of the written and other work of the order?—A. I am.

"Q. The ritual. You know of the obligations that are taken in the four degrees of that order?—A. I do.

"Q. You have heard this purported oath read here in court, have you not?—A. I have.

"Q. Do they take any oath?—A. They do not take any oath. Our society is not an oath-bound society; in fact, can't hardly be called a secret society. It is a society of Catholic laymen, recognizing the authority of the Catholic Church in matters spiritual.

"By Mr. MORRIS. Objected to as not responsive to the question.

"By the COURT. I will sustain the objection to that part of it.

"A. I am leading up to it, your honor.

"Q. What is the purpose of the Order of the Knights of Columbus?

"Mr. MORRIS. Objected to as incompetent, irrelevant, and immaterial; the question here is whether Lawless took an oath as stated in that complaint. The purpose of the order will throw no light on whether he did or didn't.

"By the COURT. He testified there is no oath taken; objection sustained.

"Q. Have you a printed copy of that oath, of that obligation?—A. I have.

"Q. Will you produce it?

"(Marked 'State's Exhibit D.')

"Q. What is State's Exhibit D?—A. State's Exhibit D is an official copy duly attested under the seal of the Order of the Supreme Council of the obligation taken by all members initiated in the fourth degree of the order.

"Q. And you are the custodian of this?—A. I am official custodian of the ritual and ceremonies of the order and the laws of the order under seal of the order.

"Q. And let's see; have you stated that is the one taken by the fourth-degree members?

"Mr. HESSIAN. Yes.

"Mr. HANZEL. Now, we offer this in evidence.

"Mr. MORRIS. One question. I notice 'M., or F. N.' at the head of this Exhibit D; what does that represent?—A. 'Master, or faithful navigator,' title of one of the officers of the degree.

"Q. Is that the only obligation of the fourth degree?—A. The only obligation.

"Q. Contains the only obligation in anyway connected with the fourth degree of the Knights of Columbus?—A. Yes.

"(State's Exhibit D read to the jury by Mr. Hanzel.)

"State's Exhibit D is as follows:

"'M., OR F. N.

"'I swear to support the Constitution of the United States.

"'I pledge myself, as a Catholic citizen and Knight of Columbus, to enlighten myself fully upon my duties as a citizen and to conscientiously perform such duties entirely in the interest of my country and regardless of all personal consequences. I pledge myself to do all in my power to preserve the integrity and purity of the ballot and to promote reverence and respect for law and order. I promise to practice my religion openly and consistently, but without ostentation, and to so conduct myself in public affairs and in the exercise of public virtue as to reflect nothing but credit upon our holy church, to the end that she may flourish and our country prosper to the greater honor and glory of God.

[Supreme Council seal.]

"'A true copy.

"'Attest:

"'(Signed) WM. J. McGINLEY,
"'*Supreme Secretary.*'"

"Cross-examination by Mr. Morris:

"Q. Mr. McGinley, references have been made here to the word 'oath' and the word 'obligation,' and apparently exception has been taken to the use of the word 'oath' as describing the thing we are thinking of. Will you tell us the difference between oath and obligation?—A. An oath, as I understand it, is a pledge or obligation or affirmation wherein or in connection with which God is called upon to witness, or the Deity; and an obligation is a pledge or undertaking of a kind in which the Deity is not called upon to witness. That is the distinction, I believe, between an oath and a pledge. I would suggest the word 'pledge' rather than 'obligation.' It is easier to say.

"Mr. HANZEL. Just a question. Ought there not to be inserted there also: Isn't an oath something that would be administered by proper legal authority? Ought not that to be a part of the explanation?

"Q. I notice that you have these printed on little slips. What is the object of having them printed in that way, loose?—A. For the convenience of the ceremony in the fourth degree of the order, whereby annually, at the first meeting of the fourth degree, assembled in January of each year, all the members of the fourth degree renew that obligation. That is what is known as the annual meeting, and for the purpose of supplying the officers with their parts, for convenience' sake it is arranged in that form.

"Q. Dr. Buckley, in his testimony, stated there was something in the obligation requiring members to remain members of the Catholic Church. Is that true?—A. That is a constitutional, fundamental law of the order. Well, toward the end there he promises to remain a member of the Catholic order, in there by implication, if not expressed.

"Q. I will ask you is this all the obligation of the fourth degree?—A. That is our obligation in the fourth degree.

"Q. Do any of the other obligations—first, second, or third degrees—have reference to non-Catholics in any way, directly or indirectly?—A. None whatever.

"Q. You have heard this purported oath in the criminal warrant read, have you?—A. Yes; I have.

"Q. Have you seen that elsewhere?—A. I have."

The defendants testified and also called Mr. Lawless, who had testified for the State. They were not cross-examined by the county attorney.

It is unnecessary to go into the recital of the other evidence in this case. Suffice it to say that the defendants made no attempt to establish the authenticity of the bogus oath, but threw themselves on the mercy of the court and tried to show that there was no intentional libel on Mr. Lawless.

DEFENDANTS FOUND GUILTY.

The jury returned a verdict of guilty, which was read by the foreman, Rev. Thomas Billing, and the court imposed a jail sentence of 30 days on each of the defendants, from which they took an appeal to the district court on the following day, each giving a bond of $500, with H. B. Oblinger and W. Knaack as sureties.

Referring to the foregoing trial, we set forth below the correspondence between the Rev. Mr. Billing and Hon. Fred Bierman, of Decorah, Iowa, who, we believe, is the publisher of the Decorah Journal:

DECORAH, IOWA, *August 14, 1914.*

Rev. THOMAS BILLING,
Pastor of Methodist Church, Waterville, Minn.

DEAR SIR: I have noted with interest that you were a juror in the prosecution of A. M. and G. E. Morrison, of Waterville, for criminal libel by E. M. Lawless, of the Waterville Sentinel.

The reports are that the jury unanimously voted for the conviction of A. M. and G. E. Morrison. May I not ask you to write me a line or two, stating whether or not this report is a fact? And also give me any bit of information that may be of interest in the case.

This anti-Catholic agitation, in my judgment, is very discreditable to all the Protestant churches that do not seek in the spirit of Christian charity to quiet it. Furthermore, it is a menace to the best conduct of political affairs and breeds a very regrettable bitterness and suspicion among people who otherwise would be friends.

If you have no objections, I should thank you very much for the privilege of publishing your reply in the Journal.

Sincerely, yours,

FRED BIERMAN.

—

WATERVILLE, MINN., *August 15, 1914.*

Mr. FRED BIERMAN, *Decorah, Iowa.*

DEAR SIR: Yours of the 14th received. And while I do not care for publicity, must admit that either by the irony of fate or by the hand of Providence I found myself upon the jury empaneled to find a verdict in the E. M. Lawless criminal libel case against A. M. and G. E. Morrison, of the Mankota Journal. I did not know until I reached the court room of the case. Had I known what awaited me that day, I would probably have been absent when the sheriff came three-quarters of an hour before the trial to summon me. But when summoned did not inquire how or learn for what purpose. However, never having run away from anything that looked like duty, and not being challenged by either party, I stood my ground, and notwithstanding much adverse local criticism am glad to have had the privilege of helping to nail down so ugly and diabolical a lie as the pseudo oath so widely published and attributed to Ed. Lawless was proven to be.

Furthermore, my district superintendent and other of my ministerial brethren (all of whom I have hitherto met) have expressed themselves as being perfectly at one with me.

The case was very simple.

1. The publication of the so-called oath in the defendant's paper was proven.

2. Its diabolical character was proven.

3. Its circulation in Waterville was proven by Rev. H. P. Chapman, pastor of the Congregational Church of that city.

4. Its utter and complete falsity was proven by two witnesses of the highest standing in the order, viz, Dr. Buckley, of St. Paul, by whom or in whose presence the fourth degree was conferred on complainant Lawless; and also by William J. McGinley, of New York, supreme secretary of the order, and custodian of all the written and oral work.

The first ballot stood 9 to 3 for conviction. The second ballot stood 10 to 2 for conviction, and the third was unanimous for conviction. The verdict was followed by a sentence of 30 days for each of the defendants in the county jail. The case, however, is appealed to the district court in September.

The case was the result of an anti-Catholic spirit (which has had other deplorable results), stirred up by the advent of Annie Lowry, the pseudo nun, whose trail across the State is quite visible, and certainly not enviable. Such things exhibit the strange anomaly of a religion of love producing the keenest haters and a gospel of peace engendering strife and animosities more bitter than the disputes and rivalries of the most profane.

Yours, for the peace of Zion,

(Rev.) THOMAS BILLING,
Foreman of Jury.

THANKS FOR LETTER.

DECORAH, IOWA, *August 17, 1914.*

Rev. THOMAS BILLING,
Waterville, Minn.

MY DEAR SIR: I thank you very much for your letter of August 15 and for the promptness of your reply.

I want to compliment you on the position you take in the matter, and to say that, in my opinion, if the Protestant clergymen in general took this position they would be held in higher esteem by the general public.

If I can do you a favor at some future date, I hope that you will not hesitate to call upon me.

Sincerely, yours,

FRED BIERMAN.

ANOTHER PROSECUTION.

Another case was tried in St. Johns, Newfoundland, on February 18, 1913.

The defendant was Charles A. Swift.

This trial was held in the central district court, before Judge Knight.

The defendant was charged with criminal libel in publishing and circulating the same oath described in the foregoing pages.

The complainant was Charles O'Neill Conroy, for himself and the Knights of Columbus.

Mr. A. B. Morine, K. C., was counsel for the complainant and Mr. F. A. Mews for the defendant.

The witnesses for the Government were William Bowden, Kenneth Barnes, William F. Coaker, Charles O'Neill Conroy, John Fenelon.

The defendant testified, admitting the charge, and concluded his testimony as follows:

"I should now like to express my very deep regret to Mr. Conroy and Mr. Fenelon and the whole Council of Knights, in St. Johns and elsewhere, that I should have been led to believe through false representations that this was the oath of the Knights of Columbus, and I wish to make an apology to all concerned, saying I sincerely regret having caused any pain or ill feeling to the members, and I wish this apology to be as complete as possible. I may add that in January last I did not know any of the members of the Knights of Columbus as such."

Mr. Morine then made the following statement to the court:

"This proceeding was taken for the purpose of showing the bogus nature of this alleged oath. If the accused had justified his conduct or attempted in any way to set up the truth of the alleged oath, the prosecution would be pushed to the greatest possible extent. There was no desire to persecute or even to punish where punishment was deserved. Mr. Swift having explained and given proper information, the complainant is satisfied that Mr. Swift was a victim, that he had no actual malice, and that he sincerely regrets his part in the circulation of the defamatory matter. This being so, the prosecutor's object has been achieved, and he desires that these proceedings go no further against this particular accused. He will, however, prosecute for any further circulation of this same or similar matter, and reserves his ordinary denial, their clear and deliberate assertions being made on oath in a properly constituted court. In exercising clemency the Knights will have won respect and admiration; but after this ample vindication it should be a solemn duty on the part of members of the order and their friends, whether Roman Catholic or Protestant, to take steps to assure the severest punishment the law provides to any who may make similar charges. It is an old story, this oath business, and the Knights of Columbus is not the only society that has suffered similarly in the past. What made the offense more atrocious was an evident desire on the part of some to revive those displays of sectarian hatred which were buried, it is hoped forever, a quarter of a century ago."

ACTION IN SEATTLE, WASH.

In Seattle, Wash., a public statement was made on September 1, 1912, in the course of which it was alleged that this same "oath" was the oath taken by fourth-degree members of the Knights of Columbus. As a result of this statement the knights in Seattle voluntarily decided to submit to a committee of Protestant gentlemen the printed ceremonial containing the actual obligation taken by fourth-degree members of the order. The following newspaper extract gives the result of the investigation:

"The gentlemen to whom this obligation was submitted are H. C. Henry, railroad contractor and president of the Metropolitan Bank; J. D. Lowman, president of the Seattle Chamber of Commerce; J. E. Chilberg, vice president of the Scandinavian-American Bank of Seattle. The signed statement of these gentlemen follows:

"COMMITTEE FINDINGS.

"Honorable Catholic gentlemen of this city have placed for examination in the hands of the undersigned two papers—one the actual fourth-degree obligation taken by each person upon becoming a member of the Catholic organization known as the Knights of Columbus, the other a printed circular purporting to be the above-mentioned obligation. This latter is a blasphemous and horrible travesty upon the real oath, and as fair-minded citizens of this city we can not allow an atrocious libel upon the large body of our public-spirited Catholic fellow citizens to stand undisputed. We declare, further, that the obligation taken by the fourth-degree Knights of Columbus is one of loyalty and patriotism to our flag and Nation, and that the said obligation binds those who assume it to the exercise of the highest type of American citizenship.

"Signed at Seattle, Wash., this 31st day of October, 1912.

"H. C. HENRY.
"J. D. LOWMAN.
"J. E. CHILBERG."

We beg to submit all of the above as evidence of the fact that we have been the objects of a malicious slander at the hands of a disturber of the public peace,

T. J. GORMAN,
Past Vice Supreme Master of the Fourth Degree.
JOHN D. CARMODY,
State Deputy of Washington.
J. C. FORD,
Past Grand Knight, Seattle Council.

RESOLUTION PASSED.

Mr. JOHN D. CARMODY, *Seattle, Wash.*

DEAR SIR: The following resolution was passed by the Olympian Clericus, an organization composed of all Episcopal clergymen in the State of Washington west of the Cascades:

"Our attention has been called to a circular which has been rather widely distributed purporting to be a copy of the oath taken by the members of a certain religious order or society. We desire on behalf of ourselves to express our deep regret that such an attack should have been made on the members of a religious body. We disclaim any desire to judge others, but feel most deeply that the interests of true religion can never be served in such a way."

SIDNEY T. JAMES, *Secretary.*

ALL SAINTS' RECTORY, SEATTLE.

LOS ANGELES INVESTIGATION.

The following letters need no explanation:

Hon. PAUL J. MCCORMICK,
Courthouse, Los Angeles.

MY DEAR JUDGE: I take pleasure in handing you herewith the findings of the committee of Freemasons to whom you exhibited the ceremonials and pledges of the Order of Knights of Columbus.

I am very glad that I have been able in a measure to secure this refutation of a slanderous lie which has been widely circulated and which has been disseminated in many cases by well-meaning, credulous, and deluded persons.

I shall see to it that this report has wide circulation among Masons, and you may use it in any way you deem best to bring about an understanding of the truth among men who, above all controversies

and contentions, desire to know and to follow that which is right and true.

Yours, cordially, W. R. HERVEY.

OCTOBER 9, 1914.

We hereby certify that by authority of the highest officer of the Knights of Columbus in the State of California, who acted under instructions from the supreme officer of the order in the United States, we were furnished a complete copy of all the work, ceremonies, and pledges used by the order, and that we carefully read, discussed, and examined the same. We found that, while the order is in a sense a secret association, it is not an oath-bound organization and that its ceremonies are comprised in four degrees, which are intended to teach and inculcate principles that lie at the foundation of every great religion and every free State. Our examination of these ceremonials and obligations was made primarily for the purpose of ascertaining whether or not a certain alleged oath of the Knights of Columbus which has been printed and widely circulated was in fact used by the order, and whether, if it was not used, any oath, obligation, or pledge was used which was or would be offensive to Protestants or Masons or those who are engaged in circulating a document of peculiar viciousness and wickedness. We find that neither the alleged oath nor any oath or pledge bearing the remotest resemblance thereto in matter, manner, spirit, or purpose is used or forms a part of the ceremonies of any degree of the Knights of Columbus. The alleged oath is scurrilous, wicked, and libelous, and must be the invention of an impious and venomous mind. We find that the Order of Knights of Columbus, as shown by its rituals, is dedicated to the Catholic religion, charity, and patriotism. There is no propaganda proposed or taught against Protestants or Masons or persons not of Catholic faith. Indeed, Protestants and Masons are not referred to, directly or indirectly, in the ceremonials and pledges. The ceremonial of the order teaches a high and noble patriotism, instills a love of country, inculcates a reverence for law and order, urges the conscientious and unselfish performance of civic duty, and holds up the Constitution of our country as the richest and most precious possession of a knight of the order. We can find nothing in the entire ceremonials of the order that, to our minds, could be objected to by any person.

MOTLEY HEWES FLINT (33°),
Past Grand Master of Masons of California.
DANA REID WELLER (32°),
Past Grand Master of Masons of California.
WM. RHODES HERVEY (33°),
Past Master and Master of Scottish Rite Lodge.
SAMUEL E. BURKE (32°),
Past Master and Inspector of Masonic District.

RECENT PROSECUTION IN SANTA CRUZ, CAL.

The Santa Cruz News, of Santa Cruz, Cal., published the following under date of October 28, 1914:

SOCIALIST EDITOR BOUND OVER—NO TESTIMONY PRESENTED BY DEFENSE.

"H. S. Turner, editor of the World Issue and charged with libeling the fourth-degree members of the Knights of Columbus through the publication of a false oath attributed to the organization, was bound over to the superior court by Justice of the Peace Bias this morning under $300 bonds, following a very interesting preliminary examination in which the most noticeable incident was the ingenuity of Attorney Ralph H. Smith in the defense of his client, the defendant.

"The little court room above the fire house was completely filled when the case opened this morning. Assisting District Attorney Knight was John H. Leonard, the local attorney and a prominent Catholic."

The complainant was Charles Gillen, who testified with Joseph J. Rosborough, of Oakland, and Eugene F. Conlon, San Francisco. No evidence was offered by the defendant, and after argument by his attorney, Mr. Smith, Judge Bias held that there was sufficient evidence to hold the defendant for the higher court.

BUSINESS MEN OF INDIANAPOLIS PROTEST AGAINST THE CIRCULATION OF THE FAKE OATH.

The business men whose signatures appear below are all Protestant; they can not comprehend how any Christian can lend himself to the further circulation of the monstrous lie.

KNIGHTS OF COLUMBUS "FAKE OATH."

We the undersigned citizens of Indianapolis, Ind., beg to make public the following statement of facts, the truth of which is established by thorough investigation, regarding the circulation in Indianapolis and Indiana of a "fake oath" as being the true fourth-degree oath of the Knights of Columbus.

It will be unnecessary to reproduce the fake oath here on account of its vile character. Ordinarily charges of such vile nature should go unnoticed, but good citizens of all creeds owe it to themselves to pillory before the public those circulating this literature as un-American.

The true oath of the fourth-degree members of the Knights of Columbus as hereinafter shown in the court proceedings is as follows:

"I swear to support the Constitution of the United States.

"I pledge myself, as a Catholic citizen and Knight of Columbus, to enlighten myself fully upon my duties as a citizen and to conscientiously perform such duties entirely in the interest of my country and regardless of all personal consequences. I pledge myself to do all in my power to preserve the integrity and purity of the ballot and to promote reverence and respect for law and order. I promise to practice my religion openly and consistently, but without ostentation, and to so conduct myself in public affairs and in the exercise of public virtue as to reflect nothing but credit upon our holy church, to the end that she may flourish and our country prosper to the greater honor and glory of God."

Appended to the "fake oath," which is being circulated anonymously, is this notation:

"Copied from the CONGRESSIONAL RECORD, Washington, D. C., volume 49, part 4, February 15, 1913, page 3216."

By referring to the CONGRESSIONAL RECORD quoted it will be found that this "fake oath" is filed as an exhibit by Eugene C. Bonniwell, of Pennsylvania, in his charge against THOMAS S. BUTLER, before the Committee on Elections No. 1, in Congress, growing out of an election contest. Mr. Bonniwell, the contestant, in his protest, printed in the CONGRESSIONAL RECORD, says:

"Messengers in the employ of supporters of THOMAS S. BUTLER traveled the district, having in their possession and circulating a blasphemous and infamous libel, a copy of which is hereto attached, pretended to be an oath of the Knights of Columbus, of which body the contestant is a member. So revolting are the terms of this document and so nauseating its pledges that the injury it did, not merely to the contestant but also to the Knights of Columbus and to Catholics in general, can hardly be measured in terms." (Copied from CONGRESSIONAL RECORD, vol. 49, pt. 4, p. 3216, Washington, D. C., Feb. 15, 1913.)

Mr. BUTLER, in his defense, as printed in the CONGRESSIONAL RECORD, says:

"I apprehended with alarm the use of such a document in a political campaign or at any other time. I did not believe in its truthfulness, and so stated my judgment concerning it on November 4, 1912, as soon as complaint was made to me of its general circulation. Inasmuch as I did not wish to give this document, which I judged to be spurious, any notoriety whatsoever, I refrained from its public condemnation until the time when a general complaint was made to me, and I thought it my duty to publicly condemn it." (Copied from CONGRESSIONAL RECORD, vol. 49, pt. 4, p. 3219, Washington, D. C., Feb. 15, 1913.)

The congressional committee to which the matter was referred reported in part as follows:

"The committee can not condemn too strongly the publication of the false and libelous article referred to in the paper of Mr. Bonniwell and which was the spurious Knights of Columbus oath, a copy of which is appended to the paper." (Copied from CONGRESSIONAL RECORD, vol. 49, pt. 4, p. 3221, Washington, D. C., Feb. 15, 1913.)

This shows that the "fake oath" is a fake, and it explains how it got into the CONGRESSIONAL RECORD.

In addition to the reference made in the CONGRESSIONAL RECORD showing up this "fake oath," its false and malicious character was shown in two court proceedings, one in Waterville, Minn., tried on July 29, 1914, and one in Philadelphia, Pa., tried on January 30, 1914.

The Waterville case was a criminal libel brought by E. M. Lawless, the editor of the Waterville Sentinel, against A. M. Morrison and C. E. Morrison, father and son, editors and publishers of the Mankato Morning Journal, of Mankato, Minn.

The libel consisted in the charging of Lawless with having taken the "fake" Knights of Columbus "oath," which is the same "fake oath" so largely circulated in Marion County.

The trial was presided over by Judge George J. Dressel. The district attorney who prosecuted the case was Francis J. Hanzel, of Montgomery, prosecuting attorney for Le Sueur County, who was assisted by Attorney Thomas Hessian, of Le Sueur. The defendants were represented by Owen Morris, of St. Paul.

A jury was selected, and the Rev. Thomas Billing, the resident Methodist minister of Waterville, was chosen on the jury.

At the trial reputable citizens gave evidence that the "fake oath" was a vile fake, and that the obligation above set out is the true obligation of the Knights of Columbus.

The defendants at the trial made no attempt to establish the authenticity of the "fake oath," but threw themselves on the mercy of the court and tried to show that there was no intentional libel on Mr. Lawless.

The jury returned a verdict of guilty, which was read by the foreman, Rev. Thomas Billing, and the court imposed a jail sentence of 30 days.

In the Philadelphia case two men, Megonegal and Stage, were charged jointly with conspiracy to defame several members of the Knights of Columbus by causing the "fake oath" to be circulated.

At the hearing it appeared that the "fake oath" had been bought in bulk from the Menace in the beginning, but afterwards Megonegal had done the printing on his own account.

The Menace was called upon by counsel for these two men to give them some assistance, and it replied in a letter, dated March 5, 1913, and addressed to Leroy N. King, attorney for the defendants:

"We do not have any evidence that the oath is the one which is taken by the Knights of Columbus. We feel sure that it would be folly for you to base your defense on the authenticity of this document."

The case came on to trial at the quarter sessions court in Philadelphia on January 30, 1914, before Judge Robert W. Wilson. The district attorney was Joseph Taulane, who was assisted by Attorneys Owen J. Roberts and Joseph P. Gaffney. The defendants, in addition to Mr. King, had Peter F. MacLaren. Evidence was introduced that the "fake oath" was utterly false, and that no Knight of Columbus ever took it.

Megonegal pleaded guilty and Stage pleaded nolle. Whereupon, at the request of the plaintiffs, the sentence was suspended.

Knowing that the "fake oath" is false, we hold that all good citizens will join us in denouncing its circulation in Marion County and in Indiana, to the end that people of all creeds may dwell in peace and harmony as becomes the highest ideals of true and patriotic American citizenship.

Alex C. Ayres, attorney; H. C. Parker, physician; Aquilla Q. Jones, attorney; John G. Williams, attorney; Hugh McK. Landon, capitalist; Frederick M. Ayres, president L. S. Ayres & Co.; L. O. Hamilton, president Hamilton, Harris & Co.; Linneas C. Boyd, capitalist; Gustave A. Schnull, of Schnull & Co.; Albert P. Smith, attorney; J. M. McIntosh, president National City Bank; August M. Kuhn, treasurer Aetna Trust & Savings Co.; John Rauch, clerk Marion circuit court; G. A. Efroymson, president H. P. Wasson Co.; Chester P. Wilson, president Interstate Public Service Co.; Frank S. C. Wicks, minister; Henry M. Downing, attorney; Henry H. Hornbrook, attorney; Frank E. Gavin, attorney; Dick Miller, broker; Hugh Dougherty, vice president Fletcher Savings & Trust Co.; J. W. Stickney, general manager Central Union Telephone Co.; Thomas A. Wynne, vice president and treasurer Indianapolis Light & Heat Co.; Louis Newberger, attorney; Henry Lawrence, manager Claypool Hotel; Otto N. Frenzel, president Merchants' National Bank; Frank Wheeler, of Wheeler & Schebler; John J. Appel, real estate agent; C. G. Sander, of Sander & Recker; John W. Minor, secretary and treasurer Sentinel Printing Co.; Evans Woolen, vice president American National Bank; William Fortune, president Indianapolis Telephone Co.; J. D. Forrest, general manager Citizens' Gas Co.; Chalmers Brown, president Reserve Loan Life Insurance Co.; F. F. Hutchins, physician; Wilson S. Doan, attorney; Edward E. Gates, attorney; Oscar Schmidt, president Old Town Co.; Elmer E. Stevenson, attorney; Samuel O. Pickens, attorney; Sol Meyer, president Meyer-Kiser Bank; Linton A. Cox, attorney; Frank T. Edenharter, attorney; John F. Robbins, attorney; Thos. J. Owens, secretary Meridian Life Insurance Co.; George J. Marott, shoe merchant.

The above appeared in the Indianapolis News October 17 and in the Star October 18. All signatures are those of prominent non-Catholic men of the city.

Mr. Speaker, may I call the attention of this House to the stenographic report of the hearing before President Wilson which was held in the East Room, White House, January 23? The hearing was given in response to the request of many gentlemen, both proponents and opponents of the bill now under consideration. I shall read here the arguments of those representative men and women who asked our President to veto this measure.

When the hour of 10 o'clock arrived, President Wilson, rising from his seat, spoke as follows:

Ladies and gentlemen, we are going to devote two hours and a half to this discussion, and in order that it may be conducted in as satisfactory a manner as possible we have arranged to divide the time equally between the two sides, those for the signing of the bill and those against it. It has been arranged that the time of those in favor of the bill should be allotted under the supervision of Mr. Frank Morrison, secretary of the American Federation of Labor, an hour being devoted to that side. The next hour and 15 minutes will be devoted to those who wish the bill vetoed, this time to be arranged by Representatives GALLIVAN, SABATH, and GOLDFOGLE; and then, at the conclusion of the 2 hours and 15 minutes which would be thus used up, the closing 15 minutes will be given to those who favor the bill, this time to be allotted as the other.

I am not informed as to who is to speak first in favor of the bill.

FOR THE OPPONENTS.

Representative GALLIVAN. Mr. President, Messrs. GOLDFOGLE, SABATH, and myself have agreed to divide our time equally. We have 1 hour and 25 minutes. The closing 15 minutes will be assigned to the Hon. W. Bourke Cockran. Because we have so many who have come from different sections of the country who will be unable to talk on account of lack of time, with your permission, Mr President, I am going to ask all those who are opposed to the pending legislation to rise.

The PRESIDENT. No; not now, please.

Representative GALLIVAN (to the audience). Never mind; do not do that. We do not desire to disappoint people here without letting them know that we have not the time to give them, and for that reason I thought that if they could show their numbers that would be an expression of opinion on their part. But we are profoundly grateful to you for this opportunity to be heard.

The PRESIDENT. Whom shall we hear first?

Representative GALLIVAN. I am going to ask Representative J. HAMPTON MOORE, of Philadelphia, to speak for two minutes.

Representative MOORE. Mr. President, the German-American Alliance, which claims a membership of 2,000,000, protests against this bill and is directly opposed to the literacy test. The Federation of Italian Societies of Pennsylvania, numbering about 50,000, also protest against the bill. The Jewish societies unitedly protest against the bill, and Mr. Louis E. Levy, of Philadelphia, the head of these societies, I hope may be heard from for a moment or two a little later on. The United Polish Societies are also opposed to this bill, and they are a very numerous part of our citizenship in Pennsylvania.

Mr. President, I shall ask to file some papers voicing the sentiments of these societies, and shall ask their consideration at your hands. It has been said by some of those who have already spoken, in scholarly fashion, that we must conserve the brain power of the Nation. I agree to the conservation of the brain power of the Nation, but I question whether the conservation of the brain power of the Nation should be conducted at the expense of the conservation of the brawn and the muscle of the Nation. We may be overdoing the conservation of the brain power and leading unconsciously to a race suicide that is entirely unlooked for. We must conserve the brawn and the muscle of the Nation. We must admit those who have committed no crime against the Nation save that of being unable to read to those same conditions which were granted to our forefathers from the beginning of our Nation's history.

It has been said that the insane are increasing in our institutions in this country. That may be true. Some startling statistics have been given with respect to the insane. But I question, Mr. President—I am on the Immigration and Naturalization Committee, and have been dealing with this question for years in Congress—I question whether any more law upon the subject of naturalization and immigration will improve this condition. The law which we now have, the act of February, 1907, provides in the second paragraph for the exclusion of the insane. Section 2 reads that the following classes of aliens shall be excluded from admission into the United States: All idiots, imbeciles, feeble-minded persons, epileptics, insane persons, and persons who have been insane within five years previous.

Mr. President, there is ample law to-day for the exclusion of this class of citizens. Will more law help the situation? It is a matter of administration, as we have been told on former occasions. It is a matter of administration now.

May I have the privilege, Mr. GALLIVAN, of presenting Prof. M. D. Learned, of the University of Pennsylvania?

Representative GALLIVAN. You may. I will say that Prof. Learned has been given eight minutes.

Prof. LEARNED. Mr. President, gentlemen, while I have been requested by two organizations to speak on this occasion, what I have to say comes rather from a man who has studied it from an independent point of view. It has been my lot for the past 10 or 15 years to follow the history of immigration to this country with more or less care and with particular reference to the early immigration. I have also examined with great care the million-dollar output of the Immigration Commission—42 volumes, I think, in all. I will not swear that I have read them from cover to cover. Now, this report, to which reference has been made to-day, is presumably the basis upon which the committee and Congress have formulated the immigration bill before us. I wish to say one word about this report. It begins practically with 1819, at a time when our statistics begin to flow rapidly and freely. It was a convenient place to begin, because the good members of that commission did not have any difficulty in reconstructing the unwritten statistics back of that period. We all know that that is the great crux in the statistics of the United States—the period before the First Census, in particular.

Mr. President and gentlemen, it is precisely this neglected period in this report which vitiates the results of the report. The fact is that the period of the making of this Nation was the period before the First Census of the United States. It was the formative period, in which all these nationalities were grouped together in various parts of the country and the process of assimilation was going on. And what were the elements of that population? If we should see them moving down Pennsylvania Avenue to-day, with their packs on their backs, in many cases in their bare feet, and their tatters and rags, we should be ashamed to acknowledge that they were our ancestors. We can not judge from the immigrants what the output of this country is to be. We must remember that from these great stress periods, periods of religious persecution, periods of depletion by war, we have drawn the very best elements of our population. I need to cite only one example to show that—the example of the immigration of the Palatines in 1709 and 1710 and following years to this country, admittedly one of the best elements we have ever added to our population. And yet those Palatines were homeless, roofless, without clothes in many cases, foodless. They had to live upon the mercy of the English people when they were camped about London, and had to be actually shipped by others to this country. And hundreds and thousands of them could not read a word—had absolutely no ability to read.

This brings me now to this reading test and the present question. What is the class that will be affected by the reading test, that will be eliminated by the reading test? The class to be eliminated by the reading test will be largely the agricultural class and the artisan class of the lower grades in those countries and cities where popular education does not exist; a test that does in no wise signify or bear upon the character of the individuals; and we all know that. We all know that this particular form of test was selected—at least, we may suspect that this particular form of test has been selected—because the committee went on the plan, perhaps, of the fisherman, the happy fisherman. He takes his net and he says, "It won't catch them all, but it will catch a lot, and it is the best thing I have to fish with." And that was about the size of it with the committee that formulated this reading test.

Now, you have got to get a much larger net, and you have got to get a much smaller mesh before you can catch all of the ineligibles that were in the minds of this committee. We know that the tendencies and temptations in the Congress of the United States are all fraught with the interests of separate, distinct organizations, and separate economic and other interests of the country. We know that; and we know that Congress has to deal with all those conflicting interests; and we know that this legislation, like most of the legislation of Congress, is tied up with these special interests; and, Mr. President, I think, for me, one important fact to remember is that in this legislation we are not legislating for to-day or to-morrow. We are legislating with a view to the great future, with a view to those elements which are to come to us, and which are to give to us their brain and their brawn, because you need not tell me that in these peasant regions of the East, the uneducated regions of Russia and Bulgaria, and the other countries of the East, in Italy as well—you need not tell me that that brain which has been lying dormant for centuries, when it once catches the touch of education, will not, like a virgin power, rise up and give a new element to this civilization of ours. That is what the educational test is going to cut off—just that virgin brain that has not had the opportunity yet which our old ancestors had when they came to this country.

Representative GALLIVAN. Mr. President, I want to present Mr. David A. Lourie, representing the New Century Club of Boston, an organization of professional men. Mr. Lourie will speak for three minutes.

Mr. LOURIE. Mr. President, as I heard some of the arguments here this morning it reminded me of the history of immigration as it has been discussed for the last 100 years. Away back in 1814, arguments were advanced for the restriction and exclusion of immigration, similar to those that have been advanced here to-day. Had those arguments been listened to, and those ideas translated into law, what would the development of this country have been to-day? The first speaker asked the question, Do we want to Russianize the people over here? I say, "No"; and the fact that we do not want to Russianize the people over here is the reason that we are opposed to the literacy test. What does Russianize mean? It means autocratic officialdom, tyranny, and everything that is bad in public life. Now, what does this principle of a literacy test, reduced to its lowest terms, mean? It means that a man subjects himself to examination by one official. Is there any standard by which this official can say whether the immigrant can read well or badly enough to admit him or to deport him? It is left entirely to his discretion, to his whim, to his caprice; and it is for this reason, among others, that we are opposed to this un-American principle of one-man power, to be able to decide whether a man is able to read well enough to come in here; we are absolutely opposed to this literacy test.

The gentleman tells you that the Farmers' Union is in favor of the literacy test. Why should they be? We know that it is for the interest of the United States of America to get as many of our immigrants out on the farms as is possible, to develop our agricultural resources. Secretary Nagel, in his letter to ex-President Taft, upon which ex-President Taft's veto was based, made a clear and careful study of the immigrant's relation toward the agricultural problem; and in that letter he says that it is these illiterate immigrants who have been coming here in the last 15 or 20 years who are greatly reclaiming the abandoned farm lands of the West and of New England.

Representative GALLIVAN. Mr. President, I will give two minutes to Mr. Michael Leveen, grand master of the Independent Order of King Solomon, of Newark, N. J.

Mr. LEVEEN. Mr. President, I give way to Mr. Saul Cohn to represent us as spokesman.

Mr. COHN. Mr. President, it is very difficult for a youngster to add anything to what has been said by those opposed to the literacy test by such men as President Eliot and the President of the United States and a great many other gentlemen who have had the opportunity, and a part of whose duty it has been to study this brand of legislation. The words of the second gentleman who spoke in regard to the fact that the immigrant desired to be excluded catches almost as though a burning torch were applied to him, the ability to take advantage of our institutions, are absolutely true. It has been shown that there is a greater percentage of illiteracy in the children of native-born parents than there is in the children of foreign-born parents.

Mr. President, I do not desire to go into a detailed statement of the reasons for which we oppose the literacy test. I only desire to bring a homely illustration to the gentlemen present, in that those of us who lead professional lives know of our own knowledge that very frequently in our experience—I know it has been in mine—we find gentlemen who come to this country who can not read or write; who sign their notes and their deeds with a cross; who have brought up large families in decency; have given them every advantage that American institutions will permit; who have risen to stations of opulence in our communities; who have made excellent citizens, excellent fathers, and excellent busi-

ness men; and I am quite positive that from those experiences the proposed test has no foundation in truth and in justice.

Representative GALLIVAN. Mr. President, I will ask Capt. Samuel H. Borofsky, representing the largest Jewish congregation in New England, to speak for two minutes.

Capt. BOROFSKY. Mr. President, I am personally foreign born. I came here when a boy of 14. I have lived amongst the foreign born of all classes—Jews, Italians, and others—in the city of Boston, and I want to say right here, Mr. President, that this country would have a great deal less trouble with the foreign-born element if all of them came here uneducated. The man who comes here and imbibes his education in the American schools imbibes something the value of which he realizes and which he appreciates more than those who have had the best education from the universities where revolution is rampant and where tyranny prevails, because our institutions are good. And, Mr. President, I want to say one more word with regard to many of us who come from those foreign countries. We have many ties there. A war is going on, devasting all of Europe, where fathers and brothers are being slaughtered on the field of battle. A man may bring his child of 14 years of age—I believe 16—a father may bring in his wife and his children up to that age; but if my father is killed there, and I have got a sister in the old country who can not read, who did not have the opportunity, no matter what my wealth in this country might be I would not under this bill be permitted to take my unfortunate sister from the old country and give her a shelter in my home. Just think, if I had a sister over there and she had a young girl of 14 or 16 or 18 years, with no parents after this war, absolutely destitute, with all my means I would be unable to bring her to this country and give her a shelter. Is this Americanism? Is this the true spirit of Americanism, Mr. President? I certainly submit, Mr. President, that the American people of this country, if they only realized how far this provision goes, would never for a minute consent to its enactment into law.

Representative GALLIVAN (addressing Mr. Sol B. Kantor, of Boston). How much time have we remaining, Mr. Kantor?

Mr. KANTOR. About eight minutes.

Representative GALLIVAN. Mr. President, we have here some representatives of Boston opinion on this bill; they have come from the city of Samuel Adams, of William Lloyd Garrison, of Wendell Phillips, and of thousands of many splendid immigrants of all races who could not have entered this country under a literacy test. They have come to protest with voice and mind and heart against this un-American measure that now threatens. They believe that such a test would not bar from our shores the arrogant, the brutal, the vicious, the selfish, the hateful, the uncharitable, the unwanted, but that it would close our doors against the unfortunate, the oppressed, the victims of brutalism and repression in Old World misgovernment.

Mr. President, I rise to speak chiefly against the literacy test in this bill, because I believe that, based on the experience and history of this and every other country, literacy is not a measure of character or a test of fitness for citizenship. It is a convenience, not a necessity, in the life of a people. It neither adds to nor diminishes the native nobility and virtue of any people, and it is the simplest commonplace to say that no nation was ever saved, no people ever freed, no government ever established by the pen of the writer and the book of the scholar; the vigor, courage, intelligence, and strong arms of men that accomplish these great ends were the endowment of those who were able to make history, even if they could neither write nor read it.

If there is one thing that stands out more imposingly in our national life—yes, far more than any other—it is that literacy has not been the source of American liberty or the cause of American greatness, and our lack of a commanding literature has sometimes been a cause of national reproach.

I believe it was Emerson who said that the farmer, laborer, artisan, fisherman, and chopper are the Commonwealth, not the lawyer, the scholar, and the penman. Too many of us make the mistake of confounding and confusing the terms of illiteracy and ignorance, and our great President hardly needs to be told that lack of letters and lack of knowledge are two entirely different things.

Mr. President, it is important to remember that this alleged stream of alien immigrants has been flowing into America since the early days of the seventeenth century. Its fanciful dangers have begun to dawn on us in the twentieth. Those who favor this bill seem to forget that only the other day their ancestors were alien, the sons of England, France, Ireland, Italy, Scotland, Poland, Germany, Russia, and other lands; and though that stream of fresh and revivifying blood has ceased to flow into some sections of our country, it still continues to renew the energies and courage of the North and the West as ever. Wherever the immigrant has come his energy, courage, fidelity, and brains have made the regions wherein he has cast his fortune blossom like the rose. Wherever he has gone schools have sprung up, industries have flourished, trade has increased, wealth has multiplied, prosperity has bloomed, and patriotism, peace, law, order, intelligence, and happiness follow in his footsteps.

Mr. President, we know that a literacy test will bar from our land its most vital necessity—strong, vigorous, simple, God-fearing peasants, who come here to find homes and to make the wilderness blossom into fertility. But will a literacy test keep out a single criminal whose record and antecedents we are ignorant of? You will find some illiterate criminals who have been guilty of crime of sudden passion, of violence, men who united ignorance with illiteracy; but it is everlastingly true that the crimes most injurious to society, most detrimental to business, commerce, finance, are never the work of illiterates.

The forger, the conspirator, the crooked promoter, the business defaulter, the blackmailer, the bank thief, the political grafter, and all that class of criminals, outside of and outnumbering the criminals of passion and violence, are literate. They read and write, for these vicious talents must be supplemented by literacy to make them profitable. Vicious talent sharpened and developed by letters is the most serious problem society has to deal with. Yet this absurd literacy test will admit the dangerous European criminal of the continental cities and bar out the honest and hard-working and badly needed peasant—farmer and laborer—whether he be English or Irish or French or German or Hebrew or Polish or Italian or Lithuanian.

In every crisis of the country's history these alien classes have stood loyally by the Republic that gave them asylum and home.

In conclusion, Mr. President, let me say that literacy is not a test of character, manhood, or civic fitness. It is a trap to catch the unwary; it is contrary to American principles and practices. Give us honest men and women for our immigrants and the educational problem will not stagger us. Mr. President, hopefully and pronouncedly we ask for your veto.

Representative GOLDFOGLE. Mr. President, I regret that I will not be able to yield as much time as I should like to the many prominent and distinguished gentlemen that come from the city of New York. I present, Mr. President, Mr. Oswald Villard, of the New York Evening Post, to whom I yield four minutes.

Mr. VILLARD. Mr. President, on behalf of the Friends of Russian Freedom, our national society, and as the son of an immigrant who came to this country as a result of the revolution in the Palatinate in 1848, in which three members of his family earned the highest sentence for treason, I desire earnestly to protest against the exclusion by the bill under consideration of aliens who advocate or teach the unlawful destruction of property, against the provision of section 19, that any who within five years after entry shall be found advertising or teaching the unlawful destruction of property shall be deported; and against the last paragraph of section 28, subjecting to fine and imprisonment, or both, as for a misdemeanor, anyone who knowingly aids or assists any such alien to enter the United States.

These prohibitions against those advertising or teaching the unlawful destruction of property, contained in the present law, mark a new and important departure in our national policy. Those who advocate or teach the unlawful destruction of property are to be excluded; but advocate how? Through books? Through discussion among a small company of friends? This comes too near continuing the folly already in the immigration law of legislating against a state of mind, against those who believe in polygamy, or, like Prince Kuropotkin, possibly, in no organized government. Mr. President, I myself am never in favor of force to settle any difference of opinion between individuals or nations, and neither are the officers of this organization, which includes some of the most persistent workers in the cause of peace that we have in this country, such as Bishop Greer, George Kennan, Seth Low, Louis Marshall, Hamilton Holt, Paul Kennedy, and others; but in the opinion of the bulk of humanity force often must be applied to bring about reform in lands where no adequate provision is made for the peaceful declaration of the popular will. Before and since our Boston "tea party" the annals of history are full of cases where advertising and teaching the unlawful destruction of property have led men and women to come to freedom, to democracy, and to a better common life. As long as forcible revolution is regarded as legitimate the world over, it would be monstrous to say that we should deny an asylum to foreigners who might sit together on our territory and dream dreams of tyrants' yokes broken at home and foreign despots driven from their shores. Shall we set a premium upon the spy and the informer? Shall we brand the exiled patriot as one to be watched, because, sitting in his room with his family about him, he may talk over possible deeds of arms? Perish the thought. The shades of a thousand revolutionists—men like Blanqui, Sigel, and Carl Schurz—would rise to protest. Plotting for freedom is precisely what has always been done in this country and in England.

Representative GOLDFOGLE. Mr. President, I yield four minutes to the former lieutenant governor of the State of New York, the Hon. Robert F. Wagner, who represents, among other institutions, the Tammany Society, or Columbian Order, a society which was formed for patriotic purposes and has stood for liberty and freedom for over a hundred years.

Mr. WAGNER. Mr. President, perhaps I can get through in less than four minutes; but I have the honor, as chairman of a subcommittee appointed by the executive committee of the Tammany Hall organization of the county of New York, to present this resolution for your consideration, in which we express our opposition to this measure, and also the hope that you will disapprove it. [Handing paper to the President.]

There was one thought that came to me, Mr. President, while this discussion was going on, and that is, What is the matter with our country now that this extraordinary literacy test should be imposed upon our immigrants? In the city of New York we have a population 80 per cent of which consists either of foreign born or the children of foreign born, and yet I submit that we have one of the greatest cities, if not the greatest city in the world, and our illiteracy rate is lower to-day than it ever was in the history of our country. We have there a free college—the College of the City of New York—with which your Excellency is no doubt well acquainted, and of which I have the honor to be a graduate. And, by the way, I am a foreigner—a foreigner in the sense that I was born in a foreign country and came here as a young boy. In the College of the City of New York we have at least 90 per cent children of foreign born, and of that 90 per cent, I take it, 40 per cent at least are the children of illiterate foreigners who have come to our country to seek freedom and an opportunity to work out an existence under happier conditions. Now, no one, it seems to me, can contend, in view of this experience within our own city, that this foreigner, illiterate though he may be, is a menace to our institutions. On the contrary, he is interested in them; he works in our industries to help build up our industries; and wants to give his children the best education possible, so that he may, if possible, become part of our institutions.

So we feel that this proposed law is un-American; it is undemocratic; it is in violation of the fundamental principles upon which our Government was built; and we feel that if this literacy test should be imposed at this time it is not a test of character, it is not a test of intellect, for illiteracy does not necessarily mean ignorance; nor does it mean that the individual will not be useful in the community where he may resides; and it will deprive our country in the future of men the like of whom in the past have helped to build us up and make us great.

In conclusion let me just say this: There are a number of refugees, no doubt, who will seek our shores just at this time, when their country is in turmoil and strife, where they are being oppressed, and they want to come to this country because we are enjoying peace and happiness and brotherly love, and largely due, entirely due, to your own efforts. [Applause.]

Representative GOLDFOGLE. Mr. President, I present Mr. Louis Marshall, president of the American Jewish Committee, and yield to him seven minutes.

Mr. MARSHALL. Mr. President, this is the third time that an immigration bill containing a literacy test has been presented to the President of the United States for consideration and action—first to President Cleveland, who vetoed it in a vigorous message; next to President Taft, who vetoed it; and now it is presented to your Excellency.

I feel that if this bill, as now prepared, should become a law it would be taking a step backward in our American civilization. It would make a decided change in the policy of our Government. Our Nation, which has been in the past the asylum of the oppressed of all countries, would no longer possess that proud distinction which has made it the home and cradle of liberty. The literacy test has been evolved after many years of labor on the part of the restrictionist as the touchstone which shall determine whether or not an immigrant shall be received into this country.

The arguments which have been presented hereby Prof. Fairchild and Prof. Ross are not arguments in favor of the literacy test, but in favor of the prohibition of immigration altogether. I have heard no argument presented by them which in any way indicates that the literacy test has any value whatsoever. Those who are opposed to its adoption and to restriction are not so unpatriotic as to say that our doors should be kept open to the immoral, to the defective, to the insane, to those who would be a menace to our country. As good citizens, we subscribe to the principle that our Government has the right to keep out those who by virtue of their bad character or other equally undesirable qualities should not be admitted. But before we adopt a test of exclusion it is important to understand whether that test means anything; whether it tests anything. After all, what do we want in this country? We want men and women—men and women of character, of principle; people who are industrious and who are willing to devote their energies to the upbuilding of the country.

The gentlemen who are in favor of this test seem to act on the theory that this is a country in which we have the right to be selective, to divide people into groups, and say, "You shall come, and you shall not come"; "you from eastern Europe must be excluded; we are perfectly willing to take you from western Europe." But that is un-American, and that would be injurious to the best interests of this country. This is a land of immigrants. Two hundred years ago there were very few people in this country, and all who were here were immigrants at that time. In 1790 there were about three and a half million people in the United States, and a very large percentage of these people were immigrants. We have now grown, in the last 125 years, from 3,500,000 to nearly 100,000,000, and a very large percentage of those are the children of immigrants or immigrants themselves. I also have the proud distinction of being the son of immigrants, and I feel, from my acquaintance with immigrants from my earliest days, which I have continued down to the present moment, that there is no better part of our population than that which has come to this country from foreign lands during the past 60 years, and who are coming day after day, when the spirit moves them to come, and to cast their lot with the welfare of this country.

Now, Mr. President, what is there in this literacy test which is of the slightest value. Does it indicate that because a man can read these cabalistic 30 or 40 lines which are to be presented to him under conditions of excitement and stress—that if the man can read them he is to be admitted, and if he can not read them he is to be rejected? Does that indicate that the man has character, ability, intelligence? I have known college graduates who have been able to speak six languages and who starved in each of those six languages. [Laughter.] They were unable to make a living. I have known graduates from the Sorbonne and from Heidelberg and from Cambridge and from Oxford who, in this country, lived on their wits and were a menace and an injury to this country. Those who believe that people who preach against American institutions are an injury to this country will find that among them those who are most able in their denunciation of constitutional government are those who are highly educated and who would not be excluded from this country because of their lack of the ability to read and to write. [Applause.]

Representative GOLDFOGLE. Mr. President, I yield two minutes to Mr. Alexander I. O'Rourke, of New York.

Mr. O'ROURKE. Mr. President, in the two minutes I have to be brief. I am going to assume, sir, that your mind as yet has not been made up, either to sign or veto this bill, because, if it were, you would not call this meeting to discuss it. I am going to assume, secondly, sir, that prior to your election as governor of the State of New Jersey you, by reason of your great association with the intellectual institutions of this country, had come to believe, as I, as a graduate, that the education of the people of this country is to be desired. But there is a literacy test imposed here, sir. Literacy does not make for the good of this Nation; and while we are discussing, Mr. President, the literacy of our people, we are forgetting the fundamental principles upon which this country was founded. The colonists said, when they founded this country, that a man was entitled to life, liberty, and the pursuit of happiness. This Nation has stood as a beacon light to all the nations of the world, saying that here all peoples, of all classes, irrespective of education, should have the opportunity to pursue the happiness that they believed they were entitled to. They came from lands wherein they were persecuted. Religion, politics, and other things drove them here, and they came here thankful to this country for offering them an asylum; thankful to this country, whose foundation principles, upon which it was built, granted them this place as an asylum. Therefore they came here with hearts open to us; and we, the sons of these immigrants, realizing what this country has done for our parents, are prepared to sacrifice everything for this country because of its goodness to our parents and because of the advantages it has given to us. In the words of the psalmist, the immigrant and his son will say to you, sir, "If we forget thee, O Columbia, may our tongues cleave to the roofs of our mouths and our right hands forget their cunning." [Applause.]

Representative GOLDFOGLE. Mr. President, I present former Judge Leon Sanders, of New York City, president of the Hebrew Sheltering Immigrant Aid Society. I yield to him three minutes.

Mr. SANDERS. Mr. President, as a Russian by birth, an immigrant by compulsion, and an American by choice, I am here to-day in the name of the Independent Order of B'rith Abraham, a fraternal organization that has 200,000 paying members, and as president of the Hebrew Sheltering Immigrant Aid Society, an organization which spends considerable sums of money for the Americanization of Jewish immigrants, and for the purpose of preventing congestion in the larger cities, to protest against this attempt that is being made in the passage of this immigration bill before you for consideration, to reverse the time-honored policy of this Nation. We believe that the greatness of this country has been produced in a large measure, and almost in every respect, by the immigrants who have sought opportunities here denied to them at home. Many have come here fleeing from religious persecution; others have come here fleeing from political persecution. Whatever their motives have been, they have come here and have assimilated with Americans; have taken part, in time of peace, in building up this Nation to what it is; and have been every ready to shed their blood whenever this Nation called them to the front.

Mr. President, not only is there an attempt to adopt the literacy test but there is something new injected into the law, of which even the lawmakers themselves who have passed it are unable to explain the meaning. "Persons of constitutional psychopathic inferiority" are to be sent back. [Laughter.] I have been looking carefully over all the medical books; I have consulted men of science, men who have given this subject careful thought, and not one was able to give me a definition. How are we going to expect an inspector, getting perhaps $1,200 a year, to define this beautiful sentence, upon the strength of which people abandoning their homes abroad are to be sent back perhaps thousands of miles home? [Laughter and applause.]

Representative GOLDFOGLE. Mr. President, I yield one minute to my colleague, Hon. GEORGE W. LOFT, Representative from the State of New York.

Representative LOFT. Mr. President, I come before you with 179,000 names [handing a petition to the president] of citizens of the State of New York, of men who are the heads of families. We give you this book that we show you now and ask you to veto this measure. [Applause.]

Representative GOLDFOGLE. Mr. President, I yield one minute to Mr. Marcus Braun, of New York.

Mr. BRAUN. Mr. President, in order to avoid repetition I have taken the liberty to sign my statement [handing a paper to the President].

Representative GOLDFOGLE. Mr. President, I yield one-half minute to Mr. J. A. Shiplikoff, of New York City.

Mr. SHIPLIKOFF. Mr. President, on behalf of a quarter of a million organized Jewish working men and women I beg to present their opinion that it would be detrimental to the interests of this country to have this bill restricting immigration passed. I beg to call your attention to the fact that the standard of living has been raised within the last 35 years considerably, since the bulk of immigration from Europe has started, and if anything can lay claim to that it is organized labor, and organized labor in this country consists greatly of immigrant labor. Fully 65 per cent of the American Federation of Labor consists of immigrants, such as I am. [Applause.]

Representative GOLDFOGLE. Mr. President, through the kindness of my colleague [Mr. SABATH], I have been yielded just a few minutes, and I will take those for a few comments by myself.

I desire to say that while much has been expressed in Congress by those who favored restriction as to the desire to exclude the illiterate, the great city of New York, part of which I have the honor to represent, has never been afraid of the immigration problem over there. We realize in that great city, as I think the people throughout the whole country realize, that many of the illiterates who have come to this country have, as has been remarked this morning, made a desirable acquisition in the communities in which they settled, and through the means of our educational institutions and opportunities presented in this great land have been enabled to obtain an education, and in time become worthy and desirable citizens.

We realize, as I think you do, Mr. President, that there are many of the great resources of this country still to be developed. The hand of toil is still necessary. The American farm boy, as has been so frequently remarked, has left the farm, has been lured to cities and towns, and we still need the hand that will work in the tilling and the cultivation of the soil, the tunneling of the mountains, the building of the railroads, the doing of the thousand and one things that are required in the development of the great resources of the land.

Now, if you examine, as unquestionably the departments under you have examined, the records of the savings banks and the other institutions of this country, you will find that the immigrants have added to the welfare and contributed to the prosperity of the land. I wish to say on behalf of the great city of New York, and on behalf of the many institutions of which I am a member and a director, that we emphatically protest against the imposition of this literacy test. We believe it to be unjust; we believe it to be unfair; it is undemocratic; it is un-American. [Applause.]

Representative SABATH. Mr. President, in behalf of the people of the great city of Chicago, with its many civic and social organizations, I have the great pleasure of presenting Miss Grace Abbott. [Applause.]

Miss ABBOTT. Mr. President, it seems to be necessary to present our forbears as a part of the introduction. I want to say that I come of Puritan and Quaker stock, and come here representing a very large group of old native Americans, who believe that the present test is a step backward in American idealism. I am aware that a great deal of the discussion in regard to this test is based on the narrow ground of race and religious prejudice. That, I take it, is unnecessary to discuss here; but that the advocates of the literacy test should believe in it because they think that a curtailment of the number of those who are coming will be of assistance in the solution of a great many of our difficult social and political and economic problems is the question that I want especially to speak on this morning in the few minutes that I have.

At the first conference of charities and corrections which I ever attended, a young sanitary engineer who had been making a study of typhoid fever in the city of Pittsburgh had made the discovery, he thought, that typhoid fever and similar epidemics usually began in our foreign neighborhoods, and spread from there to other parts of the city. His conclusion further was (and I do not want to vouch for anything excepting his line of reasoning) that this was due to the fact that the immigrant was accustomed to a purer water supply at home than the native American, who represented a sort of survival of the fittest, so far as the struggle against impure water was concerned. His further conclusion was that in the interests of public health in Pittsburgh and other cities with large foreign population we ought to be able to work out some kind of test by which we could exclude those who were liable to fall victims to impure water, and so protect the American public. [Laughter.]

Now, that is, of course, the general line of reasoning of those who are discouraged at the slow progress that we are making in the line of pure water, to the better industrial and social conditions, and a more healthful and normal life for us all. They find the discouragement in the way of pure water in Pittsburgh more than they can face, perhaps, and so they say, "Well, let us get rid of some of the group that are suffering from this situation." That is, of course, a kind of short cut which is not going to help us in those problems in which I am more interested than any other; those which mean better control of the conditions under which men and women work, better wages, and better living conditions all around. It is therefore perfectly futile to devote ourselves to this test in the expectation that we are going to change the large group of the people in the community who are opposed to better living conditions for the workingman and better wages for the workingman. The presence of the immigrant is not responsible for that attitude of mind. And so it seems to me that, throughout the discussion of the question of a literacy test brings us round to the question of where we should devote our strength and our efforts and our hopes; and it is not in this direction.

I want to say that I feel very strongly that the immigrants who are coming and who have come in the past have been very distinctly a democratic asset. We have pronounced to the world certain big fundamental propositions in regard to the equality of rights and opportunities. To those we are only struggling to live up, little by little. But the last arrival who comes in the expectation that we are going to make good in these directions has been a real democratic

asset that is going to help us to live up to the larger ideals that we have preached to the world, and which I, as one of the earlier ones, want to join with him in making a reality. [Applause.]

Representative SABATH. Mr. President, in behalf of people that have demonstrated that they are good and law-abiding citizens, in behalf of people that have made good, I desire to present Father John Sobieszczy, representing the Polish-American Catholic Union.

Father SOBIESZCZY. Mr. President, I will not take much time, for all the arguments pro and con are known to all those who are interested. But still, with all those arguments, just because we appreciate and love this country and this Government, and everything that has made the name of the United States so glorious amongst the nations, voicing the sentiments of the organization that I represent, numbering 80,000, and at the same time voicing the sentiments of all the Polish people, who for the most part are a laboring class, I protest and protest strongly against this literacy test; for it is unjust, unfair, undemocratic; and we believe it aims at the foundations of American liberty and liberality. [Applause.]

Representative SABATH. Mr. President, the Polish citizenship of this country is represented here by Mr. Adam S. Gregorowicz, representing the Polish National Alliance of America.

Mr. GREGOROWICZ. Mr. President, on behalf of the Polish National Alliance, which aggregates about 125,000 members, I concur in everything that has been said against the literacy clause, and in addition, without taking up much time I would like to lay stress upon one argument that has appealed to me very forcibly and which I have not heard mentioned here by anyone present, and that is this: That while this literacy clause strikes the man who can not read and write, although he may be healthy and otherwise admissible, the same law bars out his children and the children's children, and thereby dooms them to suffer the conditions from which the parents sought to escape; and it is therefore legislation against one generation to the prejudice of the descendants of that generation, while the mentally weak and unfit aliens are barred out under other conditions of the law. Their descendants have in no way the same chance as the descendants of healthy immigrants who would be excluded.

I have also been asked by another Polish delegation which is here—and I suppose they will not have the opportunity to express themselves—the representatives of the Polish American Citizens' League of Pennsylvania, to register their protest against this proposed literacy test.

Representative SABATH. I have a petition here which I desire to present to you, Mr. President. [Handing a paper to the President.]

Now, Mr. President, permit me to present to you the representative of the Polish Women's Alliance of America, Miss Napieralski.

Miss NAPIERALSKI. Mr. President, this I deem will be the greatest honor of my life. As an American born, it is the first and perhaps the last privilege to come before the President of the United States and before a large body of learned men, and because my time is limited I will confine myself to just a few words.

Mr. President, the mother of one of the greatest Presidents in American history signed her name with the sign of the cross, and yet her son was the greatest emancipator of man, whose memory is sacred to all of us—Abraham Lincoln. [Applause.] As the representative of the Polish women of America I have come here to protest against this unjust, un-American, and unconstitutional bill.

I thank you, Mr. President. [Applause.]

Representative SABATH. Mr. President, my time has been taken away by others, therefore I am deprived of the pleasure of presenting to you other gentlemen who are here to address you. But permit me to say that in behalf of the Bohemian and other foreign-born people of Chicago and of Illinois and in behalf of the foreign-language newspapers of the United States I am asking that you should veto this bill. They have requested me to do so. I regret very much that I am deprived of the privilege of calling upon them, but I am doing the very best I can. My time is up, and I hope that you will take into consideration the plea of these millions of honest foreign-born citizens who are hoping that you will veto this unfair bill.

Representative GALLIVAN. Mr. President, as the closing speaker for the protestants against the pending legislation I desire to introduce, for the 15 minutes left to us, the Hon. W. Bourke Cockran, of New York. [Applause.]

Mr. COCKRAN. May it please your excellency: Listening here to everything that has been said since the opening of this discussion, I think I may assume there is one point on which we will all agree, and it is that the policy which this pending measure aims to abandon—nay, completely to reverse—is as old as this Nation itself. I do not think anybody will dispute that it has been the distinctive policy of this country, and if it is to be judged by the results that it has produced I do not think any in the history of mankind has ever been so triumphantly vindicated. Certainly nobody can dispute that during the period of its enforcement, now stretching over 125 years, this country has reached a measure of prosperity entirely without precedent in human experience. But at the same time the influence that it has exercised throughout the world has been simply incalculable. I do not think it is an exaggeration to say that the light of hope it has kindled among the oppressed and the suffering in every quarter of the globe has been a constellation in the firmament of civilization that has worked the chief influence in accomplishing the uplift in human conditions that has marked this last century beyond all the centuries that have preceded.

And yet, Mr. President, I quite agree with the gentlemen who have spoken here. Perhaps I would go even further and say that the merits of this measure should be considered entirely by the effect it will produce on this country. Your Excellency and the other officers of this Government are bound to defend the interests of this land. To that you have sworn. You are pledged to loyalty; you are not pledged to anything else. If the effect of this measure shall be beneficent to all the world we may rejoice at the universal good that it works. But though it should benefit every man in every other country throughout the world, if it should work injury to our own citizens its abandonment and its reversal, prompt and immediate, becomes a duty that is imperative and inescapable.

Now, that being so, Mr. President, I ask your attention for a moment to the character of the arguments that are being advanced here in favor of the bill, for I think you will agree with me that where a policy unbroken since the establishment of the country, whose benefits nobody here questions, is sought to be reversed the affirmative lies with the proponents of the measure. I have followed very carefully everything that has been said here, and I can find not a single evil that has actually occurred to this country which is charged against the immigration. The most vehement of the orators on the other side, and the most eloquent, anticipate dangers from it, but none has pointed to a single evil consequence yet. For I take it that the distinguished scientist in lunacy who told us about the spread of insanity throughout the world does not charge that to immigration. But even if he did, a literacy test would be no particular measure by which we could determine whether a man was either crazy or approaching lunacy. [Laughter.] I take it that may be considered negligible.

Now, I am repeating that we must consider the measure solely from the point of view of its influence upon this country. I want also to state that the proponents and the opponents of this bill have no issue as to the precautions which should be taken against the exclusion of the undesirable; that is to say, of the vicious, of the incapable, or of the diseased. There are no measures sufficiently drastic to suit us in that respect. But, on the other hand, we believe that men and women—laborious, meritorious, virtuous—seeking this soil for the chance to cultivate it loyally, anxious to establish homes under the protection of our flag and to rear their children in reverence for our Constitution and our laws, far from being a danger, actual or potential, to this country, are the most valuable contributions to its well-being that can pass through our seaports. [Applause.]

Now, Mr. President, let us test just what the effect of this measure will be. First, I assume that the literacy test can be disregarded as a serious test in itself. Its purpose is to shut out immigration. As one of the speakers said, it is the most effective method that can be employed. The gentleman who represents the Locomotive Brotherhood I do not think was particularly sensitive about the literary quality of these immigrants. He wants them shut out because 350,000 boys, as I think he described them, expected your Excellency to do it. [Laughter.] Now let us see what the effect of that would be. As far as the literacy test is concerned I will say this: That from what your Excellency has heard, I do not think that you would regard with particular favor a measure that distinguished against the laborious and in favor of the loquacious. [Laughter.] I do not think that the literacy test in itself proves any merit whatever except a certain glibness of utterance which might well be dispensed with in favor of expertness in labor. I believe that a calloused hand, a hand calloused by labor, should be a better passport through our customhouse than a tongue supple in several languages. I do not think this country needs linguists; I do think it greatly needs laborers.

Now, in addition, the labor of the country is, I suppose, really at the base of the opposition which comes from gentlemen who are associated with organized labor. I am perfectly willing that the consequences of continuing immigration shall be determined by its influence on the rate of wages to be paid to labor. I know of no test that can establish the prosperity of the country except wages of labor. Now, then, it is absolutely unbelievable that wages can be high unless production is abundant, and that production can be abundant unless prosperity is general. Now, how would this affect labor? These gentlemen seem to think that every man who comes to this country displaces somebody else. They forget the entire structure of our industrial system. No man can work except as somebody gives him an opportunity to work. The man who casts seed upon a western field would be perfectly senseless unless he employed another man to reap, another to transport his grain, another to mill it, and still another to distribute it among the consumers. Would there be any sense in mining ore from the earth if other laborers were not employed to transport it and transmute it into steel? Every man who works creates an opportunity for labor instead of depriving it of an opportunity, and that is especially true with reference to skilled labor. Now, I wonder if these gentlemen realize that skilled labor can not be employed upon the earth, but only on some product of it, and that product must be drawn from the earth by unskilled labor. Can the carpenter ply his trade before he is furnished with lumber, and can he be furnished with lumber until the tree is cut down by the hand of an unskilled workman? Can a bricklayer be paid $6 a day for laying brick if some unskilled workman is not found to carry his bricks? Does anybody suppose he could be paid at that rate if he had to carry his own bricks? Is there any skilled laborer in the world that can work until the raw material of his product is furnished to him as the theater in which his craft must be exercised? Yes; the immigrant does displace the native labor, for this basic labor must be employed before any industry is possible. The immigrant performs that basic labor which is the fountain of all industry. He does displace the native laborer there; but how? He takes the native laborer on his back and lifts him up to a higher plane, where he gets better wages. [Applause.] And as the immigrant straightens himself under the influence of the better conditions he is enjoying he is lifting the native skilled labor higher and ever higher, to better conditions and higher wages.

Mr. President, what other objection is made to this policy that would justify us now in abandoning it? Why, without this stream of immigrants coming in here the supply of commodities would be so diminished that not merely would skilled labor be deprived in a large degree of the materials on which it exercises its craft; but generally, throughout the whole world, there would be a diminution of the supply of commodities, so that the cost of living would go still higher, while the rate of wages would necessarily go lower. This work must be performed or all industry must end; and this laborer, this immigrant, is coming here in streams to perform it so that the native laborer may gain higher wages. He is, Mr. President, the Helot of this age. As the Helot of Sparta gained admission to citizenship by service on the battle field, he comes here to gain citizenship for his children and for himself by more meritorious service still upon the industrial field.

Now, is there any objection on the score of political expediency? If there be corruption in politics throughout this country—and very great corruption has been found in certain localities—they have not been those where naturalized citizens were in the great majority. But, Mr. President, this is not a question of citizenship; this is a question of admission to our population. You speak of tests that should be applied to a man coming into this country, and you say that he must be brought up to the test you exact from your own. Let me ask, Is any test exacted at the ballot box, where the supreme act of sovereignty is exercised by the citizen? Do you exclude men from that greatest of all functions that have ever yet devolved upon the common man because they can not read and write? You are here trying to apply a higher test to the man who comes here to work for you than you apply to the man who governs you. Mr. President, there may be some reasons for applying a literacy test to the exercise of the suffrage. That is not before us now. But the man who comes here to work with his hands must produce more than he consumes, otherwise there would be no profit in employing him. He is a contributor to this land, to its material prosperity, to its wealth, and, I believe, judged by all history, to its stability. He takes from it in return the admission to this life, the greatest boon that can come to a man upon this earth. There is not an unreserved grant on either side. There is service on both sides; and that mutual service has produced what? This people.

Will any of those professors who are so much afraid of the influence of these immigrants upon our labor tell us that there is a people in all the world can compare with us now? And what are we? Why, the product of a commingling of blood—those who live here and those who are constantly coming here. There has not been in the world a population like this, and this population is produced through that free access of all members of the Caucasian race and the commingling of their blood. They are always the best who come, for none but the best would be capable of the determination and the enterprise that would bring them away from home, sacrificing the associations of a lifetime and of the generations that preceded them, facing all the discomforts of an ocean voyage, landing upon this soil with nothing in the world but the capacity to labor. They are the men that we want. We can not have too many of them. We should not put the slightest barrier in their way, but we should ask them to come, that this stream of prosperity of which they have been in a large degree the source, of which they have been in the highest degree the tributaries, shall continue undiminished while this land remains peopled by us and by those who shall follow us.

Mr. President, I might almost say that it would be a very extraordinary thing that this measure should be proposed, if it were not, after all, but another appearance of a tendency old as human nature.

The spirit that is against this immigration under this bill is one form of a conflict that has been waging ever since civilization began. It is a blow against our civilization. Mr. President, there are but two forms of civilization. One might be called the civilization that trusts humanity, the other that distrusts it; one that builds institutions under the conception that if all men be given equal voice in the control of the Government its powers will be exercised for the protection of everyone, and the other which holds man so depraved that if he be trusted with power it will be abused; so that the majority—the poor, who are always a majority—would exercise their political functions to plunder the rich, who are always a minority. These two systems of civilization have been now on trial before the world. Ours is vindicated by the most glorious fruits that a political system ever bore, and it is now sought to change the policy of this country and enact this legislation, conceived in distrust and dislike of humanity. Substitute for that legislation a broad confidence in human kind that has blessed this land as no land ever was blessed before. It is, Mr. President—and I say it with all respect to these gentlemen, for I do not think they quite suspect themselves the real motives and forces that govern them—it is a revival of that savagery which finds a strong exemplification in the desperate war now ravaging foreign lands. This,too, springs from that distrust of humanity which made each nation arm, under the impression that all other nations coveted its territory, and could only be restrained from assailing it by the force that could be organized to resist it. This country conducted its Government on another plan, and now behold, all the countries that took armed precaution against war, based upon distrust of humanity, are being massacred by a dreadful machinery which already has cost the lives of the flower of their youth; and this country, which has trusted entirely in that spirit of humanity that will not assail unless it is assailed, and that will trust where it is trusted, is now in the enjoyment of perfect peace and of a prosperity, not equal to that which was its own when it traded freely with the countries whose industries were throttled, but still without a single building ruined, without a single city attacked, without a field ravaged, without a man killed. Now, the very same spirit that is back of this bill wants that policy abandoned, sir. Nay, they want to put your office in commission. They propose to create a commission of nine to give the Congress and the people information about our armed condition, because we are unprepared. But the Constitution makes you the authority who should furnish that information, and it creates that authority that the peace of the world may be preserved. And you have been faithful to that trust. You have stood against every storm of criticism that would be calculated to move even a man in your exalted place. The same spirit has checked that manifestation, and insists that this country shall remain unarmed, following out this old policy at least until it can be seen whether the result of this war will enable the world to come and adopt ours, before we should even consider being driven to adopt theirs. We earnestly hope that this spirit of distrust exemplified in this bill shall be defeated, and that those features of your policy which this and other measures propose to change, and which I think are the most valuable that this country has ever enjoyed in a great crisis of civilization, shall be upheld. The defeat of this measure will mark the triumph of our civilization, the security of this Government, the continued stream of immigration that will feed the springs of our production and continue our prosperity at least at the level that it has attained, and probably carry it higher than ever; whereas if this measure passes, it not only will impair our prosperity, not merely cloud our credit, but it will darken the prospects of humanity throughout the world.

Mr. President, I am glad that I can couple the prayer of humanity with the demands of this people. This people have a right to ask that a policy tried by 125 years of success shall not be lightly altered. The whole human family look with eyes of unuttered longing to the action that you shall take here, and which shall decide whether this light of hope shall be extinguished forever, an extinction which I believe would be a loss to humanity greater even than the war that is now ravaging a large part of Christendom. [Applause.]

Mr. EDWARD T. CAHILL. Mr. President, I desire to present, as a citizen of the United States, my plea for the nations of Europe and their children. [Handing a book to the President.] I feel that in presenting this as a citizen I am reechoing the sentiments that you reecho. Only those can speak who can feel. In this argument I tell the history of the alien laws; I tell the growth of our country as illustrated in your own acts and your own history; I connect that with our present acts down to date, and bring out a new theory, namely, the right of locomotion, etc.—the right of the people to move from one place to another; and I furthermore bring out all the treaties with reference to that and bring out the further ideal, as our friend from New York said, of you being the great peacemaker of the world. [Applause.]

The PRESIDENT. There is a gentleman present, a Mr. Russell, whom I would like to hear for a minute or two.

Mr. CHARLES EDWARD RUSSELL. Mr. President, I thank you for kindly allowing me to be heard on this subject.

Some limitation and restriction of immigration is undoubtedly necessary and salutary. We are opposed to this measure because the provision of the literacy test would be unscientific, unsound, and extremely difficult to enforce. Consequently it would not reach the purposes aimed at in the bill. No provision, perhaps, could be more easily evaded than the literacy test.

Next, when there are at least two other tests, two other measures, that would reach the end sought, and that would not be open to the objection of the literacy test, is it not unfortunate that we should adopt this test, which is open to objection on so many grounds and which in all probability can not be enforced?

In behalf, therefore, of the Socialist Party, which I represent here, I offer this protest against the bill, and on one other ground, for I have sat here this morning and have been amazed to note that but one speaker has called attention to what is, in my judgment, the most deadly defect in the measure. Are we aware, Mr. President, of the fact that if this bill becomes a law we have abolished the right of political asylum in the United States? We have done it without a question. Take the provisions in section 12 and in section 28 and the only effect of them will be to utterly destroy the right of political asylum. Who are we, Mr. President, in this country that we should pass judgment upon the measures used by patriots in other countries to effect their liberty? We do that in advance in this provision in regard to the unlawful destruction of property. It is one thing, Mr. President, in a country that has universal suffrage, that has the right of free speech, free assembly, and a free press, it is one thing; but in a country that has none of these rights with respect to agitation for liberty it is a totally different thing. Only those who, like myself, have been engaged in the fight to preserve this right of political asylum in the United States can know how difficult it has been, and how increasingly difficult. This bill proposes finally to abolish that right. Are we ready to take that step? That is the greatest question of all involved in this bill—the right of political asylum. Bear in mind that if we had had this bill as a law in years gone by not one of the eminent refugees that have come here in the last century could have been admitted. Garibaldi, Sigel, John Mitchell, the grandfather of the present mayor of New York, Carl Schurz, every distinguished refugee from a foreign country who had agitated for political freedom would have been excluded if this act had been in force. If we put this law upon the statute books finally, we have abolished that right which has been so difficult to maintain.

In behalf, therefore, of the 1,000,000 Socialists of this country whom I represent I petition you, Mr. President, to veto this bill. [Applause.]

The SPEAKER. The time of the gentleman has expired.

Mr. GALLIVAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. The gentleman from Massachusetts asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. MANN. Mr. Speaker, to save time, I hope the gentleman from Alabama will ask that all Members who speak on this veto message may have permission to extend their remarks in the RECORD.

Mr. BURNETT. Mr. Speaker, I make that request.

The SPEAKER. The gentleman from Alabama asks unanimous consent that all gentlemen who speak on this veto message be allowed to extend their remarks for five legislative days in the RECORD. Is there objection?

Mr. LINTHICUM. Mr. Speaker, reserving the right to object, I would like for the gentleman from Alabama to include other Members also.

Mr. BURNETT. Mr. Speaker, I make that request, that all gentlemen be permitted to extend their remarks in the RECORD.

The SPEAKER. The gentleman modifies his request and asks that all gentlemen have five legislative days in which to extend their remarks. Is there objection? [After a pause.] The Chair hears none. If nobody wants to speak—— [Cries of "Vote!"]

Mr. MOORE. Mr. Speaker, I yield five minutes to the gentleman from North Dakota [Mr. NORTON]. Mr. Speaker, I will occupy the floor myself, to be taken out of my time, until Mr. NORTON is ready to proceed. It is only a matter of getting some papers.

Mr. NORTON. Mr. Speaker, for more than three centuries the territory included to-day in these United States has been a haven toward which the downtrodden, oppressed, and persecuted of other lands have turned with wistful, longing eyes. Thousands of them have braved the most terrifying dangers of sea and land seeking a home and a better life on this new continent.

The Government which you men on that side and we on this side to-day enjoy was conceived in liberty and dedicated to the cardinal principles of equality and unrestricted opportunity to all men.

For more than a century our Constitution, our laws, and our people have invited and welcomed immigrants to our shores. The unceasing tide of immigration that has flowed from Europe into this Nation for a hundred years has never endangered or menaced its stability. On the contrary, it has enabled us to bring forth to the world out of a wilderness of forests, prairies, and mountains and firmly establish on this continent a Nation incomparably richer in material wealth and richer in the happiness, the contentment, and the political and religious freedom of its people than any nation the hand of God has ever blessed.

With this record of national development and achievement before us under a distinctly American immigration policy, a policy older on this continent than the Nation itself, the proponents of this bill aim to overturn this policy and adopt instead a policy of rigid restriction and exclusion which, in its operation, will debar from admission to this country a large number of poor and unfortunate, honest, healthy European immigrants and will not at all tend to keep out the educated gambler, society

crook, or common rascal who, as an immigrant, comes to us to live by his wiles and his wits and to become an addition to the already large number of parasites feeding off the toil and labor of our honest working class.

The thought impresses me that it would be a very great mistake to now place an embargo on willing hands and brawny muscles. Would it not be much better to increase the efficiency of our existing methods and machinery for distributing arriving aliens so that they might readily reach our vast and scattered demands?

Some of the gentlemen from the South, representing States where the good red blood of honest, healthy European immigration is strikingly conspicuous by its absence and where the greatest illiteracy among native white citizens in this country is to be found, who are most eager for and insistent upon the enactment of this legislation, recall to my mind two pictures I have seen. The first is that of a large lifeboat containing a few apparently well-cared-for and well-groomed professional men, business men, and officers struggling in the billowy waters of the sea. Surrounding the lifeboat are a few poor sailors, with tearful eyes uplifted, beseeching safety in the lifeboat. The occupants of the boat observe the unfortunates in the sea, but give no aid, because they have concluded that the admission of these men to the boat might crowd or inconvenience themselves in some way. The other picture shows the same large lifeboat, with the same occupants, dashed upon the rocks and being lost in the angry waves of the sea for lack of sufficient brawn and muscle to man her oars.

The proponents of the provisions of this bill in a narrowness of vision seem to have lost sight of the birth, the purposes, and the history of this Nation. They who to-day set up the cry that European immigration is the greatest menace to the welfare and well-being of the people of this Nation overlook the underlying principles of this Republic. This cry against honest, healthy, able-bodied immigrants with ready hands and willing hearts to work is not a new cry. It is the same old, narrow, self-centered, selfish complaint that was made by narrow-visioned Americans even in the days when the Nation was in its infancy. In the second annual report of the managers of the Society for the Prevention of Pauperism in New York City, published in 1819, we read the following conclusions:

> As to the emigrants from foreign countries, the managers are compelled to speak of them in language of astonishment and apprehension. Through this inlet pauperism threatens us with the most overwhelming consequences.

On page 21 of the same report we find this calamitous complaint:

> For years and generations will Europe continue to send forth her surplus population. The winds and the waves will bring needy thousands to our seaports and this city continue the general point of arrival. Over this subject we can no longer slumber. Shall we behold a moral contagion spreading and expanding with the most inveterate ravages amid the ranks of our growing population without endeavoring to arrest its progress? Shall this mass of immigrants be suddenly identified with ourselves and our children, inculcating their habits and their principles without an effort on our part to stay the impending calamity? Why attempt to exclude the ravages of sickness and disease and suffer the fatal ravages of moral desolation to stalk in triumph among us?

We read from an article published in 1835 entitled "Imminent Dangers to the Institutions of the United States of America Through Foreign Immigration":

> Then we were few, feeble, and scattered. Now we are numerous, strong, and concentrated. Then our accessions of immigration were real accessions of strength from the ranks of the learned and the good, from enlightened mechanic and artisan and intelligent husbandman. Now immigration is the accession of weakness, from the ignorant victims of the priest-ridden slaves of Ireland and Germany, or the outcast tenants of the poorhouses and prisons of Europe.

In the report of the meeting of the delegates of the Native American National Convention held in Philadelphia on July 4, 1845, the following is found in one of the addresses delivered at the meeting:

> It is an incontrovertible truth that the civil institutions of the United States of America have been seriously affected, and that they now stand in imminent peril from the rapid and enormous increase in the body of residents of foreign birth, imbued with foreign feelings, and of an ignorant and immoral character.
>
> The almshouses of Europe are emptied upon our coast, and this by our own invitation, not casually or to a trivial extent, but systematically and upon a constantly increasing scale.

And so this cry against immigration has been made since from almost the birth of this Nation to the present time by those blinded by a narrow selfishness and prejudice, refusing to read or recognize the pages of our country's history, that is so grandly emblazoned with the patriotic deeds and marvelous achievements of thousands of immigrants who reached our shores in deepest poverty and distress, but with the bright hope burning in their breasts that these United States would give the honest labor of their hands and their intellects opportunity to win and enjoy a quiet and peaceful home and a new and a better life.

At first the threatened menace of immigration was from England. Next it was the Irish; then the German immigrant, who was heralded as endangering American institutions. More recently the Swede and the Norwegian immigrant was the subject of attack as being an undesirable addition to our citizenship. To-day we are told the threatened danger lies in immigration from southern Europe and from Poland and Russia. While reading in the library a few days ago I came across a paragraph in an article in the National Geographic Magazine for November, 1914, which is interesting in this connection. The National Geographic Magazine is not, as you know, a political magazine. The paragraph I refer to appears on page 519 of the copy of the magazine I hold in my hand.

The SPEAKER. The time of the gentleman has expired.

Mr. NORTON. Mr. Speaker, I shall ask the gentleman from Pennsylvania for a few minutes' additional time.

Mr. MOORE. I yield two minutes to the gentleman.

Mr. NORTON. On this page is a picture of an interesting group of men and women—Russian immigrants to Siberia. Under the picture is the following:

> Such people as these undoubtedly will prove to be the progenitors of a race that will compare with our own sturdy farmers in the Northwest. A group of Russian peasants emigrated to Siberia with nothing but the clothes on their backs, a little flour, some home-tanned leather, and a few tools for carpentry and blacksmithing. The first day they made two sets of ovens out of brick they prepared from a clay bed near by, and the men burned charcoal, while the women made bread. Within two days after their arrival they had six blacksmith's forges going, and inside of 10 days they had built themselves rude houses, made wagons, manufactured spades by the dozen, and reshod their horses, all the iron used being forged on the ground.

And the paragraph concludes with—

> Yet none of them could read or write.

Has the time arrived in this country when we should debar men and women of this kind and character from making homes in this country, which has an area so great that our population could be increased tenfold, and then it would not be as dense as the present population of Germany. I do not think it has. In 1910 we had in the United States but 30.9 people to the square mile of our area, while Germany has 312 and the United Kingdom of Great Britain and Ireland 374 to every square mile of area.

We should not allow our better selves and our better senses to be blinded by the blare of the supporters of this shocking measure to the debt we owe to past and present generations of splendid men and women, who came to us from foreign lands knowing nothing of education but knowing everything of honest toil, clean living, and loyal and lasting devotion to their adopted country. We should not forget our duty to open the door of hope to every sincere, honest man, whether he knows how to read or write. We should not pass this bill, for its enactment into law clearly places lettered scoundrelism above untutored industry and virtue.

The action of President Wilson in vetoing this bill and the action of President Cleveland and President Taft in vetoing immigration bills containing the same indefensible, un-American provisions included in this bill has been and will be commended and approved everywhere by those having a proper conception of American ideals and American aspirations. In returning the immigration bill without his approval President Cleveland, in his message to the House of Representatives on March 2, 1897, has well said in reference to the literacy test contained in the bill, the following which in every way applies to the bill we are now considering:

> A radical departure from our national policy relating to immigrants is here presented. Heretofore we have welcomed all who came to us from other lands, except those whose moral or physical condition or history threatened danger to our national welfare and safety. Relying upon the zealous watchfulness of our people to prevent injury to our political and social fabric, we have encouraged those coming from foreign countries to cast their lot with us and join in the development of our vast domain, securing in return a share in the blessings of American citizenship.
>
> A century's stupendous growth, largely due to the assimilation and thrift of millions of sturdy and patriotic adopted citizens, attests the success of this generous and free-handed policy which, while guarding the people's interests, exacts from our immigrants only physical and moral soundness and a willingness and ability to work.
>
> A contemplation of the grand results of this policy can not fail to rouse a sentiment in its defense, for however it might have been regarded as an original proposition and viewed as an experiment, its accomplishments are such that if it is to be uprooted at this late day its disadvantages should be plainly apparent and the substitute adopted should be just and adequate, free from uncertainties, and guarded against difficult or oppressive administration.

The policy and purpose of this bill are indefensible. It is more afraid of illiterate fathers than it is gratified by their educated children. The last census reports clearly show that

the smallest proportion of illiterates is found in this country among the children of our immigrants. Among children of 10 to 14 years of age born of our native white stock 44 in 1,000 can not write. Among the children of our immigrants of the same age only 9 in 1,000 can not write. This bill looks in a nearsighted way, very narrowly at the present, and is blinded to the future. It means well, but it acts without foresight or reason.

Because the literacy test contained in this bill is neither a test of moral character nor a test of intelligence I shall vote against the bill. Because I am not blinded to the fact that the literate children of illiterate immigrants have done many million fold more good for this Nation than any harm that has come to it from immigrants who were unable to read or write I shall vote against this bill. Because the bill in several of its provisions is unreasonable, unfair, and un-American I am opposed to it, and I hope the action of this House will defeat its objectional provisions.

The SPEAKER. The time of the gentleman has again expired.

Mr. GARDNER. Mr. Speaker, I yield 10 minutes to the gentleman from Washington [Mr. JOHNSON].

Mr. JOHNSON of Washington. Mr. Speaker, in his message vetoing H. R. 6060, the bill to restrict immigration of aliens, the President of the United States says the bill—

seeks to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural and inalienable rights of men.

The President offers that objection in addition to his objection to the literacy test.

Mr. Speaker, I shall devote the time allotted to me to a discussion of sections 3 and 19, which are the paragraphs to which the Society of Friends of Russian Freedom and other organizations most bitterly object and are the paragraphs to which one of the President's objections applies. Section 3 denies admission to various persons, including—

persons * * * who advocate or teach the unlawful destruction of property; persons who are members of or affiliated with any organization entertaining and teaching disbelief in or opposition to organized government, or who advocate or teach the duty, necessity, or propriety of the unlawful assaulting or killing of any officer or officers, either of specific individuals or of officers generally, of the Government of the United States or of any other organized Government, because of his or their official character, or who advocate or teach the unlawful destruction of property.

Mr. Speaker, that clause, with the exception of the words "who advocate or teach the unlawful destruction of property," is current law. (Sec. 38, act of 1907.)

Asylum for political refugees is clearly established in the words of the first proviso of section 3 of the present bill, as follows:

Provided, That nothing in this act shall exclude, if otherwise admissible, persons convicted of or legally charged with an offense purely political, not involving moral turpitude.

Now, then, a word as to section 19 of the Burnett bill. This section reads as follows:

That at any time within five years after entry any alien who at the time of entry was a member of one or more of the classes excluded by law; any alien who within five years after entry shall be found advocating or teaching the unlawful destruction of property, or advocating or teaching anarchy, or the overthrow by force or violence of the Government of the United States or of all forms of law or the assassination of public officials * * * shall be deported.

Objection is made to this clause, although most of it is now current law, the new part being:

Any alien who within five years shall be found advocating or teaching the unlawful destruction of property.

Mr. Speaker, these clauses, in my opinion, make the whole bill worth while and more than overcome any sentimental reasons or "on-first-thought" objections to the so-called literacy test.

"Shall we abolish asylum to those who seek political freedom?" shout those who want still more nostrums of the Old World taught to those who have come here as workers and toilers and who hope to rise through individual effort. And we answer, "Shall we have no redress against those who are flocking to this country to teach sabotage and to inflame and incite those who are here in the hope of bettering their conditions?"

I invite your attention while I read a few paragraphs from an article recently published in the International Socialist Review. This publication can be found, by the way, in nearly all of our public libraries. I have found it nearly always on the tables of libraries of towns of from 10,000 to 25,000 population, and I am informed it is sent to those libraries free of charge. High-school pupils, asked by their teachers to debate socialism, go to the libraries and find such statements as the one I am about to read, which, permit me to say, are not indorsed by all Socialists. The article in question is entitleld "How to make work for the unemployed." It declares that 5,000,000 persons in the United States are in need of work, and says:

Some writers propose to "organize with the unemployed"; that is, to feed and house them in order to keep them from taking the jobs away from the employed workers. Others, again, want to organize a gunmen defense fund to purchase machine guns and high-powered rifles for all union men, miners especially, that they may protect themselves from the murderous onslaughts of the private armies of the master class. Very well; these tactics may be perfectly good, but the question arises, Who is going to pay for all this?

What the working class needs to-day is an inexpensive method by which to fight the powerful capitalist class, and they have just such a weapon in their own hands.

This weapon is without expense to the working class, and if intelligently and systematically used it will not only reduce the profits of the exploiters, but also create more work for the wage earners. If thoroughly understood and used more extensively it may entirely eliminate the unemployed army.

To illustrate what he calls the "efficacy of this method of warfare"—which is sabotage, pure and simple—the writer cites an incident which occurred in the district I have the honor to represent. He says:

Some time ago the writer was working in a big lumberyard on the west coast, where nearly all the work around the water fronts and lumberyards is temporary.

The writer and three others got orders to load up five box cars with shingles. When we commenced the work we found, to our surprise, that every shingle bundle had been cut open—that is, the little strip of sheet iron that holds the shingles tightly together in a bundle had been cut with a knife or a pair of shears on every bundle in the pile—about 3,000 bundles in all.

When the boss came around we notified him about the accident, and, after exhausting his supply of profanity, he ordered us to get the shingle press and rebundle the whole batch. It took the four of us 10 whole days to put that shingle pile into shape again. And our wages for that time, at the rate of 32 cents per hour, amounted to $134. By adding the loss on account of delay in shipment, the "holding money" for the five box cars, etc., we found that the company's profit for that day had been reduced about $300.

So there you are. In less than half an hour's time somebody had created 10 days' work for four men who would have been otherwise unemployed, and at the same time cut a big chunk off the boss's profit. No lives were lost; no property was destroyed; there were no lawsuits; nothing that would drain the resources of the organized workers. But there were results. That's all.

This same method of fighting can be used in a thousand different ways by the skilled mechanic or machine hand as well as by the common laborer.

The article goes on to give further instructions as to how to practice sabotage in all lines. This is a new thing, comparatively, in this country, although it has been growing rapidly during the past three or four years. It has come from abroad, along with the teaching and preaching by clever agitators that individualism has played out in the United States—that opportunity is gone. These teachings are coming right along with the influx of more than a million aliens a year. The more illiterate of the aliens, once here, quickly absorb the teachings. Some of the worst of our recent strikes can be attributed, in part, to these things.

Gentlemen, I tell you frankly that that is why the American Federation of Labor is for the provisions of this bill. Their leaders know the disorder such preachings bring about. That organization has had to stand against such agitators. Sometimes I think that great employers of labor have been so busy fighting organized labor that they have not had time to see just how the newly arrived alien labor is organizing and what kind of riot it must produce in time.

Mr. Speaker, I have no doubt but that the article, "How to create more work for the unemployed," has been printed in a dozen languages in this country. I have seen similar and even worse printed in nearly all of the languages. Personally, I went over to Paterson, N. J., during the Industrial Workers of the World strike in the silk mills, and heard such stuff preached to the foreign workers, the majority of whom had not been in the United States two years. I heard it translated to them in their various languages. I heard the poor foreigners told that they had lost the strike, but if they would go back to the mills and secretly ruin as many bolts of silk as possible they would win the next strike. They were told to drop threads and let dyes run, and that the time would soon come when they would themselves run the mills and factories. And they believed it.

Mr. Speaker, if I had my way I would not only restrict immigration, but for the present would suspend it. [Applause.]

Mr. BURKE of Pennsylvania. Will the gentleman yield?

Mr. JOHNSON of Washington. I yield.

Mr. BURKE of Pennsylvania. Were not those statements made and those teachings given by men who could read and write; every one of whom could stand this literacy test?

Mr. JOHNSON of Washington. Of course; and they were teaching them to aliens, many of whom could neither read nor write, and who had not found overnight the opportunities they had been misled to believe exist in the United States for all who come.

Mr. Speaker, in my opinion this clause in this bill does not stop those who are seeking political freedom, but it does say that those who shall be found, in five years after entry, advocating or teaching unlawful destruction of property shall be deported, and it is pretty generally agreed that they should be deported. I can point out to you to-day any number of foreign-born editors, editing publications of this class, who have not even sought naturalization, and, as the gentleman from Pennsylvania [Mr. BURKE] says, of a highly educated class, teaching those newcomers the very things that will destroy this Government if not checked.

Mr. BURKE of Pennsylvania. I beg the gentleman's pardon. The gentleman evidently has not caught my question. He has not debated it.

Mr. JOHNSON of Washington. I have answered the question, I think. Remember, I am not discussing the literacy provision of the bill. I have not time. I am addressing myself to what I think is far more important. In my opinion, the matter of the literacy test—that is, the ability to read, and not write, 30 to 40 words of one's native tongue or jargon—is a minor matter and will create no such heartbreaking or distress as some imagine. Neither will it restrict as heavily as I wish it would, but it will do something, and should be enacted into law. The best estimates show that about two or three hundred thousand of the poorest class of immigrants might be stopped.

The gates of the United States will be open to nearly all who want to come. Those in far-off lands who know of the free institutions of the United States, and who would like to come to us but who are detained through ignorance and inability to read the simplest words in their language, still will have the great hope that their children or their children's children may come here and be of us. [Applause.] Let us hope that they will not find a country brought down to the level of their own.

The SPEAKER. The time of the gentleman has expired.

ACTION OF STATE FEDERATION OF LABOR.

Mr. JOHNSON of Washington. I desire to add to my remarks a resolution recently adopted by the Washington State Federation of Labor, assembled in annual convention at Olympia, Wash., January 18 to January 22, 1915, as follows:

Whereas the present industrial crisis in the State of Washington demands remedy, and it is apparent that the Immigration Service is seriously handicapped for the lack of funds to properly enforce the present existing laws; and

Whereas statistics shows that 1,400,000 immigrants entered the United States during the last fiscal year; and

Whereas the Immigration Service is the only department of our Government that is self-supporting, a head tax of $4 per head being required from every immigrant entering this country, and, as Government figures show, during the last fiscal year $6,700,000 expended in the administration of existing immigration laws, and it appears that immigrants in large numbers are crossing the boundary line into Washington, with but little inspection because of the parsimonious attitude of the Federal Government: Therefore be it

Resolved, That the Washington State Federation of Labor call upon the State's Representatives in Congress to demand that the money acquired for the purpose of administration of existing immigration laws be expended for that purpose.

I desire to add also a memorial of the Legislature of the State of Washington, as follows:

House joint memorial No. 2.

To the honorable Senate and House of Representatives of the United States:

Your memorialists, the Senate and House of Representatives of the State of Washington, respectfully petition that—

Whereas during the year ending January 30, 1910, Government statistics show that more than 1,000,000 aliens landed in the United States, of which number more than 600,000 came from southern and eastern Asia, the most undesirable immigrant known; and

Whereas the effect of this alien deluge is to depress the wages and destroy the employment of thousands of American workingmen: Therefore be it

Resolved by the House and Senate of the State of Washington, That the Congress of the United States be requested to pass such restricted legislation as will put a stop to this enormous influx of the most undesirable foreigners, whose presence tends to destroy American standards of living; and be it further

Resolved, That a copy of these resolutions be forthwith transmitted to each Senator and Congressman from the State of Washington for their use in endeavoring to secure the passage of such restricted legislation.

Passed the house January 19, 1911.

HOWARD D. TAYLOR,
Speaker of the House.

Passed the senate January 24, 1911.

W. H. PAULHAMUS,
President of the Senate.

The Washington State Legislature of 1915 is now in session, and to-day—just now—I received a telegram. Both house and senate urge the passage of this bill over the President's veto. The telegram follows:

OLYMPIA, WASH., *February 4, 1915.*

Hon. ALBERT JOHNSON,
Member of Congress, Washington, D. C.:

Whereas there is now pending in the Congress of the United States the Burnett-Dillingham immigration bill; and

Whereas the same is to be brought up for action on the President's veto Thursday, February 4, 1915: Therefore be it

Resolved by the Senate and House of Representatives of the State of Washington in legislative session assembled, That the secretary of state of the State of Washington be, and he is hereby, directed to telegraph to each Member of the delegation in Congress from this State a request that he vote for the passage of the said Burnett-Dillingham immigration bill over the President's veto.

I. M. HOWELL, *Secretary of State.*

Mr. MOORE. Mr. Speaker, I yield to the gentleman from California [Mr. KAHN].

Mr. KAHN. Mr. Speaker, the argument just made by the gentleman who preceded me [Mr. JOHNSON of Washington] convinces me that he is on the wrong tack. It is not the illiterate immigrant who is a menace to this country, according to his argument, but it is the educated foreigner who comes to these shores. I, for one, would gladly vote for this bill or any other bill to keep that kind of immigrants out. I have as little use, as he has, for those foreigners who come here to preach the doctrines of anarchy and destruction of property. They are a menace to our institutions. But they are the products of their education, some of them, no doubt, hold university degrees. My objection to this bill is the so-called literacy test. The literacy test will keep out a class of men who have had no opportunity to become educated in their own countries and who want to come to this land of opportunity in order to better their condition in life. No question is raised as to their character, their manhood, their physical ability to perform that hard manual labor which the educated man will not perform. But this question of emigration into the United States is not a new one. In every stage of the country's history we have read and heard of the efforts to keep out foreign elements. Thomas Jefferson in his first annual message to Congress made this statement:

And shall we refuse to the unhappy fugitives from distress that hospitality which the savages of the wilderness extended to our fathers arriving in this land? Shall oppressed humanity find no asylum on this globe?

I have not always been able to agree with the President of the United States in his policies, but in his veto message to this House on this bill he hit the nail squarely on the head when he said, in effect, that the literacy test tends to deprive a man who had not had opportunities in his own land from getting the benefit of the opportunities that this country would afford.

Away back in 1797, in the Fourth or Fifth Congress, the question of immigration and naturalization was up, and I was greatly pleased a few moments ago to hear the gentleman from Massachusetts [Mr. GALLIVAN] express the liberal views he did on this floor on this question, for this is what a Massachusetts Representative said on the subject of immigration back in 1797. I read from McMaster's History of the People of the United States, volume 2, page 332:

The door for immigrants was open too wide. It would be wise to close it a little. Too many foreigners came to the States. Already they were out of all proportion to native citizens. When the country, said Otis, was new, it may have been good policy to admit all. But it is so no longer. A bar should be placed against the admittance of those restless people who can not be tranquil and happy at home. We do not want "a vast horde of wild Irishmen let loose upon us."

[Laughter.]

At that time it was the Irishman; a little later it was the German; then, still later, it was the Scandinavian; and now it is the immigrant from southern Europe. Mr. Chairman, it is a remarkable thing that opposition to illiterate immigrants comes from those sections of the Union to which the smallest percentage of the immigrants migrate and where illiteracy among native whites and children of native white parentage is greatest. [Applause.] "Physician, heal thyself." Teach your own children how to read and write; teach your own people how to read and write; and when you have done that, then begin to talk about literacy tests in an immigration bill. [Applause.]

The SPEAKER. The time of the gentleman from California has expired.

Mr. GARDNER. Mr. Speaker, I yield five minutes to the gentleman from Kentucky [Mr. POWERS].

The SPEAKER. The gentleman from Kentucky [Mr. POWERS] is recognized for five minutes.

Mr. POWERS. Mr. Speaker, one plank of the labor section of the Democratic platform adopted at Baltimore, July 2, 1912, reads as follows:

The expanding organization of industry makes it essential that there should be no abridgment of the right of wage earners and producers to organize for the protection of wages and the improvement of labor conditions to the end that such labor organizations and their members should not be regarded as illegal combinations in restraint of trade.

In his speech of acceptance of the presidential nomination by the Democratic Party, Hon. Woodrow Wilson took occasion to make the following declaration:

The working people of America—if they must be distinguished from the minority that constitutes the rest of it—are, of course, the backbone of the Nation. No law that safeguards their life; that improves the physical and moral conditions under which they live; that makes their (the working people of America) hours of labor rational and tolerable; that gives them freedom to act in their own interest; and that protects them where they can not protect themselves can properly be regarded as class legislation or as anything but a measure taken in the interest of the whole people, whose partnership in right action we are trying to establish and make real and practical. It is in this spirit that we shall act if we are genuine spokesmen of the whole country.

The declarations of the Democratic platform and the language of Mr. Wilson's letter of acceptance of the Democratic nomination for President were an assurance to the labor world that in the Democratic Party and Mr. Wilson it would find its true friends and loyal advocates. Believing in the assurances of the Democratic Party and accepting it at its written word, the labor leaders and labor organizations and the laboring people generally throughout the country, some 2,000,000 in number, went pell-mell into the Democratic camp and became among the most loyal and enthusiastic supporters of the candidacy of Mr. Wilson. They went the length, at least in voice and vote, in putting their supposed friend and champion in the White House. After President Wilson had been inaugurated President of these United States and after the overwhelmingly Democratic House and Senate had settled down to business and undertaken the work, supposedly at least, of carrying out the Democratic pledges to the country, labor was anxious and soon expected to realize the fruition of its dreams in the fulfillment of the Democratic pledges and promises to it. Labor thought it had succeeded in less than 90 days in having the first one of its list of grievances carried in the sundry civil appropriation bill of June 23, 1913, and which reads as follows:

Enforcement of antitrust laws: For the enforcement of antitrust laws, including not exceeding $10,000 for salaries of necessary employees at the seat of government, $300,000: *Provided, however*, That no part of this money shall be spent in the prosecution of any organization or individual for entering into any combination or agreement having in view the increasing of wages, shortening of hours, or bettering the conditions of labor, or for any act done in furtherance thereof, not in itself unlawful: *Provided further*, That no part of this appropriation shall be expended for the prosecution of producers of farm products and associations of farmers who cooperate and organize in an effort to and for the purpose to obtain and maintain a fair and reasonable price for their products.

The sundry civil bill, with this proviso, passed both the House and the Senate and was sent to the President for his signature. After much hesitation he finally signed it, with the following statement attached thereto:

I have signed this bill because I can do so without in fact limiting the opportunity or the power of the Department of Justice to prosecute violations of the law, by whomsoever committed. If I could have separated from the rest of the bill the item which authorizes the expenditure by the Department of Justice of a special sum of $300,000 for the prosecution or violation of the antitrust law, I would have vetoed that item, because it places upon the expenditure a limitation which is, in my opinion, unjustifiable in character and principle. But I could not separate it. I do not understand that the limitation was intended as either an amendment or an interpretation of the antitrust law, but merely as an expression of the opinion of the Congress.

I can assure the country that this item will neither limit nor in any way embarrass the actions of the Department of Justice. Other appropriations supply the department with abundant funds to enforce the law. The law will be interpreted in the determination of what the department should do, by independent and, I hope, impartial judgments as to the true and just meaning of substantive statutes of the United States.

The President says, as forcefully as English can put it, that if he could have separated the item in the bill which provides that no part of the $300,000 therein appropriated should be used in the prosecution of any organization or individual from entering into any agreement or combination for the betterment of their conditions, he would have done so.

I would have vetoed that item—

He says—

because it places upon the expenditure a limitation which is, in my opinion, unjustifiable in character and principle.

The President continues:

I do not understand that the limitation was intended as either an amendment or interpretation of the antitrust law, but merely an expression of the opinion of Congress.

That is to say that Congress was not engaged in attempting to write a law or interpret one on this subject, but merely expressing its opinion as to what ought to be done in the premises. Congress! Congress! What a senseless and useless body, from the President's viewpoint. But the President further says:

I can assure the country that this item will neither limit nor in any way embarrass the actions of the Department of Justice—

in dealing with these labor fellows and their organizations. After the President had thus delivered himself labor had an awakening, but hoped for better things. So by and by the so-called Clayton antitrust bill came before Congress. Labor wanted Congress in this bill to do more than "merely express an opinion" on what it thought its rights under the law ought to be; so it insisted, and insisted strenuously, that there should be some real "labor exemptions" put in that bill and not mere empty words or expressions of opinion. The Judiciary Committee and the Democratic leaders refused to incorporate into the bill the provision desired by labor. A fight with the administration was imminent. It looked like there was going to be a regular knockdown and drag-out battle. The situation was interesting. A good deal of hotfooting went on from Capitol Hill to the White House. Numerous conferences were held in the hope of reaching an agreement. Finally there was incorporated in the so-called Clayton antitrust bill this provision:

Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations instituted for the purposes of mutual help and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade under the antitrust laws.

It will be remembered that the Supreme Court had held that the Sherman antitrust law did not exempt labor organizations from its operation. The court held in the Danbury hatters' case that such organizations were combinations in restraint of trade and therefore unlawful and liable for threefold damages. Labor wanted its organizations taken out from the operation of the Sherman antitrust law. Whether the provision as incorporated in the Clayton bill meets labor's grievance is a question for the courts to decide. The President says that it "grants no privilege not already enjoyed." One paper said, speaking of the provision:

It was frankly stated at the White House yesterday that the compromise provision was not an exemption provision; that, in other words, the labor unions would not be exempted from prosecution under the Sherman law.

When the President's views as to this provision in the Clayton bill became known to labor and the farmers, they wondered if they had not been handed a gold brick. That the President's position was hostile there seemed no further room to doubt.

THE EVILS OF UNDESIRABLE IMMIGRATION.

But this by no means tells the entire story. For many years organized labor, among others, has insisted that there was too much cheap labor being imported into this country; that the number ought to be greatly curtailed. Those favoring legislation to this end have practically agreed that what is known as the reading, or literacy, test is the best adapted for this purpose. There have been seven record votes in the House and five in the Senate on this question. On an average the House votes stood 192 to 73 favoring the reading test, while the average of the Senate vote was 52 to 19. As recent as January 15, of this year, this House sent this illiteracy-test bill to the President on the decisive vote of 227 to 94, although it was known by this House at the time that the President was opposed to the reading test for the admission of immigrants to this country.

The Senate has spoken in equally emphatic terms, having passed the bill after four weeks' fight by a vote of 50 to 7, notwithstanding the President's known opposition to it. The President has returned the bill to the House without his signature, accompanying it with a veto message. It is openly stated that the patronage whip has been suspended over the heads of Members in the hope of lashing them into line to support the President's veto. If the Clerk here should now begin to call the roll of this House, the A's on the Democratic side would not be passed before there would be found men with whom this matter had been talked over at the White House and their support of the President's veto earnestly insisted upon, notwithstanding the fact that they have committed themselves for it, voiced their convictions for it, and expressed the wish and will of their constituents by previously voting for it. And why the President should now disapprove the literacy test is, as I remarked at the outset, passing strange. As a private citizen, as an author and writer of books, aye, even as a presidential candidate, it seems that he entertained different views from the ones now absorbing his mind, and no doubt by his historical writing and campaign speeches induced confiding constituencies to entertain the expectation that this

needed legislation would meet a different fate at his hands. In his History of the American People, volume 5, page 212, we find this language, speaking of the character of immigrants that now come to this country:

The census of 1890 showed the population of the country increased to 62,622,250, an addition of 12,466,467 within the decade. Immigrants poured steadily in as before, but with an alteration of stock which students of affairs marked with uneasiness. Throughout the century men of the sturdy stocks of the north of Europe had made up the main strain of foreign blood which was every year added to the vital working force of this country or else men of the Latin-Gallic stocks of France and northern Italy, but now there came multitudes of men of the lower class from the south of Italy and men of the meaner sort out of Hungary and Poland—men out of the ranks where there was neither skill nor energy nor any initiative of quick intelligence—and they came in numbers which increased from year to year, as if the countries of the south of Europe were disburdening themselves of the more sordid and hapless elements of their population, the men whose standards of life and of work were such as American workmen had never dreamed of hitherto.

The people of the Pacific coast had clamored these many years against the admission of immigrants out of China, and in May, 1892, got at last what they wanted—a Federal statute which practically excluded from the United States all Chinese who had not already acquired the right of residence; and yet the Chinese were more to be desired, as workmen if not as citizens, than most of the coarse crew that came crowding in every year at the eastern ports.

He says, from the character of immigrants that have recently been coming to our shores, that it looks—

as if the countries of the south of Europe were disburdening themselves of the more sordid and hopeless elements of their population—the men whose standards of life and of work were such as American workingmen had never dreamed of hitherto.

And the President, by his veto of the immigration bill, is refusing to close the door to the admission of the very class that he condemned. He says that they are a "coarse crew" that come "crowding in every year at our eastern ports." He had a chance to stop this "coarse crew" from crowding in each year at our eastern ports, but he has failed to avail himself of that opportunity. In its national platform, as far back as 1896, the Democratic Party said:

We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market.

The Democratic platform upon which President Wilson was elected declared unequivocally for the rights of labor and its protection.

Not only as a teacher, professor, and historian did Woodrow Wilson advocate and represent that he was a restrictionist, but as a candidate for the Presidency he gave the people of this country to understand that he stood for the very legislation contained in this bill. This identical measure passed the Senate April 19, 1912; was reported to the House by the House Committee on Immigration June 7, 1912; and therefore was pending before the House during the campaign, being an issue. Not only was it pending before the House, but the Democratic leaders of the House had announced that the bill would be put through the first thing in December, a special rule having even been agreed on. Candidate Wilson's immigration speech in New York City, September 4, 1912, contained among other things the following paragraph:

If we can hit upon a standard which admits every voluntary immigrant and excludes those who have not come of their own motion, with their own purpose of making a home and a career here for themselves, but have been induced by steamship companies or others in order to pay the passage money, then we will have what we will all agree upon as Americans. I am speaking to you as also Americans with myself, and just as much American as myself, and if we all take the American point of view, namely, that we want American life kept to its standards, and that only the standards of American life shall be standards of restriction, then we are all upon a common ground, not of those who criticize immigration, but those who declare themselves Americans. I am not saying that I am wise enough out of hand to frame the legislation that will meet this idea. I am only saying that it is the ideal, and that is what we ought to hold ourselves to. * * * Of course, if the immigrants are allowed to come in uninstructed hosts and to stop at the ports where they enter and there to compete in an oversupplied labor market, there is going to be unhappiness, there is going to be deterioration, there is going to be everything that will be detrimental to the immigrant.

That was his declaration on the stump and in New York City before the editors and sympathizers of the so-called American Association of Foreign Language Newspaper Editors, who were attacking him almost daily as a restrictionist. Brave words. Note his language, saying that the "Standards of American life *shall* be the standards of restriction." With this very bill passed the Senate and pending on the House calendar, and with our State compulsory school-attendance laws and public-school system as one of America's fundamental institutions and standards, there is only one thing such language could mean to the average voter, and that was that Candidate Wilson stood for requiring as much of foreigners as we compel of our own native-born in the way of an elementary education, in order to better fit them for earning a living, worshiping God according to the dictates of their own conscience, and intelligently participating in our public affairs.

What a shock this veto must be to the friends of this bill who were misled into thinking that Woodrow Wilson was a restrictionist! What a revelation it must be to them to read and hear that the President feels himself "pledged" to veto this splendid measure! And how roughly handled they must feel when they read accounts such as that in the Boston Evening Transcript of January 28 last, stating that "it is charged even by Democrats that the administration is 'picking off' men from the ranks of the friends of the bill, and the opponents of the literacy test declare that this 'teamwork' in the Cabinet * * * will be successful." But it is not a "long way to" the next presidential election, and the voters' hearts are "right there."

The Boston Transcript in a recent editorial had this to say:

The somersault of Mr. Woodrow Wilson on the immigration plank should surprise no one. It is only the latest illustration of the politician reversing the position of the historian. For 20 years as teacher and writer of history he wrote against "the alien invasion" and brought to bear the heaviest guns of his rhetoric against this "menace." After two years of silence in the White House, which no committee of Congress was able to break, the President has finally announced his opposition to the immigration bill, which has passed the House and is before the Senate, on the ground that it carries a literacy test. Before deciding to pass the enactment up to the President for his veto, we hope the Senate will sound the White House with a view to ascertaining what form of restriction the President would suggest, or whether his somersault on the subject is so complete that he to-day favors a continuance of unrestricted immigration.

The President by his veto says he favors the continuance of unrestricted immigration; for in his opposition to the literacy test, he opposes the most feasible method of restricting immigration.

It will be remembered that a few years ago Congress created an Immigration Commission to investigate this whole subject, and particularly the feasibility of the literacy test. This commission, after an extensive investigation both in this country and in Europe costing $1,000,000 and covering a period of four years, made a voluminous report covering 42 volumes, and in that report among other things said:

A majority of the commission (8 out of the 9) favored the reading and writing test as the most feasible single method of restricting undesirable immigration.

This commission composed of both Republicans and Democrats, unanimously recommended to Congress that immigration be restricted. The commission unanimously agreed and reported that there was "an oversupply of unskilled labor in the basic industries of this country." Congress and the country both agree that the influx of undesirable immigrants to this country ought to be stopped.

In the last 18 years, either the House or the Senate has 19 times emphatically declared for the reading test. In the years 1912–13 the House of Representatives favored the literacy test by a vote of 178 to 52, and the Senate by a vote of 57 to 8.

The bill that the President has just vetoed because of the literacy test was passed by the House by a vote of 252 to 126, and by the Senate by a vote of 50 to 7. We have heard a good deal said by the Democratic Party in recent years about letting "the people rule." They have gone before the country seeking its suffrage with that as a slogan. President Wilson has himself boasted much of that principle as one of his virtues, yet the fact remains that the principles embodied in no measure have been so long before the American people; have been so well understood by them; or have been indorsed by so many of them as the principles embodied in the immigration measure vetoed by the President. If this measure is not indorsed by the body of the American people and their Representatives in Congress, no important measure that ever became a law has ever been.

President Wilson in vetoing the immigration bill said:

If the people of this country have made up their minds to limit the number of immigrants by arbitrary tests and so reverse the policy of all the generations of Americans that have gone before them, it is their right to do so.

The American people have made up their minds to limit the number of immigrants daily coming to our shores, but I deny that in so doing they are reversing "the policy of all the generations of Americans that have gone before them."

Let us look first into the question as to whether or not the American people have made up their minds to limit the number of immigrants that yearly crowd our shores, over 1,000,000 in number. Away back in 1896, nearly 20 years ago, when the evils of immigration were not so great and not so well understood as now, the Republican Party in its national platform of that year not only demanded a restriction of immigration but specifically indorsed the reading and writing test as a means to accomplish that end. In the Republican national platform of 1900 we find this language:

In the further interest of American workmen we favor a more effective restriction of the immigration of cheap labor from foreign lands—

And so forth.

In his first message to Congress in 1901, ex-President Roosevelt said:

> The second object of a proper immigration law ought to be to secure a careful and not merely perfunctory educational test.

The Republican national platform of the year 1912, the latest expression of the party on the subject, reads as follows:

> We pledge the Republican Party to the enactment of appropriate laws to give relief from the constantly growing evil of induced or undesirable immigration, which is inimical to the progress and welfare of the people of the United States.

And I want to say that a Republican Congress promptly after the election of 1896 passed an illiteracy test bill, which was vetoed by a Democratic President, Grover Cleveland, and that such a bill would now be law if proportionately as many Democrats as Republicans would vote or had voted for the measure.

The Democratic Party—the party of the President—in its national Democratic platform in 1896, said:

> We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market.

The Democratic platforms of 1900 and 1904 both demand more stringent immigration laws of one sort or another, and yet after all this the President is not advised as to what the American people want, and asks in his short veto message of this long bill: "Has any political party ever avowed a policy of restriction?"

After that part of the immigration bill to which the President objects has been favorably acted upon divers times by both branches of Congress, and by overwhelming majorities, still the President says he is not advised as to the desire of the American people upon this subject. If the representatives of the American people in this and previous Congresses have properly reflected the views of their constituents by their votes on this question, the President ought to be advised.

Now let me answer, if I can do it, the President's second proposition, namely, that in its insistence upon the literacy or other arbitrary tests Congress is "reversing the policy of all the generations of Americans that have gone before." I take issue with that statement of the President. With due deference to him and his great learning, I say that he is wrong.

From the first settlement of this country down to about 1838 immigrants came here as a matter of course. This country had no policy upon the immigration question up to that time. In that year the House of Representatives agreed to a resolution instructing the Judiciary Committee of the House to consider the propriety of passing a law prohibiting the importation of vagabonds and paupers into this country. Then and there we took steps against admitting paupers and vagabonds.

If we had any policy of admitting them up to that time, it was then reversed. In the meantime a number of the States had begun to pass laws restricting immigration, notably, New York, Massachusetts, California, and Louisiana. These States saw most of immigrants and immigration and were the first to see and feel its evil effects. But their laws differed one from another. Each State had its own peculiar notion as to who ought to be debarred. It was soon apparent that the problem was too big for the individual States to handle; that it was national in its scope. The constitutionality of a number of the State laws reached the Supreme Court of the United States for final decision, and on March 20, 1876, that court, in a very unusual decision, said:

> We are of the opinion that this whole subject—
>
> Of immigration—
>
> has been confided to Congress by the Constitution; that Congress can more appropriately and with more acceptance exercise it than any other body known to our laws, State or National; that by providing a system of laws in these matters applicable to all ports and to all vessels a serious question which has long been a matter of contest and complaint may be effectively and satisfactorily settled.

Then came efforts of the States to restrict immigration until such was held unconstitutional by the United States Supreme Court, since which day Congress has been passing one immigration bill after another, and each of them has been more stringent and more exclusive of immigration than the preceding ones.

The law of August 3, 1882, among other things, provided that each immigrant to this country should pay a head tax of 50 cents; that "lunatics, idiots, convicts except for political offense, and persons likely to become a public charge" should not be permitted to land. Another reversal of our traditional policy, Mr. President.

The law of February 26, 1885, forbade the importation of contract labor to this country. The law of February 23, 1887, gave the Secretary of the Treasury the authority to deport within one year from landing any alien who had come to this country contrary to the provisions of the contract-labor act.

The act of March 3, 1891, added to the list of aliens heretofore excluded the following: Those "suffering from a loathsome or contagious disease," "polygamist," and those "whose ticket or passage is paid for with the money of another, or who is assisted by others to come," with certain exceptions. Steamship companies were forbidden by this act to solicit or encourage immigration. I wonder if the President would regard this as the reversal of a policy or the establishing of one?

In 1894 Congress passed an act raising the head tax of immigrants from 50 cents to $1 each.

On March 3, 1903, Congress passed another act raising the head tax to $2, and made it unlawful to assist in the entry or naturalization of alien anarchists.

On February 20, 1907, Congress passed another law further restricting undesirable immigrants. This is the last important law passed by Congress and signed by the President. It adds very materially to the classes of immigrants to be excluded. Not including those heretofore mentioned, it says the following, among others, shall be excluded: "Feeble-minded persons," "epileptics," "insane persons," "persons likely to become a public charge," "professional beggars," "prostitutes, or women or girls coming into the United States for the purpose of prostitution or other immoral purposes." With but one single exception, every law passed by the Congress of the United States from the day and hour that it began to legislate upon the subject of immigration has been a law of restriction, and each law adding to the excluded classes of immigrants. The single exception, to which I have referred, was the law passed in 1864. It was a law passed to encourage the importation of contract labor; but it was repealed, however, in 1868, four years after its passage. In the face of this record and these facts, how can the President say that in adding the literacy or reading test we are reversing the policy of all the generations of Americans that have gone before us? We are not reversing their policy, but sustaining their policy, in further excluding some 250,000 of the 1,000,000 or more immigrants that are annually coming to this country. Few there be, I think, who will contend that further restriction of immigrants is not desirable.

I will not go into the voluminous 41-volume report of the Congressional Immigration Commission further than to briefly answer the arguments of those who maintain that existing immigration law is sufficient by quoting what the commission, which employed trained experts, expended a million dollars in a searching inquiry, and spent four years gathering together indisputable proof of the following conclusion of the commission, says in its first partial report, namely, House Document 1489, under the heading, "The Immigration Law and Its Administration":

> It is generally admitted by those acquainted with the subject that, notwithstanding the fact that the present law proposes to provide for the exclusion of every undesirable immigrant, *many undeniably undesirable persons are admitted every year.* The commission's inquiries concerning defective and delinquent classes show this fact very clearly and in a way which, it is believed, will be thoroughly understood and appreciated. In theory the law debars criminals, but in fact many enter; the law debars persons likely to become public charges, but data secured by the commission show that too many immigrants become such within a short time after landing. The same is true of other classes nominally, at least, debarred by the law. In short, the law, in theory, so far as its exclusion provisions are concerned, is exceptionally strong, but in effect it is in some respects *weak and ineffectual.* The commission has discovered several sources of this weakness; it is its purpose to find the others and to recommend some effective remedies.

I have here the New York World of February 1, 1915, which contains a long editorial, entitled, "Over 8,000 alien insane," and which declares that these 8,000 alien insane "represent a burden from which" the taxpayers of the Empire State are "entitled to be relieved." The World estimates that these alien insane impose an annual financial burden on the taxpayers of New York State of about $2,000,000. New York State officials have testified before committees of Congress that it is about $4,000,000, or, in other words, that about one-sixth of all the taxes levied in New York for State purposes are levied for the care and keep of insane. This bill would lift millions of dollars of taxes from the shoulders of the taxpayers of New York, New Jersey, Connecticut, Massachusetts, Pennsylvania, and other Northeastern States, and tend to prevent the dumping of mental and physical degenerates upon this country, whose progeny will simply water the lifeblood of this country, as well as overburden our taxpayers.

The two dominant political parties in their national platforms have for years been pledging to the American people more stringent immigration laws. The Immigration Commission, after four years' investigation, both in this country and in Europe, unanimously reported in favor of further restricting immigration to this country, declaring: "The commission as a whole recommends restriction as demanded by economic, moral, and social considerations, furnishes in its report reasons for such restriction, and points out methods by which Congress can attain the desired result if its judgment coincides with that of

the commission" (Vol. I, p. 48). Congress has frequently so declared itself, and more than one attempt has been made to pass such bills over Executive veto. And if it be admitted that further restriction is desirable, ought it not in all fairness be applied to the least desirable element of our immigration? In this immigration problem we have got to deal with classes and not individuals. To say that an illiterate class of citizens is more desirable than an educated class gives the lie to the favored boast of Americans that we are an educated and enlightened citizenry. If ignorance is better and more preferable in our citizens than enlightenment, we had better tear down our institutions of learning and abolish our boasted public-school system in America. If to fit our own American boys and girls for proper and efficient American citizenship we expend annually on them in tuition alone some $500,000,000, have we not a right to demand that immigrants coming to this country who are over 16 years of age shall at least be able to read some language or dialect? The American citizen who can not even read or write, but who has been reared in America, surrounded by Americans, and who has observed the workings of its Government, caught the spirit of its institutions, imbibed its lofty ideals, and inherited its progress and freedom is infinitely better prepared for wholesome American citizenship than any illiterate foreigner possibly could be.

The bill the President has vetoed makes 200 changes in the immigration laws, 50 of which are big changes. The President recognizes the force and value of these, for in his veto message he said:

> This bill is in so many respects admirable, well conceived, and desirable. Its enactment into law would undoubtedly enhance the efficiency and improve the methods of handling the important branch of the public service to which it relates.

Why should the President destroy, so far as in his power lies, a bill which he concedes to be a good one. He admits that "the bill is in many respects admirable, well conceived, and desirable," and yet he vetoes it! He says he does it because it reverses a "policy of generations that have gone before." Instead of Congress "reversing the policy of all the generations of Americans that have gone before them," has not the President reversed their policy? Has not he also reversed the policy of his own party? The Democratic Party, in its national platform of 1896, said:

> We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market.

That declaration of principles of the Democratic Party has at no time been recalled or reversed. It is the policy of the Democratic Party to-day, if its declaration of principles in national convention assembled mean anything. A majority of the Democrats in both House and Senate voted to redeem their party's pledge, but the President, exercising his constitutional right, says, "No."

I believe it was Louis XIV of France who once said: "I am the State." The President expresses it differently when he says: "I am the captain of the team." And I agree that the President is "the captain of the team." When he tells the boys to "play ball," they usually "play ball."

BROKEN PLATFORM PLEDGES.

The Democratic platform upon which President Wilson was nominated and elected said:

> We favor national aid to State and local authorities in the construction and maintenance of post roads.

It is said that Hon. DORSEY W. SHACKLEFORD, of Missouri, the present chairman of the Roads Committee of the House of Representatives, wrote that plank of the Democratic platform. Mr. SHACKLEFORD was in earnest about it. He really thought that the Democratic Party intended to carry out that pledge to the country. He went ahead and passed a bill through the House many, many moons ago looking to that end. It would be embarrassing to ask the gentleman from Missouri what has become of his bill? He would hate to tell you that the President had put the cold hand of death upon it. Mr. SHACKLEFORD's good-roads bill has not been passed by the Senate. It will not be. Did not the President tell Senator SWANSON that they did not have the money for the roads legislation? Yet the Democratic Congress has at the President's suggestion passed a law whereby the United States Government is to spend $40,000,000 in railroad building in Alaska, and now he is trying to jam through a bill appropriating $50,000,000 with which to buy ships for the shipping interests; now, and in these times when the people are forced to pay war taxes when their country is at peace with the whole world.

The Democratic platform upon which the President was elected did not call for these expenditures, but it did call for Federal aid to State and local authorities in the construction of good roads. The lost Shackleford good-roads bill called for $25,000,000 for this purpose. The Democratic administration did not have $25,000,000 to spend on good dirt roads here in the several States, but did have $40,000,000 to spend on railroads in Alaska.

PANAMA CANAL TOLLS.

But these are not the only broken promises of the Democratic Party to the American people. They said in their Baltimore platform:

> We favor the exemption from toll of American ships engaged in coastwise trade passing through the canal.

This is what Democracy in its national platform declared for in 1912, and is what President Wilson stood for before he was elected President. I shall read the President's speech made to the 2,500 farmers at Washington Park, N. J., on August 15, 1912:

> One of the great objects in cutting that great ditch across the Isthmus of Panama is to allow farmers who are near the Atlantic to ship to the Pacific by way of the Atlantic ports, to allow all the farmers on what I may, standing here, call this part of the continent, to find an outlet at ports of the Gulf or the ports of the Atlantic seaboard, and then have coastwise steamers carry their products down around through the canal and up the Pacific coast or down the coast of South America.
>
> Now, at present there are no ships to do that, and one of the bills pending—passed, I believe, yesterday by the Senate as it has passed the House—provides for free toll for American ships through that canal and prohibits any ship from passing through which is owned by any American railroad company. You see the object of that, don't you? [Applause.] We don't want the railroads to compete with themselves, because we understand that kind of competition. We want water carriage to compete with land carriage, so as to be perfectly sure that you are going to get better rates around the canal than you would across the continent.

It will be remembered that the Democratic House of Representatives had passed the Panama Canal tolls bill before the Democrats met in national convention at Baltimore in July, 1912. The Democratic national convention indorsed what the House had done by inserting in its platform the Panama Canal tolls plank to which I have made reference. The day before the President made his speech to the 2,500 farmers at Washington Park, N. J., on August 15, 1912, indorsing what the Democratic House had done and what the Democratic national convention had declared for, the Senate also passed the bill, and the President indorsed that. But after the President was elected he came hat in hand up on Capitol Hill one day where the House and Senate was in session and said: "Boys, we've got to take her back. Acting under your oaths as legislators, you said that American ships engaged in coastwise trade passing through the Panama Canal should not pay any toll. The Democratic platform upon which I was nominated and elected declared for the same thing. I declared for the same thing in my speeches before election. I have not forgotten what I said to those New Jersey farmers and the country before election, but we've got to take it all back. I can not tell you why this is so, but I have reversed myself on the question of tolls of American ships passing through the canal, and you must reverse yourselves. You have already jumped through the hoop and passed the law. I shall have to ask you to jump back through the hoop again and undo what you have done. I shall have to ask you to pass a law to make American ships pay tolls." The law was passed. The "crow" was eaten, but few, if any, of the legislators have ever known why it was necessary.

RURAL CREDITS.

But this is only a part of the story. The Democratic platform upon which President Wilson was elected said:

> Of equal importance with the question of currency reform is the question of rural credits, or agricultural finance. We favor legislation permitting national banks to loan a reasonable portion of their funds on real estate security.

The Democratic Party promised the farmer that if elected and given power to legislate this law should be passed. The farmer, among others, did help to put the Democratic Party in power. They thought they were going to get some genuine rural-credits legislation, but they have not gotten it. The President says he favors such legislation. He said on December 2, 1913, in his message to Congress:

> I present to you, in addition, the urgent necessity that special provision be made also for facilitating the credits needed by the farmers of the country; what they need and should obtain is legislation which will make their own abundant and substantial credit resources available as a foundation for joint, concerted local action in their own behalf in getting the capital they must use. It is to this we should now address ourselves. We must add the means by which the farmer may make his credit constantly and easily available and command when he will the capital by which to support and expand his business. We lag behind many other great countries of the modern world in attempting to do this. Systems of rural credit have been studied and developed on the other side of the water while we left our farmers to shift for themselves in the ordinary money market. You have but to look about you in any rural district to see the result—the handicap and embarrassment which have been put upon those who produce our food.

And at the very time the Federal reserve bill was being perfected by the House Committee on Banking and Currency did not certain members of it—particularly Representatives NEELEY of Kansas, WINGO of Arkansas, and RAGSDALE of South Carolina—insist that a provision be inserted in the Federal reserve bill carrying out the pledge in the Democratic platform as to rural credits, and did not the President send the majority leader, the gentleman from Alabama, OSCAR W. UNDERWOOD, to those men to assure them that if they would not insist in incorporating rural-credits legislation in the Federal reserve bill that he would help them and those interested in the question to pass it in a separate bill? So far it has not been passed, and I see no prospect of early action. Every one here says and knows that the President is now opposed to putting the Government back of rural credits and will not approve a bill that puts the Government back of freeing and making available the farmers' credit to the same extent that the Federal reserve act puts the Government back of the business man's and banker's credit.

The Democrats passed the currency law, and in their platform they said:

Of equal importance with the question of currency reform is the question of rural credits, or agricultural finance.

But the farmers have to wait. They have waited for about two years, and how much longer they will have to wait no one knows.

HIGH COST OF LIVING.

The last national Democratic platform pledged the Democratic Party to reduce the "high cost of living" if intrusted with power. The Democratic platform said, and the Democratic orators said, that the high cost of living was due to the "robber protective tariff" that the Republicans had foisted upon the country to fatten the rich and rob the poor. The Democrats have taken that "robber protective-tariff law" from the statute books, and in its stead have substituted one of their own, and the cost of living has been getting higher day by day ever since.

The Washington Post, a Democratic newspaper, on yesterday said that May wheat is selling in Chicago at $1.65 per bushel, the highest price recorded in Chicago for years, and that "stale bread, known as the poor man's loaf, which has hitherto retailed at 5 cents for two loaves, to-day advanced to 3 cents a loaf."

REPUBLICAN EXTRAVAGANCE.

The Democratic platform adopted at Baltimore said:

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses.

And yet the appropriations made by the Democratic Party since it came into power have exceeded in amount anything that the Republicans had ever dreamed of. And notwithstanding the Democratic income-tax law and the so-called "war-tax" law—both direct-taxation money raisers—it is said that the Democratic Party will run this Government in the "hole" by the 1st of June of this year about $80,000,000, and the appropriations will exceed those of any previous Congress.

TERM OF PRESIDENT.

It is not necessary to proceed further with the broken pledges of the Democratic Party. But I can not refrain from speaking of at least one more.

The Democratic platform upon which President Wilson was elected said:

We favor a single presidential term. * * * We pledge the candidate of this convention to this principle.

It is in the power of the President to keep inviolate at least one of the pledges of the Democratic platform upon which he was elected. He can refuse to be a candidate for reelection. But he is going to break that plank. "His hat is already in the ring," say his close friends and political advisors. He is now an avowed candidate for reelection. He will be nominated by his party and defeated at the polls. He can not survive the record made by himself and party. They have made and broken too many promises. In their Baltimore platform the Democrats said:

Our platform is one of principles. * * * Our pledges are made to be kept when in office as well as relied upon during the campaign.

On August 15, 1912, during the campaign the President said:

Our platform is not molasses to catch flies. * * * It means business; it means what it says.

The American people will not soon again intrust with power the party and its candidate that have to their credit so many betrayed trusts and broken promises. [Applause.]

A traveling man down in my district not long ago looked over his half-filled order book at the end of a hard day's work and said:

The Democrats may be honest men, but I'll be d—d if they've got sense enough to run this Government.

[Applause.]

Mr. GARDNER. Mr. Speaker, I yield such time as he may need to the gentleman from Ohio [Mr SWITZER]. Call it two minutes, and he will yield back what he does not use.

The SPEAKER. The gentleman from Ohio [Mr. SWITZER] is recognized.

Mr. SWITZER. Mr. Speaker, I have always favored protection to American industry, in the belief that it resulted in protection to American labor. Holding such a view and keeping in mind the fact that one of the great objects sought in granting protection to American industry is to give indirect protection to American labor, I feel that as a protectionist I should support all legislation that will give reasonably direct protection to the laboring classes of this country.

I voted to pass a similar bill over the veto of ex-President Taft, and I intend to vote to pass this bill over the veto of President Wilson. [Applause.]

The need of diversified industries in order that we may be self-supporting and independent of other nations is now being accentuated because of the war raging in Europe.

The object of a protective tariff is to build up, diversify, and maintain American industries, and give to the American laborer an opportunity for employment at a wage sufficiently remunerative to enable him to maintain our standard of living and lay something by for a rainy day.

A protective tariff law has always increased the opportunity to obtain employment, resulting in increased wages, and has always brought thrift and prosperity to the people; and a free-trade tariff law has always produced the opposite result—closed factories and mines, depressed business, and created an army of the unemployed stretching across the country from ocean to ocean. At least such has been the actual working out of these two opposing policies during the past 25 years of our history.

I am therefore thoroughly convinced that the products of American factories, mines, forests, and the farm should be protected from free competition with like products of low-paid foreign labor by the imposition of reasonable tariff duties on the imported article, to the end that American labor may readily find employment and that such employment be fairly safeguarded.

The pending measure seeks to directly protect labor, and what is particularly denominated common labor, from the unrestricted influx of unskilled labor from Europe, and especially from the eastern and southern parts of Europe. While the bill carries many provisions increasing in innumerable ways our present protection against the insane, physically and mentally defective, the diseased, the pauper, contract labor, and against the degenerate, immoral, and criminal classes, its primary object is to afford some additional protection to the laboring classes of our country by providing the "literacy test," requiring all immigrants to pass an examination in reading before they shall be allowed to enter our gates. It is claimed by those who have given the subject careful study that the past enforcement of the "literacy test" would have barred from this country yearly at least 300,000 of the great horde of immigrants that have been landing on our shores during the past few years, a class which has come into direct competition with the common labor of this country.

While I dislike very much to discriminate against the man who can not read, as he frequently makes an excellent citizen, and is usually a hard-working and honest man, still the Immigration Commission after a long investigation and research have been unable to discover a better method for restricting this great stream of immigrants which has been pouring into our country year after year until their increased numbers have crowded out of employment the American laborer and augmented the army of our unemployed by the hundreds of thousands, contributing to the want and distress from which our laboring classes are now suffering.

Our country has been the asylum for the oppressed of all lands. We have been generous to the distressed of all countries, whether the result of religious persecution, war, famine, pestilence, or other calamities that have overtaken them, and we have given bountifully of our substance and have frequently extended over them the protective arm of our Government, and our enlightened sympathies and high sense of duty to humanity will cause us to quickly and amply respond to such demands in the future; but we must look to the safeguarding of our own household in order to insure our future ability to respond to such demands by adopting those policies which will promote thrift and prosperity and save American institutions from the slough of decay through an overassimilation of the uneducated and in many instances un-American notions of civil liberty.

The perpetuity of a representative government depends upon the intelligence of its citizenship, and we therefore spend millions of dollars for the cause of education and in building up our great public-school system, and it seems to me that so long as

we have thousands of laborers unemployed and who are clamoring for work at even a living wage we ought to attempt to check that stream of immigration which not only adds largely to this army of the unemployed, but which tends to offset the benefits derived from our public-school system, and which lowers the standard of intelligence of the American electorate.

The percentage of illiteracy in certain European countries is much higher than in the United States, while in some it is considerably lower. According to the census of the United States for 1910, of the entire population of 10 years of age and over, 7.7 per cent were illiterate; of the whites, 5 per cent were illiterate; and of the negroes, 30.4 per cent. Among the foreign-born whites 12.7 per cent were illiterate, as compared with 3 per cent among the native whites.

The report of the Immigration Commission published in 1911 discloses that in 1900 Austria's per cent of illiterate was 23.8; Belgium, 21.9 per cent; Hungary, 41 per cent; Portugal, 75.1 per cent; Servia, 83 per cent; Spain, 63.8 per cent; Italy, 48.5 per cent in 1905; Roumania, 61.4 per cent in 1899; and Russia, 72 per cent in 1897.

The "literacy test" is aimed at the streams of immigration coming from the large illiterate populations of the eastern and southern European countries.

By excluding "all aliens over 16 years of age, physically capable of reading, who can not read the English language or some other language or dialect, including Hebrew or Yiddish, with certain exceptions," we expect to check the avalanche of immigrants that has been pouring in upon us during the past few years.

Ex-President Taft based his veto of the Burnett-Dillingham immigration bill on the reasons set forth in the letter of the Secretary of Commerce and Labor, Mr. Nagel, which accompanied his veto message. Mr. Nagel contended that the "literacy test" would be difficult of enforcement and would entail a considerably increased expense on the part of the Government, and he further contended that—

> We need labor in this country, and the natives are unwilling to do the work which the aliens come over to do.

He evidently believed that we were in no danger of an oversupply of laborers, for in the conclusion of his letter he says in part, referring to the "literacy test," that—

> It is based upon a fallacy in undertaking to apply a test which is not calculated to reach the truth, and to find relief from a danger which does not really exist.

While industrial conditions under the administration of ex-President Taft were so prosperous as to lead him, as well as his Secretary of Commerce and Labor, to feel that we were in no danger from an oversupply of labor, no one will claim that these conditions obtain to-day. President Wilson, while vetoing the present bill because of the "literacy test," has been compelled to seek other reasons for his action than those set forth by ex-President Taft. He states that it is a radical departure from the traditional and long-established policy of this country, and that—

> In this bill it is proposed to turn away from the tests of character and quality and impose tests which exclude and restrict.

The primary object in enacting the proposed legislation is to protect the American laborer from direct competition with the foreign laborer. I know of no way of doing this except by some method which will exclude or restrict the foreigner from coming into this country. All protective measures must be to some extent arbitrary in their application.

President Wilson states if this country desires to adopt an arbitrary policy of restriction that we have a perfect right to do so. But he seems to doubt that there is a universal sentiment throughout the Nation for such a policy. This proposition has been before the American people for the past 20 years, and has been the subject of thorough investigation by a commission appointed by Congress, whose work extended over a number of years, with the result that this test was recommended by a majority of the commissioners. It has been considered time and again by the thousands of farm, labor, and patriotic organizations throughout the country, and has been universally indorsed by these bodies. It carried by more than a two-thirds vote in the Senate of the last Congress over the veto of President Taft, and lacked but a few votes of receiving a two-thirds vote in the House. It received more than a two-thirds vote in the House at this session of Congress, and practically a unanimous vote in the Senate, the vote being 50 for and 7 against the proposition. I know of no better index of the sentiment of the people upon this question than the overwhelming majorities cast in its favor during this and the last Congresses. It does not seem to me to be possible that so large a number of the Senators and Representatives of these two Congresses could be mistaken as to the sentiment of their respective constituencies. I feel sure that there is an overwhelming sentiment in my district in favor of the passage of this bill, as I have had numerous letters of individuals and resolutions of patriotic and labor organizations urging its enactment, and not a single letter or remonstrance, verbal or written, to the contrary. I shall accordingly cast my vote to pass the bill over the veto of the President, believing that such a law will tend to bring some relief to the depressed labor conditions throughout the country.

Mr. Speaker, I yield back the remainder of my time.

The SPEAKER. The gentleman yields back half a minute.

Mr. BURNETT. Mr. Speaker, I yield 15 minutes to the gentleman from California [Mr. RAKER].

The SPEAKER. The gentleman from California [Mr. RAKER] is recognized for 15 minutes.

[Mr. RAKER addressed the House. See Appendix.]

The SPEAKER. The time of the gentleman has expired.

Mr. GOLDFOGLE. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. GOLDFOGLE. To make the point of order that there is no quorum present.

SEVERAL MEMBERS. Oh, no!

Mr. SABATH. Will not the gentleman withdraw the point of order?

Mr. GOLDFOGLE. I withdraw the point.

Mr. MOORE. I yield 30 minutes to the gentleman from Minnesota [Mr. MANAHAN].

Mr. MANAHAN. Mr. Speaker, I am not persuaded by the suggestions just made by the gentleman from California [Mr. RAKER] that labor organizations all over the country have petitioned this Congress to pass this bill over the President's veto. I am aware of the fact, however, that a large number of officials of labor organizations have worked up quite a sentiment in favor of the bill and in favor of overturning the President's veto. I presume that every Member of the House has had telegrams and letters from the officials of labor organizations to the effect that it was the duty of Congress to pass this legislation in the interest of labor.

But I beg to suggest, as every Member of the House knows, that it is very easy for one of the officials of the Federation of Labor here in Washington, by a few telegrams and letters on his part to subordinate officials over the country, to obtain this flood of telegrams and letters, which mean nothing so far as the sentiment of the rank and file of labor is concerned.

I do not hesitate to say, as one who has battled a long time for the cause of labor, that this illiteracy test does not reflect the judgment or the wishes of the rank and file of the toilers of this Nation deliberately formed. [Applause.] It does not reflect the cause of labor, which is more important. It does not reflect the best interests of labor, which is still more important.

How men in earnest, as I know men are, who have been leading the cause of union labor in this country can ever come to the unsound conclusion they have regarding this bill is beyond my comprehension. Their conclusion shows that they have not studied and do not understand the great underlying causes that have made the lot of the toiling man so hard to bear. They think, forsooth, that if they can pass some sort of legislation that will close the doors to competitors in labor that they thereby benefit the cause of labor. How foolish that idea is. Just as though the toiling man's wage is ever fixed by the number of toiling men willing to take the job. Do not men know that the wage of the laborer is not measured in such a way at all, but is measured by those fundamental laws that control the distribution of wealth and that divert the streams produced by labor and by land, those great laws regarding trusts, corporations, and transportation, and grain exchanges, all these great fundamental movements of commerce—those are the laws that congest into a few hands the wealth of the Nation and take unjustly from those who produce it; and the man is in the kindergarten class of politics and statesmanship who does not see and who does not understand that the cause of labor is measured, influenced, and controlled by the great laws of distribution of the products of labor, and reflect the wisdom or lack of wisdom of the laws controlling corporations and monopolies, laws measuring the tax imposed by transportation companies and marketing exchanges of the country, and not by the number of competitors.

Why, gentlemen, is it not clear to every thinking man that the welfare of labor is measured by how much of the products of labor the toiling men are able to hold as their reward for toiling? Is not that clear? Now, it is obvious that the wealth of the Nation is made by the toiling men altogether. Is it not equally clear that if you increase the number of toiling men by immigration you increase the aggregate wealth created for dis-

tribution? More men means more wealth produced; more toilers mean more necessities of life brought into existence to feed hungry men, to clothe shivering men.

Mr. MOORE. Will the gentleman yield?

Mr. MANAHAN. Yes.

Mr. MOORE. Is it not true that every man who creates wealth consumes the products produced by other toilers of the country, and thus is useful in two ways?

Mr. MANAHAN. An obvious thing; and yet the gentleman from Pennsylvania knows that many men in this House are swayed by such an intolerant, narrow, and selfish point of view that they can not really comprehend that simple proposition of economics. Do not these intolerant men with prejudiced minds realize that if a million toiling men came in the next 10 years, this million toiling men will produce a mighty accumulation of what? Of the things that the laboring men need for their prosperity and comfort of life; food to eat, clothing to wear, shoes to wear, and houses in which to live.

Mr. JOHNSON of Washington. Will the gentleman yield?

Mr. MANAHAN. Yes.

Mr. JOHNSON of Washington. The gentleman assumes that the million men will always be at work and all the others, also.

Mr. MANAHAN. I say in reply to the gentleman from Washington that he is not fit to sit as a representative of his constituents in this body if he does not realize that a wise Government would see to it that every willing man in the United States would have work to do, and plenty of it, if the great wealth of this Nation was not controlled by selfish, greedy men, and if the great opportunities of this Nation were opened up to the toiling men of the Nation. [Applause.]

The gentleman knows that in his own State of Washington there are acres and acres of valuable timber to be cut, hundreds of mines to be opened, dams to be built, bridges to be constructed, and with that unlimited field of human opportunity he has the effrontery to stand up and ask the question, Would it not be necessary for the Government to find employment for immigrants coming to our shores? What kind of statesmanship is it in this great arena that we possess in this country that allows so many men to remain out of employment? Why, gentlemen, in the State of Washington alone there are untold resources sufficient to give employment to every man who with wistful eyes in Europe turns this way hoping for an opportunity to make a home for himself and family.

If men coming in, or now here, fail to find opportunity to make homes for themselves the fault lies in our lack of statesmanship, in our lack of intelligence, in our lack of far-seeing patriotism that fails to open these opportunities to these men anxious and willing to work. [Applause.]

Mr. KELLEY of Michigan. Mr. Speaker, will the gentleman yield?

Mr. MANAHAN. Yes.

Mr. KELLEY of Michigan. Mr. Speaker, the gentleman, of course, understands that there are a great many hundreds of thousands of men out of work now. What I want to know is how it will improve the conditions to add more to the already unemployed list?

Mr. McKENZIE. Mr. Speaker, will the gentleman yield for a question?

Mr. MANAHAN. That is two at once.

Mr. McKENZIE. My question will be short. I would like to ask the gentleman if he does not think the laboring men of America are competent to decide what is for their best interest; and, if so, why do they not oppose this legislation? [Applause.]

Mr. MANAHAN. Mr. Speaker, the laboring men of America, if given a fair opportunity to have the question put up to them, are competent to decide, but I answer the gentleman by saying that it never has been put up to them. There is not a laboring man in the United States who will take issue with the fundamental statements that I have been making. There is not a laboring man in the United States who will not agree with me that the trouble with labor is not in the number of competitors, but in the selfish greed of big business that takes from him the fruits of his toil; there is not a laboring man anywhere on earth, in labor unions or outside of them, who does not know that he needs food to eat that must be grown by the toil of other men, that he needs clothes to wear that must be made by the toil of other men, that he needs a place in which to live that must be constructed by the muscle of fellow laboring men, and how does he think that he can get more food to eat or better clothing to wear or better houses in which to live by keeping from this country laboring men who are willing to grow food, make clothes, and build houses for him?

Coming to the question of the gentleman from Michigan [Mr. KELLEY], which asked how it would improve the condition of laboring men to have others come, I say this, that I thought I was making it clear that what laboring men needed was opportunity to work, and the man who says that in this country of ours there is not an opportunity for laboring men had better go back to the kindergarten and study elementary geography. [Applause.]

Mr. POWERS. Mr. Speaker, will the gentleman yield?

Mr. MANAHAN. Yes.

Mr. POWERS. What laws would the gentleman suggest that would bring this opportunity to the laboring man? We would like something specific on that score.

Mr. MANAHAN. That is a very simple proposition, and I am surprised that the gentleman from Kentucky would ask a question so elementary [laughter]; yet I ought not to say that I am surprised.

Mr. KELLEY of Michigan rose.

Mr. MANAHAN. Oh, let me answer one question at a time. The gentleman from Kentucky [Mr. POWERS] asked me for some suggestions, and I said at first that I was surprised that he should, but when I consider that he comes from a constituency where something in the neighborhood of 30 per cent of the people are illiterate I am not surprised. [Applause and laughter.] I should not have mentioned this argument, because, in a way, it is an argument in favor of the literacy test.

Mr. BURKE of Pennsylvania. Would not a little Republican legislation also help?

Mr. DONOVAN. Mr. Speaker, a point of order. [Laughter.] The gentleman has no right to interrupt a speaker without first addressing the Chair.

The SPEAKER. That is true; but the gentleman from Minnesota has a right to yield if he desires; and if he does not desire to yield it is his business to indicate it.

Mr. DONOVAN. Mr. Speaker, will the gentleman yield?

Mr. MANAHAN. Yes.

Mr. DONOVAN. Mr. Speaker, I appeal to the gentleman, inasmuch as this is the only intelligent address we will have here, to take the floor and keep it, so that we may hear it fully.

Mr. MANAHAN. Mr. Speaker, I desire to answer the gentleman from Kentucky [Mr. POWERS] as to the remedies that will give employment to the laboring men of this country. I will have to be very brief, but I say, first, that the full enforcement of the Sherman antitrust law would be one step in that direction. The destruction of monopolies in this country and the prevention of great corporations from exploiting the public by stock-watering manipulation of assets and indirect graft by their officials would be another step. Still another would be the lowering of freight rates instead of raising them [applause] and the squeezing out of the water in the stock of all public-service, and especially all transportation, companies. Another stupendous step would be the freeing of great market places from the intolerable monopolies that now control them and the encouragement of agriculture by placing the burden of taxation upon unused and undeveloped land. All of these would be steps in that direction. Another would be the opening up of the great natural resources of the country by the Government itself for the benefit of all the people. Why, this Government could put a million men to work building roads in this country—roads that would make the cost of living less to every toiling man; roads that would make the channels of commerce busy with the activities of both labor and capital; roads that would stimulate every line of industry; great roads over which could be hauled cheaply the fruits of the earth and the products of toil—not only roads, but the Government could construct great dams and public works of reclamation, irrigation, and drainage, where countless millions of men could work in the production of food and other necessaries of life for the common good of all and every man willing to work could get work. But, you say, would not that increase the taxes?

I have heard men ask foolish questions like that. I have heard Congressmen who considered themselves quite intelligent ask the simple question, How can the Government give laboring men employment without adding to the tax burden of the people? apparently unable to comprehend the simple proposition that every man who toils, whether he works for the Government or an ordinary employer, produces more wealth than he gets, and the whole Nation is richer by his toil, whether he works for the State or for private capital. If a million men come to this country and toil here for the next five years, whether they work for the Government on public works, or for railroads in transportation, or on the farms in raising crops, no matter where, they will increase the wealth of the country, the food supply for laborers, as well as increase the market for the manufactured product made by other toilers.

Mr. POWERS. Mr. Speaker, will the gentleman yield?

Mr. MANAHAN. I yield.

Mr. POWERS. The gentleman suggests that the building of good roads throughout the country would greatly aid laboring men. I would ask the gentleman if it is not true that this House has already passed a measure of that character, which is now in the Senate, and that the President has put the cold hand of death upon it?

Mr. MANAHAN. I have no custody over the President's cold hand of death; I do not know anything about it. [Laughter.] But I can suggest to the gentleman from Kentucky and to the Democratic Members of this House that if nothing worse can be said about the President's record than by reference to this veto he is fortunate indeed as Chief Executive of this Nation, because I think that he has approached the highest point he has yet attained as President of the United States when he put the stamp of disapproval upon this un-American bill. [Applause.]

This phrase reminds me that there are in the United States quite an aggregation of men who style themselves patriotic orders of one sort or another, who have deluged the Congress by petitions and letters to pass this on the theory that everything but the old stock is un-American, arrogating to themselves a higher conception of American nationality than that held by men of foreign birth and their children. I know I dignify more than they deserve the bigoted leaders of these organizations by referring to them at all in this debate, but there are men in this House who are actuated by a sort of subtle fear that these so-called patriotic societies have influence commensurate with their intolerant gall and effrontery and that they may have some merit to back their claims to patriotism; but common sense applied to the known facts of American history shows that these intolerant men, of narrowed minds, of poisoned hearts, are themselves out of place in our free air, and have yet to grasp in the slightest degree the meaning of human liberty and the mission of this Government. What is the spirit of this Government that from its inception has made it what it is? It has been that sublime spirit of fraternity and kindness; of gentleness and asylum, as the President so well expressed it in his message of disapproval. It has been the very essence of sheltering and universal asylum that has made this country truly great. Why, what is a nation? Is it a matter of battleships and armies? Is it a matter of bank accounts or balances of trade? Is a nation measured by geography or by its material wealth? Not in the right conception of nationality. A nation is a spiritual thing, and when you gentlemen who favor this measure take the narrow, selfish point of view that because we have got a good thing in this country therefore we must exclude men from foreign lands from sharing it—when you take that material, selfish point of view you repudiate the essential principle of this Government and the spirit that gave it life at the beginning. Not only that, it is unwise economically as well as being unfair, un-Christian, and unkind.

Furthermore, I suggest that right now in the Old World is being enacted the most tragic illustration of the folly and insanity of the spirit of selfishness, such selfishness as even in our own land here and now actuate the men who are backing this measure; the selfishness of men who want to take the property of all men and hold it to themselves, of men who would profit by the gifts of Almighty God and to the exclusion of other men just as deserving in His sight. I say there is being enacted in Europe a tragic illustration of what comes to nations when they permit their destiny to be shaped by greed, avarice, and selfishness; when they permit the spirit of materialism to control them; when, with greedy hearts, they would take what somebody else produces, and take it by force of arms if necessary. You would not take it by force of arms, perhaps, yet you would hold it by this legislation. You would deny other men the opportunity to labor, to produce wealth from nature, under the same pretense of self-preservation that drives the mighty armies of Europe on one side or the other. Oh, the spirit of materialism and of greed, the spirit of avarice and of power, the spirit of selfishness! Oh, the selfishness of this bill—the brutal selfishness of it! It is a blind and ignorant selfishness, too, because instead of benefiting those who think they would be benefited it would injure them and make them more helpless in the grind of greed. But that does not relieve those who strive to destroy our Nation as the refuge of the oppressed of the odium of being actuated by selfish motives. That does not relieve them of the odium of seeking by this legislation to take away opportunities from other men just as deserving.

The President well said that the inspiration of this people from the beginning, the star of hope that led them through every difficulty, was always symbolic of universal brotherhood and of the equality of man. The immortal declaration penned by Jefferson that all men are created equal and endowed of certain inalienable rights, of life, property, and the pursuit of happiness, meant just what it said. Jefferson did not say all men within the confines of these 13 colonies are entitled to these rights, but he said all men. Thus spoke the philosopher when he was discoursing upon the rights of men as such, all men, whether they be from the south of Europe or from the north of Europe or from New England or Kentucky. So, I say that is the spirit of this great Nation, and a nation's greatness is measured by its spirit and not by its wealth or by its armaments or its bank account. You once inject into the spirit of a great nation the selfishness of exclusion, the selfishness of greed, the selfishness of appropriating what belongs by God's decree to all mankind, you once inject that into this Nation and it is the beginning of the end. Just as we are now witnessing on the far fields of Europe, where the best of the toiling men are being destroyed in mighty battalions, because their Governments and the Governments of their opponents permitted action to be taken along lines of selfishness for their own people without regard to the rights of other people. Until a nation is content with spiritual power and until it can recognize the rights of men as such regardless of where their cradle rocked, until a nation is content with power of serving all men created in the image and likeness of Almighty God, it has no place in history, and no credit in all the annals of time.

I only hope that this great Nation of ours will put behind it the spirit of greed, the spirit of selfishness, the spirit of imperialism and of power, and open its heart, as it did at the beginning, to the toiling sons of Europe, its honest men and honest women who seek opportunity to work and to live, and to do their full duty as human beings. If this Nation has the wisdom to do that all will be well. If we, its representatives to-day, have the wisdom to forget the manufactured sentiment, and the clamoring of bigoted men on the outside, we will sustain the President in his veto. [Applause.]

Mr. GARDNER. Mr. Speaker, I yield five minutes to the gentleman from Wisconsin [Mr. LENROOT].

Mr. LENROOT. Mr. Speaker, there are but two propositions embodied in the President's message calling for consideration of the House at this time. The first proposition laid down by the President is inferentially, and almost expressly, that we owe an obligation to those foreign countries superior to the obligation which we owe to our own citizenship. [Applause.] He stands for the open door in immigration, subject to restriction only with reference to mental and physical defects and criminal tendencies.

Mr. Speaker, we have no such obligation. The question is the effect of unrestricted immigration upon our own citizenship and upon our economic conditions, and that, Mr. Speaker, is an obligation that we owe superior to that which we may owe to any general question of any general brotherhood of men. [Applause.] Our obligation, Mr. Speaker, to our own citizenship is to do that which is within our constitutional power to enlarge the opportunities for the average citizen of the United States, to do those things, Mr. Speaker, which will elevate the character of the citizenship of this Nation. And if unrestricted immigration will narrow the opportunities of the citizenshp now here, if its effects may be to lower the general character of the citizenship, then our obligation is to pass this bill over the veto of the President. Whether such would be the effect of the passage of this bill is a fair subject of discussion upon which patriotic men differ.

But the President in his message does not touch upon that question. It is simply the broad question of whether our superior obligation is to those abroad rather than to those now here. The gentleman from Minnesota [Mr. MANAHAN] spoke of the selfishness of this kind of legislation. Why, Mr. Speaker, whatever our individual views may be, as a theoretical matter, it is our sworn duty to legislate for the people who have sent us here to represent them. And as for selfishness, it is the same kind of selfishness, sir, and none other, as the selfishness you exercise with reference to having a little greater care for the opportunities for the children of your own family than you have for the opportunities of the children of your neighbors. [Applause.] It is a proper kind of selfishness, and unless, sir, we have that kind of selfishness, if you choose to call it such, for the people of our own country, there is little hope, indeed, for our own future.

The next proposition, Mr. Speaker, that the President lays down is that he is not unalterably opposed to this legislation, but that the American people have never expressed themselves upon this subject. He says:

> Does this bill rest upon the conscious and universal assent and desire of the American people? I doubt it. It is because I doubt it that I

make bold to dissent from it. I am willing to abide by the verdict, but not until it has been rendered.

The SPEAKER. The time of the gentleman from Wisconsin has expired.

Mr. GARDNER. The gentleman from California [Mr. KENT] is not going to use his time, and I therefore will yield the five minutes to the gentleman from Wisconsin.

Mr. LENROOT. He said:

Let the platforms of parties speak out upon this policy and the people pronounce their wish.

Now, Mr. Speaker, under ordinary circumstances it would be assumed that a measure that was favored by one Congress by an overwhelming majority, an election had intervened, and another Congress elected by the people, and that second Congress by a two-thirds majority had expressed itself in the same way upon that subject—ordinarily, as I say, Mr. Speaker, that would be taken as some evidence of what the public sentiment was upon that question. But the President of the United States casts that all aside. So far as Republicans are concerned, he perhaps ought not to be condemned for casting their votes for this bill aside, for in his Indianapolis speech he said that the Republicans were either blind, misguided, or most of them ignorant. But the majority of you Democrats of both Houses have voted for this bill, voted for it two years ago, an overwhelming majority voted for it a short time ago, and what about you? Ought not th President of the United States to infer that you represent the sentiment of the people upon this question? But no; he says you do not represent the people. And perhaps he ought not to be condemned too greatly for that, because this is the first important measure that has reached the President of the United States where you have exercised your own judgment at all. It is the first measure that you have passed where you have not first obtained the consent of the President of the United States to pass it. And inasmuch as you did not first obtain his consent, it is natural enough that the veto message is here before us. He says it was not in a political platform. Suppose it was in a political platform, what would it amount to? I need not refer to some provisions that are in a present political platform, and there is not a Democrat looking me in the eye to-day who will say that some of the promises in the platform amounted to the snap of your finger. Perhaps the President takes the position that it shall be tried out in the next election, and that if the Democrats put this in their next platform and the President is defeated, that then it will be an expression that they do not want this legislation. But, Mr. Speaker, you might place in your next platform all the promises that the mind of man could conceive of, and among them this one, and the American people would not pay the slightest attention to that promise, because the test will be not the promises that you make in your platform but what you have done with the power that you have had while you have been in control.

Mr. Speaker, there is no direct referendum on this question. There can be none. And, indeed, if a defeat of a President of the United States who has vetoed this legislation is any indication of public sentiment on this question, I recall that President Taft two years ago vetoed this very bill, and that Taft is not the President of the United States to-day. [Applause.]

The SPEAKER. The time of the gentleman has expired.

Mr. SABATH. Mr. Speaker, I yield five minutes to my colleague from Illinois [Mr. GALLAGHER].

Mr. GALLAGHER. Mr. Speaker, I am unalterably opposed to this legislation and have before on other occasions cast my vote against this bill. In doing so I have been prompted by the best of motives and the best of feeling for the best interests and the general welfare of my country and for the great body of people who are unable to plead here to-day for themselves. I come from the city of Chicago and the great West. The development of this part of our country and these States is the direct result of a policy that has been followed by our Government for over 125 or 130 years. We have grown and builded not by a policy of restriction, but by a policy of liberality and a policy of welcome for all who have come here to aid us. In my city are gathered representatives of most of the races coming from every section of the world; nearly every tongue is spoken; newspapers printed in most every foreign language are issued daily and weekly, and the effect of this has been for good and of great benefit; and in consequence of it we are solving the problems of the greater future of this country. The old theory of America for Americans I had hoped had long since passed away, and to-day new and more important issues were before us.

I was more than pleased with the President's veto of this bill, and the sentiments conveyed in his message are worthy of more than a passing thought. He has laid great stress upon the fact that the people of the United States have never had this issue presented to them, and it is true. I appeal to every man here to inquire if this is not a true statement. The message stated that while we are the Representatives of the people yet this issue was never submitted to be passed upon in a campaign at large before the people.

Persons and associations banded together and organized for mutual and economic purposes have unquestionably expressed opinions, but let us examine their protests. Are they not signed by the leaders of the interests, and not the voice or the wishes of the persons whom they pretend to represent? The great masses of our people, however, have not passed upon this question.

I have always believed in party fidelity and party loyalty, and I appeal to my friends on my side of the House to remember that we have a leader to-day in the White House who dares to express his opinion, and having expressed it appeals to us to sustain him. That chivalrous spirit ever makes a union successful and powerful. For over 50 years the Democratic Party has not been in power for any length of time, and during all of that period we have looked for a leader. I am saying nothing against any other parties, many members of which will stand back of the President to-day; but I do appeal to that unity of purpose, that unity of interest which the President is entitled to at this hour. It has been stated on this floor that both parties have in their platforms asserted the right of restriction of aliens. In reply to this I will only say that when the platform of my party is examined it will be found that the restrictions there mentioned were never intended to exclude those affected by the literacy test, but the dominant thought was to keep out the undesirables of Europe, and nothing more; and it is unjust to state, as has been stated here to-day, that the platforms of both parties are against the statements made by the President. All this is hardly true when you analyze the real object and intent. You gentlemen can not point to a single rostrum where an advocate stood representing either party submitting the issue as to the literacy test to the people as a part of his argument.

I am surprised at the woeful lack of knowledge that Members display here in regard to our foreign population by advocating this legislation. Do they know anything of those people? Have they ever lived among them to any extent? I do not think so.

I come from and live in a district that is made up entirely of foreigners. The Polish population in my district, the Italian population, the Jewish population exceed by far in numerical strength that of any single district in the United States. My district is in the very heart of the great populous and enterprising city of Chicago. Upon this district in finance, industry, and conveniences these great and progressive peoples by their sterling qualities of manhood and womanhood have impressed their enterprising individuality. And against these people, than whom no more moral or God-fearing people ever lived anywhere, we hear a lot of cheap talk, senseless tommyrot, which proves undeniably that those who declare these sentiments are grossly ignorant of the qualities of these peoples and convince the initiated that they positively do not know what they are talking about. [Laughter and applause.]

These people come here to better their condition, and they are positively doing it, and if you want any evidence of this fact come into my district and I will show you just as great churches, just as good schools, just as big banks, just as happy homes, and just as numerous and just as prosperous people as you can find anywhere upon God's footstool. [Applause.]

The youth of that district crowd the schools and colleges, preparing for all the learned professions of law, medicine, dentistry, pedagogy, and devoting their best mental energies to the study of the arts and sciences.

I see my friend from California [Mr. RAKER] smiling sardonically over there, as he always does when the plain truth is distasteful to him. He referred to some steamboat companies or shipping interests on the Pacific coast, telling us about the crews they employed upon their boats, but he did not tell us anything about the people who unload those boats upon the docks, the poor people who are compelled to unload them upon the docks, who are striving hard to better their conditions, and who have an interest in this matter. [Applause.]

The President's veto message is a masterly document, showing a breadth of vision and a wealth of information of which he has been able to secure possession by reason of the facilities at his disposal to accumulate it. His reasoning is sound, his argument unanswerable, and his patriotism unimpeachable. He has spoken in this ringing appeal with a clearness and a force that will inevitably convince anyone whose mind is free from prejudice and whose spirit is not burdened with intoler-

ance. He has spoken not for the present alone but for all time to come, blazing the way for future statesmen to build up a Nation here in our beloved America that is destined to become the most cosmopolitan, the most progressive, and the most prosperous that the sun, in all its course, has ever shone upon.

Mr. SABATH. Mr. Speaker, I yield five minutes to the gentleman from Colorado [Mr. KINDEL].

The SPEAKER. The gentleman from Colorado [Mr. KINDEL] is recognized for five minutes.

Mr. KINDEL. Mr. Speaker, I am glad of the opportunity to express my sentiments, which will be subjective, rather than objective. I am the son of an immigrant. My father came to this country and he could only write his name. He was as sturdy and as honest a citizen and as useful a citizen as any man that I know of, and I, his humble son, will say, without egotism, that I have, in my humble way, done more for the general mass of the people to reduce the cost of living by championing fair and equitable transportation rates than I dare say any other man on the floor of this House [applause], because I have for twenty-odd years devoted myself to the subject of transportation, the currency of which everybody knows, or, rather, ought to know, is paramount to the currency of money in the development of our country. [Applause.]

I am surprised that you want to come here and legislate against a man who can not write because of the literacy test. Why do you not keep out the European goods? Why do you let them come in here at a less rate than is charged to transport domestic goods from interior points? Why, I was forced to buy goods in England simply because I could save $75 a car from Liverpool via Galveston to Denver instead of from New York via Galveston to Denver.

It is the same way with the express companies. The foreign parcel post, in conjunction with American express companies, will charge you $1.20 for a package of a certain kind, whereas our domestic express companies, shipping a similar package from New York to the same point or destination will charge you $1.75. On the foreign shipment our express companies receive but 24 cents. The parcel post comes along, and it is said it was introduced in order to reduce the cost of living. I am surprised that not one of you has gotten up here to challenge me and to say that these things that I have pointed out are not correct. Now, in order to prove these figures, I have repeatedly issued statement after statement; and now I wish in a concrete way to show you what is happening with the parcel post. I am surprised that the labor unions have not taken this matter up.

Mr. RAKER. Mr. Speaker, will the gentleman yield?

The SPEAKER. Does the gentleman from Colorado yield to the gentleman from California?

Mr. KINDEL. Yes.

Mr. RAKER. I understand the gentleman is in favor of this bill and its provisions as to exclusion, except as to the literacy test?

Mr. KINDEL. Yes. I say the literacy test is wrong—to hold that up——

Mr. RAKER. Is the gentleman in favor of the rest of the bill?

Mr. KINDEL. Oh, yes. I do not want criminals and imbeciles or other undesirables of that kind to be allowed to come to this country, but I am most emphatically opposed to the literacy test.

Now, I will show you what has happened in regard to the parcel post, which the Postmaster General has said reduces the cost of living. A 5-pound parcel from New York to Denver would cost 51 cents by parcel post; by express it is 37 cents. A 10-pound package from New York to my city of Denver would be $1.01 by parcel post, while by express it is 57 cents. A 20-pound parcel by parcel post would be $2.01 from Denver to New York, whereas by express it is 98 cents. A 50-pound parcel from New York to Denver would be $5.01 as against $2.22. Mind you, I am quoting the cost of transportation on edibles, the things that reduce the cost of living. And yet this administration has been for two years compounding and perpetuating this error, with all the rest of the inexplicable and irreconcilable rulings I complain of. [Applause.]

The SPEAKER pro tempore (Mr. SAUNDERS). The time of the gentleman from Colorado has expired.

Mr. SABATH. Mr. Speaker, I yield five minutes to the gentleman from New York [Mr. LEVY].

The SPEAKER pro tempore. The gentleman from New York [Mr. LEVY] is recognized for five minutes.

Mr. LEVY. Mr. Speaker, section 19 of the pending immigration bill is so ambiguous and uncertain and so loosely drawn as to give unlimited power to the immigration authorities who have charge of deportation. Suppose, for instance, that an alien who, having been admitted to this country, has made application for citizenship papers, and the probabilities are that he would receive his final papers at the expiration of five years; then, perchance, some designing person would make complaint to the Bureau of Immigration that this alien, who is on the verge of receiving his final papers, was subject to some of the provisions of this bill, it would place in the hands of that bureau unlimited power. Perhaps some innocent female might be taken advantage of by the exercise of such a power—a power far exceeding any lettres de cachet issued during the reign of Louis XIV—and she might be deported without being given any fair notice whatever.

Under the existing law innocent women have been charged with crimes of which they were perfectly innocent and deported without any protection, and it is now time for legislators to prevent the enactment of such unjust and extraordinary laws and to properly protect the immigrant and to curb such enormous power as deporting anyone who has been in this country for a period of five years. No such power should be placed in the hands of any official or representative of the Government unless properly safeguarded, but as the proposed section is now drawn it gives unlimited power to officials to deport perfectly innocent persons. This section alone should be sufficient to sustain the presidential veto and thus defeat the measure.

The whole spirit and proposition of this bill is opposed to the principles of American institutions and the Democratic Party. Such a measure was one of the causes of our throwing off the yoke of Great Britain and bringing on the Revolution. In the Declaration of Independence the following is contained concerning the obstructions to immigration:

> He has endeavored to prevent the population of these States, for that purpose obstructing the laws of naturalization of foreigners, refusing to pass others to encourage their migration hither, and raising the conditions of new appropriations of lands.

And this very section which I refer to was one of the principles advocated by the immortal Jefferson.

I opposed a similar measure in the Sixty-second Congress and voted to sustain the veto of President Taft. In opposing such a bill I sustain the principles of the Democratic Party as laid down by Thomas Jefferson in his proclamation concerning foreigners, in which he said:

> It has been the wise policy of these States to extend the protection of their laws to all those who would settle among them of whatsoever nation or religion they might be, and to admit them to a participation of the benefits of civil and religious freedom; and the benevolence of this practice, as well as its salutary effects, renders it worthy of being continued in future times.

In writing to Citizen Genet, the representative of the French Government in this country, on the subject of free immigration Mr. Jefferson said:

> Our country is open to all men, to come and go peaceably when they choose.

And, again, in writing to Gen. Kosciusko on the same subject he said:

> The session of the First Congress, convened since republicanism has recovered its ascendency, * * * are opening the doors of hospitality to fugitives from the oppressions of other countries.

Mr. HEFLIN. Mr. Speaker, will the gentleman yield?

The SPEAKER pro tempore. Does the gentleman from New York yield to the gentleman from Alabama?

Mr. LEVY. I can not yield.

Instead of abolishing the onerous shipping laws which are on the statute books at the present time, this bill intensifies them and makes them more obnoxious and more troublesome to our merchant marine.

The SPEAKER pro tempore. The time of the gentleman has expired?

Mr. LEVY. Can I have one more minute?

Mr. SABATH. I yield to the gentleman one minute.

Mr. LEVY. I sincerely hope that my colleagues will vote to sustain the veto of President Wilson, and by doing so they will be following the teachings of the father of Democracy—Thomas Jefferson.

The pending measure is very unfair to captains, masters, agents, and consignees of vessels, as it lays down intricate rules and regulations so difficult to construe as to make it almost impossible to conform thereto, thus interfering with the efficiency of our commerce and merchant marine service. [Applause.]

Mr. GARDNER. Mr. Speaker, what is the score, please?

The SPEAKER pro tempore. The score is as follows: The gentleman from Alabama [Mr. BURNETT] has 47 minutes, the gentleman from Massachusetts [Mr. GARDNER] has 54, and the gentleman from Illinois [Mr. SABATH] has 51 minutes, and the gentleman from Pennsylvania [Mr. MOORE] has 28 minutes.

Mr. GARDNER. I yield five minutes to the gentleman from Tennessee [Mr. AUSTIN].

Mr. AUSTIN. The gentleman from California [Mr. HAYES] has promised to yield to me three minutes.

The SPEAKER pro tempore. How does the gentleman from California get his time?

Mr. AUSTIN. I think he gets it from the gentleman from Massachusetts [Mr. GARDNER].

Mr. GARDNER. I have yielded five minutes to the gentleman from Tennessee [Mr. AUSTIN], and it has just been stated to me that the gentleman from California [Mr. HAYES] is not going to occupy as much time as I thought, so at the end of the five minutes I hope to be allowed to yield to the gentleman from Tennessee a little more time.

The SPEAKER pro tempore. That question will arise at that time.

Mr. AUSTIN. Mr. Speaker, we are called upon this afternoon to vote either for America or for the rest of the world. I am for America first, last, and all the time. [Applause.] We are called upon to decide by our votes whether we will legislate in the interest of our own beloved country; our own honest and deserving people; or in favor of foreign lands and alien people; whether our consideration, justice, and charity shall begin at home or on foreign shores; whether we prefer the interest and advancement of the native and naturalized American citizen or the far-away stranger from beyond the seas; whether we will favor the four or five millions of unemployed American workingmen, or whether we will favor more than a million of idle aliens who are landed upon our shores every 12 months by a greedy Steamship Trust. [Applause.]

When this bill was under consideration in this House a year ago, I read the following letter to show how aliens were used to underbid and take labor from our own people:

EDWARD HORVATH LABOR AGENCY,
124 EAST THIRD STREET,
New York City, October 4, 1913.

S. E. & H. L. SHEFERD CO.,
Rockport, Me.

GENTLEMEN: Foreign laborers are now available in this city for less wages than you can secure men for in your State.

Are you in need of any? If so, we can offer for immediate shipment any number of them of any desired nationality.

Trusting to hear from you, we are,

Very truly, yours, M. ENGEL, *Manager.*

After this letter was submitted, the gentleman from New York City [Mr. CANTOR] interrupted with this statement:

Oh, Mr. Chairman, that is not an authorized labor agency at all. We are familiar with that letter. This is an old chestnut, 2 years old.

To prove that my statement was correct and the gentleman from New York was in error, I offer the following letter from the manager of the labor agency and a telegram from Commissioner Bell, who, under the law, issues licenses in New York City:

EDWARD HORVATH LABOR AGENCY,
New York City, February 1, 1915.

Hon. R. W. AUSTIN,
Member of Congress, Washington, D. C.

DEAR SIR: I am in receipt of your favor of the 30th ultimo, in which you inquire whether I am the manager of the Edward Horvath Labor Agency. In reply to the above I beg to advise that I am as yet the manager of the above concern, which has been in existence for the last six years, and is duly licensed and bonded by the city of New York in accordance with the law.

In connection with the above, permit me to express my surprise as to the knowledge of that particular New York Member of the House, who has informed you that our agency was not legal, without license, and a myth.

May I give you yet additional information which that particular Member of the House could not furnish to you?

Yours, very truly,

M. ENGEL, *Manager.*

NEW YORK, *February 2, 1915.*

R. W. AUSTIN, *Washington, D. C.:*

Edward Horvath Labor Agency, 124 East Third Street, is licensed and bonded according to law and was in 1913.

GEORGE H. BELL, *Commissioner.*

As further evidence along the line of this offer to furnish foreign laborers for lower wages in the State of Maine, of how these people are used after their arrival in this country, I call the attention of the House to what the members of a subcommittee of which I was a member, in investigating the coal strike in Colorado last spring, discovered. The proof shows the places of the miners in the first or original strike, occurring several years ago, were taken by foreigners who were shipped in from eastern cities, and in the last strike, in 1913, the strikers' places were filled by labor agents in Pittsburgh, Pa., furnishing foreign miners, some of whom admitted on the witness stand they had been in this country three or four months. When we had this immigration bill under consideration last February I read an article from the daily New York Times, showing there were 331,650 men out of employment in that city. Judge E. H. Gary, chairman of the executive committee of the unemployed, is authority for the statement that "from the best estimate, the number of unemployed in New York City is 200,000 larger than it was at the same time last year." So we now have over 530,000 idle men in that city alone, and the President favors a policy which means landing yearly on our shores more than a million of idle persons, seeking work, from foreign lands, practically all of them to go ashore in New York City. I venture the assertion the great majority of the idle men in New York City are foreigners who do not speak our language and have no interest in our country except to get what they can out of it, regardless of the interest or welfare of our native or naturalized citizens.

President Wilson has vetoed this immigration bill, and in his message he says the American people have never passed upon the illiteracy question. The Democrats in their national convention several years ago placed this plank in their platform:

We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market.

The Republican Party in its national platform made this declaration:

For the protection of the quality of our American citizenship and of the wages of our workingmen against the fatal competition of low-priced labor we demand that the immigration laws be thoroughly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write.

So we have had both national parties indorsing this legislation in one form or another.

Out of 213 Members in the Sixty-second Congress who voted to pass this bill over President Taft's veto, more than 160 were reelected. Of 252 Members of the present House who voted on the 4th of last February for this bill, and whose position was thus known to the voters, 185 were returned. Out of 126 who voted against this bill at that time, only 76 were reelected. In other words, out of a membership of 435 in the next House, there will be only 76 who went on record in opposition to this bill. The American people have passed upon this question by electing President McKinley on a platform favoring the illiteracy test by an overwhelming majority, and President Roosevelt upon a restriction platform; and I venture the prediction the next occupant of the White House will be elected upon a platform indorsing the principles of the bill now before us. [Applause.]

Mr. GARDNER. Will the gentleman yield?

Mr. AUSTIN. Yes.

Mr. GARDNER. Does the gentleman think any President could be elected on a platform pronouncing against the restriction of immigration of that kind?

Mr. AUSTIN. I am absolutely sure no candidate of any party could win on such a declaration or platform. As a patriot and a lover of my country, I am anxious to see this bill passed over the President's veto; but if I considered this matter as a partisan, I would want to see his veto sustained, in order that the American people could face him at the polls in the coming presidential election on the issue he has raised. [Applause.]

Congress must settle this question right for all time. We can not evade, indefinitely postpone, or side-step it. It will not down until a law is written closing our doors against the undesirables of every country on the face of the earth. The President of the United States in 1902 stated in his History of the American People we were receiving too many of what he termed "the lowest class of people from southern Italy and the meaner sort from Hungary and Poland." When he made that statement we were receiving 246,146 annually from those three sections of Europe. Last year we received from southern Italy, Hungary, and Poland 517,590, or more than double the number the President objected to. At the time of the President's criticism in 1902 the foreign steamships landed here a total of 648,743 aliens, and last year the number had increased to 1,218,480. In 1902 we received 165,105 illiterates over 14 years of age, and in 1914 263,225 illiterates landed. When an impartial historian and a private citizen, not a prospective candidate looking for the so-called foreign vote, the President stated, "The Chinaman was to be preferred as a workingman, if not as a citizen, to the coarse crew" we were receiving from southern Italy, Poland, and Hungary. Yet his veto means to keep our doors wide open to the people from these three countries, so they can be dumped upon our shores and their labor brought in competition with free, honest, American labor in the mine, workshop, and in all other lines of industry.

The gentleman from Minnesota [Mr. MANAHAN] says only the officials of the labor organizations, and not the rank and file of the members, are against this bill. I deny this. In a number of their national meetings, with delegates from every State and industrial city, they have unanimously asked the American Congress for the passage of this bill. I insist organized and unorganized labor is a unit for this legislation, and it has the sym-

pathy and support of a large majority of the American people—native and of foreign birth.

Two million members of the American Federation of Labor, 3,000,000 of the Farmers' Union and Alliance, half a million of the United Mine Workers, the trainmen's, conductors', engineers', and firemen's associations, and many other organizations, including practically every patriotic organization in the land, have repeatedly asked for the passage of this bill, and as their honest, just, and patriotic appeal fell upon deaf ears when they urged President Wilson to approve the bill, in the coming presidential election they will demand and materially aid in electing a Chief Executive of this Republic who will stand for the American home and for American labor against the cheap labor of Europe. [Applause.]

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. GARDNER. I yield five minutes to the gentleman from Michigan [Mr. J. M. C. SMITH]. [Applause.]

Mr. J. M. C. SMITH. Mr. Speaker, I am in favor of immigrants coming into this country who can read at least 30 common words of their own language, as provided by this bill.

I quote the literacy provision:

That after four months from the approval of this act, in addition to the aliens who are by law now excluded from admission into the United States, the following persons shall also be excluded from admission thereto, to wit:

All aliens over 16 years of age, physically capable of reading, who can not read the English language or some other language or dialect, including Hebrew or Yiddish: *Provided*, That any admissible alien or any alien heretofore or hereafter legally admitted, or any citizen of the United States, may bring in or send for his father or grandfather over 55 years of age, his wife, his mother, his grandmother, or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not; and such relative shall be permitted to enter. That for the purpose of ascertaining whether aliens can read the immigrant inspectors shall be furnished with slips, of uniform size, prepared under the direction of the Secretary of Labor, each containing not less than 30 nor more than 40 words in ordinary use, printed in plainly legible type in some one of the various languages and dialects of immigrants. Each alien may designate the particular language or dialect in which he desires the examination to be made, and shall be required to read the words printed on the slip in such language or dialect.

This provision is the one so much objected to. The following provisions can hardly receive objection, it seems to me, from anyone. I refer to a part of section 28:

SEC. 28. That any person who knowingly aids or assists any anarchist or any person who believes in or advocates the overthrow by force or violence of the Government of the United States, or who disbelieves in or is opposed to organized government, or all forms of law, or who advocates the assassination of public officials, or who is a member of or affiliated with any organization entertaining or teaching disbelief in or opposition to organized government, or who advocates or teaches the duty, necessity, or propriety of the unlawful assaulting or killing of any officer or officers, either of specific individuals or of officers generally, of the Government of the United States or of any other organized Government.

And also to a part of section 35:

SEC. 35. That it shall be unlawful for any vessel carrying passengers between a port of the United States and a port of a foreign country, upon arrival in the United States, to have on board employed thereon any alien afflicted with idiocy, imbecility, insanity, epilepsy, tuberculosis in any form, or a loathsome or dangerous contagious disease.

I wish now to refer you to a statement made by President Wilson in his veto message, which, I think, commends the bill:

This particular bill is in so many important respects admirable, well conceived, and desirable. Its enactment into law would undoubtedly enhance the efficiency and improve the methods of handling the important branch of the public service to which it relates.

In my State of Michigan we have spent millions of dollars for education, and no money is more liberally or willingly paid by the taxpayers than that paid for education. In that State is located the first great university of the United States—the University of Michigan, at Ann Arbor. We have the first agricultural college founded in this country, and we also have a great normal schools for teachers at Ypsilanti and many other institutions scattered over the State that are creditable and that we are proud of. And I will say for the University of Michigan that it is represented in more places on the globe, and has more representatives upon the floor of this House than any other great educational institution in the United States. [Applause.] In the State of Michigan we compel children under the age of 14 years to go to school under our compulsory-education law, and I am not in favor of letting down the bars to foreigners to come in here without an education and keep them up against our own children. I do not believe that the people of my State are in favor of it, and I can not see how the working people of this country can indorse such a policy. I want to say to you, my friends, that it is a very easy matter to learn to read 30 of the common words in your own language, and I stand absolutely upon the literacy test.

I am one of those who believe that education and good citizenship go hand in hand.

I know that if a man of fair intelligence will take a slate and pencil and sit down for one evening by himself he can learn to write the German alphabet. I say to you that when I heard the gentleman from North Dakota [Mr. NORTON] this morning say that Russians came to this country and set up forges and bakeries and made useful citizens that I would be willing to venture that these very people could read or write 30 common words in their own language. I tell you that letting people come into this country without being educated is not conducive to good citizenship. [Applause.]

An education is the best acquirement a person can obtain. It excels property and it removes mental blindness. Life is much more enjoyable to an educated person than it is to one uneducated.

We now restrict Japanese and Chinese immigration. Many of the people of these nationalities who are prohibited from landing on our shores are educated, but no distinction is made as to them.

Something has been said here that the laboring men are all in favor of the passage of this bill. They are the producers of wealth, a very respectable and considerable part and portion of our population. If they are interested, or if the bill is of any benefit to them, it adds to my interest in its passage.

I notice, from some of the papers, large concerns advertising for help make mention of Slavs, Finns, Poles, and Assyrians preferred. This is all right if they prefer that kind of workmen; and I am not opposed to the manufacturer selecting his own help, and I hope these workmen can all read at least 30 words in their own language.

If they can not read, I would put them in the class with our children and under the law require them to go to school until they learned to read and write, and by so doing give them a benefit which money can not buy nor money alone acquire. [Applause.]

Mr. SABATH. Mr. Speaker, I yield 15 minutes to the gentleman from New York [Mr. GOLDFOGLE].

Mr. GOLDFOGLE. Mr. Speaker, the disapproval of the immigration bill by President Wilson is founded in such sound common sense, is conceived in such a spirit of humanity, supported by Democratic traditions and American principles, that I cheerfully give my support to the President's position and shall vote to sustain the veto.

The proponents of the measure propose to enter upon a reversal of the historical policy of our Government concerning immigration. It has been one of our Nation's boasts that we have hospitably received the foreigners who, coming healthy in mind and body, law-abiding, and self-supporting, sought habitation in our land. Here, too, it has ever been our policy to give to those who came to our shores from lands where equal opportunity was denied or where educational advantages were withheld, an asylum against oppression and persecution. Yet now it is proposed to close our gates to those who, regardless of whether they are bodily or morally sound, useful in occupation, or self-sustaining, happen, because of educational opportunities denied them abroad, to be unable to pass a literacy test.

Mr. Speaker, as much as any man in this House, I am opposed to the admission to our country of the pauper, the bad and the vicious, and the really undesirable classes. I favor the enforcement of the law which looks to their exclusion. But surely because a man, woman, or child happens to be illiterate does not by any means imply that he or she belong to either of these excludable classes. Go to the great centers of population among the immigrant classes and see how illiteracy decreases, as many of these immigrants avail themselves of the opportunity held out to them to learn to read and write.

I heard the gentleman from Illinois [Mr. GALLAGHER] describe the conditions in his city respecting the foreign born, their progress and advancement. I come from the city of New York, which abounds with multitudes of the foreign born. Aided by their contribution of thrift and industry, energy and perseverance, my city has grown in wealth and position, in power and in influence, and we who come from that cosmopolitan city, teeming with the myriads of people of almost every nationality, do not in any way share the fears about the influx of immigration so freely expressed on this floor by the advocates of the bill.

I have at all times been a supporter and advocate of the cause of labor. Throughout my public career I have willingly, cheerfully, and unhesitatingly supported the measures designed for the benefit of labor and the betterment and protection of the working classes. I have stood for the principles of organized labor. I, too, want to see the standard of American living maintained and the standard of American wage upheld. I can

not believe that the admission of a few illiterates, otherwise qualified under existing law for entrance to our land, would work the conditions which the advocates of the bill argue on this floor would be produced.

Mr. Speaker, were we to look into the ancestry of many of those who have served city, State, and Nation in public station—aye, of many of those who from time to time have served with honor and distinction in this House—we would find many who came to America from foreign lands illiterate. They, like the immigrants of the present day, quickly entered into the spirit of American life and became imbued with American habits and ideals. They, like the immigrants of the present day, eagerly sent their children to the schools, where, with remarkable aptitude for study, these children made rapid progress in education, and the rolls of honor in our colleges and universities are replete with names of the children of these foreign born.

Through means of immigration our land has prospered, our wealth augmented, our cities and towns upbuilded, and our general welfare increased. Yet for over a hundred years the demand for restriction of immigration has come, more frequently from the narrow minded, the prejudiced, or the ill informed. In the debates on immigration in the House during my years of service I have pointed out, as others, too, have done, the vain fears and gloomy forbodings expressed by the enemies of immigration from the earliest period of the Republic to the present time, yet our country has grown and prospered and become the mighty Nation that it is to-day, while the fears and doubts and pessimistic misgivings have vanished as thin air.

Ah, but some say the quality of immigration is not to-day what it was years ago. Mr. Speaker, that is the same, same old cry. It is the same cry made every time restriction was proposed. Years ago it was directed against the Irish, the Germans, the Austrians, and the Scandinavians. These splendid, sturdy, industrious, and thrifty immigrants made splendid, valuable, most desirable acquisitions to our land. Who now dare deny their worth, their quality, their value to our common country. Now the hand of the restrictionist is directed against the Russian Jew, the Italian, the Roumanian, the Hungarian, the Pole, and the Slav.

You gentlemen who come from districts into which little or no immigration comes do not understand the worth and quality and value of these people. They come hopefully into this country, and, like the immigrants that preceded them, seek, through earnestness of effort, through thrift and energy, through labor, and all that makes for decent manhood and womanhood, to build for themselves and their families and for usefulness and happiness of home. So, sir, aside from those who are honestly and squarely moved to support this bill because they in their judgment believe economic conditions demand it, I fear that much of what underlies the advocacy of the measure in the minds of some is that spirit which is born of narrowness and conceived in racial prejudice.

Time does not permit me to pursue the subject longer. My views, frequently expressed on this floor on the literacy test, are well known to the membership of the House. I ask the House to sustain President Wilson in his scholarly and patriotic message. The literacy test, neither a test of fitness or character, determining neither the morality of the immigrant nor his quality, but used only as a subterfuge for arbitrary restriction, has been three times by Presidents condemned. President Cleveland, in vigorous terms, disapproved it. So did President Taft. Now that great Jeffersonian Democrat who so ably stands at the helm of state, in a message that commends itself to the judgment of fair-thinking men, calls upon us to sustain that policy under which America, as the land of liberty and opportunity, has held its gates open to the stranger from other lands. [Applause.]

The SPEAKER. The time of the gentleman from New York has expired.

Mr. ADAIR. Mr. Speaker, I am directed by the gentleman from Alabama [Mr. BURNETT], the chairman of the committee, to yield 15 minutes to the gentleman from Delaware [Mr. BROCKSON].

Mr. BROCKSON. Mr. Speaker, restriction of immigration into the United States has been a fixed policy of our Government so long, I believe, the wisdom of such policy is not now debated.

The act of March 3, 1875, prohibited the immigration of alien convicts.

The immigration of Chinese laborers was prohibited by the act of May 6, 1882. Section 1 of that act was as follows:

> That from and after the expiration of 90 days next after the passage of this act, and until the expiration of 10 years next after the passage of this act, the coming of Chinese laborers to the United States be, and the same is hereby, suspended; and during such suspension it shall not be lawful for any Chinese laborer to come or, having so come after the expiration of said 90 days, to remain within the United States.

This law was continued in force for an additional 10 years by the act of May 5, 1892, and it was reenacted and continued in force without limitation by the act of April 29, 1902.

The act of August 3, 1882, prohibited the immigration of "any convict, lunatic, idiot, or any person unable to take care of himself or herself without becoming a public charge."

By the act of February 26, 1885, section 1 provided that—

> It shall be unlawful for any person, company, partnership, or corporation, in any manner whatsoever, to prepay the transportation, or in any way assist or encourage the importation or migration of any alien or aliens, any foreigner or foreigners, into the United States, its Territories, or the District of Columbia, under contract or agreement, parol or special, express or implied, made previous to the importation or migration of such alien or aliens, foreigner or foreigners, to perform labor or service of any kind in the United States, its Territories, or the District of Columbia.

The following provision was added to this act by the act of February 23, 1887:

> That all persons included in the prohibition in this act, upon arrival, shall be sent back to the nations to which they belong and from whence they came.

Section 3 of the act of March 3, 1891, was as follows:

> That it shall be deemed a violation of said act of February 26, 1885, to assist or encourage the importation or migration of any alien by promise of employment through advertisements printed and published in any foreign country, and any alien coming to this country in consequence of such an advertisement shall be treated as coming under a contract as contemplated by such act, and the penalties by said act imposed shall be applicable in such a case.

Subsequently various amendments were added to these laws. By the act of February 20, 1907, now in force, the "contract laborers" who are excluded from admission into the United States are described as follows:

> Persons hereinafter called contract laborers who have been induced or solicited to migrate to this country by offers or promises of employment or in consequence of agreements, oral, written or printed, expressed or implied, to perform labor in this country of any kind, skilled or unskilled; those who have been, within one year from the date of application for admission to the United States, deported as having been induced or solicited to migrate as above described; any person whose ticket or passage is paid for with the money of another, or who is assisted by others to come, unless it is affirmatively and satisfactorily shown that such person does not belong to one of the foregoing excluded classes and that said ticket or passage was not paid for by any corporation, association, society, municipality, or foreign Government, either directly or indirectly.

Thus from time to time our immigration laws have been made more restrictive.

The pending bill provides for further restriction of immigration by excluding aliens who can not read their own language. The bill has been returned to us by the President without his approval, and is now before us for reconsideration.

Do we need further restriction? If so, should the literacy test be used?

The act of February 20, 1907, provided for a commission, consisting of three Senators, three Members of the House of Representatives, and three persons to be appointed by the President, to investigate the subject of immigration.

This commission, after an investigation of three years, made its report, containing 41 volumes, in 1910. The report of this commission states:

> From July 1, 1819, to June 30, 1910, 27,818,710 immigrants were admitted to the United States. Of this number, . . .5 per cent came from European countries, which countries are the source of about 95.5 per cent of the present immigration movement. From 1819 to 1883 more than 95 per cent of the total immigration from Europe originated in the United Kingdom, Germany, Scandinavia, the Netherlands, Belgium, France, and Switzerland. In what follows the movement from these countries will be referred to as the "old immigration."
>
> Following 1883 there was a rapid change in the ethnical character of European immigration, and in recent years more than 70 per cent of the movement has originated in southern and eastern Europe. The change geographically, however, has been somewhat greater than the change in the racial character of the immigration, this being due very largely to the number of Germans who have come from Austria-Hungary and Russia. The movement from southern and eastern Europe will be referred to as the "new immigration." In a single generation Austria-Hungary, Italy, and Russia have succeeded the United Kingdom and Germany as the chief sources of immigration. In fact, each of the three countries first named furnished more immigrants to the United States in 1907 than came in the same year from the United Kingdom, Germany, Scandinavia, France, the Netherlands, Belgium, and Switzerland combined.
>
> The old immigration movement in recent years has rapidly declined, both numerically and relatively, and under present conditions there are no indications that it will materially increase. The new immigration movement is very large, and there are few, if any, indications of its natural abatement. The new immigration, coming in such large numbers, has provoked a widespread feeling of apprehension as to its effect on the economic and social welfare of the country.

Mr. DONOHOE. Mr. Speaker, will the gentleman yield?

Mr. BROCKSON. I have not the time. If the gentleman will excuse me, I must decline. If I yield, I will not have time in which to conclude what I desire to say.

The Commissioner General of Immigration, in his report for the fiscal year ending June 30, 1914, says:

Immigration, judged from the results of the year, has apparently reached the million mark permanently, and unless some affirmative action is taken by the Federal Government to restrict it, or steps are taken by European and other nations to reduce the steady stream of persons leaving the various countries of the Old World, we need hardly expect that the number annually entering the United States will hereafter fall far below 1,000,000. During the last fiscal year 1,218,480 souls have immigrated to the United States, 20,588 more than were shown for the previous year and only 66,869 less than the total shown for 1907, the banner year in immigration. Comparison of the record of emigrating aliens with that of immigrating aliens shows that 633,805 left the United States, so that the net increase in population by the immigration was 769,276. It was 815,303 in 1913 and 401,863 in 1912.

Paragraph 8 of the Immigration Commission report, which I have mentioned, is as follows:

The investigations of the commission show an oversupply of unskilled labor in basic industries to an extent which indicates an oversupply of unskilled labor in the industries of the country as a whole, and therefore demand legislation which will at the present time restrict the further admission of such unskilled labor.

It is desirable in making the restriction that—

A sufficient number be debarred to produce a marked effect upon the present supply of unskilled labor.

As far as possible the aliens excluded should be those who come to this country with no intention to become American citizens or even to maintain a permanent residence here, but merely to save enough, by the adoption, if necessary, of low standards of living, to return permanently to their home country. Such persons are usually men unaccompanied by wives or children.

As far as possible the aliens excluded should also be those who, by reason of their personal qualities or habits, would least readily be assimilated or would make the least desirable citizens.

The following methods of restricting immigration have been suggested:

The exclusion of those unable to read or write in some language.

The limitation of the number of each race arriving each year to a certain percentage of the average of that race arriving during a given period of years.

The exclusion of unskilled laborers unaccompanied by wives or families.

The limitation of the number of immigrants arriving annually at any port.

The material increase in the amount of money required to be in the possession of the immigrant at the port of arrival.

The material increase of the head tax.

The levy of the head tax so as to make a marked discrimination in favor of men with families.

All these methods would be effective in one way or another in securing restrictions in a greater or less degree. A majority of the commission favor the reading and writing test as the most feasible single method of restricting undesirable immigration.

The commission as a whole recommends restriction as demanded by economic, moral, and social considerations, furnishes in its report reasons for such restriction, and points out methods by which Congress can attain the desired result if its judgment coincides with that of the commission.

All the members of the commission excepting one recommended the adoption of the reading and writing test.

The testimony recently taken before the Committee on Immigration also shows an oversupply of unskilled labor in this country. The foreign unskilled laborers are evidently coming to this country in greater number than new positions are being made or supplied. Hence they are crowding out or interfering with the unskilled laborers among us. Many unskilled labor immigrants find such little opportunity here for work that they return to their native country.

We all know that it is impossible for this country to provide for properly and assimilate the millions of unskilled laborers that might come here if they were admitted without restriction. Since we can not admit all we should select for admission those who are most desirable and best fitted for our institutions.

Will the literacy test in the pending bill assist us in making the selections? I believe it will.

True it is that education alone does not prove good character, and the lack of education may be evidence of the lack of opportunity. Yet it is also true that the lack of education may be evidence of the lack of diligence. In some cases the lack of education proves a lack of diligence.

By adopting the literacy test we would reduce the immigration of unskilled laborers and would still receive those immigrants best fitted to become citizens.

As I have shown by the laws quoted, we have been attempting for years to exclude undesirable unskilled laborers. The Chinese-exclusion law prohibits the immigration of "Chinese laborers," regardless of whether they are educated or not educated, skilled or unskilled. The "contract-labor law" excludes persons who have been induced "to migrate to this country by offers or promises of employment," without regard to their education or lack of education, except that "skilled labor may be imported if labor of like kind unemployed can not be found in this country." Certain professional persons are also excepted.

It is not morally wrong for a foreigner to promise to work in this country. If it were not for the law prohibiting such an agreement, it would be the part of prudence to have an agreement for a position before coming here.

The laws I have mentioned plainly show that we do not want to encourage the immigration of unskilled laborers but do desire to discourage the immigration of such laborers. The "contract-labor law" is hard to enforce, and it is generally believed that it is being constantly evaded and violated.

Probably 99 per cent of the immigrants who are unable to read come to this country to work as unskilled laborers.

The enactment and enforcement of a law containing the literacy test would greatly check and restrict the immigration of such laborers. Too many are coming here under present conditions. There are good reasons for believing that a still greater influx of unskilled laborers will occur after the close of the European war. I believe existing conditions require a law to restrict immigration without delay. No man has offered a bill better than the bill now pending. Therefore I shall vote for the passage of this bill.

It has been well said:

> This above all: To thine own self be true,
> And it must follow, as the night the day,
> Thou canst not then be false to any man.

As with the individual, so should it be with the Nation. [Applause.]

I yield back the balance of my time.

Mr. BURNETT. How much time does the gentleman yield back?

The SPEAKER pro tempore. Two minutes.

Mr. BURNETT. Mr. Speaker, I yield five minutes to the gentleman from Ohio [Mr. BATHRICK].

Mr. BATHRICK. Mr. Speaker, I desire briefly to protest against the effort on the part of some gentlemen to bring this question into the scope of partisanship. I voted to pass this bill over the veto of President Taft, and I would not be consistent or square with my own conscience if I did not do the same in my party lines and vote to pass it over the head of my President.

Mr. DONOHOE. Will the gentleman yield?

Mr. BATHRICK. I can not with the time I have. Now, in reference to partisanship, in reading a letter sent to me by Michael A. O'Leary, chairman of the Democratic State committee of Massachusetts, I was rather surprised that he should make the statement that if this bill passed it would ruin the Democratic Party in that State, and I think it was a direct attempt to bring the bill within the scope of partisan politics. In the same mail I find that the Massachusetts State branch of the American Federation of Labor, being for the passage of the bill, stated that 200,000 members of labor in Massachusetts desired its passage, and in the same mail also I find that the Central Labor Union of Boston, representing 85,000 workmen of that city, desires to have the bill passed. In this connection, Mr. Speaker, I desire that a letter to Mr. O'Leary, from the president of the Boot and Shoe Workers' Union, be read by the Clerk. I believe the Democrats of Massachusetts need to look around and see where the votes are.

The SPEAKER pro tempore. The Clerk will read in the gentleman's time.

The Clerk read as follows:

FEBRUARY 2, 1915.

Mr. MICHAEL A. O'LEARY,
Chairman Democratic State Committee,
No. 15 Beacon Street, Boston, Mass.

DEAR SIR: We are advised that you are circularizing Members of Congress, urging them "that the future success of the Democratic Party in Massachusetts as well as throughout the country would be greatly endangered by the refusal of Democratic Members of Congress to sustain the President's veto of the immigration bill, and that the dictates of humanity, the high ideals of American fairness and justness, as well as party contingency, require that every Democratic Member shall vote to sustain the President."

In view of the passage of the immigration bill, both in the House and in the Senate, by a substantial majority, it would seem that your conclusion that the future success of the Democratic Party depends upon sustaining the conclusion of the President is not well founded.

We have within a few days past sent out letters to Congressmen and Senators in behalf of our 45,000 members throughout the United States urging that the immigration bill be passed over the President's veto.

We believe that we are qualified to speak with authority and knowledge upon the disastrous effect of free trade in labor, which has now left this country with a bread line of monstrous proportions in all the industrial centers of this country.

It has not been considered that the high ideals of American fairness and justness has been invaded by the qualifications along educational lines required to pass civil-service examinations, and thereby curtail the opportunities for employment of those unable to reach civil-service standards. Politicians have found it necessary to reduce through the civil-service plan the number of applicants for employment within the gift of political organizations or political officials. It is not inconsistent with fair play to humanity and justice if the workers of this country seek the slightest protection which might be afforded by the literacy test contained in the bill vetoed by President Wilson. The workers of this country have to share opportunities for employment with a large foreign element, when there are two or three men looking for one job. It is very easy to note that the influences behind opposition to this bill comes from large interests, who appear to believe that there must

be an unlimited opportunity to secure workers, regardless of the compensation they are to receive. The significant statement of Mr. J. P. Morgan before the National Commission on Industrial Relations yesterday that he supposed $10 a week was enough wages for a man if he was willing to accept employment at that rate, and that if that was the rate of wages there was no obligation upon the part of the person seeking employment to take the wages if they were not satisfactory. We can well understand how Mr. Morgan reaches the conclusions of this kind, as he evidently has never been in a position of seeking employment in an overcrowded labor market or with hungry children needing sustenance.

I express my unqualified surprise that the Democratic Party of this State is responsible for the issue of a circular such as you have sent out to the Congressmen. I am quite sure that the rank and file of the Democratic Party of this State will repudiate any such action upon your part.

This, in my opinion, is not a party measure, and I do not believe that the Democratic Party will be sustained if it is found to be lined up with the President in his veto of this important bill.

Very truly, yours,

JOHN F. TOBIN,
General President of the Boot and Shoe Workers' Union,
246 Sumner Street, Boston, Mass.

Mr. BATHRICK. I desire to insert, in addition to the letter just read by the Clerk, the letter of Samuel Gompers, president of the American Federation of Labor, to the chairman of the House Committee on Immigration, and certain inclosures with reference to the manner in which the opposition to this needed legislation is financed by the Shipping Trust and other big combinations, who want cheap labor at any cost to our standards of living and ideals of government:

[From the American Federation of Labor, Washington, D. C., Saturday, January 30, 1915.]

SHIPPING, STEEL, AND MINING CORPORATIONS FINANCE OPPOSITION TO IMMIGRATION RESTRICTION—THE FOLLOWING AUTHENTIC DOCUMENTS DISCLOSE THAT THE NATIONAL LIBERAL IMMIGRATION LEAGUE, WHICH HAS CONDUCTED THE CAMPAIGN TO OPPOSE RESTRICTION AND REGULATION OF IMMIGRATION, HAS BEEN FINANCED BY THE SHIPPING TRUST, THE COAL BARONS, THE STEEL COMPANIES, AND OTHER CORPORATIONS—THE OFT-REPEATED CHARGES THAT HAVE BEEN MADE BY ORGANIZED LABOR'S REPRESENTATIVES AND OTHERS FAVORING IMMIGRATION RESTRICTION ARE PROVEN—PRESIDENT GOMPERS ANSWERS PRESIDENT WILSON'S VETO OBJECTIONS TO THE IMMIGRATION BILL.

HEADQUARTERS AMERICAN FEDERATION OF LABOR,
Washington, D. C., January 29, 1915.

Hon. JOHN BURNETT,
Chairman Committee on Immigration,
House of Representatives, Washington, D. C.

DEAR SIR: It is sincerely regrettable that the President found it necessary to exercise his great constitutional prerogative by vetoing the immigration bill which passed both the Senate and House by such overwhelming votes, more than two-thirds of each body. It was hoped that with all the information before the President and with the history of the legislation since and including 1896, he would have reached the conclusion to give the bill his approval.

I have before me a copy of the President's veto message, in which he gives his reasons for his inability to give the bill his approval. Of course any utterance from so learned a man, from a man whose heart and mind are so attuned to the people's welfare as are Hon. Woodrow Wilson's, as well as from a man who, in addition, occupies the great office of President of the United States, is deserving of greatest respect and consideration. And still when a measure of such vital importance is yet under consideration and awaits final action by the Congress of the United States, it becomes the duty of citizens to express either their approbation or dissent, as their judgment and experience warrant. In line with this thought, I beg to submit for your consideration some views which are contained not only by me but which are generally entertained by the people of our country.

The President gives two reasons for his veto: First, that the bill embodies a radical departure from the long-established policy for this country, and would close the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of agitation for what they conceived to be the natural and inalienable rights of man; second, that the bill provides for a literacy test.

In connection with the first objection which the President interposes, it should be understood that without regard to that provision of the immigration bill the existing law of the United States does exactly what the pending immigration bill emphasizes. The President's objection is against what is now law, even should the immigration bill fail to become law, and in order to remove that objection, if the immigration bill shall fail of enactment, immediate steps thereafter should be taken to repeal the law which in principle the President characterizes as unjust and improper.

Now, in regard to the second objection of the President—that is, the literacy test—permit me to say that the essential purpose is to restrict and limit and better regulate immigration. In view of present conditions, as well as those which will necessarily confront us after the close of the European war, some measure of foresight is imperative if the menace of an overwhelming immigration is to be averted. No thinking, observing man who has his highest hopes centered in the welfare, the protection, and the mission of the people of the Republic of the United States disputes the fact that there must be some measure to restrict, limit, and better regulate immigration to our country. While a literacy test may not be the highest ideal for its accomplishment, yet that it is the most practical, advantageous, and workable no one in or out of Congress has undertaken to disprove, nor has anyone taken the people of our country into his confidence by suggesting or proposing a better method.

For a moment I must again call attention to what is generally apprehended regarding immigration after the close of the present terrible European war. The nations engaged in the conflict will, undoubtedly, do everything within their power to keep the strong and the healthy men at home. They will do everything in their power to encourage the emigration of the weak or incapacitated men and those whose health is partially undermined. Many will be glad to escape compulsory military service, and will do all they can to get away from the burdens of taxation which will result from the war.

And, pray, where will all these men go? Surely they will not go from their own to other countries now engaged in the struggle. They will come, if they can, to America, and come in such numbers as to overwhelm the toilers already here, to depress their standard of life, and to add to the already large number of unemployed.

The present is the time to make provision against what will surely become a menace unless the laws of our country shall restrict and limit and better regulate immigration.

If ever the citizenship of the United States has given indorsement to any measure of legislation, it has certainly done so to the principles embodied in the immigration bill now before Congress.

Not necessarily for your information, but because of the benefit the record may have, let me here state that:

In 1896–97 the Senate and House passed an immigration bill containing the literacy test. It was vetoed by President Cleveland. The House passed the bill over the President's veto. In the Senate it failed of passage over the veto by a few votes.

In 1898 the Senate passed an immigration bill containing the literacy test, but the bill, it is generally conceded, was crowded out of consideration of the House of Representatives by reason of the Spanish-American War.

In 1902 the House passed an immigration bill containing the literacy test.

In 1906 the Senate passed an immigration bill in which the literacy test was embodied. The House substituted a bill creating the Federal Immigration Commission. The commission consisted of nine members, eight of whom recommended the adoption of the literacy test as the most practical means for restricting, limiting, and better regulating immigration.

In 1913 the Senate and House passed an immigration bill containing the test recommended by the commission. The bill was vetoed by President Taft. That bill passed the Senate over the President's veto, but failed to pass the House over the President's veto by four votes.

In 1914–15 the House and Senate passed by more than a two-thirds vote the immigration bill now before Congress, which contains the literacy test. That is the bill which President Wilson has vetoed.

In the President's message he asks the following question: "Has any political party ever avowed a policy of restriction in this fundamental matter?" The answer is found in the Democratic and the Republican national platform declarations as far back as 1896. The Democratic national convention platform made the following declaration:

"We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market."

In that same year—that is, in 1896—the Republican national convention platform contained the following declaration:

"For the protection of the quality of our American citizenship and of the wages of our working men against the fatal competition of low-priced labor we demand that the immigration laws be thoroughly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write."

And, as you know, the candidates for President and Vice President of the United States nominated upon the platform containing this declaration were elected.

Of course it is sometimes profitable and always justifiable to ascertain the real purposes sought to be attained by and actuating the advocates and the opponents to legislation. Those who advocate the enactment of the immigration bill are persuaded that the needs of the people of our country require some means to protect them, their rights, their work, and their future against wholesale immigration—immigration planned on a great scale to depress the condition of the workers here by large numbers who may and do supplant them and take from them their opportunities to earn a livelihood; immigration which is so potent a factor to intensify and make acute the industrial and social injustice to our people. In a word, there must be some provision to meet a serious and menacing situation jeopardizing American standards of life and American concepts of freedom. If there be any desire for further information as to the justification for the attitude of the advocates of immigration restriction, ample evidence can be found in the report of the Federal Immigration Commission, the report of the Federal Bureau of Labor upon the investigation in Bethlehem, Pa., the report of the House committee giving the results of its investigation of the conditions in the steel industry (known as Stanley report), the statistics of immigration for the last 20 years (now temporarily reduced by the war), and many other sources of official and authentic information. If there be any desire to learn from whence the means has come for America's wage earners' movement to secure the enactment of an effective immigration restriction law the books and papers of the American Federation of Labor are open to you and to any Representative in Congress.

The purposes and the means by which the opponents to the enactment of the immigration law have conducted their campaign are equally a justifiable subject of inquiry. The opponents have openly stated the purpose they have in view. They have publicly declared that their motives are altruistic and patriotic; that they have conducted a campaign open, fair, and square; that the means by which their campaign was financed were contributed by men prompted by motives such as they themselves have openly declared; and that there were no ulterior motives prompting the financial contributors to the campaign of opposition.

Now, there has recently come into my possession a number of documents which place an entirely different light upon the motives, the purposes, and the methods of the campaign which has been conducted in opposition to immigration legislation. These documents have been printed. I make part of this letter a true copy of the documents I have. They are inclosed. If you or any other Representative or Senator in Congress cares to examine as to whether what is inclosed are authentic copies of the documents I have, I should be very glad to afford an opportunity for that purpose.

In conclusion it is earnestly hoped that the Congress of the United States will enact the immigration bill, the President's veto to the contrary notwithstanding.

Very truly, yours,

SAMUEL GOMPERS,
President American Federation of Labor.

WHAT THE STORY TELLS.

Trusts furnish money to National Liberal Immigration League to finance campaign against immigration legislation.

League affirms friendship for National Association of Manufacturers.

Hamburg-American Steamship Line notified by cablegram that league owes $7,000 and is liable to be sued and forced into bankruptcy.

French steamship company urged to aid in financing "a tremendous agitation" against immigration legislation.

Steamship companies campaigned for the appointment of Charles Nagel as Secretary of Commerce and Labor under President Taft. Mr. Nagel is referred to as one "not likely to favor legislation restricting immigration."

Hamburg-American Steamship official tells an associate that "a number of delegations composed of members of various nationalities" were sent to Washington to oppose immigration legislation. He says: "The delegates were not really chosen by bodies of their own nationality." It is stated that the campaign includes "visiting the societies of various nationalities, as Italians, Hebrews, Hungarians, etc., including the unions, for the purpose of advocating liberal immigration."

"We have to send appeals and communications to some 15,000 influential persons, most of them clergymen," says the steamship official.

National Liberal Immigration League, in another appeal for financial aid, tells trusts it is making possible "the influx of alien unskilled labor," and if contributions are not received "we will not be able to keep up our work."

WASHINGTON, D. C., *January 30.*

A sensation was sprung to-day in this city by the publication of authentic documents, many of which bear their own authenticity, and others so circumstantially proven that there is said to be no escape from their purport. As will be observed, among the documents are letters and appeals from the officers of the National Liberal Immigration League to corporations for funds and "subventions"; letters from the officers of the Liberal Immigration League to shipping companies of Germany and of France; cablegram appeal for funds by Mr. Behar, managing director of the National Liberal Immigration League, and a carbon copy of letter to the same company confirming the cablegram; financial statement of the receipts of the National Liberal Immigration League showing that $15,000 was paid as an annuity for the conduct of the campaign against protection of America's workers from stimulated immigration; letters from Mr. Benar, managing director of league, to Messrs. Japhot and Sagot, Compagnie Generale Transatlantique, Rue Auber, Paris, France, and the reply of Mr. Rene Sagot; appeals by B. A. Sekely, field secretary of the National Liberal Immigration League, who, in addition to his salary, it is declared, became entitled to 25 per cent of his successful solicitations; correspondence on official letterheads between Mr. Behar, managing director of the National Liberal Immigration League, and Emil L. Boas, resident director and general manager of the Hamburg-American Line, 45 Broadway, New York City, and J. Pannes, the St. Louis representative of the company, in the campaign to make Charles Nagel the Secretary of the Department of Commerce and Labor in President Taft's Cabinet, whose campaign was conducted upon the platform that he was an anti-immigration restrictionist; the documents also expose the fake of the delegations representing their own nationalities, for as one official informs his associate that "the delegates were not really chosen by bodies of their own nationality."

In view of the immigration bill now before Congress for a vote over the President's veto, the means by which the National Liberal Immigration League financed its campaign by contributions from the corporations most hostile to the interests of America's workers is both timely and of great import.

This is one of a series of circular letters appealing to corporations for the customary contributions and cash signed by the field representative, who is B. A. Sekely:

EDUCATIONAL DEPARTMENT.

Educational committee: N. Behar, managing director; John E. O'Brien, secretary; B. A. Sekely, field representative; Arthur F. Day, George M. Dodge, Michael J. Drummond, Charles W. Eliot, Judson Harmon, John J. Haynes, G. Gunby Jordan, Charles R. Parkhurst, Charles L. Stickney, William E. Story, William Sulzer, F. William Vogt.

[National Liberal Immigration League. (Selection and distribution rather than restriction.) Headquarters, No. 150 Nassau Street, New York City. Telephone 4762 Beekman. P. O. Box 1261.]

OCTOBER 14, 1913.

SUSQUEHANNA COAL CO.,
907 Arcade Building, Philadelphia, Pa.

GENTLEMEN: There are now eight new restrictive bills before Congress. One of them, introduced by Representative Roddenbery, provides for an educational test, increase of head tax from $4 to $25, possession of $100, and a physical test like that imposed on recruits for the Navy.

Worst of all these bills is the new Dillingham measure, providing that not more than 10 per cent of the number of any nationality in this country shall be admitted in any one year.

As soon as the regular session of Congress opens there will be started a bitter fight on immigration. We must be prepared, and the most effective way is to strengthen the hands of this league, which is the official organization of the liberal immigration movement. To do this is the duty of every citizen who believes in keeping the gates of America open to deserving immigrants.

This league has no lobby in Washington, and never has had one. It has always worked openly in legitimate and commendable ways, by educating public opinion, by holding meetings in various parts of this country, and sending delegations to Washington when necessary. We believe this honest expression of enlightened public sentiment will in the end triumph over the methods of the restrictionists. But we must present a united front, and to that end we ask you to send your contribution, as you did last March.

Very truly, yours,

NATIONAL LIBERAL IMMIGRATION LEAGUE,
Per ——— ———, *Field Representative.*

—

Rough drafts used as basis for letter to Andrew Carnegie, appealing for contributions and indorsing National Association of Manufacturers:

DEAR SIR: May I for a moment claim your kind attention to the character and labors of the National Liberal Immigration League?

The chief aim of our league is to preserve for our country the benefits of immigration, while keeping out undesirable immigrants.

Amongst our definite achievements I may say that since December, 1905, our league has, by means of open agitation through mass meetings and the distribution of argumentative literature, defeated all anti-immigration bills, beginning with the Gardner bill No. 8495, introduced that year, which provided for a $40 head tax. Conspicuous amongst such bills defeated by us was the Hayes bill of 1910.

All along we have ceaselessly been advocating the distribution of immigrants and labor, improvements in steerage conditions, and increased facilities for the naturalization of aliens worthy of that privilege. While on the other hand it has been our continued aim to promote good citizenship and patriotic sentiment amongst immigrants.

Up until recently we were receiving from a steamship line * * * $15,000 per annum, which, however, scarcely covered our running expenses, considering the vast amount of literature we print and distribute during the year. But the steamship line in question no longer see their way to keep up their contribution. And so we are compelled to fall back for support upon appeals to private citizens. We are confident that the responses will come in according to our deserts.

As a friend of our cause, as shown by yourself in your letter to our president February 2, 1911, we would appeal to you to head our list of subscribers.

Sincerely, yours.

The league, however, is fully inclined to indorse the National Council for Industrial Defense, organized and conducted under the leadership of the National Association of Manufacturers. We are convinced that their activities are beneficent to labor as well as to capital, to employees as well as to employers.

Very truly, yours, ——— ———.

The foregoing paragraph was evidently an afterthought.

NATIONAL LIBERAL IMMIGRATION LEAGUE.

Statement of income and liabilities, July 1, 1910, to Nov. 20, 1911.

RECEIPTS.

Paris	$15,000.00
Subscriptions for the distribution of Prof. Charles W. Eliot's letter	1,584.30
Dues and donations	380.42
Total income	16,964.72

EXPENDITURES.

From July 1, 1910, to Nov. 20, 1911	19,476.19
Deficit	2,511.47
Deficit July 1, 1910	1,680.70
Total deficit Nov. 20, 1911	4,192.17
Liabilities to date	1,974.97
Total deficit and liabilities	6,167.14

The foregoing financial statement discloses a deficit of $6,167.14, and shows the reason why Mr. Behar, managing director of the National Liberal Immigration League, sent the following cablegram and letter confirming the same:

[Postal Telegraph commercial cables telegram.]

DECEMBER 15, 1911.

Director STORM,
Hamburg-Amerika Linie, Hamburg, Germany:

We owe over $7,000 in salaries, rent, printing, etc. Unless we pay immediately we will be sued and put in bankruptcy with disagreeable consequences for all concerned.

BEHAR.

Mr. ADOLPH STORM,
Director Hamburg-Amerika Linie,
Hamburg, Germany.

DEAR SIR: This morning I said to Mr. Boas that I am continually assailed by creditors to whom we are indebted for rent, printing, etc. I added that it had been suggested to me to send these people to him, but he had always acted so kindly and gentlemanlike that I found it my duty to spare him any trouble. He suggested to me to address to you the following cablegram, "We owe over $7,000 in salaries, rent, printing, etc. Unless we pay immediately we will be sued and put in bankruptcy, with disagreeable consequences for all concerned," which I did.

Very truly, yours, ——— ———.

The following is a banking statement of Nissim Behar in account with the Guaranty Trust Co. of New York on the company's financial blank:

Nissim Behar, 150 Nassau Street, New York. In account with Guaranty Trust Co. of New York.

If no report be made within ten days the account will be considered correct. Vouchers returned.

Line No.	Day.	Checks.	Day.	Total checks.	Date.	Deposits.

3	28	9,800.00	26	9,800.00		
Balance interest to Dec. 28						8.13
Total Dec. 31, 1910				11,083.13		11,091.26
Balance						8.13

The following is a carbon copy of a letter sent by Mr. Behar, managing director of the National Liberal Immigration League, to Messrs. Japhot & Saget, Compagnie Generale Transatlantique, Rue Auber, Paris, France, appealing for contributions to start a tremendous agitation throughout the country against immigration legislation. The letter discloses the activity of former Congressman Bennet and the "service" rendered by the socialist paper, the New York Call:

NATIONAL LIBERAL IMMIGRATION LEAGUE,
November 23, 1910.

Messrs. JAPHOT & SAGET,
Compagnie Generale Transatlantique,
Rue Auber, Paris, France.

GENTLEMEN: We arrived safely on the 22d instant. I was permitted to leave the steamer without any formality as an American citizen, but my baggage, naturally, went with the rest to Ellis Island, causing me some annoyance and loss of time. On the 24th I went to Washington to see the Secretary and hand him over a letter from the secretary of our league, of which I inclose copy. I inclose also clipping from the Sun on this subject. The same has been appearing throughout the press generally, even in the Call, which is the socialist paper.

Though I am personally not unknown to the Secretary, still I took with me my friend, Mr. William S. Bennet, who is prominent in the Republican Party. The Secretary assured us that he and the President are anxious to prevent the breaking of family ties of American residents, but the law must be obeyed, according to the decision given by the solicitor, as per inclosed. But he will do his best to make the application as rare and as lenient as possible.

As to the consequences of the last elections, I was told at Washington that they would be felt in the tariff question, the Democrats being since long declared against the tariff, if not unanimously, at any rate in an overwhelming majority. As to the immigration question, there are Democratic restrictionists, as well as liberals, and, to be more correct, they go according to the manifestation of public opinion.

I will urge all my friends to start a tremendous agitation throughout the country, beginning in December and continuing through January. I shall be very glad to receive your contribution as soon as possible, as I am compelled to make inroads now before the end of November in the supplies which are to last until August, 1911.

Respectfully, yours, ——— ———.

The following letter is from Mr. Rjene Sajot to Mr. Behar, responding to the latter's letter of November 23, 1910:

PARIS, *30th December, 1910.*

DEAR MR. BEHAR: I was glad to hear that you had a good crossing on the *Chicago* and that you landed safely on the other side.

I suppose my chiefs have now written to you. Anyhow, I must thank you for the very interesting literature you have forwarded to me.

Would you mind in future addressing your correspondence to my chief alone and not mention my name on the address, as I am far from being on the same footing in the firm?

Wishing you a happy, healthy, and prosperous New Year, believe me, dear Mr. Behar,

Yours, very truly, RENE SAGOT.

—

Here is a copy of the original letter sent by Mr. Pannes on the official letterhead of the Hamburg-American Line:

HAMBURG-AMERICAN LINE,
902 Olive Street, St. Louis, January 20, 1909.

Mr. E. L. BOAS,
Resident Director and General Manager
Hamburg-American Line, 45 Broadway, New York.

DEAR MR. BOAS: Your wire arrived too late to secure to-day the information you want on Charles Nagel, but I shall do my best to write you fully to-morrow.

The inclosed article appeared in the St. Louis Globe Democrat of January 19.

Yours, very truly, J. PANNES.

The following is a copy of a newspaper dispatch printed in the St. Louis Globe Democrat:

NAGEL SLATED FOR CABINET POSITION—SECRETARY OF COMMERCE AND LABOR PORTFOLIO FOR NATIONAL COMMITTEEMAN—HIS NAME ON THE LIST—TAFT PLANS TO KEEP IT THERE ACCORDING TO RELIABLE REPORT—NO PULLING FOR HIM—ST. LOUISAN'S WORK ATTRACTED ATTENTION OF PRESIDENT ELECT LONG AGO.

WASHINGTON, *January 18.*

From a source whose reliability can not be brought into question it was learned to-day that the name of Charles Nagel, of St. Louis, appears at this time on the tentative list of the Cabinet of President-elect Taft. The place opposite the name of Mr. Nagel is that of Secretary of Commerce and Labor.

From the same source comes the story that Mr. Taft, having completed a tentative draft of his Cabinet slate, does not propose to change it before his departure for Panama. He will upon his return take up with Senator Knox, who is to be his Secretary of State, some of the Cabinet places which have not been definitely offered to the men picked out for them. Close up to March 4, when he is to be inaugurated, the President elect will make his final revision in the light of some inquiries which Mr. Knox is to make for him.

WANTED MISSOURI TO HAVE PLACE.

It develops that early in his consideration of his Cabinet the President elect determined that Missouri should have a place. One of the fond desires of Mr. Taft was to carry Missouri. He felt that there would be a labor defection which would make him suffer in some parts of the country.

Mr. Roosevelt during the campaign twitted Mr. Taft repeatedly about carrying Missouri, telling the candidate that he might make a good race (the President was always confident of Mr. Taft's election, and said so to all who asked him), but he never would duplicate his own performance in introducing the "mysterious stranger" into the Republican camp. When the slow returns made it apparent that Taft had carried Missouri there was a rapid-fire exchange of pleasantries between the two.

HEARD GOOD ABOUT NAGEL.

Mr. Nagel was brought to the favorable attention of Mr. Taft during the administration of Mr. Roosevelt. Mr. Taft was several times the guest of Mr. Nagel. Mr. Taft often heard eulogistic references to Mr. Nagel from Mr. Roosevelt. While the national campaign was on, the best of reports came from Chicago as to the intelligent advice which Mr. Nagel was able to give to the campaign managers. Not only was he deferred to in many steps taken in the Middle West, but he had a controlling voice, so it was said, in many of the general policies adopted in the national campaign.

It was also asserted to-day that no member of the Taft Cabinet will come into his place with less of wire pulling and solicitation in his behalf. It is said that after a dignified presentation of Mr. Nagel's name from the right quarters no campaign was carried on in his behalf, and that the only further representations made were at the solicitation of Mr. Taft, who sought additional information.

ONLY ONE ADVERSE REPORT.

The only adverse movement in connection with Mr. Nagel's name was that which involved bringing the President elect's attention to the fact that Mr. Nagel's law firm had as clients a big brewery concern, and also, at one time, the Standard Oil Co. This information was conveyed to Mr. Taft by one of his senatorial friends with whom he went over his tentative Cabinet list. Recently the President elect has fully informed himself as to the reports. After weighing them carefully, he is said to have fully determined that Mr. Nagel's high personal character and the character of his law service has been such in no way to disqualify him for the service which Mr. Taft seeks at his hands.

Although Mr. Nagel's name has been frequently associated with the place of Secretary of the Interior, it is said that place will go to R. A. Ballinger, of the State of Washington.

TREASURY PORTFOLIO UNFILLED.

AUGUSTA, GA., *January 18.*

That the President elect has not determined who is to be his Secretary of the Treasury is indicated by the circumstance that he to-day had a conversation with J. Shaffer, president of the Chicago Post, regarding the qualifications of the several Chicagoans whose appointment has been urged by Shaffer, who came here at the special request of the President elect for this conference. He says Mr. Taft is giving careful attention to the Treasury portfolio, and that he may not decide the matter until immediately before his inauguration.

Walter S. Dickey, Republican State chairman of Missouri, will talk politics with Mr. Taft to-morrow.

—

The following letter is upon the official letterhead of the Hamburg-American Line and discloses the campaign to make Mr. Charles Nagel Secretary of Commerce and Labor of President Taft's Cabinet:

HAMBURG-AMERICAN LINE,
902 Olive Street, St. Louis, January 21, 1909.

Mr. E. L. BOAS,
Resident director and general manager
Hamburg-American Line, 45 Broadway, New York.

DEAR MR. BOAS: The inclosed abstract from the Book of St. Louisans contains condensed information on Mr. Nagel's professional and political career, also of the career of his former partner, Judge Finkelnburg.

Mr. Nagel is an intimate friend of Mr. Adolphus Busch and is attorney for the Anheuser-Busch Brewing Association.

I am now waiting for additional information from Mr. Jos. A. Wright, an attorney with whom I am very well acquainted and on whose discretion I can rely absolutely.

Information secured from other sources is too general in its nature, and I suppose of no use to you. I refer to the general statements that he is highly respected, upright, a conservative, etc.

The inclosed clipping is from to-day's Globe-Democrat.

I hope to have other particulars to-morrow morning in time for the mail which reaches New York on Saturday afternoon.

Yours, very truly, J. PANNES.

NAGEL QUITS PIERCE CASE—FILES FORMAL NOTICE OF WITHDRAWAL IN MISSOURI SUPREME COURT—HIS CONNECTION WITH SUIT—ACTION IS NO SURPRISE, BUT MAY HAVE BEEN HASTENED BY TALK OF A CABINET OFFICER.

JEFFERSON CITY, MO., *January 20.*

Charles Nagel, of the firm of Nagel & Kirby, of St. Louis, who is said to be on the Taft Cabinet slate for Secretary of the Department of Labor, to-day filed with the clerk of the Supreme Court of Missouri formal notice of the withdrawal of his firm as associate counsel for the Waters-Pierce Oil Co., which, in the ouster suits, was shown to be largely owned by the Standard Oil Co. The notice of withdrawal was sent by mail.

When Gov. Hadley, then attorney general, filed his oil suits to oust the Standard Oil and Republic Oil Cos. from the State and to revoke the charter of the Waters-Pierce Co., the latter a Missouri corporation, Charles Nagel was to have been general counsel for the Waters-Pierce Co. His outlined policy of defense did not suit H. Clay Pierce, president of the board of directors of the company, and Judge John D. Johnson was made general counsel and Judge Sam Priest his associate. Nagel was retained in a minor capacity and took little part in the hearing of the oil cases before Commissioner Anthony. About his only connection with the case was in consultation and in making a final argument of about an hour before the commissioner in St. Louis when the case was submitted on the testimony.

Although Mr. Nagel stated some time ago that he meant to withdraw from the case, the fact that President elect Taft has slated him for a Cabinet position as a reward for his good work for Republicanism in Missouri while serving as national committeeman may have hastened his action.

Here is a biographical write-up of Mr. Charles Nagel:

[From Book of St. Louisans, published by the St. Louis Republic, 1906. Data for biographical sketches furnished by the parties themselves.]

Nagel, Charles, lawyer, born in Colorado County, Tex., August 9, 1849; son of Dr. Herman and Fredericka Nagel; educated in country school in Colorado County, Tex.; academic course in private school and high school, St. Louis; two years' course in St. Louis Law School and one year in University of Berlin, where studied Roman law, political economy, etc.; married, first, Louisville, Ky., 1876, Fannie Brandeis; one child, Hildegard, living; married, second, St. Louis, 1895, Anne Schepley; four children, Mary S., Edith, Charles, and Anne Dorothe. Returned to St. Louis after studying abroad in 1873, and engaged in practice; associated at different times with various partners, and January 1, 1903, became partner in firm of Finkelnburg, Nagel & Kirby, which changed, on the withdrawal of Judge Finkelnburg, June, 1905, to Nagel & Kirby. Since 1875 has been professor at St. Louis Law School; has been member of the board of trustees Public Library, trustee Washington University, member of board of control of St. Louis Museum of Fine Arts, member St. Louis Turner Society; Republican; member Missouri House of Representatives, 1881–82; president city council, St. Louis, 1893–1897. Clubs: St. Louis, University, Commercial, Mercantile, Round Table, Noonday. Office, 700 Security Building; residence, 3726 Washington Boulevard.

Finkelnburg, Gustavus Adolphus, lawyer, born near Cologne, Prussia, April 6, 1837; educated in Germany and St. Charles, Mo.; attended St. Charles College, Missouri, and graduated Cincinnati Law College; married, first, Emma Rombauer; married, second, Ida M. Jorgensen. Admitted to Missouri bar 1860; member Missouri Legislature, 1864–1868; Member Congress, 1868–1872; Republican nominee for governor of Missouri, 1876; defeated; same for supreme judge, 1898; defeated; appointed district judge May 20, 1905; member American Bar Association; Republican; author: practiced in supreme court and the courts of appeal in Missouri, 1894; wrote article on the "Power of the State to regulate prices and charges," American Law Review, July, 1898. Clubs: Mercantile, University. Office, room 320, Customhouse; residence, 4312 Westminster Place.

The following is another letter on the official letterhead of the Hamburg-American Line, which is self-explanatory:

HAMBURG-AMERICAN LINE,
962 Olive Street, St. Louis, Mo., January 23, 1908.

Mr. EMIL L. BOAS,
Resident Director and General Manager
Hamburg-American Line, 45 Broadway, New York City.

DEAR MR. BOAS: Mr. Wright could not let me know until to-day the result of his inquiries about Mr. Nagel. Mr. Wright says that in the opinion of Mr. Nagel's intimate friends he is well fitted for the post and not likely to favor legislation restricting immigration, since Missouri and the Southwest are in great need of immigrants.

This and the information already sent you is all I can secure at present. If you wish me to try for more definite information, I shall do my best to find out more.

Yours, very truly, J. PANNES.

Here is a most illuminating and interesting letter from Mr. Behar, managing director of the National Liberal Immigration League, to Mr. Emil L. Boas, resident director of the Hamburg-American Line:

JANUARY 24, 1908.

Mr. EMIL L. BOAS,
Resident Director Hamburg-American Line,
35 Broadway, New York.

DEAR SIR: The league has so far succeeded in checking the efforts of restrictionists, but the foes of immigration are the kind of people whose energy is increased by opposition, and whose earnestness and enthusiasm grow by defeat. The Junior Order tents have multiplied in Pennsylvania and in other parts of the country, and the delegates of the Immigration Restriction League and of other restrictive organizations are agitating everywhere.

We have sent to Washington a number of delegations composed of members of various nationalities, but the delegates were not really chosen by bodies of their own nationality. If we are to continue the campaign successfully we must penetrate into the masses and interest them to send delegations and instruct Congress that they are opposed to further restriction of immigration.

Our agitation should be carried on in the following ways:

First. Through mass meetings organized in all important centers voting resolutions.

Second. Through delegations to Congress and to all important conventions.

Third. Through public lectures and through special delegates visiting men's and women's clubs throughout the country.

Fourth. Through delegates visiting the societies of various nationalities, as Italians, Hebrews, Hungarians, etc., including the unions, for the purpose of advocating liberal immigration.

Fifth. Through literature. The league ought to continue to send pamphlets and other publications to the Members of Congress and other notable citizens, and to the public in general.

Sixth. Through correspondence. We have to send appeals and communications to some 15,000 influential persons, most of them clergymen.

In order to prove effective the propaganda must be carried on steadily all the year round. It would require vast financial resources to cover adequately all the above-enumerated points. However, if we had a definite sum of money to spend annually, we could arrange a plan for a systematic campaign, selecting the most important means of agitation. The formulation of such a plan is obviously impossible when we have no idea to what amount we may commit ourselves. We therefore suggest that a regular subvention would greatly enhance the value of our activity.

Hoping you will take this matter into consideration for the present year, I remain,

Sincerely, yours, _____
Managing Director.

The following is a circular letter sent out by the National Liberal Immigration League, of which Mr. Edward Lauterbach at the time was president:

[Edward Lauterbach, president; S. M. Newman, first vice president; William D. Eckert, second vice president; Frank Y. Anderson, third vice president; J. B. Young, fourth vice president; Antonio Zucca, treasurer; N. Behar, managing director; Mark J. Katz, John E. O'Brien, secretaries. Advisory committee, William S. Bennett, Benjamin F. Buck, David James Burrell, Frank S. Gannon, Louis N. Hammerling, J. J. B. Johnsonius, Herman C. Kudlich, Louis Edward Levy, R. D. Silliman, Thomas R. Slicer, Benjamin F. Tracy, Gallus Thomann. National Liberal Immigration League. For the proper regulation and better distribution of immigration. Headquarters, No. 150 Nassau Street, New York City. Telephone 4762 Beekman. P. O. Box 1261.]

GENTLEMEN: Since 1906 this league has kept America's door open to deserving immigrants. Without it, as Members of Congress and others have repeatedly asserted, laws would have been enacted to shut out yearly hundreds of thousands of immigrants whose labor is so much needed for our great industries.

In addition, this league has constantly advocated remedial legislation, such as Federal distribution of immigrants, deportation of criminals, and other measures that would take away the evils of immigration while preserving its great blessings.

We also do educational work by distributing our literature among libraries and debating societies, from whom we receive daily requests for pamphlets. In this way we are building up a public opinion in favor of liberal immigration among future citizens.

Our league had fully carried its claims for support from all public-spirited citizens, and especially those who are connected with industries whose existence is made possible by the influx of alien unskilled labor that can not be replaced by the native element. In default of such support we will not be able to keep up our work, and the Immigration Restriction League, of Boston, will have the field to itself.

Mr. B. A. Sekely, our field representative, will call on you and we bespeak your kind consideration on his behalf.

Yours, very truly, _____,
President.

No contract binding upon this league unless countersigned by the managing director. No person is authorized to use the name of the league otherwise than in connection with its corporate activity.

IMMIGRATION BILL IS DISCUSSED—PRESIDENT WILSON HEARS ARGUMENTS BY BOTH SIDES AT OPEN MEETING—THE AMERICAN FEDERATION OF LABOR, RAILROAD BROTHERHOODS, AND FARMERS' ORGANIZATIONS PLEAD FOR THE LAW—CHARLES EDWARD RUSSELL INFORMED THE CHIEF EXECUTIVE "1,000,000 SOCIALISTS" OPPOSE BILL—TAMMANY AND "BIG BUSINESS" ALSO PROTEST.

WASHINGTON, *January 30.*

In the White House last week 300 men and women urged President Wilson to sign and urged him to veto the Burnett immigration bill. It was an interesting assembly that arranged itself in a semicircle around the Nation's Chief Executive, who gave close attention to the workers' pleas for restriction and the oratorical flights of "big business" representatives. The battle was waged on the section of the bill providing for a literacy test.

Unions affiliated to the American Federation of Labor, the railroad brotherhoods, and the farmers' organizations asked that the bill be signed. On the other side were patriotic representatives of "big business," vote-hunting politicians from every party, and those who opposed the bill for sentimental reasons.

Ex-Congressman Bourke Cockran, New York lawyer, and Congressman GALLIVAN, of Massachusetts, led the opposition. Their rounded sentences and inspiring appeals for the American flag might well be termed classics for schoolboys. Such gems as this were common: "A constellation in the firmament of civilization."

Mr. Cockran indicated who he represented, however, when, in opposition to the literacy test, he said, "I believe a hand calloused with labor should be a better passport."

Former Lieut. Gov. Whitman told the President he represented Tammany, and that that organization was opposed to the bill.

Charles Edward Russel, magazine writer and lecturer, said, "1,000,000 socialists" oppose the bill, which, he declared, was "unsound and could not be enforced."

Secretary Morrison, of the American Federation of Labor, diplomatically called attention to the opposition of some associations "that depend for existence for contributions from the employing class." In referring to the $60,000,000 annual income of steamship companies, he said, "this will account in a great measure for the opposition of societies of various nationalities composed wholly or partly of business men and the attorneys of business men," whose freight charges might be increased to meet the companies' deficit if immigration was restricted. The unionist presented organized labor's position on this question, and showed, by the testimony of investigators, that workers are correct when they state that ignorant aliens are beating down the living standard of American wage earners.

The President gave two and one-half hours to the hearing, which was divided between the two forces. Secretary Morrison had charge of the time for friends of the bill.

J. H. Patten, representing the three farmers' organizations, comprising millions of members, presented resolutions passed by National and State conventions in favor of the bill. The speaker denied the claim that farmers desire the sort of immigrants the bill is intended to exclude. He protested against the "Russianizing" of American labor because of the influx of ignorant aliens.

William M. Clark, vice president Order of Railroad Conductors, spoke on behalf of the railroad brotherhoods, representing 350,000 workers, who favor the bill.

Dr. Stewart Paton, of New York, on behalf of various organizations of alienists and State boards of health said that three-fourths of the insanity in certain sections of the country is the result of illiterate immigration. He said the cost of maintaining them is greater than the cost of our common-school education. His figures were startling. He said this insanity could be largely traced to the flood of aliens arriving every year.

Prof. Fairchild, of Yale University, insisted that the illiteracy test is American and fair. He stated that when this same bill was up for consideration in previous Congresses Italy built schoolhouses in anticipation of its passage. The schoolhouses were abandoned when the bill was defeated.

Prof. Ross, of Wisconsin University, said that of all the tests that had been proposed to restrict immigration the one of illiteracy was the best.

Opponents of the bill showed much alarm at the prospects of this country running short of labor. Many opponents declared in favor of restriction, but "not this kind." None of them, however, even hinted of an effective substitute. Among the other speakers against the bill were Representatives Sabath, of Illinois; Goldfogle, of New York; J. Hampton Moore, of Pennsylvania; and Prof. Larned, of the University of Pennsylvania; Oscar Villard, editor New York Evening Post, and several representatives of foreign fraternal and other organizations.

LITERACY TEST FAVORED BY TRADES-UNIONISTS; AMERICAN FEDERATION OF LABOR SECRETARY MORRISON TELLS WHY.

At a public hearing in the White House last week President Wilson listened to arguments for and against the literacy provision contained in the Burnett immigration bill, which has passed both Houses of Congress by overwhelming votes. Secretary Morrison spoke for the workers of this country, and in urging that the President sign the bill, presented the following defense of the literacy-test clause:

"Mr. President, the proposition to prohibit immigration to the United States of able-bodied men and women because they can not read has a sympathetic viewpoint, where individuals are considered; but, notwithstanding such a viewpoint, the American Federation of Labor, which represents the organized workers of the country, and which is the only method or organization or agency which can with any justification or reason represent the unorganized workers, has repeatedly declared by resolutions in conventions 'that the literacy test is the most practicable means of restricting the present immigration of cheap labor whose competition is so ruinous to the workers already here, whether native or foreign.'

"A great deal has been said and published in an endeavor to create the impression that it is necessary to induce immigration to come to this country for the purpose of securing agricultural workers. There is no question in my mind but that such agitation has for its purpose the enticing of emigrants to our country to supply the United States Steel Co., the great manufacturing concerns, coal companies, packing houses, and railroads with men willing to work at a cheaper wage than those who are born here.

"That there may be no misunderstanding in regard to what the farmers think about using immigrants for farm hands, their representative, in his statement to you to-day, has clearly placed the farmers' organizations on record as opposed to the proposition of bringing immigrants into this country to do agricultural work.

"The opponents of this test make the argument that common laborers would belong to the class that could not pass the literacy test, and that this country is very much in need of that particular kind of labor.

"The great industrial companies of this country have more men to-day than they can employ, but they want the present conditions of unemployment to obtain. They want two men for every job. They know that unemployed men must work to live, and their necessities will force them to accept any wage set by the companies. Hence the workers' wages are literally held below a living wage by the hunger, misery, and distress of the unemployed.

"The organized wage workers have declared in favor of restriction of immigration to maintain unlowered the American standard of life. Those who oppose restriction are representatives of companies and associations composed of employers of labor, whose dominant interest is the dollar, and associations that depend for their existence upon contributions from the employing class.

"They feel that a reduction of immigration will result in a higher wage for their workers, which will disturb the profits and dividends from products manufactured by them, or perhaps they have been informed that if the steamship companies do not receive $60,000,000 a year for transporting aliens they will raise their freight rates.

"This reason will account in a great measure for the opposition of societies of various nationalities composed wholly or partly of business men, and the attorneys of business men. Restriction may interfere with their profits.

"With them it is always the dollar—with never a thought for the success or comfort of our millions of wageworkers or the hundreds of thousands who are continuously without sustaining employment. The steamship companies' interest in immigration is the $60,000,000 or more a year collected by them for carrying aliens to and from our shores. These companies have no interest in the welfare of our people. Their interest is in the dollars they collect.

"We oppose any attempt to lower the standards of American life. We want to raise them, and we are opposed to the exploitation of millions of aliens with its attending evils to swell the profits of the steamship companies, even if it adds to the resources of those companies $60,000,000 a year, even if it enables the United States Steel Trust to pay dividends and interest on $400,000,000 of stocks and bonds which never cost that company one cent.

"I wish to call your attention to the fact that industry is protected by a tariff, but labor is not; that the products of labor are protected, but we have a free flow of labor coming to our shores all the time; that the manufacturers have protection against products manufactured by cheap labor in foreign countries, but labor has no protection against the importation of cheap labor.

"The opponents of this measure say that if the products of labor are protected, then labor itself must be benefited, because the manufacturer can sell the products at a much higher price than can be obtained in other countries and will be in a position to pay higher wages to his employees. The protected manufacturer does receive a higher price than the products can be sold for in other countries, and the second contention—that they are thus made able to pay higher wages to their employees—is also true, but the fact is they do not pay higher wages. They pay lower wages.

"We find that the most highly protected industries, particularly the industries that are now controlled by trusts, such as the Steel Trust, Rubber Trust, Sugar Trust, packing houses, and textile industry, pay to their employees the lowest wage in the country, and some of them less than a living wage for a family. A high tariff has nothing to do with the wages paid in these industries.

"We hold that limitation of immigration to our country will compel social and industrial reform in the countries from which the immigrants flow. The fact that these countries have an outlet for a great number of their people means that there is an outlet from the oppressive conditions in those countries. For that reason those countries delay social and industrial reforms. As a consequence industrial and social misery is perpetuated in those countries, because their citizens are induced to come to this country.

"Those of us who have made a careful study of the question and have watched the census have been forced to the conclusion that it has become a habit of mind of the people of this country to have small families. The foreigners who come here have large families, but after being here some time they seem to get into the habit of mind which prevails among those born here; that is, the ever-decreasing number in a family. Those who have given this particular subject much thought and observation have come to the conclusion that this habit of mind is one of the direct results of the tremendous influx of foreign immigration into this country, which causes competition, increases the difficulties in way of obtaining a living wage, and forces the workers to the conclusion that it is their one recourse to enable them to sustain the American standard of life, and to survive the competition of the million or more aliens that have been coming here each year.

"The fact is that immigrants have been exploited to such an extent that workers possessing American ideals can not compete with them.

"On February 2, 1914, Representative AUSTIN read the following letter:

[Edward Horvath Labor Agency, M. Engel, manager. Licensed and bonded. Telephone, Orchard 1039. 124 East Third Street.]

NEW YORK CITY, *October 4, 1913.*

S. E. & H. L. SHEPHERD CO.,
Rockport, Me.

GENTLEMEN: Foreign laborers are now available in this city for less wages than you can secure men for in your State.

Are you in need of any? If so, we can offer for immediate shipment any number of them of any desired nationality.

Trusting to hear from you, we are,

Very truly, yours,

M. ENGEL, *Manager.*

"The following advertisement appeared in a Pittsburgh paper:

"'Men wanted—Tinners, catchers, and helpers to work in open shops; Syrians, Poles, and Roumanians preferred. Steady employment and good wages to men willing to work. Fare paid and no fees charged.'

"The wage earners believe in an effective regulation of immigration, because they desire to retain the American standard of living. The standard of wages for both skilled and unskilled labor of this country is the result of many years' effort by organized labor. When an immigrant accepts work at less than the standard wage, he not only takes the place of a man working at a higher rate, but he assists in forcing downward the prevailing rate of wages in that industry, which result carries with it a corresponding reduction in the physical, moral, and intellectual standards of American life.

"It is now an undisputed fact that in many industries the immigrants who come here are working for wages so low that the American worker, insisting on American standards, can not compete with them. In fact, they can not support a family on the wages paid them.

"In support of my statement that the American worker can not compete with this induced immigration and support a family on the wages paid, I refer you, Mr. President, to the investigation of the Bethlehem Steel Works made by a committee of the Federal Council of the Churches of Christ, representing over 16,000,000 people, and the investigation made by Commissioner Neill, of the Department of Labor, as to wages and conditions in the steel industry.

"The committee of the Federal Council of Churches of Christ, commenting on the wage scale at Bethlehem, said:

"'This is a wage scale that leaves no option to the common laborers but the boarding-boss method of living, with many men to the room. When a man has a family with him, they take in lodgers, or often the woman goes to work. It is reported that immigrant parents send their children back to the old country to be reared while the mother goes to work. On such a wage basis American standards are impossible.'

"Again, they say:

"'None of these common laborers in any of these steel mills are paid a living wage for the average-size family.'

"The literacy test is an expedient which should be adopted now, and time and experience will demonstrate what further legislation will be necessary in the interest and for the safety of the American people, for the improvement of American citizenship and homes, and for the perpetuation of the American Republic.

"The American Federation of Labor, at its convention held in November in Philadelphia, unanimously adopted a report urging the speedy enactment into law of the immigration bill. I will read so much of the report as refers to the literacy test:

"'It may be well understood that the Governments of Europe will exert themselves to the utmost to the end that those who are fit and who survive the destruction of the present conflict will not be permitted to leave their native countries, but will be seduced by whatever promises are necessary to remain and aid in the restoration of those countries to their lost position in commerce and industry, at the same time offering whatever inducements or assistance they may to the migration of the unfit to the United States, Canada, or any other country that may receive them. * * * For this, if for no other reason, the organized labor movement of the North American continent should devote without cessation its most earnest endeavor to secure the speedy passage of the Burnett bill, containing the provision for the literacy test.' * * *

"Mr. President, no other single proposed addition to our immigration laws has received the indorsement accorded to the literacy test. Seven times since 1894 bills to regulate immigration have passed one or the other Houses of Congress; in each case they have been passed by large votes. The Immigration Commission, which studied the question for nearly four years, said in the statement of its conclusions:

"'The commission as a whole recommends restriction as demanded by economic, moral, and social considerations.'

"A majority of the commission favor the reading and writing test as the most favorable single method of restricting undesirable immigration. The majority in this case consisted of eight out of nine members of the commission.

"The men who are chiefly interested in importing cheap labor into this country are the great tariff barons, the great mine barons, who want cheap labor. They know that they can not get cheap labor unless they get ignorant labor, because ignorant labor is the only labor that does not organize, that does not combine, and does not defend itself. When you bar men because of illiteracy, you do not bar them because of themselves—you bar ignorance. You bar ignorance, because ignorance is dangerous to free institutions in a self-governing country."

PRESIDENT VETOES IMMIGRATION BILL—UNIONISTS URGED TO WRITE REPRESENTATIVES—QUICK ACTION NECESSARY TO OFFSET INFLUENCE OF POWERFUL STEAMSHIP LOBBY AND ITS ALLIES—SUCCESS DEPENDS UPON A TWO-THIRDS VOTE.

WASHINGTON, *January 30.*

President Wilson communicated to the House of Representatives, Thursday, that he disapproved the Burnett immigration bill because of the literacy test. The American Federation of Labor, the railroad brotherhoods, and farmers' organizations prepared for this possibility, and have been urging their members to communicate with Representatives, who are being urged to not sustain the President's veto. It is agreed by House Members that action on the veto will be taken next Thursday, February 4. A two-thirds vote is necessary to reject the veto. Both sides in the House have issued a call for absent Representatives, as it is predicted the vote will be as close as when President Taft's veto on the same bill was sustained in the House by but 4 votes.

Trades-unionists are urged to immediately telegraph their Representatives to not sustain the veto. All other believers in maintaining the American standard of living are urged to do likewise. It is imperative that this action be taken to offset the influence of the shipping interests and their allies, who are working under the guise of "liberalism" to permit them free access to the world's cheapest labor markets.

The passage of the Burnett bill is necessary for workers in their struggle to maintain American ideals and living wages.

Inform your Representative of this fact to-day.

AMERICAN FEDERATION OF LABOR,
Washington, D. C., January 30, 1915.

Hon. JOHN BURNETT,
Chairman Committee on Immigration,
House of Representatives, Washington, D. C.

DEAR SIR: Since my letter to you of yesterday, in which I undertook to meet the objections interposed by the President in vetoing the immigration bill, and in which letter I also referred to the source from which the National Liberal Immigration League obtained its financial backing, and in which I also incorporated copies of documents which came into my possession, I have this morning by mail received several documents of importance bearing upon this latter subject. One of them is a copy of an agreement entered into between the National Liberal Immigration League, Mr. N. Behar, managing director, and Bela N. Sekely, field representative of the league. The agreement provides for the commissions which B. A. Sekely shall receive for financial contributions made by trusts, corporations, and holding companies, and special reference to the United States Steel Corporation. For your information, as well as for the record, I inclose a copy of that agreement.

I also inclose a copy of a pen-written letter by Mr. Behar from Wiesbaden, Cologne, under date of August 22, 1913, to Mr. Sekely. These are of the most important among those I received.

In addition, I should say that the person who placed these communications in my possession writes me to the effect that if the documents submitted to you yesterday and the inclosed should be supplemented by others, or if he is wanted "to appear before any properly constituted body to substantiate by statement," and anything in reference thereto, he will be glad to comply. It seemed to me that as chairman of the Committee on Immigration of the House of Representatives all this information should be in possession of yourself, of your committee, and of Congress.

Very truly, yours,

SAML. GOMPERS,
President American Federation of Labor.

NATIONAL LIBERAL IMMIGRATION LEAGUE,
150 NASSAU STREET, NEW YORK.

AGREEMENT.

Entered into June 17, 1912, by and between the National Liberal Immigration League, of New York, party of the first part, and Bela A. Sekely, of New York, party of the second part, witnesseth:

First. Party of the second part agrees to endeavor to raise financial support for the National Liberal Immigration League and party of the first part agrees and obliges itself to pay to party of the second part commissions as stated in the following paragraph for each and all contributions and donations secured by party of the second part.

Second. It is mutually agreed by the contracting parties that party of the first part will pay to party of the second part the following commissions on each of the donations and contributions secured by party of the second part—

(a) On sums over $10,000 a commission of 10 per cent.
(b) On sums over $5,000 up to $10,000 a commission of 15 per cent.
(c) On sums over $1,000 up to $5,000 a commission of 20 per cent.
(d) On sums amounting to $1,000 or less a commission of 25 per cent.
(e) On all contributions and donations made by parties after one year has elapsed since their first contribution was made party of the first part will pay to party of the second part a commission of only 10 per cent irrespective of the size of such contributions or donations.

Third. It is mutually understood and agreed that when a single contribution is made by business concerns known as trusts or holding companies this contribution comprising the contributions of several subsidiary companies of such trust or holding company—like the United States Steel Corporation—then the amount of such contribution is to be subdivided by the number of companies belonging to such trust or holding company, and the percentage of commission is to be determined by, and to be paid on each of the average amounts shown by the subdivision stated above.

Fourth. Party of the first part agrees to pay to party of the second part a weekly sum of $25 to cover his personal expenses, the total of such payments, however, to be deducted from the total of commissions due to party of the second part.

Fifth. Party of the first part agrees to pay the traveling expenses for party of the second part and such necessary business expenses as typewriting, etc.

This agreement can be discontinued by either party in giving two weeks' notice to the other party.

BELA N. SEKELY.

N. BEHAR.

WEISBADEN, COLN., *August 22, 1913.*

MY DEAR MR. SEKELY: I am going shortly to Liverpool, as everything depends on the decision taken there.

I will do my best—as far as argument and persuasion can go.

Received your friendly lines the 5th instant. I hope by this time you have received from Mr. Waron or otherwise the $30.

Very glad to hear that you will go often to the office.

I enjoyed the trip in the steamer, where I could do good service by refraining from sitting at table at night for supper. No more so, since I must count the sous and the pfennigs.

Let us hope, with kind regards for you and Mr. Berlin.

My address: 9 Rue Wauquelin, Paris.

Yours,

N. BEHAR.

I hope you will obtain from Mr. O'Brien to sign a letter to the signatories, which I will send by next mail. The object of the letter in question is to notify our signatories that we will append their names to our arguments.

Mr. BURNETT. Mr. Speaker, I will ask the gentleman from Pennsylvania to use some of his time.

Mr. MOORE. I yield five minutes to the gentleman from New York [Mr. CALDER].

Mr. CALDER. Mr. Speaker, there is unquestionably a strong sentiment among a large number of people in this country that this measure should prevail. These people are actuated by the very highest ideals; they are among our very best citizens and sincerely believe that the immigrant coming to this country who can not read or write is a menace to our institutions. I respect their views, and if I could bring myself to agree with them, I would gladly vote to-day to override the President's veto.

This country was settled by immigrants. Our forefathers came here that they might enjoy freedom of speech, freedom of religion, and have an opportunity to work out their own and their children's happiness. I am heartily in favor of keeping out the undesirable alien, and when this measure was under consideration voted for it with the literacy test eliminated. I regret sincerely that it did not pass in that shape. It would have been a stronger and better measure than the one now in force.

Much has been said to-day of the attitude of labor on this important question, and it has been argued that the coming to this country of large numbers of immigrants has tended to decrease the earning capacity of the American citizen. My observation in the great city of New York, where we have to meet and work out this problem, is entirely contrary to that view. I have been a close observer of labor conditions in the city and State of New York and of the wages paid there. I know that 30 years ago the men engaged in the common labor in our State were largely of Swedish, Irish, German, and English extraction. Now the children of these same men are engaged in the skilled trades at wages from 25 to 50 per cent more than they were paid 30 years ago. The effect of immigration has been to force up the wages of the immigrant of 30 years ago, who is the American of to-day. Common labor in the city of New York is now almost entirely performed by the Italians and the other races from southern Europe. We have spent in New York State during the past eight years on the roads in our rural communities and in the rebuilding of the Erie Canal over $150,000,000, and have now under contract or in contemplation the expenditure of over $300,000,000 for the extension of our great subway system in the city of New York. More than half the labor in these great public improvements is performed by unskilled workmen, and the vast majority of the men engaged in this work are illiterate. In New York State we have a law which compels every boy and girl to go to school until they are 14 years of age. In the northern European countries the same law also prevails. Neither the young American or the alien from the countries referred to will perform the common laboring work demanded in the great public improvements we have undertaken in recent years.

I said a moment ago that in New York City we have this great problem to solve, and we are solving it successfully. It is true that at present over 400,000 men and women in our city are out of employment, but in this vast number few are among the illiterate. These people take care of their savings and, when the hard times appear, are able to live on their savings until business revives.

My observation, Mr. Speaker, is that when the illiterate foreigner comes here he is the first one to see the necessity of education. I have gone through some of our night schools and find the great majority of those attending are from our foreign-born population. They can neither read nor write, and they improve the first opportunity to gain this advantage. They learn in these night schools the rudiments of an education and respect for our American institutions, and most of them when they are here long enough to become citizens are sufficiently advanced to present themselves to our courts and be accorded the rights they are entitled to under the law. I have visited some of the high schools in the city of New York. I find that a majority of the boys and girls attending there endeavoring to obtain an education are children of foreign-born parents. These parents, realizing their lack of education, grasp it immediately for their children. I am informed that in the College of the City of New York the parents of three-fourths of the children are of foreign birth. Men on this floor have criticized the character of the citizenship of our city. We are proud of it. The leveling influence of our great public-school system is doing more to solve this problem than all the laws we can place on the statute books. We want the strong, decent immigrant. We need him. We can assimilate him. We are assimilating him. We do not want the criminal, the anarchist, the unclean or indecent, and I am in favor of making the law just as strong as possible to keep out the men and women who, from their character, their health, their previous habits, will not in the end become good American citizens.

The other day, in a conversation with several Members of the House, it was suggested that our pension laws should be amended so as to prohibit the granting of pensions to pensioners who did not reside within the boundaries of the United States. This brought very forcibly to my mind the story of two cousins of my maternal grandfather who came to this country at the outbreak of the Civil War—two young Irishmen who could neither read nor write. They had heard of the war for the preservation of the Union. They knew this country had been the haven for the oppressed of their land, and they offered their services to the United States. One of these illiterate lads was killed at Gettysburg and the other severely wounded. The wounded boy returned to his old home after the war and there married a young Irish woman, and shortly after left her a widow. She is living in the old country, drawing a small pension, which I am sure, when the circumstances are understood, nobody will try to take from her. I simply point out this incident to indicate how unfortunate it would have been if at that time these two young liberty-loving Irishmen had been unable to come here and serve this country in its hour of need.

Mr. Speaker, I address the House to-day with some misgiving. As I indicated in the opening of my remarks, many of the best people in my State and city differ with me on this question. Frankly, I have at times struggled with myself in an effort to see if it were not possible to agree with them on the subject, but I can not do so. In a matter of this kind one must vote according to his conscience, and I can not bring myself to vote to shut the door of opportunity to the unfortunate man or woman who has been denied the chance that you and I have had.

Mr. GARDNER. Mr. Speaker, I yield five minutes to the gentleman from California [Mr. J. R. KNOWLAND].

Mr. J. R. KNOWLAND. Mr. Speaker, having supported the bill now pending before the House, I shall now vote to pass it, the veto of the President notwithstanding.

The necessity of some character of restriction to keep from our shores undesirable classes of immigrants has been growing more apparent from year to year, as the records have disclosed an annually increasing number of arrivals at our ports. Various methods have been proposed to solve the problem during the decade that I have been a Member of this body. In 1907 Congress provided for the appointment of a commission to make a thorough study of the entire question. At that time a bill providing a literacy test was pending. Before adopting this plan the House desired that a thorough investigation of the whole subject should be made. This commission was composed of three Members of the Senate, three Members of the House, and three others not Members of Congress. One of these outsiders was a distinguished citizen of the State of California, Mr. William R. Wheeler. An investigation was made of conditions abroad. Exhaustive hearings were had. In reporting the commission was unanimous that some method of restriction was necessary. As I recall—and I think the gentleman from Massachusetts [Mr. GARDNER] so stated upon the floor yester-

day—eight of the nine members of the commission advocated a literacy test.

The President in his veto message declares that he knows of no desire on the part of the American people for this character of law. My experience in this House has taught me that when a measure passes this body by an overwhelming vote it is in response to a well-defined public sentiment throughout the United States. Upon two occasions a literacy test has passed this House by an overwhelming vote. I maintain there can be no better or more accurate test of public sentiment throughout the country than shown by a majority vote of the Members of Congress representing every section, and who are responsible to the people of their various districts for their every act. Yes; and I have found that the Members of this House are quicker to detect public sentiment than any other body or individual in the country. They appeal to the people every two years.

The President also declares that the political platforms should speak. It seems to me that the President of the United States is the last person upon the face of the globe to disapprove a bill because it is not mentioned in the platform of the party. We have seen too many planks repudiated that were contained in the platform of the Democratic party. We saw the free-toll plank repudiated; and now the President and his party are about to repudiate another plank in the Democratic platform—the one in reference to a second presidential term. So, it seems to me, that this argument falls to the ground. Oh, it may be that this test will not keep out of the United States all of the undesirable immigrants we would desire to keep out, but, in my opinion, it is a step in the right direction. [Applause.]

This method may not be perfect, but what better plan is offered? It will be found that most of those who oppose the literacy test are unfavorable to any form of restriction.

As a nation we have always welcomed the thrifty and industrious immigrant, and will, I hope, continue this policy. Those who fail to have the proper respect for our institutions, those who do not appreciate the value of American citizenship and would subvert our laws, this class we do not welcome. The literacy test, in my opinion, will bar many.

I freely acknowledge that many of our best and most desirable citizens are foreign born. Had they come to this country under present conditions, considering the advance the world has made in education, there would be few, if any, who would have been unable to meet the simple literacy test provided in this bill. Any foreigner imbued with the proper ambition and possessed of sufficient enterprise would fit himself for the test.

In this connection I will quote the language of the literacy test. I do not see how it can be seriously objected to in this enlightened age. It reads as follows:

That after four months from the approval of this act, in addition to the aliens who are by law now excluded from admission into the United States, the following persons shall also be excluded from admission thereto, to wit:

All aliens over 16 years of age, physically capable of reading, who can not read the English language, or some other language or dialect, including Hebrew or Yiddish: *Provided*, That any admissible alien or any alien heretofore or hereafter legally admitted, or any citizen of the United States, may bring in or send for his father or grandfather over 55 years of age, his wife, his mother, his grandmother, or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not; and such relative shall be permitted to enter. That for the purpose of ascertaining whether aliens can read the immigrant inspectors shall be furnished with slips of uniform size, prepared under the direction of the Secretary of Labor, each containing not less than 30 nor more than 40 words in ordinary use, printed in plainly legible type in some one of the various languages and dialects of immigrants. Each alien may designate the particular language or dialect in which he desires the examination to be made, and shall be required to read the words printed on the slip in such language or dialect.

When the war in Europe ends the Pacific coast will be confronted with a new immigration problem resulting from the opening of the Panama Canal. Then the European immigrant will land directly at our doors. We are taking steps to meet the situation. The best methods of locating immigrants in the soil is being studied. With this in view, a Pacific coast immigration congress was held in San Francisco in April, 1913, attended by 327 delegates from 42 cities in California, Oregon, and Washington.

As shown by evidence already placed in the RECORD, the chief fight against this section is being inspired by the foreign steamship companies which profit so largely from the traffic. They want no restriction of immigration. It is not surprising that these companies have contributed to the fund raised by the National Liberal Immigration League, which is the leading organization fighting against the restriction of immigration. Probably it will be impossible to override the veto of the President owing to his power, but the issue will be a live one in the next campaign. Organized labor is interested. Patriotic men and women in every section, anxious to raise the standard of American citizenship, will continue the fight.

In California no man or woman can enjoy the privilege of full citizenship, can exercise the right of the ballot, unless able to both read and write. Should not the immigrants entering that State be able to read at least, as provided in the literacy test?

We of the Pacific coast want restriction that will aid in excluding the undesirable classes, and, in my opinion, this bill is a marked advance over existing laws or any new law so far proposed. [Applause.]

The SPEAKER pro tempore. The time of the gentleman has expired.

[Mr. FARR addressed the House. See Appendix.]

Mr. GARDNER. Mr. Speaker, I yield five minutes to the gentleman from Oklahoma [Mr. MCGUIRE].

Mr. MCGUIRE of Oklahoma. Mr. Speaker and gentlemen, if the Democratic Party were going to remain in power indefinitely there would be no occasion to restrict immigration. The Democratic Party always has restricted immigration, and for a splendid reason, and that reason is that when the Democrats are in power there is no work in this country for the laboring man, whether he be foreign or domestic. The Republican Party was divided in the last presidential campaign. However, notwithstanding that division, I want to make this observation, that if President Wilson had gone before the American people with the statement that there would be a bill such as this before the American Congress, and that it would pass both the House and the Senate and that he would veto it, he never would have been President of the United States. [Applause.] There never would be a man elected President who was opposed to restricted immigration if the people knew his position prior to the date of election. They say that they qualify quickly in this country; that they learn to read and write quickly. I see no reason why a man, if he is competent, can not qualify just as quickly in some other country as he can after he gets here. I fail to see the force of that suggestion.

I have in my office now no less than 100 protests from different sections of the United States, all coming from organized labor, requesting that I vote to pass this bill over the President's veto. I have two letters on my desk at this time requesting that I vote to sustain the President of the United States. And I apprehend, gentlemen, that the ratio of population of this country is in accord with the ratio of letters which I have received pro and con upon this question.

Mr. WALSH. Mr. Speaker, will the gentleman yield?

Mr. MCGUIRE of Oklahoma. I can not yield now. I undertake to say that for every man in America, whether for labor or otherwise, for every man who is opposed to restricted immigration there are no less than 50 who favor restricted immigration, and you can generally rely upon the disinterested, honest, frank, and candid judgment of the American people.

Talk about its not being in the Democratic platform. The President says it has been in no platform. The President is mistaken about that. Every party that has ever mentioned it has always declared in favor of restricted immigration. But the President has been for some things that were not only in the platform, but which declared for the opposite of his subsequent position. I speak particularly of the Panama Canal tolls. The ladies went to him some time ago and interrogated him in respect to woman suffrage. He said, "I can not do anything, because it is not in my party's platform." Well, I will tell you there was something, gentlemen, in the Baltimore platform; there was a plank or paragraph in that platform that the people of America were for. I refer to rural credits. There was an affirmative statement in favor of rural credits in that platform, so that the President, it seems to me, could find something to do by taking up things they did declare for. [Applause.]

The SPEAKER. The time of the gentleman from Oklahoma has expired.

RESIGNATION OF A MEMBER.

The SPEAKER. The Chair lays before the House a notification of the resignation of a Member. The Clerk will report it.

The Clerk read as follows:

JERSEY CITY, N. J., *February 1, 1915.*

Hon. CHAMP CLARK,
Washington, D. C.:

Have this day tendered my resignation as Member of House of Representatives to the governor of New Jersey. Formal notification mailed to you this morning.

EUGENE F. KINKEAD.

IMMIGRATION.

Mr. BURNETT. Mr. Speaker, I yield three minutes to the gentleman from Mississippi [Mr. HARRISON].

The SPEAKER. The gentleman from Mississippi [Mr. HARRISON] is recognized for three minutes.

Mr. HARRISON. Mr. Speaker, the President in his message vetoing this bill, in speaking of the literacy test, employed the following language:

> Restrictions like these, adopted earlier in our history as a nation, would very materially have altered the course and cooled the humane ardors of our politics.

That is true, Mr. Speaker, but the American Government of to-day is unlike the American Government of yesterday. Conditions prevailed then not only in this country but in other countries very much different from now.

New and changed conditions have made necessary new and changed laws. What was the situation in the formative period of this Government? Here was a great country with untraveled forests, unexplored streams, and unbounded opportunities; a country that extended an invitation to the oppressed and adventurous of other lands—an invitation, however, that was accepted mainly by the sturdy Anglo-Saxon, whose ambitions cried out for liberty and whose heart beat for freedom. The undesirables, the riffraff, the outcasts, and the scum of other countries did not accept the invitation, first, because they were unable to feel its warmth of meaning, and secondly, because they did not breathe the spirit of adventure, thrift, and liberty—qualities that make a people strong, a nation great.

There were in those days, Mr. Speaker, no great steamship lines to encourage and bring over for selfish purposes the criminals and illiterates of other lands, but those who came were moved by a spirit of liberty, a love of freedom. If you say few of them were educated, I answer yes. If you say that had the literacy test then been invoked few of them could have entered, I answer yes. All that is true, yet it argues nothing. In those days many people, not only in America, but in the great countries of Europe were uneducated. One hundred and twenty-five years ago few colleges and no public schools could be found in this country, but since that time no fact has been appreciated quite so much by the American people as the necessity of education. They see in it the preservation of high ideals, the perpetuity of Christian institutions, the stability of the Government, and the greatness of the Nation.

In 1800 there was expended in this country for education a little more than $1,000,000. Last year there was expended over $700,000,000. Since the foundation of our Government we have expended incalculable sums for education, and to-day schoolhouses nestle on almost every hill and great towering universities and magnificent colleges are found in almost every community throughout this country.

The spirit of education pervades all our people, and why? Because we would inculcate into their hearts and minds the highest ideals of good government and good citizenship. A similar condition is found in practically all the civilized countries of the world. There is no reason now, as there might have been in former days, for any person in any part of the civilized world to be deprived of an education—the best test of the true qualities of good citizenship.

I ask you, sirs, in view of these changed conditions, is it asking too much that the same test be applied by this Government to those who would seek the opportunities and advantages of our land, the protection of our Government, and the society of our people as is applied to our own citizenship? [Applause.] There is nothing unfair or unjust in the literacy test. It will deprive none who are entitled to come from coming; it will allow those who ought to come to come; and by the adoption of such a test as is embodied in this bill the high ideals and splendid character of our people will continue to be exerted, shedding the benign influence of liberty and freedom and good government to all the nations of the world. [Applause.]

Mr. SABATH. Mr. Speaker, I yield five minutes to the gentleman from New Hampshire [Mr. STEVENS].

The SPEAKER. The gentleman from New Hampshire [Mr. STEVENS] is recognized for five minutes.

Mr. STEVENS of New Hampshire. Mr. Speaker, I voted against this bill when it was before the House, and I shall vote to sustain the President's veto.

I do so with some doubts on the subject, because there are arguments in favor of restriction that appeal to me. But, Mr. Speaker, restriction of immigration runs counter to all our history and our democratic sentiments. I am not yet convinced that we need restriction of immigration in the United States.

It is true the conditions of to-day are somewhat different from those of 100 years ago, but to-day in America, with millions of untilled acres of land, thousands of acres of forests untouched, vast resources that are undeveloped, this country could support in prosperity and happiness millions and hundreds of millions of more people than it has to-day. If the coming of men to America meant that every man who came took some bread out of the mouths of those already here, if the amount of wealth was limited and it meant sharing it with more men, if our resources were developed and our power to support population fully matured, then, indeed, it would be wise to restrict immigration. But that is not the fact, and every man in this country knows that it is not the fact.

Furthermore, even if it were necessary to restrict immigration to-day I would be opposed to the literacy test, which is no test whatever of a man's qualifications to become a citizen of the United States. The question is not whether you can read or write or whether you have been educated, but are you educatable, are you the kind of people who will take advantage of the opportunities for education and work if you have them?

Unfortunately there are many countries in Europe peopled by men who have fine human qualities, where the opportunities for education are very limited, and thousands and thousands of men get no opportunity whatever to go to school. I do not believe that it is American, I do not believe that it is just to exclude such men merely because they have not had opportunities in their own land. I would point out to the gentleman from Mississippi [Mr. HARRISON], who speaks of the vast amount of wealth we spend in education, the fact that that wealth that we put into education has been largely created by immigrants and the sons of immigrants. These men who come here bring with them not only mouths to feed, but hands to work with, and they produce more wealth than they consume.

The one argument, Mr. Speaker, that appeals to me in favor of restriction is the one from the labor-union point of view. There is no doubt that the steady flow to this country of large numbers of unskilled laborers from other countries makes more difficult the great problem of union labor, and with that I sympathize. But I believe that we can help laboring men more in this country, and labor unions more, not by this crude makeshift policy of exclusion, but by better laws for the distribution of immigrants when they come, and better laws governing the distribution of wealth which the workers receive in this country. [Applause.] I will go as far as any man in Government action to encourage unions, to protect the right of men to organize, but restriction of immigration does not appeal to me as a way of helping the workingman.

So, Mr. Speaker, for these reasons I shall vote to sustain the President's veto. [Applause.]

SUNDRY CIVIL APPROPRIATIONS.

Mr. FITZGERALD, by direction of the Committee on Appropriations, reported a bill (H. R. 21318) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1916, and for other purposes, which was read a first and second time, referred to the Committee of the Whole House on the state of the Union, and, with the accompanying report (No. 1365), ordered to be printed.

Mr. MANN. Mr. Speaker, I reserve all points of order on the bill.

The SPEAKER. The gentleman from Illinois [Mr. MANN] reserves all points of order on the bill.

IMMIGRATION.

Mr. SABATH. Mr. Speaker, I yield 15 minutes to the gentleman from New Jersey [Mr. WALSH].

Mr. WALSH. Mr. Speaker, I did not expect anything to arise that would call for an effort on my part during the short time that I am to be among you as a Member of this honorable body. But an occasion has arisen which I can not conscientiously ignore, especially as no one else seems to insist on the aspect of the matter which appeals so strongly to me.

I leave Washington on March 4 next with the conviction that I have been made a better and broader-minded American citizen by my term in Congress and by contact with the many men of brilliant parts who, in the ranks of different parties, are serving their country unselfishly and well.

But before going from among you I feel in duty bound to give voice to a protest and a warning, and I do it not only as a Member of this House but also as an American citizen trained from youth to respect authority.

As Members of Congress we are called to be the big men of the country. This is the place where big things have to be dealt with that concern a big Nation's health and prosperity. As Representatives of the people in the work of national legislation we should be a pattern for the people in all that makes for sound citizenship.

It is in this spirit that I protest with all the earnestness and energy within me against the insinuating language which has been used on the floor of this House with reference to the President of the United States.

We enjoy the privilege of differing with the President on each and all of his policies. We have the privilege of voicing

such differences either here or elsewhere and of giving the reasons that seem to justify our opposition to his plans and measures for the welfare of the country. We have the privilege of fighting against his policies with all the energy of our convictions. But I hold, gentlemen, that we are doing a positive injury to the Nation and to the dignity which should characterize all our activities as Members of this important branch of the Government when we descend to personalities and to mean insinuations that seem to imply dishonest or dishonorable conduct on the part of the President.

By choice of the people he is President of the United States, and as long as he occupies the White House he is President not merely of the Democrats but of all the people—your President, gentlemen of the minority, as well as mine. As such we owe him respect, and we should be the first to give this example to the Nation.

Remember, it is not opposition to the President—it is not persistent and conscientious antagonism to policies the President may favor—which I am protesting against as hurtful. My protest is entirely against the manner in which that opposition has been expressed on the floor of this House; against unjustifiable accusations and insinuations and language that was full of disrespect for the Chief Executive.

Deep down in our souls, gentlemen, we of this House know that Woodrow Wilson stands before the country and the world as a man of transparent patriotism, unshakable honesty, and singleness of purpose—a man whose whole thought is the welfare of the Nation, the peace, happiness, and prosperity of its people. We know him as a man of courage and strong convictions, so conscious of rectitude that he can court the searchlight of publicity with confidence in the sound judgment of the people.

In the political history of the Nation there have been many truly great men. We have a Washington, a Jefferson, a Jackson, and a Lincoln to honor and be proud of. Yet in their day, when the country was profiting by their service, their patriotism was questioned, their motives maligned, and they themselves made the butt of many a jibe and sneer. Disaster was prophesied as a result of their policies. Well, these critics have passed into oblivion, but the names of these great Presidents are enshrined in the memory of the Nation forever.

Who of us to-day would dare to stand on this floor and insinuate that President Lincoln was a sneak? Who would dare speak of Jackson as a coward? None, of course, because we know that to do so would be to sound the death knell of one's political career. Yet these accusations have been hurled at the head of our present distinguished President, and while the gentlemen who went to such extremes may have been able to convince themselves that there was sufficient foundation for their accusations, I am maintaining that they are false, and that such language is a disgrace and an injury to all of us as a body and to the people we represent, and may be productive of consequences which these same gentlemen would be the first to regret.

There was a Brutus once, "the noblest Roman of them all, who loved the name of honor more than he feared death; who would have brooked the eternal devils to keep a state in Rome," yet the smooth and sweet-tongued Cassius and his fellows, with persistent insinuations, under the guise of a sublimated patriotism, were able to inveigle even Brutus into believing that the undoing of Caesar was for the good of Rome, and moved him to a deed which he regretted only when it was too late.

And if a Brutus could be so influenced against the man who called him friend, and who, when he plunged the dagger in, said, "You, too, Brutus?" what of the ever-present multitude whose passions are easily inflamed by words spoken in high places, perhaps in haste and without the judicial calmness which should mark the utterances of all Members of this distinguished body?

In times of great stress great passions lie smouldering near the surface, and oftentimes a trifling word or act may start a flame that would develop into a conflagration. Among the many millions of our people there are always those who seem forever wandering on the very brink of fanaticism, ready to leap beyond the bounds of all restraint on the slightest provocation. We as a Nation are at the present time going through such a period of stress.

The terrible war into which all of the great European nations have unfortunately plunged has prolonged and emphasized the slight depression which was bound to follow the great body of legislation which this Congress has enacted into law. Most naturally the condition affects more acutely the great multitudes who labor and who have little or no resources to fall back upon, who in their present need see little comfort in the good that is predicted. Many of these are not inclined to search beneath the surface of things for real causes, but slip into the old fallacy of arguing "after this; therefore because of this," or, in other words, "the milk soured after the new moon, therefore the new moon caused the milk to sour." They blame their troubles on the new administration, and there are politicians petty and unpatriotic enough to further their own selfish ends by fostering this attitude in the minds of such people.

For these people the administration centers in the President, particularly when, as now, the President stands out predominant as a big man; a strong man who has admittedly accomplished big things. Therefore we should weigh our words and let them be the result of serious reflection, the words of men who measure up under all conditions to the dignity of the position they occupy.

Besides, gentlemen, we are a cosmopolitan Nation. Many of our citizens are children of nations now unhappily at war, struggling perhaps for their very existence. Most naturally their sympathies go out to their native land in the present gigantic conflict, and even though the administration is trying most scrupulously to maintain an attitude of strict neutrality, it would not take a great deal of unjust criticism to convince some that the Executive of the Nation is not doing all in his power to preserve an impartial attitude toward all.

We as a Nation are blessed with peace amid almost universal turmoil, with glorious prospects ahead, please God, because of peace, and we look forward to the happy time for which we pray when, because of neutrality, we shall be a strong force in securing for all a happy and lasting peace.

As regards the great forces of labor in this country, to which one Member referred while charging the President, I can say that, having come from the ranks of labor myself, I yield to no man in my sympathy and in my respect for that great institution—the laboring man.

I have worked for them with Wilson, both in the State of New Jersey and the Nation, and I am firmly convinced that when he lays down the burden of office the workingmen of America will have lost the truest and most sympathetic and effective friend that ever occupied the White House.

The times are big, gentlemen; big with calamity; big with prospects for the future. Let us be big and avert calamity from our Nation; big to grasp all opportunities for our people. Paraphrasing Wolsley's advice to Cromwell, Let all the ends we aim at be our country's, our God's, and truth's. [Applause.]

The SPEAKER pro tempore (Mr. FOSTER). The time of the gentleman has expired.

Mr. BURNETT. Mr. Speaker, I yield to the gentleman from California [Mr. CHURCH].

Mr. CHURCH. Mr. Speaker, I am in favor of this bill because it restricts immigration. Had I lived a hundred years ago I would have been opposed to it for the same reason that I am in favor of it now. One hundred years ago we needed more people, now we need less. A hundred years ago there were more opportunities than there were men. During the long years of the century just passed people have been coming here by the millions. One opportunity after another has been taken, until now our country is full of men and our cup of opportunities is about empty. There are at least a million more people now here than there are jobs. We ought to send a million undesirable men back to their native land instead of permitting any more to come. It is true in times past we made this country the asylum for all the world, but our gates should now be closed, for the room is all taken. Years ago we had an insane asylum at Napa City, Cal., but after a while it became full, and the management refused to admit another patient. I say, as an asylum for immigrants, the United States is full. Ninety-nine million people are all it will hold, and we have a hundred million on hand. For one I am in favor of closing the gates of our country against laboring immigrants, at least until what we now have are assimilated.

Some one has said:

> The literacy test, and the tests and restrictions which accompany it, constitute an even more radical change in the policy of the Nation.

The same force of reason could have been used against the failure of the management to admit patients to the Napa Insane Asylum after it was full.

You might just as well demand that your friend should drink a barrel of water because he asked for water when thirsty as to claim the United States should not stop foreign immigration when its needs are supplied. [Applause.]

I consider the passage of this bill of more importance than was the passage of the Underwood tariff bill or the banking and currency bill. Those measures dealt with the finances of the country; this bill deals with the personnel of the country; and as men are of more importance than dollars, so this bill is of more importance than any measure dealing with money. This country is rich in financial resources. As far as wealth is concerned, it will last forever. Our valleys, rich with alluvial soil, and our mountains, stored with gold, are a guaranty against poverty; but bear in mind gold and silver are not the greatest consideration of a nation. Especially is this true of a Republic that claims to be the light of the world. With the advantages God has given us, foolish, indeed, would we be if by the passage of nonsensical laws we confound our resources so our temporal wants can not be supplied. Our forefathers established a Government that, like our soil, is the best there is on earth, a Republic where every man has an equal opportunity and an equal say, and where each man's power is as great as that of his fellow's. This land in the days of our forefathers was full of opportunities but empty of men, and so they threw wide open our eastern and western gates, invited the European to come by the way of New York and the oriental by the way of San Francisco, but at no time have they intimated that their invitation would never cease. An invitation is always limited to time, place, and numbers, and by its very nature signifies there will come a time when the gates will be closed.

When our fathers won this land on the bloody battle fields and extended an invitation to the world to come, they reserved unto themselves and their children the right to withdraw the invitation whenever they should see fit, and during the years that have passed we have exercised this right whenever we so desired.

In 1892 we closed our western gates to the Chinese and departed from our original policy in reference to them. At that time there were a hundred million of them who wanted to come, but we told them frankly that our invitation to them had ceased. We did not do this because we dislike them or because it was for their best interests to stay away, but because it was for the best interests of our country that they should not come. Doubtless by this act we prevented many good men from coming here, but, nevertheless, by the exclusion we did our country a thousand times more good than harm.

This country does not belong to the world, as some people seem to think, but it belongs to us and our children forever, and the question is, Are we wise enough to keep it? To-day, in spite of the Chinese-exclusion and other exemptions we have made, we find too many immigrants are coming to our shores and that we must make a further exclusion.

Being unable to assist all of the unfortunate, poor, and needy, have we not the privilege to decide who shall be the recipients of our bounty? Unfortunate, poor, and miserable people pass the door of each Member of this House daily. Do you take them in and warm, feed, and clothe all of them? No; you decide according to your best judgment and aid the ones whom you consider are most apt to be worthy. As a class, the foreigner who can not read in his own language is an idler, spendthrift, and has no capacity or desire to learn. There are thousands of exceptions, doubtless, but what I have stated is the rule.

At least you will admit the illiterate class has a greater percentage of people who would not make good citizens here than the class which is composed of people who have had energy and capacity to acquire a little learning at home. We would not, however, want it to be understood we favor excluding the ignorant people because our hearts do not beat in sympathy with them, but, being obliged to exempt another class from the benefits of this country, we consider it wise and just to decide in favor of the intelligent class as being most desirable to us and, as a class, the most deserving. By making this choice we decide in favor of intelligence and learning, and thus impress upon the people of the world the value of knowledge, and in this way emphasize upon the minds of ignorant people of all lands the fact that the human race is developing, and that all must keep apace with the times.

Enlightenment being necessary in this country, we have decided to exclude the ignorant. Some one has said:

This is an exclusion against those who have not had opportunity.

Such is not the truth. Many people in Europe have not had an opportunity to attend a college or university. Some have not had an opportunity to attend a school of any kind; but all have had an opportunity to learn to read simple words in their own tongue. A primer in any language can be purchased for a few pennies or a dime, and anyone who has been sufficiently frugal to earn traveling expenses with which to come to this country and money enough to guarantee against becoming a pauper certainly has had the opportunity to buy a little book. On the corner of almost every street in any city of the world can be found persons who will help another learn his letters and to read 40 simple words. I am sick of hearing people talk about poor, lazy mortals, covered with dirt and scurvy, never having had an opportunity in the world.

The man who has not had an opportunity to learn to read 40 simple words in his mother tongue, has never heard of the United States, and should he by chance wander onto a ship coming to these ample shores, would be excluded from landing by the immigration authority under the present law on the ground that he was an idiot. I do not say all who can not read in their own language are idiots, but I do say all who have not had an opportunity to do so are of unsound mind. I freely admit there are thousands of good people in the world who can not now meet the educational test of this bill; but I claim it would be no unreasonable hardship while earning sufficient money with which to pay traveling expenses here to employ an hour or two each evening for a couple of months learning enough to meet this educational test. [Applause.]

Certain animals when born have not the power of sight, but nature has ordained that such shall not wander from the parental nest until they can see. This bill provides that prospective immigrants must stay at home until through their intellectual eyes they begin to discern at least some rays of light. It is better they remain at home during the black hours of intellectual night in a monarchical form of government where others see and think for them, in a government they can not harm, than to come to this Republic, where enlightenment is the watchword and where all are equal.

Ignorance is the greatest enemy of a republican form of government. It will no more live in harmony with a republic than will fire exist in harmony with water. Wherever a republic and ignorance meet, one subdues the other; it means an uncompromising fight to the finish. Sometimes one is victorious, and sometimes the other; it depends altogether, and always, upon the relative strength of each. But bear in mind that victory for either in a way means defeat, for the victor always comes out of the ordeal more or less injured. Just in proportion as you fill up a republican form of government with ignorance, just to that extent do you bring down its standards. If the standards fall below a certain point, the ship of state will be left to unskilled hands and will soon drift among the rocks of revolution and be lost, and ignorance will prevail. If the standards are left just above this point, the ship will still take its feeble course without proper attention soon to become a byword among men. For one I am not in favor of mingling the clay of ignorance with the iron of this Republic.

Ignorance thrives in a monarchical form of government, for there the subjects do not govern themselves, but are governed. The more ignorant the subject is, the easier is he governed. I would rather the prospective immigrant would stay at home while he is ignorant, where his ignorance is a blessing, than to come to this country where his ignorance is a curse. Let him prepare himself while in his own land, to be a blessing to our land when he comes. When I invite a tramp to abide under my roof, I always insist that he take a bath before he retires for the night. Once I purchased a Texas steer, but I sawed off his horns before I turned him loose, for fear he might harm the other stock. I insist that care and preparation is necessary before any radical change is made, for without it one may become injured, or may injure others.

As I said before, I would, if I could, stop all immigration of the working classes to this country, not because I hate the working classes that might come but because I love the working classes that are now here. The working classes come to this country to get a job, and there are not jobs enough for those who are already here. There are a million men in this country now, looking for a job. They might just as well be looking for the pot of gold at the end of the rainbow. The one does not exist any more than the other. It is because I love the working classes at home, and the working classes abroad, that I would restrict immigration. The working classes that come would be disappointed, for they would not find what they seek, and the working people here would be disappointed to have the foreigner come and be their competitors, so it is a blessing at home and abroad, to have them not come. The only persons who will be benefited by immigration are those connected with the transportation companies, the agencies across the water that thrive on immigration, and the employing classes here. If 1,000,000 immigrants come to this country each year, and there are frequently more than that number, and the transportation companies charge $50 apiece for bringing them here, it is plain to see their gross income will be $50,000,000 per annum. Viewed from this standpoint, it is not strange there are some whose hearts are turned to stone

in reference to the working classes at home, but whose hearts fairly bleed for the men intellectually as dark as night, who live in the jungles across the sea.

I am in favor of restricting immigration, because I believe in equality, and immigration, under its present condition, works a hardship upon the working classes in this country, while the capitalists receive a great benefit. The more men there are hunting jobs that do not exist, the more competition there is in labor, and the more labor is degraded. The more men there are hunting jobs which do not exist, the greater the benefit to capital that is anxious to secure cheap labor. Every man who comes here hunting work is a blessing to the capitalist, for he wants work to be cheap. Every man who comes here seeking work is a curse to the laboring man, for he wants expensive work. The working classes that come to this country must be assimilated by the working classes that are now here. Some people seem not to know how the working classes feel on this subject of foreign immigration. Let me call the attention of such to the fact that the American Federation of Labor, with its membership of more than 2,000,000 wage earners, in every national convention of recent years, with all the States represented, has asked for this legislation. The United Mine Workers of America, with 450,000 deserving members, are in favor of it; in fact, the last resolution they adopted a few days ago demanded the suspension of all immigration until the million of unemployed men now in the country could be furnished with work. The Farmers' Union, 3,000,000 strong, demands this legislation. The National Grange, the Farmers' National Congress, the Railway Trainmen's Association, the Brotherhood of Locomotive Engineers, Conductors, and Firemen, all are praying for the passage of this bill.

Within the last 48 hours I have received letters and resolutions from S. E. Heberling, international president of Switchmen's Union; G. W. Perkins, international president of the Cigar Makers' International Union; O. L. Baine, general secretary-treasurer, at international headquarters, Boot and Shoe Workers' Union; J. T. Carey, president-secretary International Brotherhood of Ropemakers, Albany, N. Y.; V. A. Olander, secretary-treasurer of Illinois State Federation of Labor, Chicago, Ill.; J. W. Hays, secretary-treasurer International Typographical Union, Indianapolis, Ind.; E. Lewis Evans, secretary-treasurer Tobacco Workers' International Union, Louisville, Ky.; John P. White, president, and William Green, secretary and treasurer, of United Mine Workers of America; Frank Duffy, general secretary of United Brotherhood of Carpenters-Joiners; S. J. Konenkomp, international president, and Wesley Russell, international secretary-treasurer, of Commercial Telegraphers' Union of America, Chicago, Ill.; James Wilson, general president Pattern Makers' League of North America; and others too numerous to mention, all demand in the strongest terms the passage of this bill. [Applause.]

The issue in regard to this measure is clearly drawn. All the laborers, toilers, farmers, artisans, mechanics, and those who wear gloves to protect their hands against blisters and slivers are on one side while the transportation companies, the rich and employing classes, all who wear gloves to keep their hands from becoming sunburned are on the other. Every man who wants a job is in favor of the bill and every man who has a job that he wants to fill with a man is against it. If you who are opposed to this measure only had faith enough in the judgment of the working man to believe he knows what he wants the controversy would end right now in favor of the bill; but you are not willing to make such a monstrous concession. You will never be able to say that you did not know what the toilers wanted, for they have written, telegraphed, and sent you resolutions by the thousands. You will not find one intelligent toiler anywhere in the 48 States of this Republic, who is posted and willing to use his own judgment, who will not tell you he is in favor of suspending all immigration of the working classes until again there are more opportunities in this country than there are men. [Applause.]

Some say this country is a refuge and asylum for the poor and oppressed, therefore we should not make the exclusion. If not now, when we have a hundred million people, when shall we make it? Will not your arguments be just as applicable when the time comes? Is anyone so shortsighted as to claim the exclusion should never be made. Is it the idea of such that here should be the great melting pot; that the gold of this country should be mingled with the silver, the copper, the tin, the zinc, and the lead of all lands? If so, let me tell you the crucible, when finally cooled, will contain a base metal without quality and without use. The gold will have lost its ring, the iron will have lost its strength, and the individuality of each metal will be gone forever.

Some say ignorant immigrants should be brought to this country to occupy positions which the people here now will not fill, that we are continually evoluting and leaving behind a class of work that we have outgrown. I object to this conclusion, because the premises are not true. Such a notion is against the fundamental doctrines of this Republic. In this country we have no use for kings, crowns, titles, caste, or class. In this country all work is honorable and the hands of every honest man, regardless of what kind of work he does, are clean.

Gentlemen talk in sentimental tones about the men in Europe coming here to escape the tyranny and oppression of their native land. I would like to invite some of you city-bred, hothouse, sentimental gentlemen to come out into the great West and temper your sentiment with observation and reason. If you did, you would be convinced that illiterate foreigners do not come here to escape anything save, too often, the laws of their own land, which they have violated. They come here because the financial opportunities are greater; because more pumpkins can be grown on an acre of land; and because red wine costs but 19 cents a gallon. There is no more sentiment about these letterless immigrants than there is about a swine drinking clabber milk. The only purpose the majority of them have in coming to this country is to get their feet into the trough.

My friends, will you kindly stop figuring from the standpoint of the man in Europe and figure from our own standpoint, and tell me, as long as we can not admit everybody, why we should not take our pick, and have the best?

As our cup will only hold so much, why not fill it with strawberries instead of soap root and choke cherries?

Why should we invite to become members of our great national family people of whom we will be ashamed?

In this country where we spend millions of dollars each year combating ignorance, why should we import more?

Why not import men to help us fight ignorance rather than import ignorance for us to fight? [Applause.]

I am sorry this bill is not broad enough at least to exclude Japanese, Hindus, and other Asiatic laborers. The people of the East do not yet realize the importance of this matter, because they have not come in contact to any extent with this strange people from across the sea.

California being on the shores of the Pacific seems to be a dumping ground for the undesirable from Asia, and I assure you the Hindu and the Japanese are the greatest problems and the greatest plagues we have in the West. Japanese are very spirited and proud fellows, who consider nothing too good for them. They locate in the garden spots of the State, bring their customs and manner of living, of course, with them; consequently as they come in the refined American with his ideals goes out. It matters not whether it be city lots or country property, the land adjacent to Japanese habitations continually decreases in value from the standpoint of an American purchaser.

You may be surprised when I say the influx of Hindus into the West threatens to be even a greater menace than the immigration of Japanese. Hindus are now going to the Pacific coast by the thousands. They are an odd, inferior people, bound down by strange traditions and religious fanaticisms. They ever present the appearance of slothfulness, stupidity, and pity. They appear to be oblivious to the sensations of either pleasure or pain. The Hindu is as tough as whalebone, and instead of eating when hungry simply takes up another notch in his belt. It is impossible for the American laborer to compete with the Hindu laborer. The Hindu will wear the clothes which the American discards, eat the food the Americans will not use, and can work 20 hours a day if necessary.

Some time ago I filed a bill asking for the exclusion of these strange specimens of humanity. When it comes before the House I am sure every man who understands the true condition will vote for it. They must be excluded sooner or later, and why not now? Every dollar the Hindu gets is sent to his native land, with which to pay the traveling expenses to this country of his cousin, and it is very discouraging when we take into consideration they all seem to be cousins, and millions of them are anxious to come.

The most important matter pertaining to immigration is to keep from our shores all who lower our national standards. The hand that brings down the standards of a nation is an instrument of sure destruction. You might as well take the warmth from the sunbeams of heaven, or innocence from the heart of a child, as to take away the ideals of a people.

A tidal wave may sweep over a land, wash down its buildings, and change the face of the country, but by and by the sun and time will do its work, the land will become dry and be restored; earthquakes may shake down a city and leave yawning fissures everywhere, but after a while rehabilitation will

do its work, and the effect of the earthquake will be no more; famine, gaunt and hungry, may hover for years above a fruitful land, but by and by years of plenty will come, and the nation will still live and prosper; but when the ideals and standards of the people are gone they are gone forever, and destiny has decreed that nation shall cease, and it matters not the size of her standing army or the number of her warships on the sea, "Thou art weighed in the balance and found wanting" is written high upon the wall. Mr. Speaker, I object to promiscuous immigration, because it lowers our national standards.

First. It lowers our standards as to labor. When the American laborer, educated, cultured, and possessed of high ideals, is obliged to work by the side of a man or a number of men who can not read or write and who do not know whether Napoleon Bonaparte was once the Emperor of France or the captain of a whaling vessel on the Northern Sea, it has its effect on labor and causes a man of spirit to feel that he is too good a man to do no higher grade of work than such fellows are capable of doing. What would a young wife think of her husband if he persisted in working with such a band of human scarecrows? The presence of these ignorant workmen brings down the American standard of labor.

Second. They bring down the standard of wages as well as the standard of labor. If there are 25,000,000 people in this country who want a job and there are 25,000,000 jobs in this country, each can be accommodated; but send a million more men, making 26,000,000 who desire a job, and they will compete with each other, bringing down the standard of wages, and after all a million of them will be obliged to remain idle. Thus will be lowered the standard of American wages. [Applause.]

Third. The standard of living and the standard of morality of our people are lowered by the arrival of this ignorant and immoral horde from across the sea. I tell you, whatever lowers the moral standards of our people strikes at the very heart of this Republic.

Fourth. Intelligence is another one of our great standards. When the immigrant comes to this country, while yet far out at sea, he sees the great monument, the Statue of Liberty—Liberty enlightening the world. From this he gets the idea, first, that we are a liberty-loving, patriotic people; and, secondly, that we are an enlightened people, each of which is true. We love to think we are the most enlightened Nation. We love to think the United States of America is the intellectual light of the world. Every person in this country who has a piece of property as large as an oyster shell is taxed to maintain our public-school system. We claim this system to be the best there is in the world. We have hundreds of millions of dollars invested in public schoolhouses, in colleges, and universities of learning. We have State laws compelling children to be sent to school.

In California, my State, every child under the age of 14 years must go to school. If the parents will not send him the parents are arrested and punished. If the parents are not able to send their children to school our local authorities will do so; and, as a result, in the great State of California there is not one native son or daughter who arrives at the age of 18 who has not a fair knowledge, at least, of the grammar course. I presume the same condition prevails in the other States of this Union. If they do not now, I am sure in the near future they will, because intelligence is one of our national standards. We do not thus compel a child to attend school simply for the benefit of the child, but we do it to keep up our standards.

I want to ask you gentlemen who are opposed to this bill if you think it would be right, in view of all this, to permit each year a half million of full-grown men and women, intellectually as dark as midnight, incapable of reading a word in their native tongue, to come to this country, associate with our children and our people? Will you dare tell me such would not debase our intellectual standard?

Fifth. Unrestricted immigration lowers the standard of patriotism in our country. In considering this phase of the subject let us forget for a moment all other effects which it produces, for they are as nothing compared to this. Labor may be considered a disgrace, wages reduced to a minimum, our schoolhouses and colleges may become inhabited by owls, yet nationally we may live as long as we respect our Constitution and enforce our laws and the fires of patriotism continue to burn. [Applause.]

Every man who comes here who does not love this form of government lowers the standard of patriotism. How can a person love this form of government who knows nothing about it, and how can a man know anything about this form of government who has not taken interest enough at home sufficient to enable him to read and write? After such a one comes to our shores and begins to learn and think, his early environments and naturally debased tendencies may drive him to anarchy and revolution. I like your banking and currency act, your project to build a railroad into Alaska, all laws calculated for the financial betterment of this country and its people, but these are nothing compared to keeping up the standard of our citizenship. We may lose much of our wealth and yet be prosperous; lose standing among the nations of the earth and yet succeed; but when a large proportion of the people of this country are not in love with our Constitution and laws we are marked as a lamb for the slaughter. [Applause.]

Gentlemen seem to figure that this Nation, because it is named the United States of America, will endure forever; an unwise conclusion, I assure you. Nations, like everything else, have their morning, their noon, and their night of life, and the only way we can stay the lengthening shadows of this Nation's day is by keeping our people in harmony with its fundamental principles and desires. When this Nation shall go the way of the other nations of the earth it will not be because some hostile foe has come across the waters and sunk our ships. It will not be because our valiant Army has been defeated upon the shore, but it will come in the form of revolution; come from within, and not from without. When that sad day shall come to curse the earth and this Republic of freedom and liberty shall go down in wreck and ruin, a mighty tower should be erected out on the great highways of the earth and in that tower the bells should never cease to toll, and on it should be written in letters of black, "The Government of the United States of America was lost by reason of the lack of patriotism of her people." [Applause.]

Mr. BURNETT. Mr. Speaker, will the gentleman from Massachusetts use some of his time now?

Mr. GARDNER. I yield to the gentleman from Idaho [Mr. SMITH].

Mr. SMITH of Idaho. Mr. Speaker, after a studious consideration of all the arguments that have been advanced in opposition to the literacy test as applied to our immigration laws, I am constrained to add by voice and vote in favor of this bill, the objections of the President to the contrary notwithstanding.

The question of an amendment to our immigration laws that would in some degree regulate and restrict the great tide of aliens flowing into the country from southern Europe has been much agitated and discussed in Congress and in the public press during the last two decades. That an urgent necessity exists for some legislation that would conserve the peace and the material and social welfare of the country has been the almost overwhelming sentiment of Congress during that period, as shown by the record of what has been done here, and I believe the action of Congress has been supported almost unanimously by public opinion.

HISTORY OF PROPOSED LEGISLATION.

In 1896–97 the Senate and House passed an immigration bill containing the literacy test. It was vetoed by President Cleveland. The House passed the bill over the President's veto. In the Senate it failed of passage over the veto by a few votes. In 1898 the Senate passed an immigration bill containing the literacy test, but the bill was crowded out of consideration of the House of Representatives by reason of the Spanish-American War. In 1902 the House passed an immigration bill containing the literacy test. In 1906 the Senate passed an immigration bill in which the literacy test was embodied. The House substituted a bill creating the Federal Immigration Commission. The commission consisted of nine members, eight of whom recommended the adoption of the literacy test as the most practical means for restricting, limiting, and better regulating immigration. In 1913 the Senate and House passed an immigration bill containing the test recommended by the commission. The bill was vetoed by President Taft. That bill passed the Senate over the President's veto, but failed to pass the House over the President's veto by 4 votes. In the present Congress the House passed by more than a two-thirds vote and the Senate by a vote of 7 to 1 the immigration bill now before the House by reason of the President's veto.

It will be seen that the literacy test, which is the main feature of this bill, was supported by a large majority of both Houses of Congress all through this period and incorporated in all the acts passed. Finally, the able commission created by Congress to investigate the subject of immigration, after four years of exhaustive inquiry, at a cost of nearly $1,000,000, made a report, covering 42 volumes, from which the following conclusions are summarized:

RECOMMENDATIONS OF IMMIGRATION COMMISSION.

The investigations of the commission show an oversupply of unskilled labor in the basic industries to an extent which indicates an oversupply of unskilled labor in the industries of the country as a whole, and therefore demands legislation which will at the present time restrict the further admission of such unskilled labor.

It is desirable in making the restriction that—

(a) A sufficient number be debarred to produce a marked effect upon the present supply of unskilled labor.

(b) As far as possible, the aliens excluded should be those who come to this country with no intention to become American citizens or even to maintain a permanent residence here, but merely to save enough, by the adoption, if necessary, of low standards of living, to return permanently to their home country. Such persons are usually men unaccompanied by wives or children.

(c) As far as possible, the aliens excluded should also be those who, by reason of their personal qualities or habits, would least readily be assimilated or would make the least desirable citizens.

The following methods of restricting immigration have been suggested:

(a) The exclusion of those unable to read or write in some language.

(b) The limitation of the number of each race arriving each year to a certain percentage of the average of that race arriving during a given period of years.

(c) The exclusion of unskilled laborers unaccompanied by wives or families.

(d) The limitation of the number of immigrants arriving annually at any port.

(e) The material increase in the amount of money required to be in the possession of the immigrant at the port of arrival.

(f) The material increase of the head tax.

(g) The levy of the head tax so as to make a marked discrimination in favor of men with families.

All these methods would be effective in one way or another in securing restrictions in greater or less degree. A majority of the commission favor the reading and writing test as the most feasible single method of restricting undesirable immigration.

INDORSED BY LABOR AND FARMERS' UNIONS.

It has been truly stated that no single proposed addition to our immigration laws has the indorsement that has been given to this test of literacy. The party platforms of two political parties advocated it in the election of 1912; the Farmers' Educational Union, representing 3,000,000 farmers in the United States; the Federation of Labor; and numerous other labor and patriotic organizations have urged its adoption. Wherever an inquiry or caucus of individuals or societies has been made the sentiment in favor of such a provision has been found to be almost unanimous.

DESIRABLE IMMIGRANTS ADMITTED.

It has been estimated that in some portions of northern and western Europe the operation of the law would exclude not more than 1 per cent of the immigrants, and in some sections 2 per cent. Of the Scandinavians and Bohemians, who make desirable additions to our population, less than 1 per cent would be excluded; of Scotch, Irish, and English less than 1 per cent, and of the Germans not more than 2 per cent. But of the vast hordes that in recent years have been coming from southern Europe, 60 per cent would be kept out, and of the Greeks and Syrians about 40 per cent. These latter classes are those that settle in the congested districts of our cities, who are never producers, and who, to a great extent, engage in occupations that are not really useful or necessary.

The truth of this statement is borne out in the report of Dr. Thomas Darlington, president of New York Board of Health under the administration of Mayor McClellan, who investigated the conditions referred to. He says:

I have heard the assertion that immigration is necessary to carry on our public works, to build railroads, to dig canals, and the like. But the present immigrants now coming over do not come for that purpose, and will not do that sort of work. No; they prefer to become push-cart peddlers and to live in our cities in poverty, breeding crime and disease. They occupy our streets, the streets for which our taxpayers have paid heavily. They interfere with traffic and break the laws of sanitation which we have decided are necessary for the preservation of public health.

Even in the early days of the Republic, President Washington foresaw the possibilities of undesirable immigration, and expressed his views, as follows, in a communication on the subject:

My opinion with respect to immigration is that, except of useful mechanics and some particular descriptions of men or professions, there is no need of encouragement, while the policy or advantage of its taking place in a body (I mean the settling of them in a body) may be questioned, for by so doing they retain the language, habits, and principles, good or bad, which they bring with them. Whereas by intermixture with our people they or their descendants get assimilated to our customs, measures, and laws; in a word, soon become one people.

For more than 75 years after this the immigrants coming voluntarily to our shores were the kind the country needed, men and women who came with a sincere purpose to attach themselves heart and soul to the New World, to share its benefits and destiny, from Ireland, Germany, and Scotland, and later from Sweden and Norway. These, with their habits of industry and thrift, assimilated with the American people, and became a part of the great bone and sinew of the Nation. But, Mr. Speaker, in the years since 1885 the tide that has swept in upon us from other parts of Europe has been of a vastly different type. They have come with their different ways and customs and ideas of life, their illiteracy and uncleanliness, their lack of thrift and morality. They have huddled together in the already congested sections of our cities under the most insanitary conditions.

UNDESIRABLES NOT WANTED HERE.

Many of these people do not come here with any intention of becoming citizens of the country. They are sought out in the highways and slums of southern Europe by agents of the steamship companies and of the great corporations that can use unskilled labor. On arrival here they do not go out to the farms, where conditions would be tolerable, where they could find employment that would enable them to live comfortably, but go into the already congested sections of cities, to become a menace and a burden.

The pitiful conditions that exist in the so-called Ghetto district of New York City have been ably portrayed, and constitute a scathing arraignment of those who are aiding hordes of paupers to come to this country, where they require them to work 16, 18, and even 20 hours a day for wages so low as to be almost beyond belief. It is charged that a very large percentage of the thousands of low-grade immigrants arriving in this country every month for years past have been aided to come by these commercial influences for their own purposes. Three hundred thousand unfortunate human beings live in the Ghetto district under conditions that are appalling. Families of six and seven persons, including young men and women grown, are found inhabiting one basement room and sleeping side by side on the floor. There are filthy tenements in which children sleep under their parents' beds in dark, unventilated rooms, without a glimpse of the sun or of trees or flowers during all their early childhood. These are illustrations of the conditions that exist among the illiterate and undesirable class whom this bill would in future exclude from the country.

It is an admitted fact that, as a general proposition, those who are ignorant of language are likewise ignorant of all the qualifications of good citizenship, and do not come here to acquire any permanent interest in the country. Even when not actually criminals or of the vicious classes, they become a burden and a menace to the social life and institutions of the Nation.

It is charged against them that they are lowering wages by underbidding the American laborer, that they are driving the American entirely off the field of fair competition by reason of their willingness to live and toil under conditions of congestion and filth to which the American wage earner can not submit. They are charged with preventing a general introduction of the eight-hour law and a general betterment of the status of the laboring man by reason of their willingness to work any number of hours a day for any kind of wages in any kind of a place. It is further charged that by reason of their congesting our already overcrowded cities they breed and disseminate there all manner of crimes and diseases; that they are filling our jails, reformatories and brothels, our orphanages, hospitals, and almshouses. This is the indictment that has been drawn against them by those who have made a careful study of the immigration question. Can we safely afford to further delay legislation for the protection of the laboring men and women now citizens of the country by limiting the influx of this undesirable horde?

I happen to have at hand statistics for a period of one year ending June 30, 1914, during which time there were received into the United States 1,218,480 immigrants, of whom 122,657 were Poles, 138,051 Hebrews, 251,612 from the south of Italy, and 25,819 Slovaks, showing a large increase over previous years. These people have flocked into our cities, to the factory towns of New England, and to the coal-mining districts of other States, where they are displacing the American laborers that were there by reason of their willingness to work for starvation wages. This is not a fanciful picture. In many of the cities of the districts mentioned the foreign population has increased at an incredulous rate during the last few years.

It is estimated that more than three-fourths of all immigrants have remained in the cities. In the great city of New York over 40 per cent of the population is foreign born; in the little manufacturing city of Bridgeport, Conn., it is 38 per cent; in Lowell, Lawrence, and Fall River, Mass., large factory cities, the foreign population has increased to nearly 50 per cent, and conditions in these cities at the present time are reported to be deplorable. Wages in the mills have been reduced to the starvation point, and thousands of former operatives have been supplanted by this cheap labor. The city of Philadelphia has 24 per cent of foreign-born population; Chicago, 35 per cent; Cleveland, 33 per cent; Worcester, Mass., over 33 per cent; Paterson, N. J., 36 per cent; and Providence, R. I., 34 per cent. These figures illustrate a situation that is rapidly producing what may soon come to be intolerable conditions.

Prof. Louck, who has made an exhaustive study of the immigration question, in a published document states:

Of the employees in the bituminous mines of Pennsylvania in 1909, only 15 per cent were native Americans or born of native father and 9 per cent native born of foreign father, while 76 per cent, or slightly more than three-fourths, were of foreign birth. What is more significant is that less than 8 per cent of the foreign-born mine workers were English, Irish, Scotch, German, or Welsh. The majority were from southern or eastern Europe, with the Italians, Magyars, Poles, and Slovaks predominating. The term "American miner," so far as the western Pennsylvania field is concerned, is largely a misnomer. When they work these miners average, as in the case of the Roumanians, as low as $1.85 a day, while in the greater number of cases the range is close to $2; more than one-tenth of the Ruthenians, Roumanians, Poles, and Croatians earn on an average under $1.50 a day. But unemployment in the course of the year brings down the general average for heads of families to $431. The south Italians earn only $399 and the Poles $324 a year.

Mr. Speaker, it is evident beyond controversy that we have confronting us in this immigration question a great problem and one that must be speedily solved if the American ideals, for which we have struggled and legislated, are to be preserved. I shall record my vote in favor of this bill, because I believe it will stay in some degree the vast tide that threatens to overwhelm us.

WE MUST PROTECT OUR OWN PEOPLE.

The idea that these United States should extend the glad hand to all comers regardless of source or condition is not so attractive to our minds as it may have been in the days when half the country was unoccupied. Self-preservation is the first law of nature, and of nations as well. Charity begins at home, and we should make sure for the future of our children and their children's children, before receiving on our shores more than one and a quarter million foreigners annually, unless they are of a character which will not crowd out our own wage earners and make it impossible for them to maintain their present high standard of living.

MILLIONS SENT TO EUROPE.

The drain on the Nation's wealth represented by the money sent abroad by foreign immigrants in this country who do not intend to make America their home is alarming, amounting to over $200,000,000 annually.

We have in this country several millions of industrious naturalized citizens who came here from other lands, and who have become as much a part of the body politic as those who are to the manor born. A great number have gone into the mines and shops, others have helped to construct our railroads, and have aided in the development of our resources. Is it fair to them, most of whom are dependent upon their earnings to support themselves and family, to continue to admit to our shores millions of uneducated and undesirable people who are unfitted for becoming citizens, and who by underbidding the labor market deprive those now here of their means of livelihood and bring distress upon our industrial communities?

BUT A SMALL PROPORTION OF IMMIGRANTS LIKE THE FARM.

One of the remedies that has been recommended by various philanthropists and students of government for our immigration troubles and the overcrowded condition of our cities is the distribution of the surplus upon the land and through the farming districts of the country. But unfortunately for them, these people are not farmers, and do not want to become farmers, even if they had sufficient capital to install themselves upon farms. They can not be induced in any appreciable numbers to leave the cities. Two or three years ago the agricultural bureau of the State of Pennsylvania made an earnest, organized effort to secure from the cities much needed help for the 228,000 farmers in that State. The appeal was sent to the farm congress, or committee of distribution in New York, but out of a very large number of requests to send immigrants, but few responses were noted. This is the experience of other States and localities.

FARMING LAND AVAILABLE IN WEST.

Easily within the memory of many of us now living the United States has acquired vast areas of territory which have from time to time been added to the public domain for settlement. To quote the language of a distinguished citizen of my own State:

The Congress of the United States has done and is doing much toward providing homes for the people within our borders, both native born and naturalized. Under the public land laws millions of acres of fertile land have been given away to those who desired it, and now that the most desirable land has been given away, millions are being expended to reclaim the desert places, that they, too, may be divided among the people. No charitable or humanitarian effort can hope to compare in generosity and magnitude to the donations made by the United States; and yet, in spite of it all, congestion such as has been described is an alarming condition in many of our large cities. Will not the embarrassments which now exist in our cities because of this congestion increase rather than diminish? How long can we continue to add to the number of impoverished in our cities without detriment to our Nation?

It has been claimed that we need more labor here to carry on our improvements and develop our resources. It is true that there is need of labor that will till the land and increase the products of our farms, but, as has been already shown, we are not getting many of that class of workers among the immigrants now coming into the country. It is also true that there are still large resources to be developed. In all the Rocky Mountain States there are excellent opportunities for trained farmers; but those immigrants who would be kept out by the proposed law and who are now buying tickets on the installment plan in southern Europe, with the intent of landing in San Francisco, Portland, or Seattle after the opening of the Panama Canal, are of the same class that now congests the cities of the Atlantic coast. They have no intention of going into agricultural pursuits and are not desirable additions to our population. They are men and women with barely enough money to permit them to enter under existing laws and must secure employment at whatever wages they can obtain, bringing disastrous competition upon many of our own native-born and naturalized citizens, millions of whom are now seeking employment themselves.

Mr. Speaker, this bill may not be a complete remedy for all our immigration ills, but it is the best possible solution that has been evolved after an agitation of nearly a score of years; it meets the recommendations of the Immigration Commission, which made such an exhaustive study of the question in this and foreign countries; it has passed this House by nearly a two-thirds vote, and there were but 7 votes against it in the Senate. It is to be regretted that the President has felt impelled to veto the bill, regardless of the overwhelming sentiment in favor of the proposed legislation, as indicated by the arguments advanced and the affirmative vote of a great majority of the Representatives of the people.

Mr. Speaker, I desire to call attention to a few selected communications which I have received, which indicate the interest that is being taken in this legislation by the labor organizations of the country:

WALLACE, IDAHO, *January 29, 1915.*

Hon. ADDISON T. SMITH,
Washington, D. C.:

We, the members of Wallace and vicinity Trades and Labor Council, representing 16 local organizations of labor, are unanimously in favor of passing the immigration bill over President's veto, and earnestly request your fullest unqualified support.

JAMES G. ARTHUR, *Secretary.*

—

MOSCOW, IDAHO, *February 2, 1915.*

Hon. ADDISON T. SMITH,
Washington, D. C.:

Every member of organized labor, and approximately every citizen of Idaho, request that Congress pass immigration bill over veto. We respect our President, but feel that he has made a mistake, which must be remedied, or disaster is likely to follow.

MOSCOW CARPENTERS' UNION.

—

BOISE, IDAHO, *January 28, 1915.*

Hon. ADDISON T. SMITH,
Member of Congress, Washington, D. C.:

As a relief to the unemployed of this State and Nation, organized labor of Boise unanimously request that you work and vote for the passage of the immigration bill over the President's veto.

P. H. SPANGENBERG, *Secretary.*

—

BOISE, IDAHO.

Hon. BURTON L. FRENCH and Hon. ADDISON T. SMITH,
Members of Congress from the District of Idaho:

We, the undersigned citizens of Boise City and Ada County, Idaho, respectfully request that you do all within your power to place upon the statute books of this Nation the immigration bill, which was recently vetoed by the President. To this end we desire that you take such action as is necessary to pass said bill over the veto of the President.

The electrical workers and other unions are talking of and watching this matter. If, in President Wilson's opinion, the voice of our Representatives is not the voice of the people, what is it?

Respectfully,

H. B. DECIUS.

—

POCATELLO, IDAHO, *January 29, 1915.*

Hon. ADDISON T. SMITH,
House of Representatives, Washington, D. C.

DEAR SIR: We, the undersigned committee, representing the railway employees' department of the American Federation of Labor, respectfully urge you to give your support and use your influence to secure the passage of the immigration bill, indorsed by the American Federation of Labor, over the President's veto. Organized labor in this vicinity is strongly in favor of this immigration bill as recently passed by both Houses of Congress.

Yours, very truly,

JAS. W. PURDIE,
THOS. DARCY,
JOHN BONNER,
Committee.

I have also received urgent communications from the following organizations urging the passage of this bill over the President's veto:

American Federation of Labor executive council, Washington, D. C.
Wood, Wire, and Metal Lathers' International Association, Cleveland, Ohio.
Central Federated Union, New York.

International Protective Association of Retail Clerks, La Fayette, Ind.
Washington State Federation of Labor, Tacoma, Wash.
International Association of Machinists, Washington, D. C.
Massachusetts State Branch American Federation of Labor, Boston, Mass.
International Brotherhood of Teamsters of America, Indianapolis, Ind.
Railway Employees' Department, St. Louis, Mo.
Pattern Makers' League, Cincinnati, Ohio.
International Seamen's Union of America, Chicago, Ill.
Pennsylvania Federation of Labor, Harrisburg, Pa.
Minnesota State Federation of Labor, St. Paul, Minn.
New York State Federation of Labor, Utica, N. Y.
International Brotherhood of Paper Makers, Albany, N. Y.
Cigar Makers' International Union, Chicago, Ill.
Washington Central Labor Union, Washington, D. C.
Boot and Shoe Makers' Union, Boston, Mass.
United Mine Workers of America, Indianapolis, Ind.
Tobacco Workers' International Union, Louisville, Ky.
International Typographical Union, Indianapolis, Ind.
Iron City Central Trades Council, Pittsburgh, Pa.
Switchmen's Union, Buffalo, N. Y.
United Brotherhood of Carpenters and Joiners, Indianapolis, Ind.
Illinois State Federation of Labor, Chicago, Ill.

Mr. GARDNER. I yield two minutes to the gentleman from Kentucky [Mr. POWERS].

Mr. POWERS. Mr. Speaker, the gentleman from Minnesota [Mr. MANAHAN] in his speech on the floor of the House this morning made the statement that 30 per cent of the constituency whom I have the honor to represent are illiterate. If that were true, it would be all the more reason why I should vote to prevent more illiterates coming to this country. If there is anything in the gentleman's statement, we already have too many illiterates in my district.

But I deny the charge of the gentleman. I deny the truth of his statement. I want to say to him that that statement is a remarkable perversion of the truth. Instead of having 30 per cent of illiterates in my district over 10 years of age, there are less than 20 per cent. There is in the entire State of Kentucky an average of 16.5 per cent of illiteracy. This includes, of course, the great cities of Louisville and Lexington and other cities in the Commonwealth, as well as the far-famed blue-grass region of the State.

Mr. MANAHAN. Will the gentleman yield?

Mr. POWERS. I yield to the gentleman.

Mr. MANAHAN. I will ask the gentleman if the figures he gives are for the entire population of his district or just for the native whites?

Mr. POWERS. The figures I give are for the entire population of my district, including the colored people. The percentage is not so great if you count the whites alone. No man here represents brainier or better people than I have the honor to represent.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. MOORE. I yield two minutes to the gentleman from Minnesota [Mr. MANAHAN].

Mr. MANAHAN. Mr. Speaker, I am glad to correct my statement. I had in mind evidently another district in the South, mentioned in the last debate, where the percentage of illiteracy was approximately 3 per cent, and I made a mistake in attributing it to the district represented by the gentleman from Kentucky [Mr. POWERS]. I will accept 19 per cent as the correct figure, and I say that that is a serious reflection upon his district, ruled by native Americans for many generations; and I will say further that from the experience all over the North of the competition that comes from live-blooded foreigners, if he will bring into his district from southern Europe, or any other part of Europe, men and women with nerve and ability and ambition and live red blood in their veins, the apathy and backwardness of his people will be overcome, and the percentage of illiteracy will be decreased from 19 per cent to approximately 3 per cent, as it is in the State of Minnesota, where 75 per cent of our people are foreign born or the children of foreign born.

I yield back the remainder of my time.

The SPEAKER pro tempore. The gentleman yields back one minute.

Mr. BURNETT. Mr. Speaker, I yield eight minutes to the gentleman from Alabama [Mr. HEFLIN].

Mr. HEFLIN. Mr. Speaker, medical societies, patriotic orders, the farmers' union, the farmers' national congress, and the Federation of Labor all indorse this specific measure. The American people are demanding its passage. Eight of the nine United States immigration commissioners have indorsed the literacy test. American patriots who have devoted their lives to the study of the question of immigration have indorsed the reading test. Twice in two years both branches of Congress have passed this bill, and the eyes of the country are upon us to-day. What are we going to do? The reading test would not prevent the coming of any man worthy of American citizenship, but it would raise the general standard of intelligence among our alien arrivals. This bill contains provisions which make the mental and physical examination of aliens more effective and would exclude a large number of those whose coming would tend to lower the mental and physical standards of our people.

Is citizenship here of such small consequence that the foreigner wishing to obtain it will not learn to read just 30 words in the English or some other language? Are we to strike down the reading test, put a premium on ignorance, and throw our doors open to the scum of the earth in order that the army of cheap laborers may increase its numbers and the steamship companies ply their trade? In New York, the most populous State in the Union, the insane asylums and charitable institutions are full and overflowing with the feeble-minded, the lame and halt of the immigrant army. This condition has become so annoying and so burdensome that the governor of the State is calling upon the Federal Government to help New York care for the decrepit and feeble-minded foreigners pouring into the State. The State commissioner of lunacy tells us that in 1911 there were in the civic hospitals 5,700 patients, and that 2,737 of these were foreigners, and the New York State hospital bulletin states that in 1912 there were 31,000 patients in the 14 State hospitals and that 41 per cent of them were of foreign birth. The New York Herald, April, 1912, said that more than 60 per cent of the occupants of charitable institutions and insane asylums in New York were foreigners. I am convinced, Mr. Speaker, that foreign countries have taken advantage of our loose and lax immigration laws to rid themselves of the criminal element and the feeble-minded of their people, and instead of caring for their own diseased and insane people they are sending them to us with every steamship that sails. Mr. BURNETT has told us that Police Commissioner Bingham, of New York, said:

> This wave of immigration that brings to New York hundreds of thousands of criminals who don't know what liberty means, and don't care; don't know our customs, can not speak the English language, are in general the scum of the earth.

Frederick A. Pope, who was prosecuting officer in New Jersey, wrote to President Taft in February, 1913, that he had prosecuted in a certain length of time for various crimes 114 foreigners, and that 91 of them were illiterate—they could not read—and that out of 8 crimes against women, 7 were committed by men who could neither read nor write.

Southern Europe is encouraging large numbers of people to go to the United States, take the place of the American laborer, accumulate money and send it home, and others are urged to return when their fortunes are made. Thousands of these illiterate people are placed in charge of a foreign priest or minister who advises them not to become citizens of the United States. I read of an instance where the priest or minister told them that it was all right to work here and send their money back to Europe, but that they must hate the American flag and remain loyal to the mother country. The number of unnaturalized foreigners in the United States has grown so enormously that the people of southern Europe refer to them as "our colonies in America." And, Mr. Speaker, it is a deplorable fact that these European colonies in America have injured the standard of the laboring man, reduced wages here, and they have driven thousands and tens of thousands of American wage earners into the ranks of the unemployed. [Applause.] Millions of Americans who toil in the mills, dig in the mines, work at the bench, or beat at the forge are praying this day that you will shield and protect them from further invasion by cheap laborers from foreign countries. [Applause.]

If you are the friend of the wage earners of America who make their living by the sweat of their faces, love our institutions and follow our flag, now is the time to show it. If you have any regard for the wishes and the welfare of the millions of American farmers, you must tell them by your vote to-day. If you would guard our civilization and protect the life of our Nation from the dangers that threaten it, I call upon you now to vote for this bill. [Applause.]

Mr. Speaker, I wish the steamship companies well, but I am not willing that they should flourish at the expense of American ideals and institutions. An official of our Government tells us that it is the deliberate plan of certain European Governments to send to the United States the most undesirable of their people. Marcus Braun, of New York, an immigrant inspector sent by our Government to Europe to investigate immigrant conditions there, reported to the Secretary of Commerce and Labor that the Hungarian Government had a contract with a steamship company, the Cunard Line, to deliver to their vessels 30,000 Hungarians a year, to be carried to the United States. The Hungarian governmental official told the American governmental official that the contract to send so many of their people to the United States every year was none of our business. When will this traffic in human beings stop? This law would injure

the traffic of the steamship companies, but it would greatly benefit the American people. [Applause.] A few years ago the new King of Denmark pardoned 700 criminals, degenerates, swindlers, thieves, and murderers. The people of Denmark did not want these criminals to remain in their country, so they made up money and purchased tickets for every one of them, placed them on board a steamship and sent them to New York.

Representative BURNETT, while in Sicily investigating the immigration question asked, "Where are the bandits who gave you so much trouble a little while ago?" And the answer was, "They have all gone to America." Think of that, Mr. Speaker; no longer the asylum for the oppressed, no longer the promised land of the worthy, but a place to which foreign countries may send their undesirable people, a place on which the steamship companies unload more than a million people every year. [Applause.] Time was when the industrious and worthy foreigner who wanted to come to our country went to work, secured funds, and paid for his own transportation. Then the deserving foreigner went to work to meet American requirements in order that he might come over and share the blessings and benefits of this great Republic. Now the steamship companies have their agents abroad, urging every class and condition to go to the United States. Pictures are displayed showing savings banks and foreigners standing around with their hands full of American money, and they are told that it is an easy matter to make money here. All kinds of stories are told to induce the coming of the immigrant horde. All that the steamship company wants to know is, can he pay his fare? They have excursions and give cheap rates, and then the agents go out with their dragnets and gather them in, and tramp, tramp they come—more than a million a year.

Mr. Speaker, the Boston Transcript speaks truly when it says that there are those in this country who are opposed to any and all restriction of immigration. Thomas Jefferson said more than a hundred years ago, "While we are providing for the fortification of our country against a foreign foe, I am in favor of fortifying it against the influx of undesirable immigration." [Applause.] And yet, Mr. Speaker, there are gentlemen here who will not vote for a measure that will keep out of our country thousands and tens of thousands of undesirable persons. What strange and unnatural influence is it that impels gentlemen here to oppose any measure that will restrict immigration? Is it the fear of certain constituents at home who care more for the business of bringing in more people from foreign countries than they do for the welfare of our own country? Mr. Speaker, if this un-American influence is strong enough now to prevent the enactment of a law to restrict immigration, what Senate or House a few years from now will even dare to undertake the difficult task? [Applause.] Yes; every 12 months the steamship companies unload upon our shores more than a million of foreigners; and Mr. Speaker, at this rate, the time will soon come when you can draw a line across the Republic and place the native born and their descendants on one side and the foreign born and their descendants on the other, and they will outnumber us. Then if we should be engaged in war with a foreign power, foes from without and foes from within, you will have reason to be concerned about the safety of your country. If these influences are strong enough to stifle the American desire that is in you to protect our country against this horde of undesirable foreigners, if these baneful influences shall cause you to take the side of foreign countries who want to continue to send to our country the refuse of their own, the day will come when your children whose birthright you have bartered for a mess of political pottage will curse you in your graves.

You talk about preparations to prevent a foreign army from invading our country when, by your votes and un-American conduct, you are letting in every year thousands of men more dangerous to the vital life of America than could possibly be the attempt at invasion by any foreign army. We would be on the lookout for such an army and would prevent it from landing upon our shores; but here is an invasion dangerous to American ideals and institutions—an invasion that enriches the steamship companies and sends out of our country every year $150,000,000, and works great injury to the American laboring man. Mr. Speaker, thousands—yes, hundreds of thousands—of cheap laborers from Europe are here enjoying the blessings and benefits of free America, competing with loyal citizens in every line of industrial endeavor and in all the marts of trade. [Applause.] And yet some of you will vote against this measure and then talk about protection to American labor. What the American laborer needs most and what he is praying for this day is protection from the vast army of cheap laborers coming into our country every year.

In his farewell address President Washington admonishes us to "promote as an object of primary importance institutions for the general diffusion of knowledge." How fitting, Mr. Speaker, that in the month of his birth we should be engaged in the work of providing for the diffusion of knowledge among those who are to come here and share with us and our children the blessings and benefits of this great Government. Thomas Jefferson has said that when every man can read the country will be safe. Here we are trying to follow the advice of Washington and take the first step toward providing for the diffusion of knowledge among our alien arrivals, and here we are setting up requirements that will enable the foreigner who desires to come here to read and learn for himself of American institutions. [Applause.] It is high time that some of our citizens who come here from foreign countries and swear allegiance to the American flag were showing their unwillingness to permit all kinds of foreigners to come into our country. If these men really love our country, they are in favor of immigration laws that will permit only worthy and desirable people to come. If they do not agree with us that something should be done to prevent undesirable and unfit foreigners from coming here, then we may well ponder the question whether we shall preserve the Republic in all its integrity for our children and our children's children or permit it to become the dumping ground for the scum and refuse of every country on the globe. [Applause.]

Here, in full view of the likeness of Washington and looking upon Old Glory, our country's flag, let us reconsecrate our hearts, our strength, and our all to the highest and best interest of our country. This is not a party question, but a question of supreme importance to the American people, and I want this vote to-day to show to the country and to the world that far above the blaze of partisanism loom the altar fires of our patriotism. [Applause.]

Mr. Speaker, I believe that if the voice of Lincoln and the voice of Davis, the voices of Grant and Lee, could be heard in this House to-day they would admonish us, from the North and the South, from the East and the West, to support this bill and in so doing strike hands about a common center for the good of the Republic. [Applause.]

Mr. GARDNER. Mr. Speaker, I yield two minutes to the gentleman from Kentucky [Mr. LANGLEY].

Mr. LANGLEY. Mr. Speaker, I desire to offer my congratulations to the distinguished gentleman from Alabama [Mr. BURNETT] and his intrepid and patriotic Democratic associates on that side of the Chamber for rising above party considerations and resisting the menace of the pedagogic lash from the White House in order to serve the best interests of their country by voting to pass this bill over the President's veto. All honor to your courage and good judgment. I am glad that this is not being made a party question here. It ought not to be. And, Mr. Speaker, I sometimes think that if we had less partisanship and more patriotism in this House the country would be better off. [Applause.] Instead of this being a party question I should say it is rather a geographical question in view of the territory represented by its advocates and opponents. And incidentally the question of expediency may figure in it, too.

I voted to pass a similar bill over the veto of President Taft, and I did that with no less pleasure than it will afford me to vote to pass this bill over President Wilson's veto. I thought the leader of the Republican Party was wrong then, just as I think the leader of the Democratic Party is wrong now. Moreover, Mr. Speaker, I am willing to concede that our party when it was in power was more or less remiss in its duty, and to that extent it was inconsistent when it failed to make the restriction wall around this country as high as it made the protection wall. It is no more detrimental to American labor to send the products of cheap foreign labor here to compete with them than it is to send the foreign laborers themselves here. Indeed, the competition is all the greater in the latter case. Believing earnestly, as I do, in the doctrine of protection, I am just as much in favor of applying it at the immigrant stations as at the customhouses. [Applause.]

The SPEAKER pro tempore (Mr. FOSTER). The time of the gentleman from Kentucky has expired.

Mr. LANGLEY. Will the gentleman from Massachusetts [Mr. GARDNER] yield me another minute or two?

Mr. GARDNER. Mr. Speaker, I yield the gentleman one minute more.

Mr. LANGLEY. Mr. Speaker, it does not require the gift of prophecy to foresee some of the results of the war in Europe. Ultimately I think it will result in there being fewer monarchies and more Republics in the world, but that much-desired result

can not immediately follow it. There is one thing, however, that will immediately follow. The oppressed of all those countries that are in the throes of the conflict, all those who are discontented with royalty and its methods of government, will want a home in this great Republic, this land of neutrality and of promise. For that reason I regard it more important than ever before that our immigration laws be better safeguarded to the end that the coming to our shores of so many undesirable aliens may be stopped. If that could be accomplished in some other way more effectively than by the literacy test, I would gladly vote for that; but no better way has been found by those who have made an exhaustive study and investigation of the whole subject. Besides, I can see no good reason why we should add foreign illiterates to our population when we are struggling so hard to remove illiteracy from our land, so as to give the blessings of education to all our people. The failure of this bill to pass will be almost a calamity to our country. [Applause.] Mr. Speaker, this war has already taught us a valuable lesson, which is that our greatest national safeguard lies in our sticking closer together as a people, selfish though it be, and that we should "sharpen our wits" to help each other rather than to open our markets and our opportunities for employment too much for the benefit of the people of other lands. All of which, to my mind, vindicates the wisdom of the policies both of protection and of restriction of foreign immigration. [Applause.]

Mr. BURNETT. Mr. Speaker, will the gentleman from Pennsylvania consume some of his time now?

Mr. MOORE. Mr. Speaker, I will say to the gentleman from Alabama that I have no more time to yield to any other gentleman except to myself and I prefer to conclude for our part after the gentleman goes on.

Mr. BURNETT. We have only one other speech besides mine and that is a short speech.

Mr. GARDNER. Is the gentleman from Illinois [Mr. SABATH] reserving his time entirely for one speech?

Mr. SABATH. Yes.

Mr. GARDNER. I ask because there are two gentleman here who want to be recognized for half a minute, but neither is on the floor at the present time. I am already to have my time closed in a single speech by the gentleman from Ohio [Mr. FESS]. I am not going to speak myself.

Mr. MOORE. The gentleman intends to conclude with the yielding to Mr. FESS?

Mr. GARDNER. Yes.

Mr. BURNETT. The gentleman from Illinois says that he will consume some of his time himself.

Mr. GARDNER. Will the gentleman be willing to consume his time now? I will give way to Mr. MOORE, if the gentleman will speak now.

Mr. SABATH. The gentleman will then reserve his time and close after both the gentleman from Pennsylvania and myself?

Mr. GARDNER. No; after the gentleman has closed, then the gentleman from Ohio [Mr. FESS] will close, and then the gentleman from Pennsylvania [Mr. MOORE], and then the gentleman from Alabama [Mr. BURNETT].

Mr. SABATH. Mr. Speaker, it is immaterial to me, and I am perfectly willing to go on now.

The SPEAKER pro tempore. The gentleman from Illinois has 15 minutes remaining.

Mr. SABATH. Mr. Speaker, I yield one minute to the gentleman from Connecticut [Mr. DONOVAN].

Mr. DONOVAN. Mr. Speaker, I would like to have read from the Clerk's desk the article which I have sent there, and I would like particularly to have the attention of the gentleman from Ohio [Mr. FESS].

The Clerk read as follows:

Sir Walter Scott said:

"I have read books enough, and conversed with enough of eminent and splendidly cultivated minds; but I assure you, I have heard higher sentiments from the lips of poor uneducated men and women, when exerting the spirit of severe yet gentle heroism under difficulties and afflictions, or speaking their simple thoughts as to circumstances in the lot of friends and neighbors, than I ever yet met with out of the pages of the Bible. We shall never learn to respect our real calling and destiny, unless we have taught ourselves to consider everything as moonshine compared with the education of the heart."

Mr. SABATH. Mr. Speaker, during the eight years of my service in this House I desire to say that every vote I have cast on labor questions has been in the interest of labor. If I thought for one moment that my action and my vote to-day would be against the interest of labor, I would rather resign my seat in this body than to cast that vote. But, Mr. Speaker, I am convinced that my action is in the interest of the American laboring man. For 20 years, as has been stated, immigrants have come here in large numbers, larger than in the entire 80 years preceding, and I want to say to you that within the last 20 years, notwithstanding the large immigration, the conditions of the laboring man during that time have improved. Not only have the living conditions improved, but the wages of the American laboring man have increased. Twenty years ago, or in the year 1890, the yearly average earning of the American laboring man amounted to about $335, and the average earning of the American laboring man to-day is over $550. I want to say to you, Mr. Speaker, that not only have the wages increased, but the hours of labor have been shortened in nearly every industry in the United States. For that reason I believe that immigration has not been detrimental to our country, but has been beneficial. It has helped the American laboring man to advance and secure a better position than he occupied before that immigration commenced. Oh, we hear that the Federation of Labor and other labor organizations are opposed to this measure. I admit that organized labor has done much for the laboring man, but I maintain that immigration has done even more. It has given the Federation of Labor their great leader, Mr. Samuel Gompers, as well as the able secretary, Mr. Morrison, who is a native of Canada. It has given this country the great Secretary of Labor, Hon. William B. Wilson, and it has given the Federation of Labor more than 50 per cent of its executive committee. The members of that organization know, or should know, that immigration is not detrimental to organized labor. In addition I desire also to state that not all of organized labor is in favor of this legislation. I hold in my hand a resolution which I received this morning signed by nine different labor organizations protesting against the enactment of this law.

Mr. BUCHANAN of Illinois. Mr. Speaker, will the gentleman yield?

Mr. SABATH. Yes.

Mr. BUCHANAN of Illinois. Will the gentleman please name those organizations?

Mr. SABATH. I really have not the time to spare to read the entire resolution, but in the interest of my colleague, whom I know is honest and a sincere man and means well, but is misled, somewhat as a great many others are, I will have the Clerk read the resolution, notwithstanding that it will take more time than I really desire to give to it.

The Clerk read as follows:

NEW YORK, *February 3, 1915.*

Hon. A. J. SABATH,
House of Representatives, Washington, D. C.

DEAR SIR: The Burnett immigration bill has been vetoed by President Wilson. We learn that strong efforts are being made by the opponents of immigration to pass this bill over the President's veto.

The impression has been created that organized labor, without exception, is in favor of this bill, which seeks to restrict immigrants chiefly on the ground of illiteracy. We wish to call your attention to the fact that a large number of powerful organizations within and without the ranks of the American Federation of Labor are unreservedly opposed to the Burnett bill, and believe that its provisions are unjust, essentially un-American, and harmful to the best interests of our country.

Even from the standpoint of those who seek the interests of the workingmen, the restriction of immigration is not calculated to do them any good; but if put into practice will most likely result in serious harm. Immigration has not been responsible for the increased cost of living, but has, on the other hand, directly developed a higher standard of living, particularly among the workingmen, on account of the prosperity and opportunity for labor that immigration has afforded.

That immigrants do not lower wages or represent an unorganizable laboring element is strikingly demonstrated by the fact that the American Federation of Labor itself has grown in strength and influence largely through the increase in its ranks of great numbers of immigrants in every part of the country and in all trades.

The movement of unionism among women has been most successful in the case of immigrants, which shows the remarkable capacity for organization among the recent immigrants.

As representatives of great labor organizations embracing thousands of workingmen, we earnestly protest against the adoption of a measure which strikes at the roots of our American principles of equality by an insidious and indirect form of exclusion.

We trust that you will not only vote against the bill, but will do all in your power actively to prevent any attempt to override the President's veto from becoming successful.

Will you not kindly let us hear from you at an early moment to learn what you expect to do in this matter?

Very earnestly and sincerely, yours,

[Seal: The Workmen's Circle (Arbeiter Ring), Feb. 2, 1915, 175 East Broadway, N. Y.]
[Seal: International Ladies Garment Workers' Union, 32 Union Square, New York City.]
[Seal: Amalgamated Clothing Workers of America, 32 Union Square, New York.]
[Seal: United Laundry Workers' Union, Local 34.]
[Seal: The Hebrew Bakers' Union, Local 160. Incorporated 1903.]
[Seal: United Neckwear Makers' Union, Local 11016 A. F. of L. Organized Dec., 1905.]
[Seal: United Hebrew Trades of the State of New York. Org. Oct., 1888.]
[Seal: International Cabinet Makers, Machine, Hand, and Wood Turners' Union, Local 2 of N. Y.]
[Seal: Shirt Makers' Union of Greater New York.]

Mr. BUCHANAN of Illinois. Mr. Speaker, a further question. I would like to ask if there is a seal on that communication?

Mr. SABATH. Those are all seals.

Mr. BUCHANAN of Illinois. I would like also to ask if the gentleman does not know that some of those organizations are not official trade organizations?

Mr. SABATH. Does the gentleman know they are not?

Mr. BUCHANAN of Illinois. There is one of them organized for purposes of this kind—the labor circle. [Applause.]

Mr. SABATH. The gentleman might know more about various labor organizations, but I am satisfied he is mistaken in this particular.

Mr. BUCHANAN of Illinois. I take it the gentleman does not want to mislead the Members of this House.

Mr. SABATH. The gentleman knows me too well to believe that of me.

Mr. BUCHANAN of Illinois. For that reason I rose to ask the question. I take the position that these are not legitimate trade-union organizations.

Mr. SABATH. I beg to differ with the gentleman.

In this connection I wish to say that I have other communications from other laboring organizations and societies, but time does not permit me to read them all. I will, however, read a few of them.

I have a telegram from the Iroquois Club, of Chicago, which reads as follows:

CHICAGO, ILL., *February 2, 1915.*

Hon. ADOLPH J. SABATH, *Washington, D. C.:*

At a special meeting of the Iroquois Club held February 2, 1915, the following resolution was unanimously adopted:

"*Resolved*, That the Iroquois Club commends the President for his veto of the immigration bill, and urge the Illinois delegation in Congress to uphold the President in his veto."

WM. ROTHMANN, *President.*
LORING R. HOOVER, *Secretary.*

I have a letter from the Illinois Manufacturers' Association, 50 per cent of the membership of which are business men, which reads as follows:

ILLINOIS MANUFACTURERS' ASSOCIATION,
Chicago, February 1, 1915.

Hon. ADOLPH J. SABATH,
House of Representatives, Washington, D. C.

DEAR SIR: The directors of the Illinois Manufacturers' Association, on behalf of the members of the organization, urged President Wilson to veto the immigration bill, because it contained the literacy test, which they believe unfair. You are respectfully urged to use your influence to sustain the President's veto.

Very truly, yours, JOHN M. GLENN, *Secretary.*

I have a telegram from the Slovak Guards of Illinois, which reads as follows:

CHICAGO, ILL., *February 3, 1915.*

Hon. A. J. SABATH,
Member of Congress, Washington, D. C.:

Slovak Guards of Illinois, representing 30,000 law-abiding naturalized American citizens, appeal to Members of Congress to vote to sustain the President's veto on immigration bill.

EMIL TEHLAR, *President.*

The Polish-American Alliance and the Polish Catholic Union of America have also sent me the following telegram:

CHICAGO, ILL., *February 2, 1915.*

Hon. A. J. SABATH,
House of Representatives, Washington, D. C.

In behalf of thousands of our countrymen who have been deprived of the opportunity of acquiring an education in the mother country, we urge you to vote to uphold the President's vetó of the immigration bill.

POLISH-AMERICAN ALLIANCE,
POLISH CATHOLIC UNION OF AMERICA.

Mr. Speaker, I wish to embody as a part of my remarks a letter which I have received from one of the most beloved and fair-minded judges of our country, Judge John Gibbons, of the Circuit Court of Cook County, Illinois.

CIRCUIT COURT OF COOK COUNTY,
Chicago, January 7, 1915.

Hon. A. J. SABATH, *Washington, D. C.*

DEAR CONGRESSMAN SABATH: I desire to register a solemn protest against the enactment of the immigration bill because it contains the literacy test. In no adequate manner can such a test determine the quality of good citizenship. Such a test would be unjust, undemocratic, and un-American.

The establishment of the Republic was a proclamation to the world that at last a land was opened and a government instituted in and under which all men could enter the lists of life and endeavor upon an equal footing with full opportunity to work out their own elevation and betterment. America soon became the Mecca of the Old World's oppressed thousands, hungering for freedom—freedom to speak, to act, and to grow. This opportunity for free individual action and development, never before offered to the "hewers of wood and drawers of water," was what moved them throughout all lands, as by a common impulse, to flee from the servitude of their native countries to build new homes and better, broader lives in a strange land. No class greater in numbers or stronger in purpose took advantage of this opportunity than the artisans and laborers, many of whom could neither read nor write. No class has proven itself more capable of growth and advancement under these benign conditions than they. In all that constitutes the true citizen and patriot, when the life of the Nation was in peril, they proved themselves peers of the noblest and the best. Such has been the result because here they found and utilized a fair field and full play for individual energy, talent, and effort.

Very respectfully, yours,

JOHN GIBBONS.

The organization known as the Friends of Russian Freedom submit the following communication:

FRIENDS OF RUSSIAN FREEDOM,
February 2, 1915.

Hon. A. J. SABATH,
House of Representatives, Washington D. C.

DEAR SIR: To us it seems of very great consequence that the right of political asylum shall be maintained inviolate in this country.

The history of nations—of others as well as of our own—teaches that at times only through the unlawful destruction of property and the advocacy of this may despotism be thrown off and representative government attained.

Born of revolution themselves, surely the American people have signified no desire to reverse their attitude toward those who in other lands, inspired many times by America's example, fight for liberty and democracy even as the founders of this Republic fought.

We may not now present to you, as we presented to Congress last year, substitutes for the clauses which in the existing law and in the bill before you wrong the political refugee and injure our own name.

We can only urge you to vote against passing the immigration bill (H. R. 6060) over the veto of the President. This we do solely on the ground that the bill in our opinion runs counter to the proper and historic policy of this country in excluding and deporting (secs. 3 and 19) aliens "who advocate or teach the unlawful destruction of property," and in subjecting to fine and imprisonment (sec. 28) "any person who knowingly aids or assists any * * * (such) alien to enter the United States."

Yours, very truly,

HERBERT PARSONS,
President Friends of Russian Freedom.

And in this connection I wish to read the names of a few of the gentlemen who comprise the national committee of this wonderful organization:

Herbert Parsons, president; Right Rev. David H. Greer, vice president; George Kennan, vice president; James Bronson Reynolds, chairman, 105 West Fortieth Street, New York; Joseph M. Price, vice chairman.

National committee: The officers, members of executive committee, ex officio, and Dr. Lyman Abbott (editor the Outlook), New York; Jane Addams (Hull House), Chicago; Miss Alice Stone Blackwell (editor Woman's Journal), Boston; John Graham Brooks (author), Cambridge, Mass.; W. Franklin Brush, New York; Edward B. Butler (president of Butler Bros.), Chicago; Prof. John B. Clark (Columbia University), New York; E. H. Clement, Boston; R. Fulton Cutting, New York; Horace E. Deming, New York; Dr. Henry B. Favill (physician), Chicago; Dr. John H. Finley, New York; Homer Folks (ex-commissioner of public charities), New York; David R. Forgan (president First National Bank), Chicago; I. K. Friedman (author), Chicago; A. S. Frissell (president Fifth Avenue Bank), New York; Prof. Franklin H. Giddings (Columbia University), New York; E. R. L. Gould (president Thirty-fourth Street National Bank), New York; Rev. Percy S. Grant (Church of the Ascension), New York; Rev. Thomas C. Hall (Union Theological Seminary), New York; Norman Hapgood (editor Harper's Weekly), New York; Rabbi Emil G. Hirsch (Sinai Congregation), Chicago; W. J. Holland (chancellor Carnegie Institute), Pittsburgh; Charles L. Hutchinson (banker), Chicago; Dr. Abraham Jacobi (physician), New York; Mrs. Helen Hartley Jenkins, New York; Prof. W. R. Shepherd (Columbia University), New York; P. Tecumseh Sherman (ex-commissioner of labor), New York; Rabbi Joseph Silverman (Temple Emanu-El), New York; Cyrus L. Mr. Speaker, great stress has been laid upon the statement contained in the President's message, that no party has ever adopted the text of this bill as part of its platform. What the President did say was this, that no party has gone to the country on this proposition. This question has been raised not only by Members of the House, but in a special edition of the weekly news letter of the American Federation of Labor attention has been directed to just this part of the President's message, wherein he inquires whether any political party has ever avowed a policy of restriction in this fundamental matter and gone to the country on it.

The article dwells upon the fact that in the year 1896 a President and Vice President were elected upon a platform containing a restrictionist clause. Is it possible that the gentleman had forgotten what the real issue was in that campaign? During the long campaign no one paid any attention to that portion of the platform.

In 1912 the Republican Party enacted the following as one of the planks in its platform:

We pledge the Republican Party to the enactment of appropriate laws to give relief from the constantly growing evil of induced or undesirable immigration, which is inimical to the progress and welfare of the people of the United States.

Surely no one can question the importance of this, and what was the result of the election in 1912? No party has ever suf-

fered such a humiliating defeat as the party which adopted this provision as a part of its platform.

Three times has the Democratic Party succeeded in carrying the Nation. It was in the years 1884, 1892, and 1912.

Four times did the Republican Party go on record against liberal immigration and three times did the Republican Party go down to defeat.

In upholding the sacred traditions of the country and of the Democratic Party, the Democratic platform of 1884 contained the following:

We oppose sumptuary laws, which vex the citizens and interfere with individual liberty.

In reaffirming the declaration of the Democratic platform of 1856, that the liberal principles embodied by Jefferson in the Declaration of Independence and sanctioned in the Constitution, which makes ours the land of liberty and the asylum of the oppressed of every nation, have ever been cardinal principles in the Democratic faith.

In the platform of 1892, while the Democratic Party favored the enactment of more stringent laws and regulations for the restriction of criminal, pauper, and contract immigration, the following provision was also embodied:

We condemn and denounce any and all attempts to restrict the immigration of the industrious and worthy of foreign lands.

In the latest pronouncement of Democratic doctrine, our platform of 1912, we have this ringing declaration:

No treaty should receive the sanction of our Government which does not recognize that equality of all our citizens, irrespective of race or creed, and which does not expressly guarantee the fundamental right of expatriation.

Now, Mr. Speaker, the gentleman from Indiana [Mr. ADAIR] who opened the remarks in favor of this bill stated that President Wilson is a great President. Mr. Speaker, I agree with the gentleman from Indiana. I agree that we have in Woodrow Wilson a great President, a President who has done more to bring about favorable legislation in the interest of the American people and laboring man than any other man who has ever occupied the White House. [Applause.] I admit that men as great as President Wilson have made mistakes, but I challenge the gentleman from Indiana to show that our President has made a mistake in vetoing this bill. The gentleman from California [Mr. RAKER] and the gentleman from Alabama [Mr. HEFLIN] cite the large number of foreign-born people in our insane asylums. They, however, neglect to show that in proportion to the population the percentage of foreign-born people is smaller than that of the native-born citizens.

Does not the gentleman from California know that under the provisions of the present law those persons suffering from insanity or even what the Department of Labor terms feeblemindedness or presenility are now debarred.

The gentleman from Alabama is fearful for our future citizenship. If he would take the trouble to visit the homes of these people whom he dubs the scum of the earth and undesirable citizens I feel confident that he would not stand on the floor of this House and slander these hard-working, sincere, and law-abiding people.

Mr. Speaker, I, as well as these gentlemen, am desirous of protecting the standard of American citizenship and our American institutions. No man who is familiar with conditions can say that so far immigration has lowered the standard of American citizenship; and I maintain that, on the contrary, immigration has forced the standard of American citizenship to a higher level. Surely, this is true of the American workingman. The immigrant has come here and dug our million ditches, while the native American has been elevated to the positions of foreman, timekeeper, assistants, and so forth, positions which the native-born American is as yet not too proud to fill.

The gentleman from Wisconsin [Mr. LENROOT] is fearful that immigration will lower the character of our citizenship. He comes from a State where nearly 80 per cent of the population is composed of foreign-born citizens, or citizens of foreign parentage. Does he desire to make us believe that his State is not up to the standard? He represents the State. The truth is that he, as well as so many others, has been poisoned by the malicious representations of certain lobbyists, whose activities have been directed against the policy of our Government and against the unfortunate immigrant.

Mr. Speaker, no doubt great stress will be laid on the great $1,000,000 Immigration Commission report, which no one has read, and with which none of the members of the commission are familiar, even though they have assumed to base their recommendations to the House on it.

In the face of these recommendations of the commission Prof. Jenks and Mr. Lauck, members of that commission, have the following to say in their book on "The Immigration Problem" (see pp. 335 and 344):

In the judgment of the commission, as well as of most other enlightened citizens, the United States should remain in the future, as in the past, a haven of refuge for the oppressed, whether such oppression be political or religious. Any restrictive measure should contain a provision making an exception of such cases. We clearly ought not to close our doors against those whom the common opinion of the world would consider really the subjects of oppression.

No doubt great stress will also be laid on the activities of the Liberal Immigration League of New York City. As to that organization, I wish to state that I did not agree with their activities, but will say that I fail to see wherein they are guilty in asking aid from all to help the cause which they advocated, unless it be from steamship companies and the five other corporations from which they received money, according to the statement. All in all, it amounted to $5,000 in five years, and the largest contribution was $500. I have a statement before me which shows that the league is over a thousand dollars in debt. The various items which it is charged they have collected appear to be reasonable, and in view of the fact that they are not able to meet their expenses puts them in at least a better light than the various restrictive organizations which have been flooding the mails with bitter, restrictive literature, and which obviously have abundant funds to meet all expenses, however heavy.

May I ask the gentlemen who are so vitally interested in the dictates of the Junior Order of American Mechanics and kindred so-called patriotic organizations who it is that is furnishing the funds for these organizations?

Mr. Speaker, I desire to say that Democracy can be proud of the wonderful, excellent record that it has made under this great and wonderful President. We have given the country and the laboring people more favorable legislation than any other party in the history of our Government, and for that reason I feel confident that, notwithstanding the fact that the Federation of Labor has taken a stand on this one question contrary to the President, they will realize and recognize that he is a great President, a wonderful man, a man who desires to help the cause of humanity, to help the cause of the people.

Right here, Mr. Speaker, I can with pride point to my closing remarks in the speech which I delivered on August 23, 1912, and which read as follows:

And in conclusion I desire to say this: I have been and am now a Democrat who believes in the Democratic doctrine, in equal rights to all and special privileges to none. I became a Democrat because of my belief in these principles and because the Democratic Party was the party that stood for them. I am a Democrat because I believe the Democratic Party is the party of the people and for the people; that it stands for and does what is just and right. I firmly believe that it stands for justice and equity; that it is a party that is broad and liberal; that and through it the people can secure beneficial legislation that will relieve them from oppression.

It stands by its pledges. It carries out its promises. And, notwithstanding the fact that I stand for and firmly believe in all its fundamental principles and have been active ever since 1888, voting for Cleveland, Bryan, and Parker, and have been many times honored by it, if I believed that our candidate for President—the Hon. Woodrow Wilson—had intentionally spoken unfairly of our foreign-born citizens and actually was prejudiced against them, I would unhesitatingly refuse him my vote and my support.

But, Mr. Speaker, I am satisfied that he is a man of broad and liberal ideas, a man of excellent judgment, a man of great knowledge and intelligence, honest and fearless, and I feel confident that, after he has been elected the President of the United States, the greatest and most glorious country under the canopy of heaven, and President of the greatest and most hospitable people inhabiting any portion of this globe, he will demonstrate to those who are endeavoring to place him in a false light that he can not and will not be swayed from the path of righteousness and justice, and will easily shine after his days of service are over with the other illustrious stars—Washington, Jefferson, Jackson, and Lincoln.

Now, Mr. Speaker, some gentlemen are going to try to make the membership of this House believe that most anyone now can come to our shores. For the information and enlightenment of those gentlemen I desire to say that last year alone we debarred at our ports 33,000 immigrants; and from July to November, 12,000; and we have deported over 4,000.

The gentlemen who have been and are now advocating the passage of this bill seem to show a great deal of solicitude for organized labor, and lay great stress upon the action of the Federation of Labor, but I am unable to place them. I can not just recollect where they were when other important legislation in favor of the American laboring man was being considered on the floor of the House. I am unable to recall the speeches which they made in favor of other bills which had for their purpose the betterment of the conditions of the laboring classes.

The RECORD must be at fault, for you will fail to find the names of many of these gentlemen included in the list of those who voted for legislation which was really in the interests of the laboring man.

Also, let me ask the gentleman how many labor organizations they have in their respective districts. Have they helped the cause in any way? The truth is that in a great majority of the districts represented by the gentlemen who are favoring this bill labor is not organized.

The gentleman from Tennessee in his speech proclaimed that he is for America.

Mr. Speaker, so am I. I am not only for America but I am for American institutions, for American citizenship, and for the American laboring man.

Due to immigration, our country is the wonder of civilization. Its population is made up of all the peoples of the earth. We have here all races, all religions, all nationalities. They have come to us from all quarters of the globe, and we have the best. Only the courageous hearts and adventurous spirits, who had the courage to face away from their native country and the homes of their birth, their kindred and friends, to face out to an unknown land, where the language they spoke was not understood, with nothing to beckon them on but the beacon light of human liberty, are the ones who have sought to make this country their home. They have planned to establish themselves where the tyranny of monarchy, the oppression of caste, and the insolence of titled wealth would not place heavy feet upon their throats. They brought with them their courageous hearts and adventurous spirits, their strong arms, their industries. The arts, sciences, professions, culture, genius, wisdom, and philosophies of thousands of years of civilization in the lands beyond the seas they gave to us. It has served to make us at once the envy and the wonder of the world. Best of all, they brought with them love and reverence for our institutions. [Applause.]

For the benefit of the House I will read, to refresh the memory of the Members, what the first Democratic President since the Civil War, Grover Cleveland, said on this question in his veto message:

MARCH 2, 1897.

To the House of Representatives:

I hereby return without approval House bill No. 7864, entitled "An act to amend the immigration laws of the United States."

By the first section of this bill it is proposed to amend section 1 of the act of March 3, 1891, relating to immigration by adding to the classes of aliens thereby excluded from admission to the United States the following:

"All persons physically capable and over 16 years of age who can not read and write the English language or some other language * * *."

A radical departure from our national policy relating to immigrants is here presented. Heretofore we have welcomed all who came to us from other lands except those whose moral or physical condition or history threatened danger to our national welfare and safety. Relying upon the zealous watchfulness of our people to prevent injury to our political and social fabric, we have encouraged those coming from foreign countries to cast their lot with us and join in the development of our vast domain, securing in return a share in the blessings of American citizenship.

A century's stupendous growth, largely due to the assimilation and thrift of millions of sturdy and patriotic adopted citizens, attests the success of this generous and free-handed policy which, while guarding the people's interests, exacts from our immigrants only physical and moral soundness and a willingness and ability to work.

A contemplation of the grand results of this policy can not fail to rouse a sentiment in its defense, for however it might have been regarded as an original proposition and viewed as an experiment, its accomplishments are such that if it is to be uprooted at this late day its disadvantages should be plainly apparent and the substitute adopted should be just and adequate, free from uncertainties, and guarded against difficult or oppressive administration.

It is not claimed, I believe, that the time has come for the further restriction of immigration on the ground that an excess of population overcrowds our land.

It is said, however, that the quality of recent immigration is undesirable. The time is quite within recent memory when the same thing was said of immigrants who, with their descendants, are now numbered among our best citizens.

A careful examination of this bill has convinced me that for the reasons given and others not specifically stated its provisions are unnecessarily harsh and oppressive, and that its defects in construction would cause vexation and its operation would result in harm to our citizens.

GROVER CLEVELAND.

Mr. Speaker, I also wish to submit the veto message of a Republican President, William Howard Taft:

To the Senate:

I return herewith, without my approval, S. 3175.

I do this with great reluctance. The bill contains many valuable amendments to the present immigration law which will insure greater certainty in excluding undesirable immigrants.

The bill received strong support in both Houses and was recommended by an able commission after an extended investigation and carefully drawn conclusions.

But I can not make up my mind to sign a bill which in its chief provision violates a principle that ought, in my opinion, to be upheld in dealing with our immigration. I refer to the literacy test. For the reasons stated in Secretary Nagel's letter to me, I can not approve that test. The Secretary's letter accompanies this.

WM. H. TAFT.

THE WHITE HOUSE,
Washington, February 14, 1913.

And I do not believe that I would have completed my duty if I did not here and now bring to your attention once more the veto message of our great, wonderful, humane, peace-loving President, Woodrow Wilson:

To the House of Representatives:

It is with unaffected regret that I find myself constrained by clear conviction to return this bill (H. R. 6060, "An act to regulate the immigration of aliens to and the residence of aliens in the United States") without my signature. Not only do I feel it to be a very serious matter to exercise the power of veto in any case, because it involves opposing the single judgment of the President to the judgment of a majority of both the Houses of the Congress, a step which no man who realizes his own liability to error can take without great hesitation, but also because this particular bill is in so many important respects admirable, well conceived, and desirable. Its enactment into law would undoubtedly enhance the efficiency and improve the methods of handling the important branch of the public service to which it relates. But candor and a sense of duty with regard to the responsibility so clearly imposed upon me by the Constitution in matters of legislation leave me no choice but to dissent.

In two particulars of vital consequence this bill embodies a radical departure from the traditional and long-established policy of this country, a policy in which our people have conceived the very character of their Government to be expressed, the very mission and spirit of the Nation in respect of its relations to the peoples of the world outside their borders. It seeks to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural and inalienable rights of men; and it excludes those to whom the opportunities of elementary education have been denied, without regard to their character, their purposes, or their natural capacity.

Restrictions like these, adopted earlier in our history as a Nation, would very materially have altered the course and cooled the humane ardors of our politics. The right of political asylum has brought to this country many a man of noble character and elevated purpose who was marked as an outlaw in his own less fortunate land, and who has yet become an ornament to our citizenship and to our public councils. The children and the compatriots of these illustrious Americans must stand amazed to see the representatives of their Nation now resolved, in the fullness of our national strength and at the maturity of our great institutions, to risk turning such men back from our shores without test of quality or purpose. It is difficult for me to believe that the full effect of this feature of the bill was realized when it was framed and adopted, and it is impossible for me to assent to it in the form in which it is here cast.

The literacy test and the tests and restrictions which accompany it constitute an even more radical change in the policy of the Nation. Hitherto we have generously kept our doors open to all who were not unfitted by reason of disease or incapacity for self-support or such personal records and antecedents as were likely to make them a menace to our peace and order or to the wholesome and essential relationships of life. In this bill it is proposed to turn away from tests of character and of quality and impose tests which exclude and restrict; for the new tests here embodied are not tests of quality or of character or of personal fitness, but tests of opportunity. Those who come seeking opportunity are not to be admitted unless they have already had one of the chief of the opportunities they seek, the opportunity of education. The object of such provisions is restriction, not selection.

If the people of this country have made up their minds to limit the number of immigrants by arbitrary tests and so reverse the policy of all the generations of Americans that have gone before them, it is their right to do so. I am their servant and have no license to stand in their way. But I do not believe that they have. I respectfully submit that no one can quote their mandate to that effect. Has any political party ever avowed a policy of restriction of this fundamental matter, gone to the country on it, and been commissioned to control its legislation? Does this bill rest upon the conscious and universal assent and desire of the American people? I doubt it. It is because I doubt it that I make bold to dissent from it. I am willing to abide by the verdict, but not until it has been rendered. Let the platforms of parties speak out upon this policy and the people pronounce their wish. The matter is too fundamental to be settled otherwise.

I have no pride of opinion in this question. I am not foolish enough to profess to know the wishes and ideals of America better than the body of her chosen representatives know them. I only want instruction direct from those whose fortunes, with ours and all men's, are involved.

WOODROW WILSON.

THE WHITE HOUSE, *28 January, 1915.*

In connection with President Wilson's great message I wish to read to you an editorial appearing in the Chicago Examiner on February 1, 1915. This is a paper which everyone knows has not demonstrated any very great friendship or love for our President:

WILSON ACTED WISELY IN VETOING THE UNAMERICAN IMMIGRATION BILL.

The President has done a distinct service to his country. He has, moreover, freed his party from a most menacing situation and has saved it from a humiliating exhibition of its lack of true Democracy. He deserves the approval of all true Americans, and especially the warm commendation of all genuine Democrats.

It seems incredible that any faction of the party in Congress should be fatuous enough to plunge it back into the mire from which it has been thus extricated by an effort to pass this most indefensible bill over the President's admirable veto. Should any such effort be made, the responsibility of those to whom it is credited will be a hard one for them to carry before the people.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. SABATH. I had 14 minutes left.

The SPEAKER pro tempore. The gentleman has consumed 14 minutes.

Mr. SABATH. I regret that my time has expired, but permit me to say, in conclusion, that I trust all Members who desire to vote in the interest of humanity and justice will vote to sustain the President in his veto. [Applause.]

Mr. GARDNER. Mr. Speaker, I yield to the gentleman from North Dakota [Mr. YOUNG].

[Mr. YOUNG of North Dakota addressed the House. See Appendix.]

Mr. GARDNER. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. HULINGS].

Mr. HULINGS. Mr. Speaker, I desire very briefly to state the reasons which prompt me to vote for the immigration bill, notwithstanding the veto of the President.

The reasons assigned for the veto are: First, the purely sentimental one that America is the refuge of the oppressed, the suffering, and distressed; and, second, that the subject treated in this bill has never been passed upon by the American people.

These reasons are unconvincing in view of certain well-known facts.

We now by law exclude the diseased. As a matter of self-protection we exclude them, notwithstanding their manifest suffering and distress.

We now by law exclude the penniless and the pauper, even when he comes here to better his condition, and we do this for the purely selfish reason that he might become a public charge.

So we see that immigration to this "land of the free," from the first, has been restricted in order to protect American citizens.

The policy of "restriction" is not new. From time to time as the conditions of the country have changed these restrictive laws have been made more and more exclusive.

The "literacy test" proposed in this bill is not new. It has been considered by the people as perhaps few other measures have been considered.

A learned commission, after a full and exhaustive consideration, reported unanimously that immigration should be restricted, while eight out of nine of the commissioners advocated the adoption of the literacy test.

An American Congress by a large majority enacted such a law, which was vetoed by President Cleveland.

An American Congress enacted such a law by a great majority, which was vetoed by President Taft.

This Congress by an overwhelming majority passed this measure which has been vetoed by President Wilson. How can it be said then that the people have not considered this measure.

Mr. Speaker, I believe this literacy test will restrict immigration, to an extent which I am informed will probably be 300,000 a year, though I do not regard it as the best measure that could have been desired.

When the bill was under consideration in the House I offered an amendment which would permit a man otherwise eligible, when accompanied by a wife or minor children to enter though he could not read or write. Such a modification of the measure would in very large degree remove the objections to the literacy test.

But, sir, as soon as it becomes known that immigrants must be able to read, those who have it in mind to emigrate to this country will know in advance of the date of their sailing sufficiently long, to acquire the meager ability to read, prescribed in this bill.

Restriction as a necessary self-protection is already our firmly established policy of self-protection. What then is the protection sought by this bill? It is twofold. Unrestricted immigration would open the doors and put American labor in side-by-side competition with ignorant hordes that have been coming in and will continue to come in, and would continue the absurd policy of pretending to protect American labor against foreign-made goods, while the foreign workman is permitted to come in, bringing with him his foreign habits of living; and would continue the ruinous policy of admitting hundreds of thousands of men who come here without any intention of citizenship, to work here for a season and carry his earnings home with him.

The literacy test would go far to avoid the present danger that great masses of ignorant and illiterate people coming here, unfamiliar with the language and habits of the American people, naturally follow the counsel and advice of adroit and educated fellow countrymen who come here, who make their contracts for them and live upon them and find in these illiterate masses a fertile field for the propaganda of anarchy and the destruction of property and the overthrow of all constitutional government.

This is one of the most important reasons, in my opinion, why the bill should pass, notwithstanding the veto of the President, and I shall so vote. [Applause.]

Mr. NEELEY of Kansas. Mr. Speaker, I am extremely sorry because of a situation which makes it necessary that some of us should disagree with that splendid, clean, capable man who presides over the destinies of the American people; but I find no grounds for criticism because of his action. It is easy for me to understand that in cases where our party has failed to outline a policy he might hesitate to join with us in assuming the responsibility for the enactment of legislation of this magnitude; but as for myself my duty appears plain.

The seventh district of Kansas, which I have the honor to represent in this House, contains 32 counties, almost one-third of the entire area of the State. This district is nearly 250 miles long east and west and 125 miles wide north and south, and is traversed by two transcontinental lines of railroad, in addition to other lines of lesser importance. For some years it has been the custom of the companies operating these various lines of railroad to import Mexican laborers under contract to perform the section, track, bridge, and other construction work of a similar character on these various lines of road. These laborers are imported under a contract to work for a period of six months, their transportation being paid, and at the expiration of the term practically all of them return to Mexico.

The people of my district bear no malice toward the Mexican people as a race, and no ill will toward these laborers, but they do believe that the law which permits this is unwise and unjust to the laborer domiciled within our State, and that there is an urgent necessity for the enactment of more stringent legislation that will prohibit this practice.

These imported laborers own no property within our State. They pay no taxes there. They decline and refuse to work our roads; yet hundreds of their children attend our public schools, and not a few of them are inmates of our jails, our reformatories, penitentiaries, and insane asylums, and all without contributing to the burden of taxation borne by our citizenship.

Practically all of them reside in dilapidated box cars along the railroad right of way, in houses built there from old ties set on end and covered over with sod, or, perchance, in a hut constructed of grain doors and such odds and ends as they have been able to gather. They pay no rent, and, being content to exist on coarse fare and without comforts, they have forced wages down until they have practically driven out of the labor market that humble American who heretofore has been satisfied with an employment that permitted him to rear his family near some convenient church and school and enjoy the comforts of his toil.

During the campaign of 1910 I was constantly interrogated as to my attitude on this matter, and I pledged my people then, as I did at the special election held afterwards, and again in the campaign of 1912, that if sent as their Representative to this House I would vote for some kind of legislation that would prevent the continuation of this condition; would prohibit the importation of laborers under contract in competition with our own citizenship and restore the old opportunity for the laborers of our State.

The chairman of this committee, Mr. BURNETT, was kind enough to grant me a hearing; and after going into the matter carefully, the following provisions were incorporated in this bill, reading as follows:

SEC. 5. That it shall be unlawful for any person, company, partnership, or corporation, in any manner whatsoever, to prepay the transportation or in any way to induce, assist, encourage, or solicit, or attempt to induce, assist, encourage, or solicit the importation or migration of any contract laborer or contract laborers into the United States, unless such contract laborer or contract laborers are exempted under the provisions of section 3 of this act, or have been imported with the permission of the Secretary of Labor in accordance with said section; and for every violation of any of the provisions of this section the person, partnership, company, or corporation violating the same shall forfeit and pay for every such offense the sum of $1,000, which may be sued for and recovered by the United States as debts of like amount are now recovered in the courts of the United States; the Department of Justice may from any fines or penalties received pay rewards to persons other than Government employees who may furnish information leading to the recovery of any such penalties, or to the arrest and punishment of any person, as hereinafter in this section provided. For every violation of the provisions hereof the person violating the same may be prosecuted in a criminal action for a misdemeanor, and on conviction thereof shall be punished by a fine of $1,000, or by imprisonment for a term of not less than six months nor more than two years; and under either the civil or the criminal procedure mentioned separate suits or prosecutions may be brought for each alien thus offered or promised employment as aforesaid.

SEC. 6. That it shall be unlawful and be deemed a violation of section 5 of this act to induce, assist, encourage, or solicit or attempt to induce, assist, encourage, or solicit any alien to come into the United States by promise of employment through advertisements printed, published, or distributed in any foreign country, whether such promise is true or false, and either the civil or criminal penalty imposed by said section shall be applicable to such a case: *Provided*, That States or Territories, the District of Columbia, or places subject to the jurisdiction of the United States may advertise, and by written or oral communication with prospective alien settlers make known, the inducements they offer for immigration thereto, respectively.

SEC. 7. That it shall be unlawful for any person, association, society, company, partnership, corporation, or others engaged in the business of transporting aliens to or in the United States, including owners, masters, officers, and agents of vessels, directly or indirectly, by writing,

printing, oral representation, payment of any commissions to an alien coming into the United States, allowance of any rebates to an alien coming into the United States, or otherwise to solicit, invite, or encourage or attempt to solicit, invite, or encourage any alien to come into the United States, and anyone violating any provision hereof shall be subject to either the civil or the criminal prosecution prescribed by section 5 of this act; or if it shall appear to the satisfaction of the Secretary of Labor that any owner, master, officer, or agent of a vessel has brought or caused to be brought to a port of the United States any alien so solicited, invited, or encouraged to come by such owner, master, officer, or agent, such owner, master, officer, or agent shall pay to the collector of customs of the customs district in which the port of arrival is located or in which any vessel of the line may be found, the sum of $400 for each and every such violation; and no vessel shall be granted clearance pending the determination of the question of the liability to the payment of such fine, or while the fine imposed remains unpaid, nor shall such fine be remitted or refunded: *Provided*, That clearance may be granted prior to the determination of such question upon the deposit with the collector of customs of a sum sufficient to cover such fine: *Provided further*, That whenever it shall be shown to the satisfaction of the Secretary of Labor that the provisions of this section are persistently violated by or on behalf of any transportation company, it shall be the duty of said Secretary to deny to such company the privilege of landing alien immigrant passengers of any or all classes at United States ports for such a period as in his judgment may be necessary to insure an observance of such provisions: *Provided further*, That this section shall not be held to prevent transportation companies from issuing letters, circulars, or advertisements, confined strictly to stating the sailing of their vessels and terms and facilities of transportation therein.

SEC. 8. That any person, including the master, agent, owner, or consignee of any vessel, who shall bring into or land in the United States, by vessel or otherwise, or shall attempt, by himself or through another, to bring into or land in the United States, by vessel or otherwise, or shall conceal or harbor, or attempt to conceal or harbor, or assist or abet another to conceal or harbor in any place, including any building, vessel, railway car, conveyance, or vehicle, any alien not duly admitted by an immigrant inspector or not lawfully entitled to enter or to reside within the United States under the terms of this act, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding $1,000 or by imprisonment for a term not exceeding two years, or by both such fine and imprisonment, for each and every alien so landed or brought in or attempted to be landed or brought in.

From the above it will be seen that the present law, which simply provides a penalty of $1,000 to be recovered in a civil action in the name of the Government of the United States, the suit to be prosecuted at the instance and expense of the informant who is to receive one-half of the amount of judgment recovered, will be changed so that not only will there be a liability of $1,000 in a civil suit brought by the Government of the United States but the offense is also declared a misdemeanor and punishable with a thousand dollars fine and by imprisonment of not less than six months or more than two years, with separate suits or prosecution either civil or criminal for each alien offered or promised importation.

I believe this legislation will accomplish the desired result; that it meets the demand of the people of my district and State; and that in voting for this measure I am obeying the instructions of those whose representative I am.

Mr. STEPHENS of Texas. Mr. Speaker, I shall vote to pass this immigration bill over the recent veto of President Wilson. I voted for this bill when it passed this House during this Congress by a vote of more than two to one. Since that time it has passed the United States Senate with only seven dissenting votes. This bill was also vetoed by President Taft, and I voted in this House to overturn his veto. This House failed by only four votes to pass the bill over President Taft's veto.

President Wilson, in his veto message, says:

It is with unaffected regret that I find myself constrained by clear conviction to return this bill (H. R. 6060, "An act to regulate the immigration of aliens to and the residence of aliens in the United States") without my signature. Not only do I feel it to be a very serious matter to exercise the power of veto in any case, because it involves opposing the single judgment of the President to the judgment of a majority of both the Houses of the Congress, a step which no man who realizes his own liability to error can take without great hesitation, but also because this particular bill is in so many important respects admirable, well conceived, and desirable. Its enactment into law would undoubtedly enhance the efficiency and improve the methods of handling the important branch of the public service to which it relates. But candor and a sense of duty with regard to the responsibility so clearly imposed upon me by the Constitution in matters of legislation leave me no choice but to dissent.

In two particulars of vital consequence this bill embodies a radical departure from the traditional and long-established policy of this country, a policy in which our people have conceived the very character of their Government to be expressed, the very mission and spirit of the Nation in respect of its relations to the peoples of the world outside their borders. It seeks to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural and inalienable rights of men; and it excludes those to whom the opportunities of elementary education have been denied, without regard to their character, their purposes, or their natural capacity.

It clearly appears from this language that the President would admit into this country the ignorant, illiterate, and un-American horde coming from every country under the sun, and it is equally as clear to my mind that he is absolutely wrong in his views on this very important subject.

This is the third time that a President of the United States has used his veto prerogative to prevent the literacy test becoming part of the immigration laws that have been passed by both branches of Congress. I am not urging my views on this on account of a narrow view of the question, but I realize that the very corner stone and foundation of a republican form of government such as ours rest upon the intelligence of its citizenship, and we can never expect to maintain a stable form of government if hordes of illiterates are allowed to come into this country unrestricted as they have been in recent years.

The conditions that so recently prevailed in West Virginia, Michigan, and Colorado, which caused such bitter warfare, would never have existed if it were not for the exploitation of these illiterate immigrants by those corporations who have practically made slaves of them. In my opinion those corporations have usurped the power of free government by taking advantage of these people and voting them through their bosses or padrone system. I urge you to pass this bill over the President's veto, as at this time there are millions of idle men unable to procure employment in the United States, and among them are millions of illiterates who have come to this country in recent years.

President Wilson further on in his veto message says:

If the people of this country have made up their minds to limit the number of immigrants by arbitrary tests and so reverse the policy of all the generations of Americans that have gone before them, it is their right to do so. I am their servant and have no license to stand in their way. But I do not believe that they have. I respectfully submit that no one can quote their mandate to that effect. Has any political party ever avowed a policy of restriction in this fundamental matter, gone to the country on it, and been commissioned to control its legislation? Does this bill rest upon the conscious and universal assent and desire of the American people? I doubt it. It is because I doubt it that I make bold to dissent from it. I am willing to abide by the verdict, but not until it has been rendered. Let the platforms of parties speak out upon this policy and the people pronounce their wish. The matter is too fundamental to be settled otherwise.

The President is mistaken in asserting, inferentially at least, that no political party ever has avowed a policy of restriction in this fundamental matter and gone to the country on it and been commissioned to control its legislation. The President is clearly wrong in this contention, as will be shown by the following plank taken from the Republican platform of 1896, and which is as follows, viz:

FOREIGN IMMIGRATION.

For the protection of the quality of our American citizenship and of the wages of our workingmen against the fatal competition of low-priced labor we demand that the immigration laws be thoroughly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write.

Mr. Speaker, if my memory serves me aright, Mr. William McKinley was that year elected President of this United States on that platform. I remember very well losing my vote that year in that election, cast by me for William J. Bryan for President.

Mr. Speaker, the Democratic platform of 1912 also contains this declaration, namely:

We repeat our declaration of the platform of 1908.

The expanding organization of industry makes it essential that there should be no abridgment of the right of the wage earners and producers to organize for the protection of their wages and the improvement of labor conditions, and to the end that such labor organizations and their members should not be regarded as illegal combinations in restraint of trade.

Again, in another place in the platform:

We pledge the Democratic Party to the enactment of a law creating a department of labor represented separately in the President's Cabinet, in which department shall be included the subject of mines and mining.

Again, Mr. Speaker, I find, as far back as the Democratic platform of 1892, this language concerning immigration:

SEC. 12. We heartily approve all legitimate efforts to prevent the United States from being used as the dumping ground for the known criminals and professional paupers of Europe.

Reading these Democratic platform pledges in the light of reason, is not the Democratic Party pledged by them to vote to exclude from our shores all illiterate immigrants? Their exclusion will be the most legitimate means of preventing undesirable persons from entering our country. Mr. Speaker, from every part of this broad land come petitions, letters, and telegrams, from all kinds of labor unions and associations, imploring this House to pass this bill over the President's veto; and as an honest Representative, under my oath of office and in view of the above Democratic platform pledges to the laboring people of this country, I can not and will not do otherwise than vote to pass this bill over the President's veto.

Mr. Speaker, the President assumes by his veto message to stand between the people of our various districts and ourselves, and to prevent us from doing a wrong to our own constituents. I am constrained by my own self-respect and by my intimate knowledge of the views and conditions of the people of my dis-

tried to differ with the President, and to positively assert that I know more of their views and wishes on this or any other political subject than the President can possibly know; and I know that I am voicing almost their unanimous wish in voting to exclude from this country all illiterate immigrants.

Mr. Speaker, as samples of the many telegrams that I have been receiving on this subject I will submit as part of my remarks the following ones, viz.:

WICHITA FALLS, TEX., *February 3, 1915.*

JOHN H. STEPHENS,
Member Congress, Washington, D. C.:

Eighteen hundred union men of Wichita Falls urge you to support House immigration bill No. 6060 over President's veto.

C. W. JOHNSON,
Secretary Wichita Trades and Labor Council.

AMARILLO, TEX., *January 30, 1915.*

Hon. JOHN H. STEPHENS,
Congressman, Washington, D. C.

DEAR SIR: Members of Pecos Valley Lodge No. 235, your honor, request that you support the immigration bill asked by American Federation of Labor by your earnest efforts in voting to pass the bill over the President's veto.

Yours, respectfully,

W. R. MCDOWELL, *President.*
J. S. HAYNES, *Secretary.*

Mr. Speaker, I will now submit a few of the hundreds of letters I have been receiving on this immigration subject, and they will tend to show, in my judgment, that our good, wise, and patriotic President has been deceived into thinking that the people of this country are not in favor of excluding illiterate foreigners from our shores.

These letters are as follows, viz.:

GALVESTON LABOR COUNCIL,
Galveston, Tex., January 29, 1915.

DEAR SIR: I am writing you at the instructions of the Galveston Labor Council, a body representing 8,200 union men of this city, to plead with you to support and try and repass House bill 6060, known as the immigration bill, over the President's veto.

Hoping you will confer upon us this favor, the same as you have favored us on previous occasions, I beg to remain,

Yours, obediently,

JAS. P. WALSH, *Secretary.*

CHICAGO, ILL., *January 28, 1915.*

To the Honorable Members of the
House of Representatives, Sixty-third Congress.

GENTLEMEN: With deep regret we learn through press dispatches of January 28 that the President has vetoed the immigration bill. With reference to that bill, our hopes now rest with Congress, confronted with the cold fact of competition with cheap labor of illiterates coming from foreign countries, while thousands of our people are suffering from unemployment. For the welfare of the working people of this country—our people, our country—we earnestly urge the enactment of the immigration bill over the President's veto.

Respectfully,

INTERNATIONAL SEAMEN'S UNION OF AMERICA,
T. A. HANSON, *Secretary-Treasurer.*

ST. LOUIS, MO., *February 1, 1915.*

Hon. JOHN H. STEPHENS,
Washington, D. C.

DEAR SIR: It becomes our duty as officers of the Railway Employees' Department of the American Federation of Labor, representing 350,000 railway shopmen, to voice their earnest protest against the President's veto of the immigration bill embodying the literacy test. We earnestly beseech your cooperation and support in the interest of maintaining a standard living wage for the workers of this country to vote for the passage of this bill as a safeguard against the invasion of our country by the pauper labor from Europe.

For the protection of the quality of our American citizenship and of the wages of our workingmen against the fatal competition of low-priced labor, we demand that the immigration laws be rigidly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write.

Hoping that our earnest appeal will receive your full support, to the end that the immigration bill will be passed in its original form, we are,

Yours, very truly,

RAILWAY EMPLOYEES' DEPARTMENT,
A. O. WHARTON, *President,*
JOHN SCOTT, *Secretary-Treasurer.*

NATIONAL COUNCIL DAUGHTERS OF LIBERTY,
1604 East Passyunk Avenue, Philadelphia.

HONORED SIR: In the early history of our country immigration was necessary and desirable and was readily assimilated with our population. It is now undesirable, because we do not assimulate it and it is making its impress on our American life, to its deterioration and injury. It has increased in such numbers that it has become a menace by reason of its low quality of illiteracy (73 per cent).

"Ignorance fosters vice." This is clearly shown by the Immigration Commissioner's report. We are appealing to you for protection to the American laborer and to maintain the standards of American life and morals.

House bill No. 6060 is opposed by every sordid influence, from which every principle for the benefit and protection of Americans and American institutions have been eliminated and they mercilessly shut out every consideration and sentiment that could be termed American.

The opposition maintains by their attitude that the man in a foreign land is entitled to the first consideration and the American second. Why should not our own have first consideration?

If parties were true to their platforms they should be true to their constituents. The Democratic Party adopted the following: "We hold that the most efficient way of protecting American labor is to prevent the importation of foreign pauper labor to compete with it in the home market." And the Republican Party, the following: "For the protection of the quality of our American citizenship and of the wages of our workingmen against the fatal competition of low-priced labor we demand that the immigration laws be thoroughly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write." Protection that has the true ring is that which protects both the workingman and the manufacturer.

With the hope that we shall find your name recorded in the column to pass this bill over the President's veto for the welfare of all Americans, we are.

Sincerely, yours,

ALBERT L. BRADLEY, *National Councilor.*

Attest:

W. V. EDKINS, *National Secretary.*

CIGAR MAKERS' INTERNATIONAL UNION OF AMERICA,
Chicago, Ill., January 30, 1915.

Hon. JOHN H. STEPHENS,
House of Representatives, Washington, D. C.

DEAR SIR: In behalf of the Cigar Makers' International Union, with a membership of 50,000, covering all ramifications of our country, I respectfully urge that you vote to pass the immigration bill, including the literacy test, over the veto of President Wilson.

The reasons for this request are many, chief of which are: That labor, in so far as it has been able to give free expression to its opinion, is practically unanimous in its advocacy of the immigration bill; that the American Federation of Labor, the supreme parliament and final authority through which labor's expression may be had, at its Seattle Convention, 1913, practically unanimously declared in favor of the immigration bill; that we hold that a free Democracy can not sustain its high ideals, justice, liberty, equality, and freedom in a state befitting advancing civilization, without the great mass of its voters possessing average intelligence and wisdom born of knowledge; that there is a vast difference between the immigrants now and those of 50 years ago; that all foreign countries have laws regulating and controlling both immigration and emigration, especially emigration, through a system of passports, the check-off plan, discretionary authority given to the emigration commission, and its system of spies and police surveillance; that under this discretionary power it becomes an easy matter for each country to keep out the immigrant not wanted and to hold back the sturdy, desirable citizen who would emigrate, and at the same time make it easy as well as helpful for the derelict and so-called undesirables to emigrate; that we personally know of cases where immigrants now here are more in favor of restricted immigration than are native-born Americans; that there are even in normal trade conditions and at all times fully 1,000,000 idle men seeking employment which they can not find, and that during periods of industrial and commercial stagnation this army of unemployed is doubled, if not tripled; that under the planless system of immigration millions of immigrants have landed on our shores with no concept of the responsibility that goes with citizenship here, and because of pressing poverty are forced into gainful occupations for wages, hours, and conditions, in the making of which, because of dire conditions bordering on starvation, they have no choice or say.

For these and a multiplicity of other reasons, with which I shall not burden you at this time, we favor the immigration bill including the literacy test. We again urge and respectfully ask that you vote for the immigration bill now in your hands.

Yours, respectfully,

G. W. PERKINS,
International President.

INTERNATIONAL TYPOGRAPHICAL UNION,
Indianapolis, Ind., January 29, 1915.

Hon. JOHN H. STEPHENS,
House of Representatives, Washington, D. C.

DEAR SIR: Representing 65,000 members of the International Typographical Union, I am directed to request that you use your vote and influence to secure the passage of the immigration bill over the veto of President Woodrow Wilson.

Yours, truly,

J. W. HAYS,
Secretary-Treasurer, I. T. U.

UNITED MINE WORKERS OF AMERICA,
Indianapolis, Ind., January 29, 1915.

Hon. JOHN H. STEPHENS,
Washington, D. C.

MY DEAR SIR: Our international organization, the United Mine Workers of America, is much interested in the passage of the immigration bill, which provides for a literacy test.

We ask you therefore to help pass the bill by your vote and influence, even though the President has seen fit to veto it. It is unnecessary to submit arguments in support of this measure, because you have no doubt given the subject very thorough consideration.

The 400,000 members of our organization believe the passage of such a law is necessary not only for the protection of American citizens but the foreign immigrants as well. This is an American measure and we believe ought to receive the support of yourself and associates in Congress.

Very truly, yours,

JOHN P. WHITE, *President.*
WILLIAM GREEN, *Secretary-Treasurer.*

INDIANAPOLIS, IND., *January 29, 1915.*

Congressman JOHN H. STEPHENS,
Washington, D. C.

DEAR SIR: Recently President Wilson vetoed the immigration bill containing the literacy test.

I am instructed by the general executive board of the International Brotherhood of Teamsters and Chauffeurs of America to write you requesting you to vote in favor of the passage of this bill over the President's veto.

It means a great deal to the membership of our organization. We have thousands of men out of employment in every section of the country. It can not be possible that the President of the United States

thoroughly understands industrial conditions. The American workingman is being driven to the wall year after year mainly as a result of immigrant labor. The children of the American workers are filling our jails and penal institutions because of the fact that they can not find suitable employment, resulting from the overcrowding of the labor market.

Employers' associations and shipping trusts are selfish in their desire for unrestricted immigration conditions, because a surplus of labor means cheaper labor for the employers, and the overflow if immigrants to this country means to the Shipping Trust enormous profits.

Religious organizations that are opposed to the literacy test take the position that unrestricted immigration will enlarge their congregations in thi country.

The interests of the working masses of the Nation are entirely overlooked by the above-named interests. We who are in the front fighting and struggling with the thousands and thousands of workers know the conditions and we speak from actual contact with the workers and experience with conditions of life. If conditions continue as they are—that is, if the hundreds of thousands of workers from foreign countries are allowed to come into this country each year without any restriction, and especially the ignorant and uneducated class—it will be but a short time until the toiling men and women of this country will have to fight for bread that they and their children may live.

Look into conditions in New York and Chicago, in St. Louis and in Boston this winter, with 1,000,000 men and women out of employment struggling for something to eat—not the riffraff who never work, but those who are willing to work and are unable to find employment—and ask yourself, as a free-born, honest-thinking representative of the people, if you are justified in still continuing unrestricted immigiation.

Our membership of 70,000 English-speaking American workingmen ask you to vote for the passage of the immigration bill containing the literacy test over the President's veto.

Respectfully, yours,

DANIEL J. TOBIN,
General President International Brotherhood of Teamsters and Chauffeurs.

Mr. Speaker, in conclusion I desire to submit as a part of my remarks statistics which show the urgent necessity for the immediate passage of this bill, so as to close and bar the doors of our country against this vast stream of foreigners now flowing into our country, making it harder year by year for our own people to earn a living in the face of so much foreign-labor competition.

These statistics are as follows:

IMMIGRATION STATISTICS.

A Department of Commerce bulletin just issued shows that there were 13,515,886 persons of foreign birth living in the United States in 1910. These figures show an increase of approximately 3,500,000 over the number of foreigners residing here in 1910. The increasing ratio is slightly in excess of the general increase in population.

Approximately 10 per cent of this foreign-born population live in New York.

Pennsylvania ranks second as a permanent abode of foreigners, with 741,000. The majority of these people are miners. Illinois has a foreign population of 604,000, and Massachusetts has 453,000.

Germans represent more than one-fifth of the entire foreign population. There were 2,501,181 Germans scattered through the country. The tremendous Russian immigration during the last decade places the Czar's subjects in second place with 1,602,000. Italy was third with 1,343,000, and Ireland, which formerly led the list, was in fourth place with 1,333,000.

There were 1,174,000 Austrians in this country and 876,455 Englishmen.

The report shows that the American migration to Canada was offset by more than 1,000,000 English and French Canadians living in this country.

Other foreigners living in this country: From Sweden, 665,183; Hungary, 495,600; Norway, 403,858; Scotland, 261,034; Mexico, 219,302; Denmark, 181,621; Finland, 129,669; Switzerland, 124,834; Netherlands, 120,053; France, 117,326; Greece, 101,264; Portugal, 57,625; Wales, 82,479; Roumania, 65,920; Turkey, 59,702; Belgium, 47,397; Cuba and the West Indies, 23,169; Spain, 21,977; all other countries, 59,701.

The number of foreign-born males over 21 living in the United States was 6,648,317. Of these, 1,034,117 were naturalized, 570,772 had first papers, 2,266,000 were aliens, and there were 775,393 citizens not reported.

Mr. BURKE of Pennsylvania. It is a pleasure to find the President in a position in which we can give him our support. His veto of the immigration bill follows the example of his worthy predecessor in the White House. I shall vote to sustain him to-day.

No man can outdo me in my zeal for a high standard of citizenship, nor can anyone go further than I in barring from this country anarchists and those whose criminal tendencies or aversion to well-ordered government or those who are so mentally or physically defective as to prove a burden or a menace to our people.

But it has been declared by one of the advocates of this bill on this floor to-day that an alien can learn an alphabet in a single night and thus qualify himself for admission. I am opposed to saddling the Government with an enormous expense to enforce a bill which can be so easily evaded.

Another gentleman cries out in despair, "What are you going to do with the 4,000,000 idle men in this country?" In reply to that I would say: "Give them a little Republican legislation and a little less Democratic folly and you will do away with their idleness and put an end to the bread line."

There are millions of acres yet to be cultivated in this country, railroads to be built, tunnels to pierce the mountains, and new industries to be established in every section.

The time has not come when this Nation can afford to reverse its policy of more than a century and bar the worthy immigrant merely because he was deprived of educational opportunities beyond the seas.

It is a man's character and not his education that determines his worth as a citizen. A rugged body, an innocent mind, and a pure heart, combined with a manly ambition, is far more preferable in a citizen to a decrepit physique, a vicious heart, and a criminal, cunning, educated mind, which enables the anarchist and the enemy of good government to pass through the gates of American opportunity while the unfortunate is denied admission.

[Mr. LINTHICUM addressed the House. See Appendix.]

Mr. GARDNER. Mr. Speaker, I yield the balance of my time to the gentleman from Ohio [Mr. FESS]. [Applause.]

Mr. FESS. Mr. Speaker, it might be regarded that an affirmative vote on this measure to-day would be a rebuke to the President of the United States. That is not true. The President's function in legislation is limited to the veto power. I called the attention of this House once before to the legislative function of the Executive of the Nation. It is not positive in character, it is negative. It is not so much to say what the law shall be as it is to say what it shall not be so far as the Executive is concerned, and therefore when the President vetoes a measure he is within his rights constitutionally and is not subject to criticism of any Member upon the floor of either House when he has exercised his constitutional right as written in the Constitution. The President has put his veto upon the ground of two items in the bill. The first is—

It seeks to all but close entirely the gates of asylum which have always been open to those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural inalienable rights of men.

The clause in the bill that induced the President to make that statement is in these words:

Who advocate or teach the unlawful destruction of property.

Mr. Speaker, I admit that it is not a pleasant situation for any Speaker to be required to ask for order in the greatest legislative assembly in the world, and yet it seems that debate on this floor has reached a place where it is thought that a man is seeking to be heard and not to convince, and I think it is a suggestion of a public opinion which emanates from this floor that is not complimentary to any Member who speaks or to those who hear. The one thing that would induce me to vote for this measure, strange to say, is the language that the President has asked us not to vote for, for if there is anybody who ought to be excluded from the shores of this country it is the person who advocates or teaches the unlawful destruction of property, and not only that, but who will attack the constitutional institutions of our country.

The other point that the President has allowed to be his determinant is the educational, or the literacy, test. Speaking as one who believes in education, a citizen of a Nation that believes in a compulsory system of education, a citizen of one of the 48 States of the Union, most of which have compulsory laws compelling education, I for one will not vote against a measure that requires the same test of an immigrant who comes here that we require of the individuals growing up under laws that compel them to obey certain regulations pertaining to education. It is not unfair for a nation to put a demand upon a man who seeks to come to our shores that we put upon the children who grow to manhood within the nation. It is inconsistent to take any other position, it seems to me. Then, on the other hand, while I could understand why Members of the House who are opposed to a system of protection, as the Democratic Members, might oppose this limitation of immigration, yet I can not for the life of me understand how Members on this (Republican) side of the House, who believe in a system of American protection, can argue against an immigration bill on the basis of protection to American labor.

My Republican friends, whether you believe in a system of protection to American wages, as has been announced over and over again in the platforms as we publish to the world, and whether you do that because you belong to a particular party promulgating it or not, matters little to me, but it does matter when men stand upon a platform that pronounces for the protection of the present system of wages, through a protective tariff, and then argue for the admission of the laborer who becomes a competitor of American labor. If it be wrong to admit goods made by him, then why is it not wrong to admit him? Cheap goods in competition with our American goods we refuse, then why allow competition in American labor and thus reduce the wages paid to labor in this country to the wages paid in the country from which he comes? [Applause.]

As a consistent believer in a system of wages that allows a workingman to have a carpet upon his floor and modern conveniences in his home, I insist that whether we have a protective tariff or a revenue tariff, the time is here for this country to put up protective bars against indiscriminate introduction of European-paid labor to force down American labor to such a basis.

Mr. KINDEL. Will the gentleman allow me a question?

Mr. FESS. Yes.

Mr. KINDEL. Since you believe in the protection of American labor, why do you permit the goods to be shipped in at a lesser rate than from interior points to distant western points? For instance, we of Colorado now buy our pottery in Europe because the freight rate is less from Europe than it is from Ohio to the same point.

Mr. FESS. My friend is introducing parcel post, and I am not up with it sufficiently to make a satisfactory answer. [Laughter and applause.] I would say this, however, that my contention has been, and is now, to prevent the goods made in Europe by a cheaper labor coming here to enter into competition with the sale of the goods made by higher-priced labor, and that is the only reason why I should stand upon a protective tariff policy. [Applause.] How can you, believing in that policy, vote out the goods he makes and vote in the men who make them and to introduce this competition? [Applause on the Republican side.]

Mr. KINDEL. Will the gentleman yield further?

Mr. FESS. If it will not take too much of my time.

Mr. KINDEL. I want to ask you this question: Why do you concede the point that Lord & Taylor, of New York, must establish a plant in Europe, as well as in this country, whereby they supply from Europe to the western part of the United States at 81 cents for 11-pound parcel-post packages while from New York to the same points in the West it is $1.32?

Mr. FESS. I would not pass any law in this country to compel Lord & Taylor, of New York, to go to Europe to manufacture an article for which they would pay the cheaper labor in Europe and then sell it back here free of duty, to come into competition with their competitor who employs American labor, which will thereby be reduced to the wages paid by Lord & Taylor in Europe.

I was pleased and edified, as every Member of this House was edified, with the argument of my friend from New Hampshire [Mr. STEVENS]. I wish every man on either side of this Chamber would be as frank as that gentleman was when he said, "I have not come to the place where I believe that the Nation ought to enter upon a policy of limiting immigration."

Why does not the rest of the opposition take that position? You talk about objecting to this bill because of the literacy test or other items. The facts are, you object to it because you oppose restriction. No matter what be the item, you are against the limitation of immigration at all, and that is the issue we now have here to meet. I say to you that the gentleman from New Hampshire has taken the only legitimate position on that side of the question, namely, that we do not want to limit or restrict immigration at all.

But I say to you that we do want to limit and restrict immigration; we must meet this issue, and we should do it now. [Applause.] That is a policy that we must enter upon. It is no argument to say that the mothers of great sons in the past never went to school, were illiterate, and therefore you would crowd out some of the greatest and most useful people in the world by this literacy test. Yes; it is true. But, in the beginning, with no common schools and no colleges open to every boy and girl as to-day, with the doors swinging open both ways, many people grew up without education and became splendid citizens. But that was the time when there was no chance. They had to grow up that way or not grow. People who years ago never went to school, if they lived now would not plead for ignorance. Those same people never rode in an automobile. They may never have seen a carpet on their floor. They may never have talked over a telephone. They may never have walked over paved streets. They may not have known anything about modern civilization, but because they did not, do you mean to say that they now would reject them, or that they should be restricted the same as if they had not all of these privileges? No. This time demands that the standards of immigration be restricted in order to get a better class of immigrants. My contention is that you can not open the floodgates of Europe, admit indiscriminate citizens from Bulgaria, Roumania, Servia, and southern Europe, and then hope that your standard of living among the labor of the country will not be reduced to the level of those people. Let us vote for this measure as a beginning of a national policy that must be met, if not by this then by a future Congress. [Applause.]

In this connection I submit a letter from Dr. Jenks, a most thoughtful student of the question now before us.

THE FAR EASTERN BUREAU,
New York, February 2, 1915.

Hon. S. D. FESS,
House of Representatives, Washington, D. C.

MY DEAR MR. FESS: Through my membership in the Immigration Commission and because of the study I have given to it during the four years covered by the commission's investigations I have come to believe that the immigration question is one of the gravest importance to the future welfare of our country. May I ask you, considering the present emergency and my own experiences as an impartial student of this problem, to take the time to read this letter?

The arguments against the literacy test, which I have lately read, seem to me to be largely beside the point.

The chief reasons for the imposition of any test of that kind at the present time are—

(1) The absolute necessity of restriction, in order to maintain American standards of living among our unskilled working people;

(2) The fact that no other restrictive measure at the present time could pass Congress; and

(3) While the literacy test is restrictive, it is also beneficially selective.

A vote to defeat the literacy test is a vote to encourage such public calamities as the Lawrence strike. Working conditions in Lawrence were doubtless sufficiently deplorable to incite the strike. Why did such conditions exist? On account of the great numbers of immigrants continually asking for positions at decidedly lower wages than those paid by employers. Of course, under such conditions, employers have little incentive to increase wages.

Trustworthy investigators, not only during the trouble at Lawrence but later, found from 25 to 30 single men living in houses that would accommodate satisfactorily families of not more than 6 or 8 people. Often there were 12 men sleeping on mattresses laid side by side on the floor of the room in which was their cooking stove and all their household goods. Here we have excessive immigration turning what should be homes into mere bunk houses, insanitary and incentive to the grossest immorality.

Shocking conditions of this sort, proved to be prevalent in Lawrence, are duplicated in very many places throughout the manufacturing and mining regions of the East and Middle West. Many of the investigators and members of the Immigration Commission were opposed to restriction when they began their work. They were made unanimous in favor of restriction because of conditions such as those at Lawrence, brought about wholly by excessive immigration. Of course, you do not wish to help perpetuate the transformation of the American home into the bunk house, with all its loathsome characteristics. Restriction of immigration can alone protect our communities and our unskilled American workers against this menace.

You yourself are, of course, conscious of the fact that Congress has repeatedly voted in favor of this particular measure of restriction. The country is determined to have restriction. If this bill is defeated by the President's veto, such defeat will merely strengthen the demand for restriction, and the next attempt to crystallize in legislation this sentiment is likely to be one regarding which there can be not the shadow of a doubt—a percentage test that would reduce immigration far more decisively than would the literacy test.

The greatest menace comes from the immigration of hundreds of thousands of men unaccompanied by their families and who, investigation proved, have no intention to make their permanent home here, but who come merely for the purpose of earning nest eggs with which to rejoin their families at home and to start anew in their own countries. These men are attracted solely by the sordid advantages presented by American economic standards. They have no interest in or sympathy with our American ideals or institutions. They come deliberately to underbid American wage earners if necessary to obtain work, to exist sometimes 12 or more in a room, and to send all their savings home. More than 90 per cent of the immigrants from Bulgaria and Greece and other such countries are males; they are mostly single men or married men without their wives or children.

The investigation made by the Immigration Commission revealed that 90 per cent of the married Bulgarians, 74.7 per cent of the Greek, and 36.9 per cent of the South Italian immigrants themselves reported that their wives continued living in their native countries. Between 1899 and 1909 the percentage of male immigrants from Europe increased from 58.5 to 73 per cent, and since then the rate of increase seems to have been continuous. That, in itself, is a very serious problem. Comparisons with early immigration, you see, are no longer valid.

The literacy test will exclude primarily men coming from the countries whence this particularly unsuitable type of immigrant emanates. According to statistics issued by the United States Census Bureau on January 26 the percentage of illiteracy in the United States for the total population over 10 years is 7.7 per cent and for the native white population 3 per cent. In Bulgaria the illiteracy percentage is reported as 65 per cent; in Greece, 70 per cent; in Italy, 37 per cent; and in Servia, 79 per cent.

The test is therefore beneficially selective.

This sort of undesirable immigration is directly responsible for our unemployment problem. Three days ago in New York City, Jeff Davis, so-called "king of the hoboes," declared that the "swarms of such undesirable immigrants, underbidding American workers, are turning our unskilled wage earners into hoboes, bums, outcasts, and criminals." I do not think there is any doubt but that increase in unemployment and criminality can be traced directly to excessive undesirable immigration.

During 1914 there was expended in this country on public-school education, in round figures, $500,000,000. The primary purpose of this great expenditure was, and is, to obliterate illiteracy. Trustworthy investigators are convinced that education is the best means of fighting pauperism and crime. Is the object of the expenditure of these millions to be nullified in fact by retaining the "open door" for illiterates who refuse to avail themselves of opportunities to learn even the rudiments of reading and writing?

On my return from Italy in a steamer carrying immigrants, the Italian commissioner of immigration in charge of the Italian immigrants on board that steamer told me he hoped the United States

would impose the literacy test, because, as he expressed it, "such restriction would within three years put a schoolhouse on every hill in Italy," and would "do more to further general education in Italy than anything the Italian Government could itself put into practice."

The argument that men can not learn to read in any country in Europe, including the Jewish Poles in Russia, is untrue and unfounded, as every well-informed Hebrew knows. Very few male Hebrews would be excluded by this test; and as you of course know, boys, wives, and parents—male and female—are not required to take the test provided their adult male relatives can read. There has been gross misrepresentation throughout the country on this point, as there has been gross misrepresentation of other provisions of the Burnett bill.

You have doubtless seen the published statement that "Lincoln's mother would not have been admitted into the United States had this test been in force in her time." Lincoln learned to read under conditions probably more difficult than those confronted by possibly 95 per cent of the present European immigrants. And Lincoln's ability to read would have brought his mother in.

It is frequently stated that this bill "would have excluded Carl Schurz and Garibaldi, and have prevented Congress from hearing Charles Stewart Parnell's famous plea in behalf of the oppressed Irish race." These great men would not have been excluded. They were not men who either applied or advocated "the overthrow by force or violence of the Government of the United States or of all forms of law, or who disbelieve in or are opposed to organized government, or who advocate the assassination of public officials, or who advocate or teach the unlawful destruction of property." The bill specifically provides that "nothing in this act shall exclude, if otherwise admissible, persons convicted of an offense, purely political, not involving moral turpitude."

The bill would exclude such men as the anarchists who were executed in Chicago some years ago; Czolgosz, the assassin of President McKinley; and men who are ready wantonly to destroy property and valuable machinery in times of strike, a proceeding not countenanced by any reputable trade-union leader.

I am reminded that Charles Stewart Parnell more than once denounced the very acts and opinions prescribed by clause 3 of the bill; that he repudiated in the name of the Irish people association in the Phoenix Park murders; that the greatest living Irishmen denounce and deplore assassination and wanton destruction as political weapons; and that the greatest Irishman of modern times, Daniel O'Connell, declared that "the salvation of Ireland is not worth the shedding of a single drop of human blood."

I trust that the serious consideration of the real welfare of the American people, as manifested by the standards of living of their poorer classes, will easily outweigh any of the merely sentimental objections, largely hypothetical and unsound, that have been raised in opposition to the literacy test; and that you will further note the very numerous "admirable, well-conceived, and desirable" important parts of the bill mentioned by the President, which, as he says, if "enacted into law" would "undoubtedly enhance efficiency and improve the methods of handling the important branch of public service to which it relates." Those most familiar with the administration of our immigration laws would probably lay even more emphasis upon these provisions than does the President.

Very sincerely,

J. W. JENKS.

The SPEAKER. The time of the gentleman has expired.

Mr. BURNETT. Mr. Speaker, I yield to the gentleman from Texas [Mr. SLAYDEN].

[Mr. SLAYDEN addressed the House. See Appendix.]

Mr. BURNETT. Mr. Speaker, I yield to the gentleman from Colorado [Mr. SELDOMRIDGE].

Mr. SELDOMRIDGE. Mr. Speaker, I shall vote to pass this bill over the veto of the President. When it passed the House last year I gave it my support, and I see no reason why it should not still become a law. I heartily join in every word of praise that has been accorded to our American citizens of foreign birth. There is evidence on every side to establish the fact that our Government and institutions have the power to remold and recast the lives and character of people from every civilized nation. We are therefore justified in the belief that the principles upon which our Government is founded and which should control its administration affect the fundamental elements of human character.

The record of achievement which has been made in the assimilation of immigrant peoples into our American life well challenges the admiration of the world. Every door of opportunity has been kept wide open to the foreigner who has sought our shores. He and his have been accorded every advantage given to those of our own Nation. While the immigrant has laid upon us many obligations, he has been given many privileges.

Those who oppose this legislation assert that they are controlled in their judgment by humanitarian motives. It is stated that we are closing the doors of opportunity to the deserving people of other nations; that we are darkening the sky of hope to the distressed and downtrodden of other countries; that we are refusing to extend a helping hand to those who are seeking our aid. We can not divorce the principles of humanity and justice in considering this legislation. We must deal justly with our own people and our own interests as well as with the desire of those who may seek our shores. We should act upon this question in the light of present-day conditions. Is restriction of immigration desirable? Will it relieve an overburdened labor market? Will it improve the living conditions of the toilers who are now among us and who must remain citizens of this country? Will it in any way reduce the burden of taxation and build up American institutions? I believe this legislation will contribute to these ends.

The European war has arrested business operations in this country. How soon these operations will become normal no one can say. For the past six months there has been a great congestion in our large centers of population of those out of employment, and yet it is proposed to make no effort to stem the tide of foreign immigration that will undoubtedly seek our shores as soon as the war now raging is brought to an end. The opponents of the bill claim that there will be so much activity in the resumption of manufacturing, in the building up of devastated cities, and also in the development of agriculture, that there will be little, if any, immigration to this country. I do not share this belief. Our great country which has enjoyed the blessings of peace will prove more attractive than ever to the residents of other lands.

The impetus to seek new environment and to cast their fortunes in this favored land will be stronger than ever. Those who have been driven from their homes and who have seen their fields laid waste will dread the task of rebuilding new homes upon the ruins of the old and amid the devastation that has occurred. Just as we seek new environment when old associations become burdensome and unattractive, so will many thousands of those who may be left after the war has ended seek our favored land to repair their shattered fortunes. This bill is not harsh in its terms. Our doors would still be wide open to those who possess even the minimum of intelligence and who thereby indicate to some degree the existence of mental activity. The great need of our country to-day is for a more intelligent and patriotic citizenship. We do well to support and maintain our great institutions of learning and to accord every possible support to our great public-school system and to require that every American child shall be an educated child. If we ever lose any of our national ideals or our governmental power shall in any way become weakened, it will be due to our failure to enforce these obligations. This bill recognizes this fundamental element of our national character in requiring the immigrant to pass what is known as the literacy test. I am surprised that this provision of the bill has aroused such bitter opposition and do not understand why it should not receive the support of every loyal American. I can well understand why the great industrial corporations are opposed to this measure. They have recruited their ranks of workers from the immigrant class. It has been a most profitable source of supply. Men who lack intelligence and power to acquire knowledge of American independence and opportunity become ready victims to corporate greed and avarice. Conditions in mine, mill, and large manufacturing centers where our foreign population has largely gathered prove conclusively that many of the great trusts of the country have been built up by the exacting toll which they have levied upon foreign and ignorant workingmen. A better day is near at hand. Our society demands that human beings shall no longer be exploited for private gain. There will always be dangerous and unhealthy employment, but public sentiment, as expressed through legislation, will require that these shall be reduced to the lowest possible minimum. We have much to do along this line, and these problems and many others relating to them should be worked out under the most favorable conditions.

It will be the part of wisdom for us to settle and determine many problems arising from the large foreign population we now have without intensifying them and adding to their complications through a continuance of an increasing tide of immigration. The congestion of laborers in our cities should be relieved by some proper system of distribution. Agricultural life should be made attractive to the foreigner. There are vast areas of public domain that should be settled and developed. When we have found the remedy for these conditions and when we have put into operation proper means of assimilation and distribution, we can then open the flood gates and allow the stream of foreign immigration to flow in. Would it not be well, in view of these facts, to work out the necessary remedies? These can and will be found. The problem is worthy the best endeavor of our statesmen and leaders of public thought. The flow of immigration should be temporarily reduced until we are better prepared to take care of those who will come to us. This legislation can be justified, in my opinion, on the highest humanitarian grounds. We are doing little for the immigrant to permit him to come to us and lose himself in the congested tenement population of the city. If we can discover some adequate way through which we can immediately avail ourselves of his productive power, we will be doing him the highest service, and he will become a most valuable asset. He has been such an asset in the past, but there is fear that he is becoming a liability. It will be best both for him and us to

allow some period of readjustment that will enable us to solve some of the problems which have arisen from unrestricted immigration and permit us to properly care for the foreigners who are now here and those who will undoubtedly be able to come by meeting the conditions of the bill now pending. In supporting this measure, I believe I am doing a service not only to the citizens of my country but also to those who will seek a home under the protection of its flag.

Mr. BURNETT. Mr. Speaker, I yield to the gentleman from Maryland [Mr. PRICE].

Mr. PRICE. Mr. Speaker, it is with regret that I feel compelled to cast my vote to make this bill a law notwithstanding the President's veto, but I take it that a Representative, in the exercise of his prerogatives, may sometimes find it his duty to differ with the Executive, and may do so without disrespect or criticism. However much any of us may differ with the views of the present occupant of that great office, none will say that he has acted other than what, in his opinion, is for the best interests of his country. During his entire occupancy of that exalted position he has been so uniformly right that it makes it all the more difficult for us, especially his party associates, to be compelled to differ with him now. The President, in the exercise of his constitutional right, has seen fit to disapprove this measure, which a large majority of this Congress, as well as several preceding Congresses, has approved, and has returned the bill to this House, giving his reasons for withholding his approval. If the reasons thus given are not convincing, and we believe in the principles embodied in this bill, and believe the best interests of the country require its passage, we should not, in my opinion, shirk the responsibility as Representatives of the American people.

For many years I have believed some further restrictions should be made in our immigration laws, and as the years have passed and I have observed the operation of our laws on this question, I have become more and more convinced of the wisdom of such legislation as this bill proposes.

It must be apparent to all those who are informed on this question that we have outgrown, as it were, the present laws on immigration. It has been argued here that we have greatly prospered under our present law, and that we should not therefore depart from the old principles of the open door and let our country remain the asylum for the oppressed of all nations. This theory sounds well, Mr. Speaker, but things have changed. We are no longer a sparsely settled wilderness. We are no longer an undeveloped country comparatively. We no longer have a hundred jobs for one man to do, as in the early days of this Republic. We have passed the formative stages, the experimental stages, if you please, and by our brain and industry, coupled with patriotism, we have transformed this vast undeveloped wilderness into a great, living, vital, throbbing world power.

In those early days we could afford to be more liberal and less discriminating than we can now, because conditions are different now. We could better afford to take the chance of making good American citizens of those who came to our shores, because we needed people. We needed laborers. We needed everything that goes into the making of a great nation. It may also be noted that in the early days the people who came to cast their lot with us spread out over the rural portions of our country, and did not to the same extent as now flood and congest our cities, because we had no large cities as now. It must be admitted that our forefathers, in the main, made desirable citizens, and many who were illiterate contributed to the betterment of the Nation; but that does not prove that because of their ignorance they were as useful as if they had not been illiterate.

I am perfectly willing to admit that literacy is not a true test of character, but I am not willing to admit that it is desirable to have it in unlimited quantities. It is argued that as we have done so well as a Nation we should not change our policy in this respect; that is to argue that the laws governing trade and commerce should not be changed to conform to growth and changed conditions. It is to argue that trusts and monopolies should not be regulated because the country was prosperous under laws that made possible their existence. In fact, it is to admit that we must stand still and that we have not the wisdom to legislate for changed conditions.

It is almost equal to the admission that popular government is impotent and ineffectual. We may not be fully grown as a Nation; in fact, I believe we have undreamed of possibilities ahead of us, if we exercise that prudence and wisdom which have characterized us in the past and have the courage to meet such questions as this in a spirit of patriotism and not permit ourselves to become mere sentimentalists.

From a handful of colonists we have grown into a great Nation of nearly a hundred million of souls; a people filled with love of liberty and patriotism; and yet it is contended that we should keep the bars down to everybody who desires to become experimental American citizens, at a time, too, when there is a large alien element who have not been assimilated, and also at a time in our history when our progress commercially has been arrested by a great war.

When many of our own people are temporarily out of employment, it does seem to me that the opponents of this measure would stop and consider whether they owe most to the already American citizen or to the prospective American citizen that a mere sentiment would ingraft on our body politic. Do you not realize that many of our citizens are out of employment, due to abnormal world conditions? Do you not know that even in normal times there is always a large percentage of American citizens seeking employment? Do you not know that there are more people in the country now than can find work to support themselves and families? I do not mean that everybody is out of work, as is reported for political effect, and that it is due to the Democratic Party; but I do mean to say, gentlemen, that our immigration laws are so lax that we have permitted more people to come in than we have been able to assimilate properly, with the result that the labor market is overstocked and we have a great mass of undigested labor on our hands. This being the case, let me ask you which is the higher duty—to protect American labor from further congestion or, because of sentiment, refuse to restrict immigration? In other words, are we for American citizens and American labor or will we legislate for foreigners instead?

I would not want to utter one word that would foster selfishness on our part as a Nation, nor say a word of disparagement of the citizens of other countries, but I do say that our first and chief duty as representatives of this great people is to legislate for America and Americans. Then, when we have done what is for their best good, do all we can to help all other peoples in the world.

I do not believe it can be successfully shown that it is conducive to our best interests as a Nation to continue this wholesale, indiscriminate policy of immigration. If we do, it means that all this imported ignorance must be educated at our expense. It means that our own American labor must be further hampered by cheap labor. It means that the now splendid standard of living by American labor must be lowered. It means that our great farming interests must come into increasing competition with this vast horde of aliens that will continually pour into this country every year. It means an increase in crime; an increase in pauperism; an increase in insanity. The percentage of insanity among foreigners is greater than among American born.

Government statistics show that of the total number of inmates of insane asylums on January 1, 1910, 28.8 per cent were white, of foreign birth, while of the total population of the United States on the same date only 14.5 per cent were white, foreign born.

Two years ago I had occasion in an official capacity in my State to visit many of the insane institutions in other States of the Union, and I recall that the superintendent of one of the New York institutions at Ward Island stated that 75 per cent of the 5,000 inmates were foreign born.

As a Nation we have wards enough of our own without importing any. It is generally admitted that when the present European war is over—which I pray may be soon—that emigration will be greatly stimulated. The people who are left, many of them, will want to get away from devastation and strife, especially the element that are devoid of patriotism, the shiftless, and the anarchist; and where else would he wend his way but to America, the land of peace and of liberty? But some will say, "Shall we be so heartless as to deny him the privilege? Shall we refuse asylum to him?" I say yes. If we do not need him, would it not be a kindness to say to those people, "We are already overstocked with cheap labor. We can not assume the burden of educating you and providing you employment. We have passed the point in our history when we can do a good part by you. We can not take you all. We have 100,000,000 of our own citizens whose interest and happiness are paramount. We can only assimilate a part, and we have decided that it is to our interest to take the intelligent part. You remain where you are and help to rehabilitate your own nation, and work there in your own land in the interest of constitutional government."

By adopting such an attitude we will be doing what is best for them as well as ourselves. We have a tremendous responsibility as a Nation. We are almost the only great nation at peace with all the world. When this present war is over we will stand out

among the nations of the world as never before. We will be looked up to as never before. The peoples of the world will ask themselves, Whence the greatness of this great nation of peace? Why has America remained tranquil and at peace when all other nations were clamoring for blood?

The people of these unfortunate countries will begin to inquire the cause, and gradually will begin to realize that it is because we are a Government by and for the people. That we rely upon right and justice as between men; that we will not tolerate oppression; that our defense rests not with the sword, but we are secure because of the patriotism in the hearts of our people.

Getting such a conception of us will stimulate the people of all nations to follow our example. A love of freedom and constitutional liberty will spring up in their hearts and eventually put an end to the ruling of kings and potentates the world over. The example we are setting the world will perhaps eventually result in the universal rule of the people.

What a destiny and what an example, and what a tremendous responsibility is ours. How jealously we should guard the sources from which spring our power—citizenship itself. Our greatness as a Nation will continually be measured by the quality of our citizenship, and it is a matter of the gravest concern that our citizenship, which is the source of power, be kept free from contamination. It is the highest function of government to raise the standard of citizenship and see that the average is never lowered.

In what better way, let me inquire, can this be done than by the restriction of ignorance and superstition in our immigration laws? It is estimated that the American people are expending something like $1,000,000,000 annually for education and the eradication of ignorance and the growth of high ideals; and yet in the face of this stupendous effort many men stand here and plead with Congress to add more ignorance to the sum total of national illiteracy. The chief thought in all our education is the instilling of love and respect for our American institutions. It is a well-known fact that very many of the immigrants who yearly come to our country come primarily because of the desire to accumulate wealth and not because of a desire to become a part of us. It is a question of take all and give nothing in return. This is evidenced by the fact that thousands of aliens do not take the trouble to fit themselves for American citizens after they get here, and thousands in our large cities have never fitted themselves to exercise the highest privilege of an American citizen—that of casting a ballot and participation in government. Many such as these will be eliminated if this bill becomes a law, and they should be eliminated.

It is contended in some quarters that a question so far-reaching and involving such a radical departure from our time-worn policies should not be disposed of without first being made a party declaration and then passed on by the American people. While this may not have been done exactly, it has been made the subject of party declaration in general terms time and time again and for many years back. As far back as 1896 the Democratic national convention platform made the following declaration:

> We hold that the most efficient way to protect American labor is to prevent the importation of foreign pauper labor to compete with it in the home market.

In that same year—that is, in 1896—the Republican national convention platform contained the following declaration:

> For the protection of the quality of our American citizenship and of the wages of our workingmen against the fatal competition of low-priced labor we demand that the immigration laws be thoroughly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write.

And, as you know, the candidates for President and Vice President of the United States nominated upon the platform containing this declaration were elected.

I believe this bill represents the desire and will of the great body of Americans without regard to party. As early as 1896 this legislation has been before Congress and before the country, having been passed by one or both branches of Congress at intervals since that time. In addition it has been vetoed by the President of the United States three times, including the present veto, and has barely escaped passage over two previous vetoes.

In view of all this I do not think it can be successfully contended that this is new legislation or that it has not received the indorsement of the American people. Admit for the sake of argument that the policy should not be changed permanently, but that we should maintain our century-old policy of the open door to those who would find asylum here; admit that we should still continue to educate foreign ignorance; that we should continue the importation of cheap labor to compete with our own American labor; that we should continue to legislate in the interest of selfish employers' associations and the Shipping Trust, enabling them to pile up enormous profits at the expense of and to the detriment of American labor and the American farmer; admit even for the sake of argument that the appeal of every labor organization in America be ignored; admit that we should give no heed to the appeal made by 3,000,000 of the tillers of the soil of the Nation; yet we would be justified in passing this bill as an emergency measure on account of the European war. This Congress has been called upon to meet many grave questions growing out of this war.

When our revenues fell off on account of war we promptly passed an emergency tax bill to make good these deficiencies. We are proposing a ship-purchase bill, not because the Government wants to engage in shipping, but in order to move our commerce across the seas and because there seems to be no other means to do it.

For the same reason, if for no other, this bill should be enacted into law, so that our country may be protected immediately after the war and until world conditions again become normal.

But this should not be treated as an emergency measure, but passed for broader reasons, namely, in order that our policy should be permanently modified. I therefore appeal to this House of Representatives of the American people to consider the best interests of your own countrymen. I appeal to you in the name of the great agricultural interests of the Nation. I appeal to you in the name of American labor from one end of this great country to the other. I appeal to you in the name and for the sake of American institutions that cost the precious blood of many of our ancestors to establish. I appeal to you to protect American citizenship, the American home, and the American boy by casting your vote to make this bill a law of the land. [Applause.]

Mr. BURNETT. Mr. Speaker, I yield five minutes to the gentleman from Alabama [Mr. UNDERWOOD]. [Applause].

Mr. UNDERWOOD. Mr. Speaker, I intend to support this bill, notwithstanding the President's veto.

For 20 years I have supported this legislation. My constituency knows my position. They have returned me to Congress knowing my position, and therefore I take it for granted that a majority of my constituency favor this legislation. Nearly two-thirds of this House voted for this legislation four years ago. The constituencies represented by this House knew the position of their Representatives.

After four years the issue comes again, and we find that when the bill is before the House more than two-thirds of the Representatives of those constituencies vote in favor of the legislation.

I believe that the Representatives upon this floor always endeavor to voice the sentiments of their constituencies on whichever side they cast their vote. But when you find that after the issue has been presented, the American people understanding the issue, two-thirds of this House reflect that sentiment in legislation, I say it is idle to contend that it requires the pronouncement of a great party in convention assembled to determine the sentiment of the American people. [Applause.]

The reason of my support of this legislation is the very reason for which the President says he vetoes the bill. He says the object of such a provision—referring to the literacy test—is restrictive and not selective. There is not a man in this House who is not in favor of selective restriction and who has not always been in favor of it. There is not a man in the country who has not been in favor of selective restriction. But that is not the purpose of the bill. It did not go before the American people with that purpose. It went before the American people with the avowed purpose of restriction of foreign immigration into this country. And why? Not because we have not benefited in the past by liberal admission of immigration into the United States, but because our conditions have changed.

Now, the real question that confronts this House to-day is the question whether or not, acting on your responsibility, you will sustain the verdict that you rendered in favor of this bill but a few weeks ago. The real question that confronts you is the question whether or not you stand first for the American standard of life, the American standard of living, and the American standard of wage. [Applause.]

The SPEAKER. The time of the gentleman from Alabama has expired.

Mr. BURNETT. Mr. Speaker, we have only one other speaker. Does the gentleman from Pennsylvania [Mr. MOORE] desire to conclude now?

Mr. MOORE. Yes.

The SPEAKER. The gentleman from Pennsylvania [Mr. MOORE] is recognized.

Mr. MOORE. Mr. Speaker, in Philadelphia, back in 1776, the Declaration of Independence, drafted by Thomas Jefferson, was first made public. The colonists who resisted King George and the burdensome legislation that was coming from the other side of the water declared through the patron saint of Democracy and the other patriots of those days that the King had "endeavored to prevent the population of these States; for that purpose obstructing the laws for naturalization of foreigners; refusing to pass others to encourage their migration hither; and raising the conditions of new appropriations of land."

That is the real basis of all immigration to the United States from the period of our independence down to the present time. We desired immigrants from foreign countries. We desired the brain and the brawn of the men who could populate this great land of ours. We had to send abroad in the days of George Washington for farmers to till our soil. We were short on industries and were obliged to gather up from other countries men who could work in the mills of those days. We were dependent upon this kind of immigration; and as we have grown in industries and in wealth we have been more and more dependent upon it. It has come to us because we have grown faster, almost, than it could serve us.

The President of the United States, in the message vetoing this bill on Thursday last, indicated that to pass a bill thus restricting immigration to the United States would be to reverse the policy of all the generations of Americans that had gone before. That is to say, it would reverse the policy of the Declaration of Independence.

The gentleman from Massachusetts [Mr. GARDNER], one of the militant restrictionists upon this side of the House, has indicated the purpose of those who favor this bill to be restriction—restriction absolute—and my distinguished colleague from Ohio [Mr. FESS] a moment ago took the same ground. I am not surprised that one who has been as forceful in all his campaigns as the gentleman from Massachusetts should take so positive a stand upon this question, but I am almost brought to doubt the attitude of the gentleman from Ohio, for his kindheartedness is characteristic.

The difficulty with these gentlemen, and with others who have advocated the passage of this bill over the President's veto, is that they fail to distinguish between an economic question and a question of humanity. If he were standing on a pier at any one of the ports where the incoming ships bring these unfortunate people of other lands to look forward with hope and expectation to better lives than they have ever enjoyed, I can not conceive that the distinguished and learned doctor from Ohio would then have the heart to say, as he now seems to say: "Turn them back; turn them back."

But the gentleman goes further and criticizes those advocating protection who fail to urge the passage of this bill over the President's veto. In this the gentleman again fails to distinguish between the economic and the human side of this question.

Why, Mr. Speaker, it has been declared over and over again upon this floor that immigration has not reduced the wages of the laboring men in the United States. It has been stated time and time again, and is capable of proof, that during the last half century, in which we have received the greatest immigration, wages have steadily gone higher, and higher, and higher, until they are at the very apex of the wage scale of all the countries of the world. No one disputes that. It has been demonstrated further, and can be proven, that as wages have ascended regularly, in spite of all immigration, the hours of labor steadily have gone lower, and lower, and lower, until the laboring man to-day gives less in time to his employer than he ever did before in the history of the world.

But the gentleman from Ohio and others have indicated that the man who advocates protection is inconsistent in opening the door of hope to those who have asked for the right that was given to his forefathers and to mine—the right to come to this country from lands of oppression, lands where prejudice prevailed against them, so that they might acquire the opportunity of worshiping God according to the dictates of their own consciences and enjoy the blessings that all of us seemed to have enjoyed in this great and bountiful country of ours. [Applause.]

Would the gentleman from Ohio, would any Republican, prefer that we should take the goods made by the Singer sewing machine employees in Scotland, where they work for $6 or $8 a week, and bring them into this country to compete with the sewing machines made in Connecticut, where the wages are twice as high and more? Does the gentleman from Ohio prefer that we admit these foreign goods, made by cheap foreign labor in this way, or would he prefer, when our industries are crying for help—they are not crying very loud in these Democratic times, but when they are crying for help—would he prefer to have the men themselves come into this country to make machines here at the American wage, to be sold both here and on the other side at the American price?

Mr. FESS. Will the gentleman yield?

Mr. MOORE. Yes; I yield.

Mr. FESS. The gentleman asks me whether I would be willing to let the product of the Singer sewing machine factory in Scotland, with the——

Mr. MOORE. Yes; foreign made, at foreign-labor prices, come into this country. That is what I asked the gentleman.

Mr. FESS. I would not.

Mr. MOORE. Of course you would not. You are a protectionist, as I am.

Mr. FESS. And I would not let the labor employed over there come into this country in competition with the labor employed here, either.

Mr. MOORE. If, after it got here, it obtained the American wage, I think you would.

Mr. FESS. No; I would not.

Mr. MOORE. I think I can demonstrate that when foreign labor which is skilled comes into this country, it no longer works at the foreign price. Give the labor unions some credit for that. They aid in bringing these foreign laborers up to the American standard. Let them continue their work not solely for the purpose of keeping their competitors out of the country, but for the purpose of keeping up wages in the United States; and if they have not done that in this era of high wages, then the labor unions themselves and the protective tariff law of the Republican Party both have been dead failures; and I do not think they have.

Mr. GARDNER. Will the gentleman allow me to interrupt him?

Mr. MOORE. Yes.

Mr. GARDNER. I would not interrupt him without his consent.

Mr. MOORE. I yield to the gentleman.

Mr. GARDNER. What did the gentleman mean when he said I was an absolute restrictionist?

Mr. MOORE. The gentleman stated that yesterday on the floor. In the speech in which he led off this debate he declared for complete restriction.

Mr. GARDNER. What do you mean by that? I did not say anything of the kind.

Mr. MOORE. Shutting the door of hope forever to any laboring man in Europe who wants to come to this side of the water.

Mr. GARDNER. I did not say anything of the sort.

Mr. MOORE. I understood the gentleman to define the policy of the restrictionists, and I also understood him in one of his questions to-day to take issue with the President of the United States, who indicated that the voice of the people had not yet been heard on this subject. Am I in error as to that? If I am, I send to the Clerk's desk this extract from the Springfield Republican, published in the gentleman's own State, which throws some light upon the subject.

The SPEAKER. The Clerk will read.

The Clerk read as follows:

LITERACY AND POLITICS.

In challenging the majorities in Congress that placed the literacy test in the immigration bill to make this issue one of the party platform planks in 1916 President Wilson raises a point that will not be met. No party would care to go before the people as the advocate of a policy that, if adopted earlier, would have seriously retarded the settlement of the United States and kept out some of its best people. The literacy test is not a question upon which either Republicans or Democrats are likely to take a stand, and, in view of the strong opposition to it from those who have studied the matter most carefully, it is surprising that it has been able to muster such strength in Congress.

Mr. MOORE. I think the Clerk is reading the part that I crossed out and not the part that I intended to have him read. I ask the Clerk to read the part that is not scratched out.

Mr. LANGLEY. Let it all go into the RECORD.

Mr. MOORE. I will put it all in, but I do not wish to use up my time in having all of it read. The part not crossed out is the part I want the Clerk to read.

The Clerk read as follows:

Every party politician outside of the South would oppose desperately a literacy test plank in his national party platform if he had the least hope of having his ticket carry pivotal States like New York and Illinois. Massachusetts politicians have not forgotten so soon Congressman AUGUSTUS GARDNER'S frightful fiasco with his immigration issue in running for governor in 1913. Few candidates for office in New England or the Central Eastern States or the Middle West would care to face the large number of naturalized voters with a plank demanding that no immigrant should be admitted unless he could read a book, or even the headlines of Mr. Hearst's newspapers. No party will accept the President's challenge and make his veto an issue in 1916.

[Laughter.]

Mr. MOORE. Now, Mr. Speaker, I will gladly yield a minute to the gentleman from Massachusetts [Mr. GARDNER], if he desires to respond to the Springfield Republican. It may be in order for him to say whether his venture into the field of popular opinion on the subject of restricting immigration was a success.

Mr. GARDNER. The gentleman from Washington [Mr. LA FOLLETTE] wishes to speak for a minute. Will the gentleman yield that time to him?

Mr. MOORE. Oh, certainly not. I love the gentleman from Washington [Mr. LA FOLLETTE], as I do all Members of the House, but I wanted the gentleman from Massachusetts to say whether, in his differences with President Wilson, he came out best.

Mr. GARDNER. As between President Wilson and the Springfield Republican I would very much favor the opinion of President Wilson. [Applause on the Democratic side.]

Mr. MOORE. The gentleman made a gallant and brave fight for governor of Massachusetts on the immigration issue. Did the gentleman win?

Mr. GARDNER. Most unfortunately I was the worst-beaten man who ever ran for governor of Massachusetts on the Republican ticket. [Laughter.]

Mr. MOORE. I knew the gentleman from Massachusetts would be square enough to acknowledge it.

Mr. GARDNER. Oh, I will acknowledge it, because the figures acknowledge it if I would not; but I do not think that had much to do with the issue—possibly it had something to do with the issue, for it takes some time to get the people educated up to the necessity of restricting immigration.

Mr. MOORE. Although the gentleman has been laboring for more than eight years to pass this bill, and it has been one of the vital issues with him, he did not succeed in that time, even in educated Massachusetts, for apparently the people there did not support him.

Mr. GARDNER. But in my own district, where I have been trying to educate them somewhat, I seem to have managed to fool them to the extent of 12,000 majority this last time. [Applause on the Republican side.]

Mr. MOORE. When the gentleman admits that he fooled the people of Iowa, he surely places himself in the presidential class.

Mr. GARDNER. Yes; if I could fool the people of Iowa I would be; but the gentleman misunderstood me. I said I had been educating the people of "my own" district, not an "Iowa" district.

Mr. MOORE. Then the gentleman evidently "put one over," as the President did at Indianapolis; but I am afraid he will not succeed in "putting one over" now.

Mr. Speaker, how much time have I remaining?

The SPEAKER. The gentleman had 31 minutes. He has used 14, and that leaves 17 minutes.

Mr. MOORE. Let us see where the opposition to this bill springs from. Patriotic societies? Yes. Many of them want this bill passed, because those who for a long time have been active in those societies desire to show results. I do not blame any man who is the organizer of a patriotic society for keeping up this agitation. I have been on the Immigration and Naturalization Committee for eight years. I had no desire to go on that committee; but I have found during the whole of that time that the organizers of the patriotic societies have been on the job. Sometimes I question whether we ought to pass this bill, for fear we might put them off their jobs, and they would have little else to do. In saying that I have as high a regard for them as anybody. This, I believe, is the apologetic stage, when we ought to explain ourselves to folks, so that we may lay the foundation for our votes, and yet it seems to exercise our judgment as legislators whether we please or displease our friends the organizers, or whether we find the galleries applauding the sentiments we express or not.

Now, amongst the many communications that have come from the patriotic orders I find one that purports to have been sent by the National Council of the Daughters of Liberty. This is an interesting document, because it quotes political conditions and the provisions of platforms. It is quite a learned and informing production. What is most interesting about it, however, is the fact that in the largest type on the outside of the envelope under the title of the National Council of the Daughters of Liberty is this cheerful inscription: "Liberal pay to organizers." Yes; liberal pay to organizers, and I have no objection to organizers being liberally paid for legitimate work in agitating this or any other subject. I understand, however, that the Liberal Immigration League, about which I know little, has been very severely criticized by the proponents of this bill for attempting to collect a fund from somebody to conduct an organization to prove to Congress the other side of the case. So that if this be reprehensible with respect to the Liberal Immigration League or any other body opposing the measure, it is fair to raise the question as to labor bodies and patriotic orders. And as to this, what may we say of the American Federation of Labor, the great central body of organized labor, which has been indulging the habit?

The president, Mr. Samuel Gompers, has issued quite a document within the last few days which has given much satisfaction to my friend from Alabama [Mr. BURNETT] in that it intimates, with great sensational headlines, equal to those in the Hearst journals, that there is a deep conspiracy here involving "the Shipping Trust," which, I would say parenthetically and in view of the agitation of the shipping bill from the White House, might be regarded at this particular time as a covert slap at the President of the United States.

Mr. BURNETT. Will the gentleman yield?

Mr. MOORE. Yes.

Mr. BURNETT. Is not there a difference in the source of revenues of the one you refer to and the Liberal Immigration League? Is not there proof from the original copy of letters that the Liberal League was making appeals to the steamship companies and Coal Trust for revenue in order to carry it on?

Mr. MOORE. I do not think there is very much in the documents put out by Mr. Gompers. What is the difference between appealing to those who have charge of large industries and those who have charge of small industries, or those who draw upon labor, or those who appeal to prejudice?

Mr. BURNETT. Does the gentleman ask that question of me?

Mr. MOORE. Yes.

Mr. BURNETT. There is this difference: The large industries that want to bring cheap labor to the country want to bring it here for the purpose of beating down wages of the people who are already here.

Mr. MOORE. I want to say, and it will not take long to do it, that those people who come from foreign countries to compete with American labor are of the intellectual or reading and writing class; there is scant complaint of the laboring class that go into the sewers and do the rough work that is avoided by the students. They are not welcomed into the cotton fields of the South or generally on the farm lands of the North. The kind of labor that comes into the country and which the gentleman would bar is not competitive; if it had been the wages in the skilled trades would have gone down, and these wages, in spite of all the gentleman says about immigration, steadily have gone up. [Applause.]

Why, we have the testimony of a distinguished labor leader, no other than Frank Morrison, the secretary of the American Federation, on certain phases of this question, and I hope I may get time to read something that this intelligent leader has said upon the subject. But that reminds me of the fine campaign work that has been done in concentrating this movement in the body of the American Federation of Labor. The work of informing Congress has been done thoroughly and well. A week ago, in the White House, under the leadership of Mr. Morrison, the forces favoring this bill, lawyers and professors of the great colleges of the country, pleaded for education, education, and more education. It was a great symposium for learning contrasted with the actual toil upon which education must thrive. Yes; and I am afraid that some of our professors in this House are inducing us to stand for that excess of education which teaches a man to despise work. There are too few of us indeed who teach that other form of education which advances with the work. [Applause.]

But, Mr. Speaker, let us see how this thing has been worked up. I say this in no offensive way. If I were an organizer of the Federation of Labor, I would agitate and organize with all the ability that I possess. Still, as a Member of this House I would exercise my judgment and try to consider both sides of this matter. I would stop to consider that while the American Federation of Labor and centralized labor organizations affiliated therewith number a little over 2,000,000 members, and other organizations not affiliated might carry the total up to 3,000,000, there are 30,000,000 wageworkers in the United States, 27,000,000 of them not organized. Who is to speak for the 27,000,000? The gentleman from Alabama [Mr. HEFLIN] rises, and in an outburst of eloquence which we all admire asks that the cotton fields in the South be protected from this foreign invasion. Is there a difference in the price of labor? If I had time, I would like to quote from Mr. Morrison on this subject. I would like to take a few minutes to let you hear what he says. Let me see if I have not got it here. Yes; here is an

extract from the hearings before the Committee on Immigration and Naturalization, Friday, December 12, 1913:

Mr. MOORE. Have you made a study of Southern States at all?

Mr. MORRISON. Yes; we had a representative down there a number of years ago, and found conditions very poor in the textile mills.

Mr. MOORE. Did you find that the operatives in the textile mills were foreign or native born?

Mr. MORRISON. They were people from the mountains. I do not know that there are very many foreigners who have been able to get down there.

Mr. MOORE. Very early settlers, were they not?

Mr. MORRISON. The people that moved in from the mountains are people who are accustomed to live on very little. They went in with their families and worked in the mills, which has not been a benefit to them.

Mr. MOORE. How did you succeed in organizing the mill workers of the South?

Mr. MORRISON. We have not been successful in organizing them.

* * * * * * *

Mr. MOORE. Do you regard your organization work in the South as satisfactory?

Mr. MORRISON. Oh, no.

Mr. MOORE. You have paid very little attention to organizing the South?

Mr. MORRISON. Oh, yes; we pay attention all over. There was a man who left headquarters the other day to go South. He will be in Atlanta, Ga., in about three weeks, and is going to this point, the name of which escapes my memory. It is quite a large place——

Mr. MOORE. Augusta?

Mr. MORRISON. That is it—Augusta.

Mr. MOORE. Do you remember the old slogan, "Eight hours for work, eight hours for sleep, eight hours for what you will"?

Mr. MORRISON. Yes; I know all about eight hours.

Mr. MOORE. You have made the eight-hour question a specialty for many years?

Mr. MORRISON. Yes.

Mr. MOORE. May I ask how the eight-hour question appeals to the farmer?

Mr. MORRISON. Short hours never appeal very strongly to the average employer.

Mr. MOORE. I am confining this to the farmer. I want to know whether the farmers' unions have specifically indorsed or approved the eight-hour proposition?

Mr. MORRISON. I do not know.

Rise, Mr. HEFLIN, and tell me whether you want the eight-hour system working in the cotton fields of your State?

Mr. HEFLIN. I do not. [Laughter.]

Mr. MOORE. Now, let the labor unions answer.

Mr. HEFLIN. Not only that, if the gentleman will permit, but no farmer in the South wants any eight-hour proposition, and I do not know of any farmer in the North who wants it, and if there is any farmer in the gentleman's district, I am sure that he does not want it.

Mr. MOORE. Union labor wages in the mines in my State are $2.56 per day. Will the gentleman tell me what the wages are of those who pick the cotton in the fields of Alabama, where you have no organization? We are up against organization. What are you paying?

Mr. HEFLIN. Sometimes they get 50 cents a hundred for picking cotton and sometimes they pick 500 pounds in a day, which is $2.50 a day. [Laughter.]

Mr. MOORE. And incidentally, if they ever pay that much in the cotton fields, it is for a 14-hour day.

Mr. BUCHANAN of Illinois. Mr. Speaker, will the gentleman yield?

Mr. MOORE. Yes.

Mr. BUCHANAN of Illinois. I would like to ask the gentleman if he knows that in Colorado and in New York the people in the whole State voted three to one for an eight-hour day, and that included the farmers?

Mr. MOORE. Yes; and I know what the eight-hour day means as well as the gentleman. It means contraction of labor. I have voted for it and supported it many times. I think I have followed the gentleman in this House many times; but when it came to protecting eight-hour labor in the United States against the product of foreign labor that works at cheaper wages more than eight hours a day, the gentleman from Illinois was not with me. I know what it means—contraction of labor for one section of the country and for one set of industries, not for all. That is the point.

Now, let us see how well this thing worked out. The American Federation of Labor sent out these letters during the last week. I have an armful of them here, and I am glad to receive them, because I respect these men and admire their ability. But the question they raise, as I view it, is one of humanity, of barring the door of hope against the unfortunates of foreign lands. They want to keep them out of the United States. Who wants to keep them out? Mr. Gompers? Yes. And where was Mr. Gompers born? Born in England—a good man and one of the ablest leaders of labor this country has ever seen. Mr. Gompers, self-educated, has become a tower of strength within the civic bodies and amongst the labor organizations of the United States. But he was born in England. Take the secretary of the Department of Labor, who is another one of the great champions of this movement. Where was he born? Over in Scotland. He is a member of the President's Cabinet. Take Mr. F nk Morrison, whom I have just quoted, the vigorous secretary, whose careful, detailed work has helped to make the federation what it is. Where was he born? In Canada. Here are three of the leading men, whose word is forceful with the affiliated bodies, that have informed Congressmen during the past week that this bill should pass. Here is a pile of their correspondence. The story is told in language that varies but little. The hotel and restaurant employees and the International Alliance and Bartenders' League of America are uppermost before me. They write and tell us that they want this bill passed. Oh, you prohibitionists who vote against the President, beware the new alliance you are making on this head! [Laughter.]

The restaurant employees and bartenders' alliance are with you, for they do not want foreigners to come up to the bar. They are aiding prohibition already, though the federation opposed it. The International Brotherhood of Paper Makers say that foreign labor can not assimilate with the wage earners now here. Why, Lord bless you, we have all assimilated in one form or another or we would not be here. Every one of us is the outgrowth of assimilation of foreign stock, and I would like to know what foreigner coming from southern Italy, for instance, or Roumania, where the Jews are now being drafted for war service against their will, and who could not escape it if this bill passes, will compete with a skilled body of workmen like the International Brotherhood of Paper Makers. The Shipwrights and Joiners' Organization tells us the passage of the bill will benefit the organization. Will the Polanders who work in the mines compete with the skilled shipwrights? The International Seamen's Union of the United States opposes this bill. Why, the struggle we have recently had here has been to get some recognition for American seamen, but the tendency on the Democratic side has been to admit foreign labor into the shipping business of this country. What voice of protest against these shipping bills has come up from the International Seamen's Union of America? I would like to go on with these. I have too many of them, however, to discuss them all in the time remaining. But I glory in them, even though some of them may be overenthusiastic.

Mr. Morrison tells us in his testimony before the committee that the membership of the American Federation of Labor is a little over 2,000,000—I think 2,071,000. Remember these figures, for 12 bodies affiliated with the American Federation of Labor, that have endeavored so earnestly to impress Congress with their strength that they alone, if their communications are not at fault, have certified to a total membership of 2,625,000. There are dozens of others that give no figures at all. It is interesting also to note that one of the oil companies is also suggesting that we have a restriction of immigration. But I shall have to extend my remarks.

In closing, I will refer to what I regard as the crux of this whole situation. Mr. Clark, the vice president of the Order of Railway Conductors, a very intelligent and active leader of the labor movement in the United States, was asked a few questions about the development of men in the railway business. I can not go into all of it, but he tells us that brakemen must pass through various grades, that conductors must pass through various grades, that all such employees must serve a virtual apprenticeship of from 3 years to 10 years before they can qualify from one standard to another. What he said of the railway men is true of most of the skilled and organized trades. Competition comes from men who are not illiterate, but from those who must stand a variety of tests. An illiterate who is serviceable in digging ditches would not compete with the skilled mechanic who is driving an engine. If he had the training, he might, but an illiterate must learn and serve an apprenticeship before he displaces a trained hand. What illiterate Polander, coming to better his condition, to find work at first digging sewers, which the American boy will not do, can become a railway conductor in the United States? What downtrodden Slav or native of southern Italy would compete with a shipwright in the United States without educating and training himself for the task? And when he has done that, will he work for foreign wages? Mr. Clark goes on to say, in answer to certain questions, that his own son is a farmer. In answer to a question as to whether his boy would dig the sewers or work in the mines, he replied that the boy was made of better stuff. That is the spirit. I told Mr. Clark it was the spirit. Yes, my friends, our boys are made of better stuff; they are born in the United States. Will they work in the sewers? No. Ask Mr. Morrison what his children are doing, and the answer comes, they are studying, they are striving for a professional calling. it is commendable. But who is to do the drudgery? If we are

educated to despise the lowly, who will do the man's work on the road or the woman's work in the kitchen? Take away the untaught foreigner, who has done so much to develop and construct our institutions, and rely too much upon that excess education and pride of scholarship which abhors the basic labor, and you will halt our national progress. We have more to consider than the possibility of driving our own wives into the drudgery of the scullery or of pleading with our scholarly men to go down into the trenches. We must deal with the problem as one of humanity, which involves no crime save that of the misfortune of illiteracy. If we need the labor and it will be useful to us without displacing the labor we already have, the advancement of the illiterate under American tutelage and conditions will readily take care of itself. [Applause.]

The SPEAKER. The time of the gentleman from Pennsylvania has expired. The gentleman from Alabama [Mr. BURNETT] is recognized for 17 minutes.

Mr. BURNETT. Mr. Speaker, just 12 months ago to-day this House, by 252 to 126, registered its vote in favor of the passage of the bill whose fate will in a few minutes be decided. Some have said that there are Members going out of Congress who will go back on their records and stand by the President and vote against overriding his veto. Mr. Speaker, I hope there is no Member here who now has less regard for the commission that the people gave him two years ago, and which he still holds, than he had for it before the last election. I can not believe there is any man who will look on that commission as any more sacred before the election than it is now. I do not believe that there can be a Democrat or a Republican, who, merely because his term of office is about to expire, will change his vote if he believes that the vote he cast 12 months ago was right or that it was in accordance with the will of his people.

But, gentlemen, the people are not asleep, and the man who voted for the bill a year ago will be watched by his people if he changes his vote to-day. Whether you are going out or not, if you voted for your people then, they will ask you why you did it if you vote against them to-day. Some have intimated that for the appointment of some Member's choice of a postmaster, or for some other sordid reason, men will barter their votes to-day. I can not believe it.

The gentleman from Pennsylvania [Mr. MOORE] has referred to the fact that Mr. Gompers and Mr. Morrison and Secretary Wilson are all foreigners. That is true, Mr. Speaker, but those gentlemen are of that stock to which President Wilson referred in one of his books, when he said:

> Throughout the country men of the sturdy stock of the north of Europe had made up the main strain of foreign blood which was every year added to the vital working force of the country, or else men of the Latin-Gaelic stock of France and northern Italy; but now there came multitudes of men of the lowest class * * * and men of the meaner sort, * * * men out of the ranks where there was neither skill nor energy, nor any initiative nor quick intelligence; and they came in numbers which increased from year to year, as if the countries of the south of Europe were disburdening themselves of the more sordid and hapless elements of their population, the men whose standards of life and work were such as American workmen had never dreamed of before.

That latter is the class, Mr. Speaker, which this bill proposes to keep out. That sturdy stock from northern Europe that the President was referring to is not touched by this bill. I am not here to say one unkind word against the great Chief Magistrate who graces the Executive chair of this country, called by the people to that high position. The gentleman from New Jersey [Mr. WALSH] must have written the speech which he has just read before he heard the speeches that were delivered here to-day, and he therefore anticipated that gentlemen would say unkind and harsh things in criticism of the President. I do not believe, Mr. Speaker, I have ever heard any debate in which there was less of partisanship, except what was injected by gentlemen who represent the opposition to this bill. I feel none. I believe, as said by my friend from Ohio [Mr. FESS], that our President did that which he not only had the constitutional right to do, but he did that which he believed to be right under the information and the light that he had.

But, gentlemen, it is a different question with you. You have studied this matter for years and years. As stated by some one, seventeen times the question of the illiteracy test has been passed by one or the other House in one form or another. Hence it can not be said, my countrymen, that we do not understand this proposition. Evidently the President by the question that he asked in his message has been misinformed by some one who assembled the facts for him. He asked the question whether any party had ever indorsed this proposition and gone to the country upon it and been commissioned to control its legislation. In 1896 the Democratic Party declared in favor of the positive prevention of foreign pauper labor coming into this country, and the Republican Party declared squarely in favor of the illiteracy test ingrafted on this bill. The Republican Party did then go before the country with that declaration in its platform, and did win, and the President's question is answered and the people's mandate has been heard. The Democratic Party, Mr. Speaker, went further than the Republican Party, for it pronounced for absolutely preventing the importation of foreign pauper labor. The gentleman from Illinois [Mr. SABATH] tries to get around this declaration by saying no party has ever gone to the country on it as a single issue. Certainly, no party has ever gone to the country with any platform entirely upon one single issue. The President has not that same sort of information that we have when he believes that the country is not informed upon this question and when he believes that the 252 men who last February voted for this bill and those who were paired for it were not informed as to the wishes of their people. My friends, this is a proposition in the interest of labor, not simply the man who works in the shop and in the mine and on the railroads and in the manufactories of the country, but the people of the agricultural districts as well. For years, through every national grange and farmers' congress that has been assembled, through every farmers' union that has been held, both in the local and in the national unions, through the Federation of Labor as well as the railroad trainmen, through the patriotic organizations and hundreds of other independent organizations all over the country, this measure has been discussed and favored.

Mr. Speaker, these Members of Congress desire to reflect the wishes of the men whose servants they are. Many of you have had appeals from the organizations that the gentleman from Pennsylvania [Mr. MOORE] has condemned to-day. I was at the White House the other day when the President had a public hearing on this bill. Many on both sides presented their arguments. One who represented the railway laborers wound up his appeal to the President by saying, "Mr. President, the boys want this bill." He was followed by a distinguished orator from New York, with silver tongue and soft hands, who sneeringly repeated the statement that the "boys wanted it." When that jeer was made it was cheered by the assembled people opposing the bill, many of whom had perhaps been sent there by the steamship trusts, or the Liberal Immigration League. Mr. Gompers a few weeks ago denounced this so-called Liberal Immigration League and showed by decisive proofs and from the records themselves—the originals and carbon copies—that the officers of this league appeal to the steamships, the Coal Trust, and the Steel Trust for funds to finance an institution which they claimed to be altruistic and honorable; and this appeal had not been in vain.

Mr. MOORE. Will the gentleman yield?

The SPEAKER. Will the gentleman from Alabama yield to the gentleman from Pennsylvania?

Mr. BURNETT. I decline to yield. Yesterday I saw one of the attorneys of this liberal (?) league "gumshoeing" through the House Office Building. He told me, however, that he would not be here to-day. He ought not to be after the exposure Mr. Gompers made of the infamy of the league.

Now, Mr. Speaker, the other proposition, outside of the literacy test, upon which the President bases his veto is that he says the bill seeks to all but close entirely the gates of asylum, which always have been open to those who could find nowhere else the right and opportunity of constitutional agitation for what they conceived to be the natural and inalienable rights of men. On that question the President again has been misled by some of his advisers. Many of the people that would come within the class of Czolgosz and other anarchists already have been excluded by the progressive restrictive laws that have been on the statute books for years. All that this bill adds to that part of the law is the exclusion of those who advocate or teach the unlawful destruction of property.

Is that what the President thinks will keep out those who desire the right of constitutional agitation?

Mr. Speaker, whom does it embrace? It embraces many who come from southern Europe, like the lawless herd in the Lawrence strike, with a torch in one hand and a bomb in the other. It embraces the militant suffragettes of England, who believe in blowing up churches and destroying mail boxes and private and public property. Are these the ones whom he calls constitutional agitators? Is the right to unlawfully destroy property the right of constitutional agitation? I want to say here to the splendid women of this country who believe in equal suffrage that there were no stronger advocates of that provision on our committee than the three gentlemen from the Pacific coast who live in equal-suffrage States.

Mr. Speaker, it is inconceivable that the President believes that that class of people ought to have the door held open to them. I do not believe he has studied this question, my countrymen, as you have studied it, and hence you, in voting for the bill, will be doing an actual favor to the great President of the

United States by saving him from this error. [Applause.] He overlooks the fact that in section 2 of the bill we expressly provide that "nothing in this act shall exclude, if otherwise admissible, persons convicted of an offense purely political not involving moral turpitude." What more could he ask? I think the closing words of his message show that he actually invites you to act on your own knowledge of what your people want. He says, "I am not foolish enough to profess to know the wishes and ideals of America better than her chosen representatives know them," and, gentlemen, you are the chosen representatives of the people. You have had the question before you for years. You have said to the workingmen that rallied to you last year and two years ago that you were their friends. You who are on the other side have often appealed to them as "the boys." You have asked the boys to come to your aid, and they came. There are gentlemen upon this floor to-day with labor cards in their pockets who are about to strike a Joab thrust at the very vitals of labor. [Applause.] My countrymen, do not do it. If you betray them now, next year when you appeal to them again you will see written upon every gatepost and upon the lintels of every door, "Anathema maranatha"—Let him be cursed with a curse. When you approach the home of the peasant and of the man who toils he will say, "Depart from me, I never knew you."

Mr. Speaker, a great war is going on in Europe. The farmers, the laboring people, the patriotic people of the country, feel that just as soon as that war is over there will be the greatest influx of the worst people that ever have come to this country. My colleagues, if by your vote to-day you allow that door to remain open, and in one year or two years you see those surging hordes coming to this country, driving out the man that toils on the farm and in the mine and in the shop you may take the sweet unction to your souls that by voting against this bill you have helped to bring them here.

Gentlemen, do not think that this is going to stop. If you strike it down to-day, it will rise again next session. [Applause.] Brave, true men are back of it, and they know it is good.

Truth crushed to earth shall rise again—
The eternal years of God are hers;
But error, wounded, writhes with pain,
And dies amid his worshipers.

[Applause.]

Mr. Speaker, I would like to read, if I had time, this letter. How much time have I remaining?

The SPEAKER. The gentleman has three minutes.

Mr. BURNETT. I would like to read from a letter written by Mr. Oberlander, one of the superintendents of new prisons in New York, in which he states that in the city of Buffalo within the last three years five electrocutions have occurred, and four out of the five criminals were aliens who could not read. Last year when the Colorado and the Michigan mine strikes were being investigated it was stated on this floor, and all over the country, that it was the new immigration that was causing the trouble there. One of the big mine operators in my State said to me a few years ago that the Italians were the poorest of all his laborers. I said, "Why do you employ them, then?" He said, "For the purpose of regulating the price of wages."

The insane asylums of New York and other Eastern States are being filled with the very ones whom the illiteracy test would keep out.

You gentlemen, I believe, are all honest in your convictions; but, for God's sake, and in the name of the man who earns his bread by the sweat of his brow, do not register your vote to help the Steel Trust and the coal barons to keep down the wages of the men who are struggling to maintain the lives of those whom God has given into their care. The workingman only asks for decent wages and decent standards of living. Give him these. [Applause.]

I can readily see how you who were against the bill can vote to override the veto of the President, because you believe that the President, while he is exercising a constitutional right, is yet exercising a right which should not be used except in cases of extreme emergency. The veto power is a dangerous one. My friends, your commissions—some of them—will expire on the 4th of March. I beg you return those commissions to the men who handed them to you just as untarnished as when they placed them in your hands. [Applause.]

Talk about platforms. My friends, it is not always in platforms. We do not all have to receive our training from the classic shades of Princeton or from the conventions and declarations of our party. But over yonder, in the little red schoolhouse on the hill, with the American flag on its top and our mother's Bible on its shelf; down there where the sugar cane grows, down amid the cotton and the corn, and out there on the bounding prairies of the West, and out on the golden shores of the Pacific, and out in that country where "the frost is on the pumpkin and the fodder's in the shock" [applause], and down in the old Kentucky home [applause], and out by the Wabash you hear from them. From the mines and the shops, the factories and the stores, the railroad tracks and cabs of the engines come the mute appeals of brave men whose homes you seek to destroy. Here are letters from the great organizations of America urging you to stand by the man who toils. They can not send their hundreds here as can the Steamship and Steel Trusts to browbeat you into doing right or wrong; but I hold in my hand their mute appeals. Seven hundred thousand of them appeal to you from the great State of New York, men with calloused hands, and men who know what labor is and who know what it is to be driven out of their positions by that influx of foreign people, to pass this bill. [Prolonged applause.]

You understand this bill. Thousands who are urging you into opposition to the bill do not. A few days ago Cardinal Gibbons wrote to Mr. Epstein, stating that foreigners who were fairly educated in their own language would be excluded by this bill. Prof. Jenks, a member of the Immigration Commission, wrote him, calling attention to the fact that it is only necessary for them to read 30 or 40 words of their own language or dialect, and Cardinal Gibbons at once wrote him the following letter:

CARDINAL'S RESIDENCE,
408 NORTH CHARLES STREET,
Baltimore, January 28, 1915.

JEREMIAH W. JENKS, Ph. D., LL. D.,
Director of the Far Eastern Bureau, New York City, N. Y.

MY DEAR SIR: Your most courteous favor of yesterday came to hand this morning, and I thank you for calling my attention to the fact that the Burnett bill, regarding immigration, does not exclude aliens capable of reading their own language or dialect, though incapable of reading ours.

It affords me great pleasure to receive this information, and, of course, it modifies, in consequence, to the same extent my opposition to the bill.

I also note with much pleasure the other points you submit for my consideration, and I am happy to assure you that, when I can, they shall receive my serious attention.

In the meantime, believe me, very sincerely, yours,

JAMES CARDINAL GIBBONS,
Archbishop of Baltimore.

You see the misinformation in regard to this bill. You see that even our great President has been mistaken.

Gentlemen, your people understand the bill. Your mail from the universities, the colleges, and country schoolhouses for years has been filled with requests for literature on the bill.

Be not deceived; the people are not fooled. The man who dodges this vote will be held even more responsible than the man who votes against the bill.

Your constituents will brand the word "coward" across the brow of every man who ducks the vote. "He who dallies is a dastard; he who hesitates is damned."

The eyes of America are on you this day. Upon this record you place your name either for right or wrong, for the people or the trusts; the responsibility is yours. "Choose ye this day whom ye will serve."

If the steamships be your masters, serve them; if some prospective office for yourself or constituent be your master, serve that; if the people be your masters, serve them.

The SPEAKER. The time of the gentleman from Alabama has expired.

The question is, Will the House, on reconsideration, pass the immigration bill, the objections of the President of the United States to the contrary notwithstanding? In plain, everyday English, if you are in favor of passing this bill over the President's veto, answer "yea," and if you are opposed to it, answer "nay." The Clerk will call the roll.

The question was taken; and there were—yeas 261, nays 136, answered "present" 2, not voting 24, as follows:

[Roll No. 56.]

ANSWERED "PRESENT"—2.

Kahn	Steenerson

NOT VOTING—24.

Cary	Hoxworth	Metz	Roberts, Nev.
Cline	Kennedy, R. I.	Morgan, La.	Smith, Minn.
Dunn	Langham	Nelson	Vare
Elder	L'Engle	Oglesby	Whitacre
Faison	Lindquist	O'Shaunessy	Wilson, Fla.
Graham, Pa.	McClellan	Prouty	Wilson, N. Y.

So the House on reconsideration refused to pass the bill, the objections of the President to the contrary notwithstanding.

Mr. BURNETT. Mr. Speaker, I desire to ask for a recapitulation of the vote, and I will ask if this is a proper time.

Mr. SABATH. Why, Mr. Speaker, the vote has not yet been announced.

Mr. BURNETT. That is why I am asking if this is the proper time.

Mr. MANN. Mr. Speaker, I think it is wise to have a recapitulation.

The SPEAKER. This is the proper time to have a recapitulation, if we are ever going to have it.

Mr. MANN. I think we ought to have it.

The SPEAKER. The vote is so close that the Chair thinks it ought to be recapitulated. [Applause.]

The Clerk recapitulated the names of those voting.

The Clerk announced the following pairs:

Until further notice:

Mr. FAISON with Mr. STEENERSON.

On this vote:

Mr. NELSON and Mr. ROBERTS of Nevada (for passing bill over veto) with Mr. KAHN (for sustaining veto).

Mr. DUNN and Mr. ELDER (for passing bill over veto) with Mr. METZ (for sustaining veto).

Mr. WILSON of Florida and Mr. L'ENGLE (for passing bill over veto) with Mr. VARE (for sustaining veto).

Mr. LANGHAM and Mr. LINDQUIST (for passing bill over veto) with Mr. GRAHAM of Pennsylvania (for sustaining veto).

Mr. SMITH of Minnesota. Mr. Speaker, how am I recorded?

The SPEAKER. The gentleman is not recorded.

Mr. SMITH of Minnesota. I wish to vote "no."

The SPEAKER. Was the gentleman in the Hall listening at the time his name should have been called?

Mr. SMITH of Minnesota. I was not.

The SPEAKER. Then the gentleman can not vote.

The result of the vote was announced as above recorded.

The announcement of the result was received with applause.

SENATE BILLS REFERRED.

Under clause 2 of Rule XXIV, Senate bills of the following titles were taken from the Speaker's table and referred to their appropriate committees, as indicated below:

S. 6980. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors; to the Committee on Invalid Pensions.

S. 7212. An act granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy and of wars other than the Civil War, and to certain widows and dependent relatives of such soldiers and sailors; to the Committee on Pensions.

S. 7213. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors; to the Committee on Invalid Pensions.

S. 7402. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors; to the Committee on Invalid Pensions.

S. 6981. An act granting pensions and increase of pensions to certain soldiers and sailors of the Regular Army and Navy, and of wars other than the Civil War, and to certain widows and dependent relatives of such soldiers and sailors; to the Committee on Pensions.

ADJOURNMENT.

Mr. UNDERWOOD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 33 minutes p. m.) the House adjourned until to-morrow, Friday, February 5, 1915, at 11 o'clock a. m.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. LEWIS of Maryland, from the Committee on Labor, to which was referred the bill (H. R. 21236) to dissolve the Foundation for the Promotion of Industrial Peace, and for other purposes, reported the same without amendment, accompanied by a report (No. 1363); which said bill and report were referred to the House Calendar.

Mr. BULKLEY, from the Committee on Banking and Currency, to which was referred the joint resolution (H. J. Res. 410) to create the national rural credit commission, reported the same with amendment, accompanied by a report (No. 1364); which said joint resolution and report were referred to the Committee of the Whole House on the state of the Union.

Mr. FERRIS, from the Committee on the Public Lands, to which was referred the bill (H. R. 21200) quieting and confirming the title of the Methodist University of Oklahoma in and to certain tracts of land located in the city of Guthrie, Okla., reported the same with amendment, accompanied by a report (No. 1366); which said bill and report were referred to the Committee of the Whole House on the state of the Union.

He also, from the same committee, to which was referred the bill (H. R. 21122) to validate certain homestead entries, reported the same with amendment, accompanied by a report (No. 1367); which said bill and report were referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. CLARK of Florida: A bill (H. R. 21315) to authorize the construction of a bridge across the Suwanee River, in the State of Florida; to the Committee on Interstate and Foreign Commerce.

By Mr. ROGERS: A bill (H. R. 21316) authorizing the Secretary of War to donate to William B. Green Post, No. 100, Grand Army of the Republic, one cannon or fieldpiece; to the Committee on Military Affairs.

By Mr. STEENERSON: A bill (H. R. 21317) to authorize the Secretary of the Interior to convey a certain tract of land in Minnesota for demonstration-farm purposes; to the Committee on Indian Affairs.

By Mr. FITZGERALD: A bill (H. R. 21318) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1916, and for other purposes; to the Committee of the Whole House on the state of the Union.

By Mr. SAMUEL W. SMITH (by request): A bill (H. R. 21319) to abolish the saloon and the retail sale of spirituous liquors in the District of Columbia; to the Committee on the District of Columbia.

By Mr. SHERWOOD: Resolution (H. Res. 723) authorizing the payment of $1,200 to Norman E. Ives; to the Committee on Accounts.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BAILEY: A bill (H. R. 21320) granting an increase of pension to John B. Hammer; to the Committee on Invalid Pensions.

By Mr. BATHRICK: A bill (H. R. 21321) granting a pension to Henry J. Wing; to the Committee on Invalid Pensions.

By Mr. EAGAN: A bill (H. R. 21322) granting an increase of pension to Frederick Smith; to the Committee on Invalid Pensions.

By Mr. GRAHAM of Illinois: A bill (H. R. 21323) granting a pension to Katherine Sternberg; to the Committee on Invalid Pensions.

Also, a bill (H. R. 21324) granting an increase of pension to William M. Hampton; to the Committee on Invalid Pensions.

By Mr. HELM: A bill (H. R. 21325) granting an increase of pension to James H. McCampbell; to the Committee on Invalid Pensions.

By Mr. SLOAN: A bill (H. R. 21326) granting an increase of pension to Esther Phoebus; to the Committee on Invalid Pensions.

By Mr. TAYLOR of Alabama: A bill (H. R. 21327) for the relief of Rittenhouse Moore, receiver of the Mobile Marine Dock Co.; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Petitions of various labor organizations of the United States protesting against the veto of the immigration bill; to the Committee on Immigration and Naturalization.

By Mr. ASHBROOK: Petition of 356 citizens of Coshocton, Ohio, asking that the sale and exportation of arms, ammunition, and munitions of war to any of the friendly nations at present at war in Europe be prohibited; to the Committee on Foreign Affairs.

Also, petitions of the Evangelical Church, German-American Alliance, and Germania Maennerchor, all of Newark, Ohio, asking for the passage of legislation which would prohibit the shipment of arms and munitions of war to the belligerent European nations; to the Committee on Foreign Affairs.

Also, petitions of the Iron Molders' Union, No. 152, Newark, Ohio; the Martha Washington Council, No. 5, Daughters of America, Dennison, Ohio; the International Union of United Brewery Workers and the International Association of Machinists, praying for the passage of the immigration bill over the veto of the President; to the Committee on Immigration and Naturalization.

Also, petition of Coshocton (Ohio) Council, No. 65, of the Junior Order of United American Mechanics, favoring immigration bill; to the Committee on Immigration and Naturalization.

Also, petition of Coshocton (Ohio) Local Union of Mine Workers of America, favoring Kern-Foster bill, providing for extension of the work of the Bureau of Mines; to the Committee on Mines and Mining.

Also, petitions of the Mansfield (Ohio) Trades Council; the Washington State Federation of Labor; the Wood, Wire, and Metal Lathers' International Union; the Central Federated Union of Greater New York and vicinity; the Massachusetts State Branch of American Federation of Labor; and the National Council, Daughters of Liberty, asking for the passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

By Mr. BARCHFELD: Petitions of Allegheny Branch of National German-American Alliance, of the German Evangelical Church; of the Allegheny County Branch, National Federation of German Catholic Societies; of the Knights of St. George; and the Homestead and Mount Oliver German Turnverein, of Pittsburgh and vicinity, favoring House joint resolution No. 377, to prohibit the exportation of arms, ammunition, and munitions of war during the present trouble in Europe; to the Committee on Foreign Affairs.

Also, memorial and protest of the National Polish Alliance Associations of Pittsburgh, McKees Rocks, Horning, Homestead, Duquesne, Carnegie, Munhall, and Clairton, Pa., against the Smith-Burnett immigration bill; to the Committee on Immigration and Naturalization.

Also, petition of citizens of Pittsburgh and vicinity against Fitzgerald amendment to the Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

Also, petition of citizens of Pittsburgh and vicinity favoring House joint resolution 377, forbidding export of arms; to the Committee on Foreign Affairs.

Also, petition of Duquesne Council, United Commercial Travelers of America, favoring Roberts bill to change date of election of Members of Congress; to the Committee on Election of President, Vice President, and Representatives in Congress.

Also, petition of Saars Sholen Lodge No. 154, Independent Order B'nai B'rith, of Pittsburgh, Pa., favoring support of President's veto of immigration bill; to the Committee on Immigration and Naturalization.

By Mr. BARTHOLDT: Petitions of 7 citizens of Wellston, 10 of St. Louis, and A. Anthes, of St. Clair, all in the State of Missouri, protesting against the Fitzgerald amendment to the Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

Also, petitions of the Catholic Union of Missouri State League, composed of 387 members, of St. Louis, Mo.; 60 citizens of St. Louis, Mo.; German-American Alliance, Middletown, Conn.; 7 citizens of Boston, Mass.; 2 citizens of Wellesley, Mass.; A. E. Stickling, Milwaukee, Wis.; and German Beneficial Union, District 97, Johnstown, Pa., favoring passage of bills to prohibit export of all war materials; to the Committee on Foreign Affairs.

Also, petitions of delegates of the Evangelical Protestant Church, representing a membership of 30,000, of Pittsburgh, Pa.; 28 congregations of Lutheran churches of St. Louis; 13 citizens of Marthasville; 26 citizens of Florissant; Holekamp Lumber Co., of Webster Groves; Rev. G. Schultz, of Morrison; and Theodore von Derck, of Bismarck, all in the State of Missouri, favoring passage of bills to prohibit the export of all war materials; to the Committee on Foreign Affairs.

Also, petitions of 114 citizens of St. Louis, Mo., Holy Cross and St. Cecilia Benevolent Societies, of St. Louis, Mo., favoring the Fitzgerald amendment to the Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

By Mr. BARTON: Petition of citizens of Kearney, Nebr., favoring free and unthrottled press; to the Committee on the Post Office and Post Roads.

By Mr. BELL of California: Petition of the Browning Club, of Pasadena, Cal., protesting against the sending of American horses to European battle fields; to the Committee on Interstate and Foreign Commerce.

Also, petitions of sundry citizens of Pomona and Los Angeles, Cal., protesting against the Fitzgerald amendment to the Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

Also, petitions of citizens of Pomona and San Gabriel, Cal., favoring House joint resolution 334, for the appointment of a national marketing commission; to the Committee on Agriculture.

By Mr. BRUCKNER: Petition of citizens and organizations of New York, against passage of immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also petition of citizens of the Bronx, county, city, and State of New York, respectfully urging support of the Burnett immigration bill in its entirety when said bill is returned to the House of Representatives for a final vote; to the Committee on Immigration and Naturalization.

Also, petition of Miss Mary C. Griffin, of New York City, favoring excluding the Menace from the mails; to the Committee on the Post Office and Post Roads.

By Mr. CALDER: Memorial of Associated Physicians of Long Island, favoring passage of the Palmer-Owen child-labor bill; to the Committee on Labor.

By Mr. CURRY: Petitions by 38 citizens and residents of Stockton; Federated Trades and Labor Council of Vallejo; Machinists Local No. 252, of Vallejo, all in the State of California; the Hotel and Restaurant Employees' International Alliance and Bartenders' International League of America; the Cigar Makers' International Union of America; and the International Brotherhood of Paper Makers, favoring the passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also, petitions by the Switchmen's International Union, the Pattern Makers' League of North America, the International Typographical Union, the United Brotherhood of Carpenters and Joiners of America, the United Mine Workers of America, the Tobacco Workers' International Union, the Illinois State Federation of Labor, the Minnesota State Federation of Labor, the New York State Federation of Labor, the International Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers of America, the railway employees' department of the American Federation of Labor, the International Union of United Brewery Workers of America, the Retail Clerks' International Protective Association, the Pennsylvania Federation of Labor, the Massachusetts State Branch American Federation of Labor, the International Association of Machinists, the Washington State Federation of Labor, the Wood, Wire and Metal Lathers' International Union, the Central Federated Union of New York and vicinity and others, favoring the passage of the immigration bill without amendment over the veto of the President; to the Committee on Immigration and Naturalization.

Also, petition by the Federal Labor Union, of Vallejo, Cal., favoring the passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

By Mr. DALE: Petition of citizens and organizations of the United States, favoring passage of immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also, petition of Locomotive Superheater Co., New York, against ship-purchase bill; to the Committee on the Merchant Marine and Fisheries.

Also, petition of conference of American citizens, representing church, benevolent, educational, and other civic organizations, held at Washington, D. C., favoring embargo on export of arms; to the Committee on Foreign Affairs.

Also, petition of Union Guard and Holy Name Society, Holy Trinity Church, Brooklyn, N. Y., favoring exclusion of the Menace from the mails; to the Committee on the Post Office and Post Roads.

Also, petition of citizens and organizations of the United States, against passage of immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

By Mr. DAVENPORT: Memorial of Democratic caucus, house of representatives, of Oklahoma Legislature, relative to removal of Republican officeholders; to the Committee on Reform in the Civil Service.

By Mr. DILLON: Petition of citizens of Lane, S. Dak., favoring embargo on export of arms; to the Committee on Interstate and Foreign Commerce.

By Mr. DOOLITTLE: Petition of merchants of Peabody, Burns, Cottonwood Falls, Florence, Clements, Cedar Point, Saffordville, Lehigh, Burdick, Lost Springs, Marion, Hillsboro, Ramona, Tampa, Durham, Lincolnville, Elmdale, Strong City, and Aulne, Kans., favoring House bill 5308, to tax mail-order houses; to the Committee on Ways and Means.

Also, petition of United Presbyterian Congregation and Reformed Presbyterian Sunday School of Eskridge, Kans., against polygamy in the United States; to the Committee on the Judiciary.

By Mr. EAGAN: Petitions of Albin S. Fendel, Union Hill, N. J., and W. H. Stowenhagen Co., of New York City, favoring passage of resolution to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. ESCH: Memorial of mass meeting of citizens of New York, protesting against the literacy test in the immigration bill; to the Committee on Immigration and Naturalization.

Also, petitions of St. Johannes Verein, La Crosse, Wis., composed of 67 members, protesting against export of war material; to the Committee on Foreign Affairs.

By Mr. FALCONER: Petitions of Local Typographical Union No. 170, and various organizations of workers in the United States, urging passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

By Mr. FARR: Protests against the passage of the immigration bill from members of the Amos Lodge, No. 136, Independent Order B'rith, and members of the Young Men's Hebrew Association, Scranton; members of the Polish-American Citizen's League of Pennsylvania, Philadelphia; members of the Friends of Russian Freedom, New York; and members of the Kosciuszko Polish Club, Taylor, Pa.; to the Committee on Immigration and Naturalization.

Also, resolutions in favor of the passing of the immigration bill from Charles Perry Taylor, Washington State Federation of Labor, Tacoma, Wash.; Ernest Bohm, of Central Federated Union, New York, N. Y.; O. Edward Risely, Scranton, Pa.; A. F. Butz, Scranton Council, No. 33, O. of I. A., Scranton, Pa.; George Preston, International Association of Machinists, Washington, D. C.; 965 miners, Hyde Park shaft, Scranton, Pa.; and National Council Daughters of Liberty, Philadelphia, Pa.; to the Committee on Immigration and Naturalization.

By Mr. GALLIVAN: Memorial of Federated Irish Society of Massachusetts, protesting against export of war material; to the Committee on Foreign Affairs.

By Mr. GERRY: Petitions of Manhattan Wholesale Grocery Co., U. S. Ring Traveler Co., James F. Bergin & Co., of Providence, and I. B. Crandall, of Westerly, R. I., protesting against preventing the Government from printing stamped envelopes bearing printed return request; to the Committee on the Post Office and Post Roads.

Also, petitions of M. W. Beebe, of Pawtucket; H. M. Laughlin, of Bradford; and United Brotherhood of Carpenters and Joiners, of Newport, R. I., favoring passage of the immigration bill; to the Committee on Immigration and Naturalization.

Also, petitions of Providence Central Federated Union, Providence, R. I., protesting against the increased cost of flour and urging investigation of same; to the Committee on Agriculture.

Also, petition of Court Rochambeau, No. 3597, Independent Order of Foresters, of Providence, R. I., urging the passage of the civil-service reform bill; to the Committee on Reform in the Civil Service.

Also, petition of Rhode Island State Federation of Women's Clubs, of Providence, urging the passage of the Palmer-Owen child labor bill; to the Committee on Labor.

Also, petition of Charles McCusker, of Arlington, R. I., urging the protection of Catholics in Mexico; to the Committee on Foreign Affairs.

By Mr. GORDON: Petitions of J. S. Wood and Amos N. Barron, of Cleveland, Ohio, protesting against the passage of the seamen's bill in regard to the Great Lakes; to the Committee on the Merchant Marine and Fisheries.

By Mr. GORMAN: Petition of St. Joseph's Men's Society and other societies of Chicago, Ill., also citizens of the third Illinois district, favoring House joint resolution 377, forbidding export of arms; to the Committee on Foreign Affairs.

Also, petitions of International Seamen's Union of America and various other organizations of workers of the United States, favoring passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also, petition of the German Society of Philadelphia, favoring House joint resolution 377, forbidding export of arms; to the Committee on Foreign Affairs.

By Mr. HELGESEN: Petition of citizens of Petersburg, Reynolds, Robinson, Sawyer, Sheldon, Sykeston, Turtle Lake, Wahpeton, Wild Rose, Willow City, and Great Bend, all in the State of North Dakota, favoring House joint resolution 377, forbidding export of arms; to the Committee on Foreign Affairs.

By Mr. JACOWAY: Petition of St. Boniface Society, of Hartman, Ark., favoring bill to prohibit export of war material; to the Committee on Foreign Affairs.

Also, petitions of Sacred Heart Branch, No. 993, Catholic Knights of America, of Morristown; Ira B. Faust, of Coal Hill; and St. Boniface Society, of Hartman, all in the State of Arkansas, favoring excluding certain papers from the mails; to the Committee on the Post Office and Post Roads.

By Mr. KAHN: Petitions of Labor Council, United Laborers' Union No. 1, International Moulders' Union No. 164, Stationary Firemen's Local No. 86, all of San Francisco, Cal., and other labor organizations throughout the United States, favoring the passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

By Mr. KEISTER: Petition of 70 citizens of Evans City, Pa., against granting to Postmaster General authority to exclude

from the mails certain publications; to the Committee on the Post Office and Post Roads.

Also, petition of St. Michael's Society, of Monessen, Pa., against Burnett-Smith immigration bill; to the Committee on Immigration and Naturalization.

By Mr. LEWIS of Maryland: Petition of sundry citizens of Takoma Park, Md., protesting against the passage of House bill 20644, to amend the postal laws, or any bill with the same title; to the Committee on the Post Office and Post Roads.

By Mr. LONERGAN: Petition of Stephens Benevolent Society, of Hartford, Conn., relative to use of the mails; to the Committee on the Post Office and Post Roads.

Also, petition of German Lutheran Church congregation, of New Britain, Conn., favoring passage of resolution to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. McCLELLAN: Petition of J. J. O'Keelly and 384 others, of Kingston, N. Y., protesting against export of war material; to the Committee on Foreign Affairs.

By Mr. MAGUIRE of Nebraska: Petition of citizens of Cook, Nebr., favoring embargo on export of arms; to the Committee on Foreign Affairs.

By Mr. MAHAN: Petition of Scheller Lodge, No. 92, Independent Order of Odd Fellows, of Middletown, Conn., favoring House joint resolution 377, forbidding export of arms; to the Committee on Foreign Affairs.

By Mr. MOORE: Petition of German-American Alliance of Philadelphia and Pennsylvania, favoring House joint resolution 377, forbidding export of arms; to the Committee on Foreign Affairs.

Also, letters from Messrs. Leach & Smith, Friedenbach Bros., and L. C. Morgan Co., all of Fortuna, Cal., urging the passage of H. R. 5308, providing for a tax on mail-order business; to the Committee on Ways and Means.

Also, resolutions and letters from sundry citizens of Philadelphia, Pa., urging Congress to enact a law prohibiting the exportation of arms, ammunition, and munitions of war during the present European war; to the Committee on Foreign Affairs.

By Mr. MORIN (by request): Petition of citizens and organizations of the United States, favoring passage of immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also (by request), petition of citizens and organizations against passage of immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also (by request), petition of the Allegheny County Branch, State League, G. R. C. Societies of Pennsylvania, favoring exclusion of the Menace from the mails; to the Committee on the Post Office and Post Roads.

Also (by request), petition of Charles L. Bernheimer, New York, relative to settlement of international disputes by arbitration; to the Committee on Foreign Affairs.

By Mr. MOTT: Petition of Chamber of Commerce, Watertown, Conn., against passage of immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also, petition of the Council of the New York Commandery of the Naval and Military Order of the Spanish-American War, favoring creation of a national defense commission; to the Committee on Military Affairs.

Also, petition of the Merchants' Association of New York and the Chamber of Commerce of the State of New York, against ship-purchase bill; to the Committee on the Merchant Marine and Fisheries.

Also, petition of Woman's Board of Trade of Massachusetts, favoring a law prohibiting use of foreign labels on goods made in the United States; to the Committee on Interstate and Foreign Commerce.

Also, petition of citizens and organizations of the United States, favoring passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

By Mr. J. I. NOLAN: Communications from the Central Federated Union of Greater New York; the Wood, Wire, and Metal Lathers' International Union; the International Association of Machinists; the Massachusetts branch, American Federation of Labor; the International Union of United Brewery Workmen of America; the Washington State Federation of Labor, Tacoma, Wash.; the National Council, Daughters of Liberty; telegrams from the Butchers' Union of San Francisco, Cal.; the label section of the San Francisco Labor Council; and Local Union No. 164, International Molders' Union, San Francisco, Cal., favoring the passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

By Mr. PATTEN of New York: Petition of citizens of New York City, favoring embargo on export of arms; to the Committee on Foreign Affairs.

By Mr. RAINEY: Petition of 26 citizens of Mount Sterling, Ill., favoring a free press; to the Committee on the Post Office and Post Roads.

By Mr. SCULLY: Protest against immigration bill from Young Men's Hebrew Association, 250 members, Perth Amboy; Polish Cadets, Sayreville; and St. Joseph's Society, South Amboy, all in the State of New Jersey; Washington Central Labor Union, protesting against class legislation for the District of Columbia; American Federation of Labor, protesting against the Taylor system; to the Committee on Immigration and Naturalization.

Also, communications favoring the passage of the immigration bill over the President's veto from International Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers of America, Indianapolis, Ind.; the American Jewish Committee, New York; Pattern Makers' League, Cincinnati; Tobacco Workers' International Union, Louisville; Switchmen's Union, Buffalo, N. Y.; International Brotherhood of Paper Makers, Albany, N. Y.; Railway Employees' Department, St. Louis, International Protective Association; United Mine Workers of America; International Typographical Union, Indianapolis; United Brotherhood of Carpenters and Joiners, Indianapolis; Boot and Shoe Workers' Union, Boston; Hotel and Restaurant Employees' International Alliance; Bartenders' International League of America, Cincinnati; the Commercial Telegraphers' Union of America, Chicago; Washington State Federation of Labor, Tacoma, Wash.; Wood, Wire, and Metal Lathers' International Union, Cleveland, Ohio; International Union of the United Brewery Workmen of America, Cincinnati, Ohio; Washington Camp, No. 111, Patriotic Order Sons of America, Asbury Park; Cigar Makers' International Union, Chicago; Massachusetts State Branch American Federation of Labor, Boston; to the Committee on Immigration and Naturalization.

Also, memorial and resolutions adopted at a mass meeting of citizens of New York; New York Nonpartisan Citizenship Committee; International Seamen's Union of America, Chicago; New York State Federation of Labor, Utica, N. Y.; Pennsylvania Federation of Labor, Harrisburg, Pa.; American Federation of Labor, Washington, D. C.; Illinois State Federation of Labor, Chicago, Ill.; New Jersey State Federation of Labor, Newark, N. J.; Minnesota State Federation of Labor, St. Paul, Minn.; and the Iron City Central Trades Council, Pittsburgh, Pa.; to the Committee on Immigration and Naturalization.

By Mr. SELDOMRIDGE: Petition of citizens and organizations of New York, Tacoma, Wash.; Cincinnati, Boston, Washington, St. Louis, and La Fayette, Ind., favoring passage of Smith-Burnett immigration bill; to the Committee on Immigration and Naturalization.

Also, petition or memorial of Friends of Russian Freedom, favoring sustaining of President's veto of Burnett immigration bill; to the Committee on Immigration and Naturalization.

Also, petition or memorial of Women's Political Union, of Colorado Springs, Colo., against passage of immigration bill over President's veto; to the Committee on Immigration and Naturalization.

Also, petition of citizens of Sterling and Amherst, Colo., favoring embargo on export of arms; to the Committee on Foreign Affairs.

By Mr. SMITH of Texas: Petitions of citizens of Sagerton and of Mills and Runnels Counties, Tex., protesting against the export of arms, etc.; to the Committee on Foreign Affairs.

By Mr. STEPHENS of California: Petitions of 1,000 citizens of Los Angeles, Cal., protesting against export of war material; to the Committee on Foreign Affairs.

Also, petition of San Francisco Labor Council, favoring passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also, petition of Browning Club, Pasadena, Cal., protesting against shipping American horses to European battle fields; to the Committee on Foreign Affairs.

By Mr. TAYLOR of Colorado: Petition of citizens of Denver, Colo., urging passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

By Mr. VOLLMER: Petitions of 2,334 American citizens, favoring passage of resolution to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. WALLIN: Petition of Local Union 128, Plumbers and Steam Fitters' Association, of Schenectady, N. Y., protesting against employment of alien labor in the Canal Zone, Panama; to the Committee on Labor.

SENATE.

FRIDAY, *February 5, 1915.*

The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the following prayer:

Almighty God, we thank Thee that Thou hast come so close to human life that we dare not make an appeal to our fellow men that does not justify the ways of God with men. Every appeal that we make to human activity and human service, whether for justice or for liberty, is but a reflection of the commanding voice of God, and every aspiration that rises within us that looks to human helpfulness, to the uplift of the race, is but an emanation of the heart of God overflowing with an infinite love for man. May we cherish as our most precious and blessed heritage the spirit that prompts to service. May we in all our service conform our action and our appeal to God, who is the author of our liberty and the guardian of our human rights. We ask for Christ's sake. Amen.

The Journal of yesterday's proceedings was read and approved.

PRESIDENTIAL APPROVAL.

A message from the President of the United States, by Mr. Latta, executive clerk, announced that the President had, on January 28, 1915, approved and signed the act (S. 6121) to authorize the construction of a bridge across the Niagara River, in the town of Lewiston, in the county of Niagara and State of New York.

ANNUAL REPORT OF COMMISSIONER OF PATENTS.

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Commissioner of Patents, transmitting, pursuant to law, a report of the business of the Patent Office for the year ended December 31, 1914. The Chair is in doubt as to what committee the communication should be referred. It will be referred to the Committee on Printing.

PETITIONS AND MEMORIALS.

Mr. JONES. I have here a telegram sent by the secretary of state of the State of Washington under the direction of a resolution of the legislature of that State. It relates to the veto by the President of the immigration bill, which has been disposed of for this session; but coming, as it does, from the legislature, I think it would be well to have it printed in the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

OLYMPIA, WASH., *February 4, 1915.*

Hon. WESLEY L. JONES,
United States Senate, Washington, D. C.:

Whereas there is now pending in the Congress of the United States the Burnett-Dillingham immigration bill; and
Whereas the same is to be brought up for action on the President's veto Thursday, February 4, 1915: Therefore be it

Resolved by the Senate and House of Representatives of the State of Washington in legislative session assembled, That the secretary of state of the State of Washington be, and he is hereby, directed to telegraph to each member of the delegation in Congress from this State a request to vote for the passage of the said Burnett-Dillingham immigration bill over the President's veto.

I. M. HOWELL,
Secretary of State.

Mr. SHEPPARD. I present a resolution from the Rural Credit League of America on rural credits, which I ask to have printed in the RECORD without reading.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Resolution adopted by the Rural Credit League of America indorsing the principles of the resolution by Senator SHEPPARD to investigate personal rural-credit bills.

We maintain that the function of a congressional body to investigate a purely scientific question, like credit, is judicial rather than legislative; and being judicial in character, its machinery should comport with that of other judicial bodies, which provide that the interested parties may appear by expert representatives and establish by sworn testimony the truth of their contentions. We hold this to be the most efficient, most expeditious, and most economical method of conducting an investigation of this important subject.

It is the most efficient, because the commission could require the proponent's expert to take up his bill section by section and show his precedent for each and every provision or state his reason for not following the precedents and experience of other countries. Then the bankers' expert would be present to test the credibility of each witness introduced by the proponent's expert. The commissioners would not only have the right to interrogate any witness introduced and introduce other witnesses, but they would confine the experts of the parties at interest to the issues involved and not encumber the record with immaterial matter. Furthermore, the commission could, and doubtless would, require each of the parties to brief his case, and this would greatly aid the full membership of both bodies of Congress in readily grasping the question.

This is the most expeditious method, because if an investigation were to be conducted in the ordinary way it would be next January before the committees could begin work; whereas under the proposed method the record and report of the commission and briefs and arguments of the parties at interest could be placed in the hands of each Member of the Sixty-fourth Congress at the beginning of its first session.

The expense to the Government in conducting the proposed investigation would be nominal compared to the expense of conducting other monetary investigations. It would be less expensive than an ordinary committee investigation, because the commission could, and should, require each party to pay for the attendance of its own witnesses.

In conclusion we would say that we suggest that the Committees on Agriculture appoint the subcommittees to make this investigation, because every member of both of those committees has bankers as well as farmers as constituents, and we do not know of any other instance in which that thing exists as to all the members of any other two committees of both bodies.

Mr. FLETCHER. I present resolutions adopted by the Board of Trade of Miami, Fla., which I ask may be printed in the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Resolutions of the Miami Board of Trade, of Miami, Fla.

Whereas the United States, by its act of Congress approved September 28, 1850, did grant to the several States the lands known as "swamp and overflow" lands, made unfit thereby for cultivation, to enable the States to contract drainage works to reclaim the lands; and
Whereas said act provided that the proceeds of said lands shall be applied exclusively to the purpose of reclaiming said lands, and thereby imposing the trust upon the States of reclaiming said lands and making them fit for cultivation and disposing of said lands for the uses and purposes of said trust only; and
Whereas the State of Florida requested and received upward of 20,000,000 acres of such "swamp and overflowed" lands, which include the Everglades of Florida, an open prairie overflowed by the flood waters of the upper drainage basin carried by the Kissimmee River to Lake Okeechobee and spilled over upon the grass-covered plain of the Glades; and
Whereas the control of the waters of Lake Okeechobee and its use as a storage basin for flood waters to prevent overflow, and the vast extent of the canals and other drainage works necessary to reclaim the 4,000,000 acres of the Everglades, make it necessary to raise large amounts of money, and only by first reclaiming and making fit for cultivation said lands can they be sold for sufficient money to pay for the construction of the necessary drainage works; and
Whereas the trustees of the lands have been unable to sell the lands for sufficient money to construct the necessary drainage works and can not sell the undrained lands without a sacrifice of value so great as to defeat the purpose of the grant of the United States and many thousands of purchasers of these lands are waiting the reclamation of the lands to settle upon and cultivate them; and
Whereas the United States has by its said act of September 28, 1850, declared its purpose to aid the States to reclaim these rich and fertile areas and make them fit for cultivation: Now therefore be it

Resolved, That we do respectfully pray the good offices of the United States, by its representatives in Congress assembled, to aid the States to reclaim the swamp and overflowed lands by its grants to the States by enacting suitable provisions in a drainage-aid act, which shall enable the States to raise sufficient money to construct the necessary drainage works; saving, however, the United States harmless from loss or gift of money by pledging to it the taxes which may be levied upon and the proceeds from sales of said swamp and overflowed lands in each drainage project of said lands; and be it further

Resolved, That the Senators and Representatives of the State of Florida are respectively requested to use all honorable means to cause the enactment of such drainage-aid law.

Mr. NELSON. I present a large number of petitions from citizens of Minnesota, asking for the enactment of legislation to prohibit the shipment of arms and munitions of war to belligerents. I move that they be referred to the Committee on Foreign Relations.

The motion was agreed to.

Mr. KENYON. I present resolutions of the Cedar Rapids Federation of Labor in reference to the shipping bill, and I ask to have them read. They are very short.

There being no objection, the resolutions were read, as follows:

CEDAR RAPIDS FEDERATION OF LABOR,
Cedar Rapids, Iowa, January 15, 1915.

HON. W. S. KENYON,
Senator from Iowa, Washington, D. C.

DEAR SIR: The following resolution, unanimously adopted by the above body, is hereby submitted to your kind support:

"Whereas the best interests of all the people of this country will be impartially protected and served only by a Government-owned merchant marine, the upbuilding of which, even in private hands, has so far insidiously been prevented by foreign interests, carrying nine-tenths of the American products in foreign bottoms, but which service broke down on account of the European war, thus leaving our country almost bare of the so necessary transportation facilities of our products to other countries desirous of buying from or trading with us, to the great detriment of our economic interests, and especially those of the laboring population: Therefore be it

"*Resolved*, That the Cedar Rapids Federation of Labor hereby respectfully asks all similar organizations, and especially our State Federation of Iowa and the American Federation of Labor, as well as our Congressmen and His Excellency President Wilson (all of whom to be notified by this body), to use their best efforts for the passage of the Government ship-purchase bill; but be it further

"*Resolved*, That we are utterly opposed to the further recommendation of President Wilson; i. e., that this service should be turned over to private capitalists after our Government has brought it to a paying basis with publi: funds. This would not only invite a certain recurrence of the above calamities, but also turn the national interests of all the people, which can properly be protected by the Government only (as disastrous experiences with railroads and other national institutions have abundantly proven), over to the mercy of its greedy exploiters and egotistic despoilers, which would be worse than turning over the

post-office or the parcel-post systems, now that they have been brought to a paying basis, to the express companies."

Very truly, yours,

[SEAL.] D. MORRISON,
Secretary-Treasurer.

Mr. OLIVER. I have a short telegram protesting against the ship-purchase bill, which I ask to have read.

There being no objection, the telegram was read, as follows:

GREENVILLE, PA., *February 5, 1915.*

Senators PENROSE and OLIVER,
Washington, D. C.:

Hold Pennsylvania hot in opposition to ship bill purchasing scheme, for country has been driven far enough hellward and over to socialism and war.

W. LOOSER.

Mr. KERN. I ask to have read the telegram which I send to the desk.

There being no objection, the telegram was read, as follows:

CHARLESTON, S. C., *January 30, 1915.*

JOHN W. KERN,
Senate Chamber, Washington, D. C.:

The directors of the Charleston Chamber of Commerce adopted resolution indorsing the principles involved in the ship-purchase bill as the bill now stands.

B. F. MCLEOD, *President.*

Mr. BRANDEGEE presented a memorial of sundry citizens of New Haven, Conn., remonstrating against the enactment of legislation to prohibit the intermarriage of persons of the white and negro races within the District of Columbia, which was referred to the Committee on the District of Columbia.

Mr. BRISTOW presented petitions of sundry citizens of Kansas City, Kans., praying for the enactment of legislation to grant pensions to civil-service employees, which were referred to the Committee on Civil Service and Retrenchment.

He also presented memorials of sundry citizens of Cawker City and Winfield, in the State of Kansas, remonstrating against the enactment of legislation to curtail the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

Mr. McLEAN presented a petition of Schiller Lodge, No. 92, Independent Order of Odd Fellows, of Middletown, Conn., and a petition of the congregation of the German Lutheran Church, of New Britain, Conn., praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

He also presented a petition of Local Union No. 127, United Brotherhood of Carpenters and Joiners, of Derby, Conn., and a petition of the Metal Trades Council of Hartford, Conn., praying for the passage of the immigration bill over the President's veto, which were ordered to lie on the table.

He also presented a petition of the Metal Trades Council of Hartford, Conn., praying for the enactment of legislation relating to trades in the Army, etc., which was referred to the Committee on Military Affairs.

He also presented memorials of sundry citizens of New Haven, Conn., remonstrating against the enactment of legislation to prohibit the intermarriage of white and colored persons in the District of Columbia, which were referred to the Committee on the District of Columbia.

He also presented a petition of Local Union No. 321, Cigar Makers' International Union, of New Britain, Conn., praying for the enactment of legislation to regulate interstate commerce in convict-made goods, which was ordered to lie on the table.

He also presented a memorial of the Board of Trade and Business Men's Association of Willimantic, Conn., and a memorial of Centennial Lodge, No. 100, Independent Order of Odd Fellows, of Naugatuck, Conn., remonstrating against any change in the present law affecting the printing of Government return envelopes, which were referred to the Committee on Post Offices and Post Roads.

Mr. CHAMBERLAIN presented a petition of the congregation of the St. Paul's Evangelical Lutheran Church, of Portland, Oreg., and a petition of sundry citizens of Oregon City, Oreg., praying for the enactment of legislation to prohibit the exportation of ammunition, etc., which were referred to the Committee on Foreign Relations.

Mr. CLAPP. I present a joint resolution of the Legislature of Minnesota, which I ask may be printed in the RECORD and referred to the Committee on Foreign Relations.

There being no objection, the joint resolution was referred to the Committee on Foreign Relations and ordered to be printed in the RECORD, as follows:

Mr. Bendixen offers the following resolution:

"Whereas it has been proposed and is being urged from various sources that the Congress of the United States place an embargo on the exportation of agricultural products; and

"Whereas this is not being urged on the ground of any shortage or prospective shortage of such products, but on the ground that prices have recently advanced somewhat, especially on cereal products; and

"Whereas such embargo would be unjust and unfair to the agricultural interests of this State in that it would deprive such interests of the advantages and benefits derived from the demand from foreign nations for these products; and

"Whereas the agricultural interests of this Nation by Federal legislation have been placed in direct competition with the same interests of other nations and are justly entitled to all the advantages of an open world market; and

"Whereas the State of Minnesota is preeminently an agricultural State and would suffer greatly from such embargo, and all its business interests would be seriously affected by the injury that would logically and necessarily follow such embargo: Therefore be it

"*Resolved*, That the Minnesota House of Representatives, the Senate concurring, earnestly and emphatically request the Representatives in Congress and United States Senators from this State to use their influence and vote to defeat any measure proposing such embargo; and be it further

"*Resolved*, That the chief clerk of the house and secretary of the Senate be, and hereby are, instructed to forward a copy of these resolutions to each of the Representatives in Congress and each Senator from this State."

REPORTS OF COMMITTEES.

Mr. SHIVELY, from the Committee on Pensions, submitted a report (No. 964) accompanied by a bill (S. 7566) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors, which was read twice by its title, the bill being a substitute for the following Senate bills heretofore referred to that committee:

Mr. CHAMBERLAIN, from the Committee on Commerce, to which was referred the bill (H. R. 19746) to authorize aids to navigation and other works in the Lighthouse Service, and for other purposes, reported it with an amendment and submitted a report (No. 965) thereon.

PAN AMERICAN MEDICAL CONGRESS.

Mr. SAULSBURY. I am instructed by the Committee on Foreign Relations to report back favorably without amendment the joint resolution (S. J. Res. 210) to authorize the President to invite certain Governments to send delegates to the Pan American Medical Congress, and I submit a report (No. 966) thereon. I ask for the present consideration of the joint resolution.

The VICE PRESIDENT. The joint resolution will be read.

The Secretary read the joint resolution, as follows:

Resolved, etc., That the President of the United States be, and he is hereby, authorized and requested to invite the several Governments of the Republics of Mexico, Central and South America, Haiti, and Santo Domingo to send official delegates to the meeting of the Pan American Medical Congress, to be held in the city of San Francisco, Cal., Panama-Pacific International Exposition, June 17, 18, 19, 20, and 21, A. D. 1915.

The VICE PRESIDENT. The Senator from Delaware asks unanimous consent for the present consideration of the joint resolution.

Mr. JONES. Does it involve any expense on the part of this Government?

Mr. SAULSBURY. Mr. President, the Committee on Foreign Relations took the matter under consideration and referred the joint resolution to a subcommittee. It appears by former resolutions which have been passed regarding this matter that while it is possible an appropriation may be asked, yet Dr. Johnson, who presides over the society in this city, has filed with the subcommittee, and it will be a part of the records of the committee which submits the report, a statement that in no event shall the amount asked for exceed $10,000.

I wish to say, in order to avoid objection, that this Congress is composed of a great body of medical men all over the Americas, North and South, and meetings have been held not only here in the first instance, but in Panama, in the city of Mexico, and in Habana. On all those occasions the Governments have always appropriated a sum of money to defray, for example, the expenses of a banquet to be attended by the members. The gentlemen who compose this very valuable association are extremely desirous that it shall not appear that the Government is refusing to bear any expense and that they can simply come as private citizens if they want to. They think it a very important matter, and the committee agree with them on that. We have limited the expense as far as we could.

Mr. JONES. I would like to know if it will result in the establishment of a sort of bureau controlled by other Governments to which we will have to send representatives and the expense of which we shall bear very largely? That has been the case in a great many other instances.

Mr. SAULSBURY. It is the first time I have heard such a suggestion made by anyone.

Mr. JONES. My colleague upon the Committee on Appropriations, the Senator from North Carolina [Mr. OVERMAN], can bear me out in the statement that a great many of these things have come about just in that way, and I simply want to bring this matter to his attention. If he has no objection to it as representing the majority of the Committee on Appropriations I shall not object, but I shall expect to see it result in just what we tried to cut out of the Diplomatic and Consular appropriation bill last year.

Mr. OVERMAN. Mr. President, there have been some dozen or more resolutions of this kind which passed Congress from time to time, whereby these different scientific experts may go to foreign countries and their expenses are paid. They seem to establish a bureau at some capital, like the Hague or Potsdam, or somewhere else, and then bind the United States to become a continuing member. For example, I had a case before me this morning; and I will say to my colleague on the committee that we concluded to strike out a good many of such items from the appropriation bills, there are so many delegates making trips to Europe. We found that they had bound this Government with other Governments that they would hold an annual meeting over there, and then they would establish a bureau, and all such things. The meetings are held abroad so that our delegates get a trip to Europe, and we have to pay the expenses. This morning we heard of one such congress that is to be held at Potsdam, and over $3,000 was asked to be appropriated for it—$500 to pay the expenses over there and $500 extra, and so on. I have forgotten the exact amount, but it amounts to about $3,500. Our continuing expenses are $1,500 to pay our bureau and for this system of representation. All these things amount to a great deal of money at the end of a year.

I was astonished, and so was my friend from Washington [Mr. JONES], when I came to look into this appropriation bill, at the large sums of money it appropriated, not in one case but in dozens of cases, and to find that in the bill the United States had bound itself to have these delegates go abroad and attend the meetings of associations, resulting in establishing a great bureau in which no American is employed. Here we are paying for the employment of foreigners in some bureau in a foreign country in order that some Americans can attend every year some convention to be held. We pay his expenses and pay all the necessary incidentals, and so on.

Mr. McCUMBER. Mr. President——

The VICE PRESIDENT. The Senator from North Dakota.

Mr. McCUMBER. I do not intend to object to the consideration of this joint resolution, but I wish the Senator from Delaware would explain to what persons in Mexico we are to extend this invitation.

Mr. SAULSBURY. I do not know whether Dr. Carranza has a medical title or not; I have sometimes heard him called by that title; nor do I know whether Dr. Huerta has one, but any of them might attend that meeting with profit to themselves. I want to say, however, Mr. President, that it seemed to the committee having this matter in charge that this was a particularly laudable object at this time, and a courteous invitation only was desired to be extended to these gentlemen.

We have taken a very prominent part, both in North and South America, in trying to do away with infectious or contagious diseases. We have been called upon, I think, recently in Ecuador to make sanitary the condition at Guyaquil, which is threatening our traffic through the Panama Canal.

Mr. McCUMBER. I wish to say to the Senator from Delaware that I simply want to make sure that we are extending the invitation through the proper President of Mexico, whether it be Villa or whomsoever it may be to-day or to-morrow.

Mr. SAULSBURY. I think it might be well to call upon the leader of the majority now existing upon that side of the Chamber as to what we are going to do in regard to this. The Senator from New Hampshire [Mr. GALLINGER] introduced this joint resolution, and I know he is very much in favor of it. So I ask him to reply to his own colleague.

Mr. GALLINGER. Mr. President, I introduced the joint resolution because I am very greatly interested in the matter of sanitation and health, not only in our own country but through-

out the world. It will be admitted that we can not have our own country free from contagious and epidemic diseases unless the matter is discussed and considered by other Governments as well as ours.

This is a great medical association. It has received the courtesies of other Governments; delegates have been sent from the United States, and have been treated with great consideration; these important questions have been discussed and the results have been published. I have myself read them with great interest and, I think, some profit. Now, it is designed that this association shall be invited to meet in this country. There may be later on some suggestion as to a small appropriation for the purpose of reciprocating courtesies which our own delegates have received from these other Governments.

It is a trivial matter, Mr. President. I see no danger of it ever resulting in the establishment of a bureau or that we shall be involved in any financial obligation that will become troublesome to us. If Congress does not choose to make an appropriation when the matter is presented to it later on, of course Congress will not make the appropriation; but unquestionably the invitation ought to be extended. We can not very well do ourselves justice without extending the invitation, and I trust no objection will be made to the passage of the joint resolution.

Mr. OVERMAN. I understand the joint resolution does not provide for any appropriation?

Mr. GALLINGER. It does not.

The VICE PRESIDENT. Is there objection to the present consideration of the joint resolution?

There being no objection, the joint resolution was considered as in Committee of the Whole.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

HEARINGS BEFORE COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS.

Mr. WILLIAMS. By direction of the Committee to Audit and Control the Contingent Expenses of the Senate, I report back favorably without amendment Senate resolution 529, and I ask for its present consideration.

The VICE PRESIDENT. The resolution will be read.

The Secretary read the resolution submitted by the Senator from Virginia [Mr. SWANSON] on the 2d instant, as follows:

Resolved, That the Committee on Public Buildings and Grounds, or any subcommittee thereof, be authorized during the Sixty-third Congress to subpœna witnesses, to send for books and papers, to administer oaths, and to employ a stenographer, at a price not to exceed $1 per printed page, to report such hearings as may be had in connection with any subject which may be pending before the said committee; that the committee may sit during the sessions or recesses of the Senate, and the expense thereof shall be paid out of the contingent fund of the Senate.

Mr. SMOOT. Mr. President, I should like to ask the Senator from Mississippi if there are any contemplated hearings to be had by the Committee on Public Buildings and Grounds?

Mr. WILLIAMS. I will say, for the information of the Senator from Utah, that this is what has happened: The Committee on Public Buildings and Grounds, thinking that it had authority to hold certain hearings, employed a stenographer, and it owes him money for his work. He can not be paid. I told him that the committee would have to obtain the authority of the Senate through a resolution before payment could be made. The resolution was therefore offered and referred to the committee, and I have been authorized to report it back favorably.

Mr. SMOOT. It seems to me, under the wording of the resolution, it would be to pay for hearings hereafter to be had and not for hearings which have already taken place.

Mr. WILLIAMS. The committee contemplates the possibility of having to continue its hearings. The Senator from Virginia [Mr. SWANSON], who offered the resolution, is not in his seat just at this moment, but I understand the committee think there is a possibility, though not any very great probability, of the continuance of some of the hearings.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

The resolution was agreed to.

LABELING AND MISBRANDING OF GOODS.

Mr. GALLINGER. Mr. President, before bills are received I desire to ask a question concerning a bill that has been reported. I address my observations to the Senator from Ohio [Mr. POMERENE].

I find on the calendar Senate bill 646, providing for the labeling and tagging of all fabrics and articles of clothing intended for sale which enter into interstate commerce, and providing penalties for misbranding.

This bill seems to have been reported from the Committee on Manufactures. I am a member of that committee, but I never heard of a meeting of the committee nor was I consulted as to the matter of the report. As I have received communications concerning the bill, in which complaint is made that no hearing was held on the subject and that there are certain parties who desire a hearing, I will ask the Senator from Ohio if it would not be compatible with his views to have the bill recommitted to the committee for the purpose of giving certain interested parties an opportunity to be heard?

Mr. POMERENE. That bill was referred by the Committee on Manufactures to a subcommittee, of which I was a member. The matter was taken up with the department. As a member of that committee I was not advised that any individuals desired any personal hearing on the matter. The bill seemed to have the indorsement of the department. I knew of no objection—I say that individually—on the part of any interested parties to the provisions of the bill until very recently. The matter is now being considered by the members of the committee in view of the fact that certain persons have indicated a desire to be heard. No later than this morning one of the members of the subcommittee and myself had a conference on the subject. We expect to have a further conference during the day, and if the matter may be allowed to rest for the day I think there can be something determined upon which will be entirely satisfactory to those who are seeking a hearing.

Mr. GALLINGER. I have no disposition to press any suggestion at all, but I thought it was rather remarkable that I had never been notified of the meeting of the committee, as I have some views on the matter which I would have desired in my usual modest way to present to the committee had I been notified of a meeting and had the privilege of attending.

Mr. POMERENE. Mr. President, as one member of the committee, I did not know the Senator from New Hampshire was interested in the subject. Had I known of the fact, he certainly would have been advised. The subcommittee was authorized to report on the bill, as I now recall.

Mr. GALLINGER. Mr. President, I am gratified to know that the subject is being given further consideration, for it is a very important matter which will lead to a good deal of discussion if it comes before the Senate unless certain matters are adjusted in connection with it.

Mr. POMERENE. Mr. President, I may say that, since these objections have come to my attention, my personal feeling about the matter is that there ought to be some further hearings on the bill with a view to perfecting it.

The VICE PRESIDENT. The introduction of bills is next in order.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. THOMAS:

A bill (S. 7567) granting a pension to James Gallagher (with accompanying papers); and

A bill (S. 7568) granting an increase of pension to Gilbert W. Potter (with accompanying papers); to the Committee on Pensions.

By Mr. JOHNSON:

A bill (S. 7569) granting a pension to Charles H. Nelson;

A bill (S. 7570) granting a pension to Sumner P. Boies; and

A bill (S. 7571) granting an increase of pension to Joann P. Swift-Libby; to the Committee on Pensions.

By Mr. WHITE:

A bill (S. 7572) for the relief of the heirs of Eldred Nunnally, deceased; to the Committee on Claims.

By Mr. MYERS:

A bill (S. 7573) granting a pension to Anna Trickey; to the Committee on Pensions.

By Mr. McCUMBER:

A bill (S. 7574) granting an increase of pension to Mary E. Walker; to the Committee on Pensions.

By Mr. NELSON (by request):

A bill (S. 7575) to amend an act entitled "An act to amend laws for preventing collisions of vessels and to regulate equipment of certain motor boats on the navigable waters of the United States," approved June 9, 1910; to the Committee on Commerce.

By Mr. CATRON:

A bill (S. 7576) granting a pension to John Lilly (with accompanying papers); to the Committee on Pensions.

By Mr. ROOT:

A bill (S. 7577) granting an increase of pension to Orra M. Duncan;

A bill (S. 7578) granting a pension to Josephine W. Bullis; and

A bill (S. 7579) granting a pension to Georgianna G. Furey; to the Committee on Pensions.

By Mr. BURLEIGH:

A bill (S. 7580) granting a pension to Elias Lyon; to the Committee on Pensions.

By Mr. SHIELDS:

A bill (S. 7581) granting an increase of pension to Andrew J. Shell; to the Committee on Pensions.

By Mr. ROOT:

A bill (S. 7582) granting an increase of pension to Charles P. Cook; to the Committee on Pensions.

By Mr. COLT:

A bill (S. 7583) granting an increase of pension to Fannie Reid (with accompanying papers); to the Committee on Pensions.

RIVER AND HARBOR APPROPRIATIONS.

Mr. STERLING submitted an amendment intended to be proposed by him to the river and harbor appropriation bill (H. R. 20189), which was referred to the Committee on Commerce and ordered to be printed.

Mr. SAULSBURY submitted an amendment intended to be proposed by him to the river and harbor appropriation bill (H. R. 20189), which was ordered to lie on the table and be printed.

THE LIGHTHOUSE SERVICE.

Mr. PERKINS submitted an amendment intended to be proposed by him to the bill (H. R. 19746) to authorize aids to navigation and other works in the Lighthouse Service, and for other purposes, which was referred to the Committee on Commerce and ordered to be printed.

AMENDMENTS TO APPROPRIATION BILLS.

Mr. WARREN submitted an amendment proposing to increase the appropriation for investigating the food habits of North American birds and mammals in relation to agriculture, horticulture, forestry, etc., from $110,000 to $360,000, intended to be proposed by him to the Agricultural appropriation bill (H. R. 20415), which was referred to the Committee on Agriculture and Forestry and ordered to be printed.

Mr. THORNTON (for Mr. BANKHEAD) submitted an amendment proposing to appropriate $225 to pay Fay N. Seaton for extra services rendered to the Committee to Investigate Joint Parcel Post, intended to be proposed by him to the general deficiency appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

Mr. POINDEXTER submitted an amendment proposing to increase the appropriation for the control of pests of orchard and other fruits from $56,115 to $58,255, intended to be proposed by him to the Agricultural appropriation bill (H. R. 20415), which was referred to the Committee on Agriculture and Forestry and ordered to be printed.

SUPERINTENDENT OF POST OFFICE.

Mr. POINDEXTER. I submit an amendment intended to be proposed by me to the Post Office appropriation bill (H. R. 19906), and ask that it be read and referred to the Committee on Post Offices and Post Roads.

The amendment was read and referred to the Committee on Post Offices and Post Roads, as follows:

Strike out line 8, on page 5, and in lieu thereof substitute the following:

"The office of postmaster is hereby abolished, except in third and fourth class offices, and in lieu thereof is created the office of superintendent of post office. Each post office of the first and second classes shall be in charge of a superintendent. In each office where there is an assistant postmaster such assistant postmaster shall be appointed to the office of superintendent of post office if qualified therefor, and shall hold the same subject to the laws and regulations of the classified civil service. Thereafter all appointments to the office of superintendent of post office shall be made upon merit, and, where practicable, by promotion or transfer from the employees of the Postal Service, and shall hold the office without regard to politics or political recommendations, upon the terms and conditions and subject to such tenure as is provided by the laws and regulations governing the classified, permanent civil service. For compensation to such superintendents of post offices there is hereby appropriated $15,000,000. This section shall not apply to postmasters now in office whose terms have not expired, but they shall be allowed to serve out the term for which they were appointed."

THE MERCHANT MARINE.

Mr. LEWIS. I tender an amendment to the present pending shipping bill (H. R. 6856), and ask to have it printed and referred to the Committee on Commerce.

The VICE PRESIDENT. Without objection, that action will be taken.

The amendment is as follows:

Amend section 1, on page 2, after the words "objects and purposes," in line 8, by adding:

"*Provided*, That no purchase of ships from any source whatever, or of foreign subject, or of any ship belonging to any foreign country, shall be made until the Department of Justice and Department of State has certified that it has examined the title of the tendered ship and that the same is available in all respects and free from any question involving any international complication or violation of any international law."

SHIPMENT OF AMERICAN MANUFACTURES.

Mr. FLETCHER. I have here a communication from the Secretary of Commerce, which I desire to have printed in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The communication is as follows:

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
Washington, February 1, 1915.

Hon. DUNCAN U. FLETCHER,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I quote the following from a letter to me dated 29th January, from the George P. Plant Milling Co., St. Louis:

"On December 8 we made a contract with the Holland-America Line to transport 20,000 sacks of flour from New Orleans to Rotterdam at the rate of 47 cents per 100 pounds, with the understanding that we were to ship the flour from the interior in January and furnish them with the necessary permit of the Holland Government, and they, under the contract, were bound to clear the flour in February. We sold this 20,000 sacks of flour to the Netherlands Government through our agent in Amsterdam, Holland, and made an identical contract with the Netherlands Government; that is, they were to furnish us with the necessary permit and we were to guarantee the clearance of the flour during February.

"We have complied with our contract, having shipped 20,000 sacks of flour from here between the 20th and 25th of January; we also secured the necessary permit through the office of the Holland-America Line in New York City, who in turn advised their office in New Orleans that this 20,000 sacks of flour would move under permit N. Y. P. 880, but in the last week the agents of the Holland-America Line in New Orleans, who are the Texas Transport & Terminal Co., have used every means in their power to stop us from shipping the flour, and have advised us that they will not clear the flour in February, and certainly not till March or April.

"Our representatives in New Orleans have intimated that whereas we have this freight booked at 47 cents per 100 pounds and the Holland-America Line are now getting a rate of 70 cents per 100 pounds, that this difference in the revenue to be earned by them accounts for their attitude; but we can not believe that such a company as the Holland-America Line would stoop to such a position, and we believe that if some pressure is brought to bear upon the line by your department that we not only can secure a fulfillment of the contract that we have with them, but that their attitude toward contracts they have with others will be quite satisfactory hereafter.

"We will be pleased to have you take this matter up with the Holland-America Line if you will, both at their New York City office and their New Orleans office, and if you wish any further information in the matter we will be pleased to supply same by telegraph if you will advise us what is necessary."

I have instructed the representatives of the Bureau of Foreign and Domestic Commerce of this department in New Orleans and New York to look further into this matter.

Yours, very truly,
WILLIAM C. REDFIELD,
Secretary.

—

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
Washington, February 3, 1915.

Hon. DUNCAN U. FLETCHER,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I hand you, for such use as you may think fit, copy of letter from the Utilities Manufacturing Co., which I find upon my desk on my return to-day, and which speaks for itself. The last paragraph seems to me worthy of publication.

Yours, very truly,
WILLIAM C. REDFIELD,
Secretary.

—

UTILITIES MANUFACTURING CO.,
18 Broadway, New York, January 26, 1915.

W. C. REDFIELD, Esq.,
Secretary of Commerce, Washington, D. C.

DEAR SIR: We have read with great interest your brilliant defense of the plan of the United States Government to purchase ships in order to make possible the shipment of American manufactures to foreign markets and bring back to this country the products of the South American countries, in particular, who are suffering from a lack of communication and who are therefore unable to make purchases, not having any market for their products.

We need hardly say that your plan has our heartiest moral support, and in addition to the records that you have already gathered on the subject we desire to inform you that just because of this serious lack of shipping facilities and because of the corresponding outrageously high freight rates we have lost a very large order from a firm in Alexandria, Egypt, and another one from a firm in Auckland, New Zealand, to whom we had quoted and who had given us their orders amounting to many thousand dollars, and both of which firms were forced to cancel the shipment by cable on account of the very high freight rates which would have made the retail price of our products prohibitive in their country. With an adequate American merchant marine it would be impossible for the few operating companies (English and French) to monopolize the freight rates and dictate to the American public what they must ship and at what prices. To speak in plain words, the situation has become so serious as regards our export business that we have had to give up free on board quotations, which, as you may know, are so essential, and as a consequence our business has suffered very badly in spite of the fact that the foreign competition during the past three months has been minimized and one of the best advertised brands and greatest sellers in almost every foreign country has had their plant destroyed by the war. We have been forced to lay off part of our help and are losing this rare chance of extending our business for no other reason excepting the lack of fur-

nishing at reasonable prices our merchandise which is in such great demand at the present time.

Yours, very truly, UTILITIES MANUFACTURING CO.

AMENDMENT OF THE RULES.

Mr. NORRIS. Mr. President, under the rule I desire to present a notice that on to-morrow I shall move an amendment to the rules. On to-morrow I shall ask that the resolution be referred to the Committee on Rules, as I have no idea that it could possibly secure the attention of this body at the present session; but I want to have it presented now in order that it may receive such consideration as it will deserve with a view of passing it at the extra session, which everyone admits is soon to follow, at which time I shall ask for its consideration and adoption, if possible.

Mr. GALLINGER. Will the Senator yield?

Mr. NORRIS. Certainly.

Mr. GALLINGER. Did I understand the Senator to say that everyone admits we are to have an extra session?

Mr. NORRIS. Whether everyone admits it or not, I presume it is unavoidable under all the circumstances.

Mr. GALLINGER. Suppose we should be wise enough to take up the appropriation bills and pass them, would there be any necessity for an extra session?

Mr. NORRIS. No; I should not think so.

Mr. GALLINGER. I hope that may be done.

Mr. NORRIS. I doubt whether we are going to be wise enough to get through with the business of the session.

I ask to have the proposed rule read, Mr. President.

The VICE PRESIDENT. It will be read.

The notice of an amendment to the rules was read, as follows:

In accordance with Rule XL of the Senate, I hereby give notice that on to-morrow I will propose an amendment to the rules of the Senate by adding thereto a new rule, as follows:

"Rule XLI. It shall be in order during the morning hour to make a motion that any bill or resolution then on the calendar shall be considered under the terms of this rule. Such motion, when made, shall lie over one day and shall then be decided without debate. When it has been decided to consider a bill or resolution under this rule, the same shall first be considered in general debate, during which time no Senator, except by unanimous consent, shall be allowed to speak more than three hours. At the close of general debate the bill or resolution shall be read for amendments, and on any amendment that may be offered no Senator, except by unanimous consent, shall speak for more than 15 minutes: *Provided*, That any Senator who has not spoken for 3 hours in general debate shall, in addition to said 15 minutes, be allowed additional time; but in no case shall such additional time or times, including the time used by such Senator in general debate, exceed in the aggregate 3 hours. When the bill is being read for amendment all debate shall be confined to the amendment which is then pending."

The VICE PRESIDENT. The notice will lie on the table.

THE OLD ROMAN SENATE.

Mr. GORE. I ask unanimous consent to have printed as a public document a history of the rules of procedure of the old Roman Senate.

Mr. SMOOT. I ask the Senator what is his request? I could not catch it.

Mr. GORE. The request is to have printed as a Senate document a history of the rules of procedure of the old Roman Senate.

Mr. SMOOT. For what year, I will ask the Senator?

Mr. GORE. It covers a number of years, about as many years as debate lasts in the Senate.

Mr. CLARKE of Arkansas. Is it accompanied by the rulings of the Chair?

Mr. GORE. It covers about as many years as an ordinary debate lasts in the Senate.

Mr. SMOOT. I ask that the matter be referred to the Committee on Printing.

The VICE PRESIDENT. On objection, the matter will be referred to the Committee on Printing.

WAGES ON AMERICAN AND BRITISH VESSELS.

Mr. GALLINGER. Mr. President, I have had carefully compiled a comparison of American and British wages paid on two steam colliers, one a British collier of 4,200 gross tons and the other an American collier of 4,417 tons. It is an interesting statement, and I ask consent to have it printed in the RECORD without reading.

The VICE PRESIDENT. In the absence of objection, it is so ordered.

The matter referred to is as follows:

Comparison of American and British wages paid on steam colliers.

AMERICAN COLLIER "LYRA."

(4,417 gross tons.)

Master	$260.00
Chief officer	100.00
Second officer	85.00
Third officer	70.00
Carpenter	55.00
8 sailors	400.00
Steward	$75.00
Chief cook	75.00
Second cook	60.00
3 messmen	110.00
Chief engineer	150.00
First assistant engineer	100.00
Second assistant engineer	85.00
Third assistant engineer	70.00
3 oilers	165.00
6 firemen	330.00
3 coal passers	135.00
Total per month	2,265.00
Total per year	27,180.00

BRITISH STEAMSHIP "MASCONOMO."

(4,200 gross tons.)

Master	$121.50
First mate	48.60
Second mate	34.02
Third mate	25.51
Carpenter	31.59
Boatswain	25.51
Steward	31.59
Engineer steward	12.15
Cook	26.73
Mess-room boy	4.86
8 able seamen	174.96
First engineer	80.19
Second engineer	58.32
Third engineer	38.88
Fourth engineer	34.02
8 firemen	184.68
2 oilers	46.17
Total per month	979.28
Total per year	11,751.36

Annual difference in wages, $15,428.64.

NOTE.—The wages given for the *Lyra* are the union rate for white crew on the Pacific coast. Sailors, firemen, coal passers, etc., can be shipped in the Atlantic-coast trade at from $15 to $20 per month less than in the Pacific; but the wages of officers and engineers, who usually stay by the ship, are nearly as high now in the Atlantic as in the Pacific.

Charges based on cost of construction.

	American Lyra	British Masconomo.
First cost	$325,000	$217,000
Interest, 5 per cent	16,250	10,850
Depreciation, 5 per cent	16,250	10,850
Insurance, 6 per cent	19,500	13,020
Total	52,000	34,720

Annual difference in charges based on cost of construction, $17,280.

COST OF FOOD.

American crew—35 men, at 50 cents per day, for 365 days	$6,387.50
British crew—32 men, at 40 cents per day, for 365 days	4,672.00
Annual difference in cost of food	1,715.50
Annual difference in wages	15,428.64
Annual difference in charges based on construction	17,280.00
Annual difference in operating American and British collier	34,424.14

THE MERCHANT MARINE.

Mr. GORE. Mr. President——

The VICE PRESIDENT. The Senator from Oklahoma.

Mr. GORE. I desire to offer a resolution (S. Res. 537) and move its adoption under Rule XXVI. For the present I ask that the resolution be read and that the motion go over under the rule for a day.

The VICE PRESIDENT. The Secretary will read.

The Secretary read as follows:

Resolved, That the Committee on Commerce is hereby discharged from the further consideration of Senate bill 7552.

Mr. GALLINGER. Let the resolution go over under the rule.

The VICE PRESIDENT. The resolution will go over under the rule.

Mr. SUTHERLAND. Mr. President, I should like to ask the Senator from Oklahoma if the resolution which he has just offered relates to the bill which the Senator himself introduced on Wednesday last?

Mr. GORE. Yes, sir.

Mr. SUTHERLAND. Which was referred to the Committee on Commerce yesterday?

Mr. GORE. Yes, sir.

Mr. SUTHERLAND. The Senator has become impatient at the lack of action?

Mr. GORE. Oh, no, Mr. President; I profess to have an unlimited amount of patience. I think the Committee on Commerce will have ample time to deliberate on this bill before the motion comes up for consideration.

PURCHASE OF VESSELS.

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from a previous day, which will be stated.

The Secretary read the resolution (S. Res. 528) submitted by Mr. BURTON on the second instant, as follows:

Whereas the pending ship-purchase bill, being Senate bill No. 6856, contemplating by certain of its provisions the purchase of shipping tonnage already constructed, and therefore suggests the possible acquisition of ships belonging to belligerents, some of which are interned in American and other ports as the result of the war; and

Whereas the purchase of such vessels would raise questions of vital importance to the interests of the United States, a knowledge of which is of supreme importance in order that the Senate may reach an intelligent conclusion as to the advisability of enacting said bill and as to the propriety of incorporating in its provisions certain amendments: Be it

Resolved, That the Secretary of State be requested and is hereby directed to transmit at his earliest convenience to the Senate of the United States information responsive to the following inquiry:

Has the Secretary of State, through private or official channels, received any information from any responsible foreign source as to the attitude the Governments of the belligerent nations, or any of them, might be expected to assume in relation to the transfer to the American flag and American register of merchant ships which have heretofore carried the flag of a belligerent State?

The VICE PRESIDENT. The question is on agreeing to the resolution.

Mr. FLETCHER. Mr. President——

The VICE PRESIDENT. The Senator from Florida.

Mr. FLETCHER. I see no objection to the resolution. I think there is no reason why it should not be adopted.

The VICE PRESIDENT. The question is on agreeing to the resolution.

The resolution was agreed to.

THE SENATE MANUAL (S. DOC. NO. 938).

The VICE PRESIDENT. The Chair lays before the Senate another resolution coming over from a preceding day, which will be stated.

The Secretary read the resolution (S. Res. 535) introduced by Mr. OVERMAN on the 4th instant, as follows:

Resolved, That the Committee on Rules be instructed to prepare a new edition of the Senate Manual, and that there be printed 4,000 copies of the same for the use of the committee, of which 250 copies shall be bound in full morocco and tagged as to contents.

Mr. GORE. Mr. President——

The VICE PRESIDENT. The Senator from Oklahoma.

Mr. GORE. Would the Senator from North Carolina object to an amendment to the resolution providing for the publication of a vest-pocket edition of the rules in convenient form?

Mr. OVERMAN. If it is the desire of the Senate, that can be done. The Constitution has been prepared and is ready to print. We find about 400 errors in this book. The seventeenth amendment is not in it, and some Senators—notably the junior Senator from Illinois [Mr. SHERMAN] and the junior Senator from New Hampshire [Mr. HOLLIS]—have never been included in it. It is now brought down to date, and we have the Constitution; and it will be very little trouble, if the Senator desires it, to print a vest-pocket edition of the Constitution, with the citations.

Mr. GORE. And the rules of the Senate? I move that as an amendment.

Mr. OVERMAN. Does the Senator mean the Constitution and the rules of the Senate in a vest-pocket edition?

Mr. GORE. Yes, sir. It will be a very great convenience.

Mr. WILLIAMS. We would have to have it printed on India paper, then.

The VICE PRESIDENT. The Chair is unable to state the amendment.

Mr. GORE. I move that the pending resolution be amended by adding:

Provided, That the Committee on Rules is further directed to prepare and print a vest-pocket edition of the rules of the Senate and the Constitution of the United States.

The VICE PRESIDENT. How many copies?

Mr. GORE. I should say a thousand copies.

Mr. OVERMAN. Mr. President, the House of Representatives has been printing vest-pocket editions of the platforms, and so forth, and has been sending them to the Senate. I do not know whether or not we ought to return the compliment by sending copies of this edition to the Members of the House. If that be so, it would take more than 250 copies.

Mr. GORE. I would suggest a thousand copies. A thousand would cost very little more than 250.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was rejected.

Mr. BRYAN. Mr. President——

The VICE PRESIDENT. The Senator from Florida.

Mr. BRYAN. I should like to inquire of the chairman of the committee, if it could be done without much trouble, if it would not be well to have declared on the margin of the rules the date upon which each rule was adopted by the Senate?

Mr. OVERMAN. It would be very little trouble, I think, Mr. President.

Mr. BRYAN. It would not require any amendment to the resolution to bring that about.

Mr. OVERMAN. Not at all; just the suggestion from the Senator will be sufficient.

Mr. BRYAN. I make that suggestion to the Senator, because in the construction of a number of the rules very much depends upon when the rule was adopted. For example, the second paragraph of Rule XVI provides that amendments to general appropriation bills moved by members of a standing committee, and so forth, shall be referred to the Committee on Appropriations. It likewise requires amendments proposing new items of appropriation to river and harbor bills to be referred to the Committee on Commerce and amendments to bills establishing post roads or proposing new post roads to the Committee on Post Offices and Post Roads. Now, it is very possible that at the time this paragraph was adopted those were the only committees outside of the Committee on Appropriations that considered appropriation bills at all. Since then a number of other committees have been empowered to consider appropriation bills; and the question came up and the Vice President was compelled to rule upon it as to whether an amendment to an appropriation bill—for example, where the Committee on Naval Affairs was concerned; I do not remember the committee involved—should go to the Committee on Appropriations or to the committee having charge of the particular appropriation bill. My recollection is that the Chair ruled, and I think correctly, that in all probability this paragraph was amended when there were no other committees except those mentioned in the paragraph that considered appropriation bills, aside from the regular Committee on Appropriations.

If we could have printed in the margin the dates upon which the rules were adopted, it seems to me it would be of great value to every Senator, and it would be very little trouble. The policy followed out in the annotation of compilations of statutes of the States or of the Revised Statutes of the United States could be very easily adopted. I hope the committee will see that that is done, now that we are to have a new edition of the manual.

Mr. OVERMAN. I think it is a very wise suggestion, and I will order it done.

Mr. CLARK of Wyoming. Mr. President——

The VICE PRESIDENT. The Senator from Wyoming.

Mr. CLARK of Wyoming. I wish to ask the Senator from North Carolina whether or not he contemplates publishing in this edition the names of Senators elect?

Mr. OVERMAN. That is the purpose of it. There are 17 Senators whose names will have to appear here. Some of them are Senators who are already in the Senate; one, the junior Senator from Illinois [Mr. SHERMAN], who was here, I think, last time, but whose name was left out by mistake. That was the purpose.

I want to say that there has been great demand for this book, an unusual demand. Senator Crane introduced an amendment on the 3d day of March two years ago, and it became my duty to look into it. There was the same number of copies printed then, and there are just 10 copies left—only 10—and there is a demand right now for the book. Only yesterday a Member of the House came over and asked for one, so they will soon be exhausted. There are just 10 copies left, and we want to get out the new edition as soon as possible, and we want each new Senator furnished with a copy with his name on it. They are entitled to that.

Mr. BRYAN. Mr. President——

The VICE PRESIDENT. The Senator from Florida.

Mr. BRYAN. There is an additional reason, it seems to me, and a more important reason, for the publication of another edition of the rules, because several amendments have been adopted since this edition was published, and unless Senators happen to remember what those amendments are they can not know what their rights are under the rules and can not know what the rules are. The Vice President has gone to the trouble of having pasted in his copy of the rules those that have been adopted since 1913, but they are not available to the Senate generally.

Mr. OVERMAN. I think it is more important to print it now than ever before. I think there have been more amendments to the rules than ever before. Here is the fifteenth amendment,

and there is no decision relating to the Constitution brought down since volume 225—10 volumes of the reports. Take "due process of law"; there have been many decisions under that head since that time; and, of course, if the Senators want the Constitution, they want it annotated to date.

Mr. WARREN. Mr. President——

The VICE PRESIDENT. The Senator from Wyoming.

Mr. WARREN. I entirely agree with the Senator from North Carolina. The resolution ought to pass, and the printing ought to be done, and the book issued at the earliest possible date. If Senators have any copies to spare, I presume there will be calls enough for them. I know in my own case calls for copies from members of legislatures of the States and others interested in parliamentary matters take up all the extra copies I have, and I often have to ask my colleagues for extra copies.

I hope the resolution will pass.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. The Senator from Colorado.

Mr. THOMAS. These rules are printed in the Manual, a copy of which every Senator has. For my part, I do not see any necessity for going to the extra expense of printing them in a different form.

Mr. CLARK of Wyoming. It is not a different form.

Mr. OVERMAN. No; it is not a different form.

Mr. THOMAS. It is practically in a different form; that is, the rules are printed and bound separately.

Mr. WARREN. Oh, no, Mr. President. It is proposed to reprint them in the same manner.

Mr. OVERMAN. Yes.

Mr. BRYAN. The amendment offered by the Senator from Oklahoma [Mr. GORE] was defeated.

Mr. THOMAS. Defeated yesterday?

Mr. BRYAN. No; just now.

Mr. THOMAS. I was out of the Chamber.

The VICE PRESIDENT. The question is on agreeing to the resolution.

The resolution was agreed to.

SHIPS OF BELLIGERENT NATIONS.

Mr. BURTON. Mr. President——

The VICE PRESIDENT. The Senator from Ohio.

Mr. BURTON. There was another resolution (S. Res. 527) calling for information which I introduced, directed to the Secretary of the Treasury. I think that ought to come up at the same time with the other resolution.

The VICE PRESIDENT. Under the rules of the Senate the resolution to which the Senator refers went to the calendar, the morning hour having expired while the resolution was being considered. It can be taken from the calendar only on motion or by unanimous consent.

Mr. BURTON. I ask unanimous consent that it be considered.

The VICE PRESIDENT. The Senator from Ohio asks unanimous consent for the present consideration of the resolution mentioned by him.

Mr. KERN. Mr. President——

The VICE PRESIDENT. The Senator from Indiana.

Mr. KERN. The Senator from Missouri [Mr. STONE] is necessarily absent from the Chamber, and I think I shall have to object in his absence. I understand that he objects to its consideration.

Mr. BURTON. Do I understand that there is objection because of the absence of the Senator from Missouri?

Mr. KERN. Yes.

The VICE PRESIDENT. Objection is made. Morning business is closed.

THE MERCHANT MARINE.

Mr. HARDWICK. Mr. President——

The VICE PRESIDENT. The Senator from Georgia.

Mr. HARDWICK. Mr. President, on yesterday, before I suspended my remarks, I had referred to the fact that at the first conference of Democratic Senators during the present session of Congress there was a general agreement that the policy of Democratic Senators during this session should be, first, to pass the necessary supply bills, and then, after that work was accomplished, if time remained, to devote it to the legislative program suggested by the President.

Because I made that suggestion a statement has been made in the public press to the effect that some caucus secret had been disclosed. Unless my memory is very much at fault, the reverse is true. Following the practice of the conference, at its adjournment the Senator from Indiana [Mr. KERN], who presided at that conference, gave a brief statement to the press stating what I have already stated on the floor of the Senate as the action of the conference.

I refer again to that action by the Democratic conference for this reason: To indicate to the Senate what the deliberate and unanimous judgment of Democratic Senators who were experienced in legislation and acquainted with the rules of this body was as to what it was possible to accomplish during this session of the Congress, and how, uninfluenced from any other quarter or by anybody else, the position they then took was, in my judgment, the sound position, the one that the country expects of us—that we should first of all and certainly pass the great supply bills that are necessary to run this Government, and then, after that necessary work was done, should go home and give the people some time to digest the great constructive legislation that we have been passing since the Democratic Party came into power.

I believed that such a course was for the best interests of the Democratic Party and of the country alike; and at that time, unless I am sadly in error in my memory, not a single Democratic Member in this Chamber raised his voice in opposition to that idea.

Mr. President, reference has been made by the Senator from Missouri [Mr. STONE] to the caucus—you will observe I no longer say "conference"—resolution adopted on the 15th day of December, 1903, by the gentlemen who were then Democratic Senators from the various States of the Union. I want to read it again so that this body may catch the exact and accurate import of that resolution. It reads:

Resolved, That hereafter all members of the Senate Democratic caucus shall be bound to vote in accordance with its decisions made by a two-thirds vote of all its members on all questions except those involving a construction of the Constitution, or upon which a Senator has made pledges to his constituents, or received instructions from the legislature of the State he represents.

This resolution, of course, was adopted before the constitutional amendment relating to the manner and mode of electing Senators had been agreed to, hence the last clause.

Mr. President, it will be observed that there are at least two classes of cases in which express provision is made that no Democratic Senator shall be bound, even by the vote of a caucus, when two-thirds of the members of his party assent thereto: First, upon all questions relating to the Constitution. Why? Because we are patriots, I hope, before we are partisians; and for the further reason that every Member of this body has sworn to support and defend the Constitution of the United States, and no man can be constrained to violate his oath of office.

In reference to the pending bill, there are Senators on this side, myself included, who have at least grave doubts as to the constitutionality of this measure. I do not profess positive conviction, because I have not yet fully matured my convictions on this subject; but I do express the gravest doubt as to the constitutional power of the Government of the United States to enact this legislation. Not long ago, on this floor, during the progress of this debate, I witnessed a spectacle and heard a colloquy that was amazing to me. Some Senator—I do not wish to call names now—sitting on the other side of the Chamber asked one of the distinguished Senators in charge of this bill, a Senator for whom I have the highest personal regard, and who has had long and distinguished service in this body, this question: "Upon what constitutional power do you rest this legislation?" The reply was made from the Senator on this side—the Democratic side, forsooth, of this Chamber—"The general-welfare clause of the Constitution."

Then the rejoinder came with crushing force, and it was deserved, that the Senator was the first Democrat who had ever lived to get to the Senate of the United States who gave such an answer like that to a question like that. The rejoinder was, "Well, if we can enact one bill because we believe or contend that it is for the general welfare of the people of the United States, we can enact all bills that we believe to be for the general welfare of the people of the United States," and what then becomes of the ancient Democratic, yea, the ancient American doctrine, that this is a Government of delegated powers, and that this Federal Government of ours may not exercise any power save that which is expressly conferred upon it or may be necessarily implied from the express powers?

So to me at least, young as I am in years, although somewhat old-fashioned, I admit, in my Democratic beliefs, the rejoinder upon the other side of this Chamber was not only crushing but complete, and I do not believe that in the future we are likely to hear any Senator of the United States, on this side of the Chamber at least, say that he rests legislation on the general-welfare clause of the Constitution. Certainly I could never rest my vote for any legislation on the general-welfare clause.

What other power, then, of the Constitution can be invoked as the basis of this legislation? Has not the Government the power to construct and maintain a Navy? Ah, Senators, that is

true, but as this bill is worded, when we consider its history, when we consider the current events that are transpiring, when we consider the arguments that are made for it, when we consider the language in which it is phrased, when we consider the provisions of the measure itself, it is impossible to deny that that contention is little more than a subterfuge. There are a great many very able writers on this question who contend, and contend with some degree of force, according to the way I look at it, that in this age of specialization, when vessels, as well as other things, are specialized, the type of ship best adapted for auxiliary purposes in the Navy is not the type of ship that you need for commercial purposes; and the contention is not disguised, yea, it is vociferously urged on this floor, that what we really want in respect to this matter is ships for commercial purposes.

Mr. SUTHERLAND. That is what the bill says.

Mr. HARDWICK. The bill says that, as my friend from Utah suggests.

Now, one other thought. If this bill is to provide ships for the real purpose of giving us an auxiliary for the American Navy, and that is not a mere subterfuge, a mere incident, why is that in no draft of the bill? During the many different revelations that we have had on this great question nobody has proposed that the Secretary of the Navy or anyone representing that department of the Government shall have a voice in the matter or representation on this board, with a view to determining that ships of a character suitable for naval purposes shall be either purchased or built under the operation of this measure.

Can the pending bill rest on the power to regulate interstate and foreign commerce? I not only doubt that proposition, but I flatly deny it. The power to regulate either interstate or foreign commerce does not include in it the power to engage in such commerce. I do not care to argue that proposition further than to state it. It seems to me like a construction that contends because the Constitution of the United States authorizes the Congress of the United States to regulate commerce between the several States and with Indian tribes and among foreign nations, therefore it authorizes the Government of the United States to go into the business on its own hook and for itself in those kinds of commerce, is far-fetched and untenable.

If that be sound, then I ask my Democratic friends what becomes of your doctrine of a government of limited powers, of a government of constitutional limitations? The commerce clause of the Constitution already is the vehicle of almost every encroachment of Federal power upon the reserved rights of the States of this great Republic, and if you are going to give it that construction both as to the interstate-commerce clause and the foreign-commerce clause you had just as well wipe out your State lines and abandon your dual system of government and forswear all allegiance to the principles of local self-government that you have prated about for generations.

Mr. President, there is another kind and character of cases in which the caucus resolution itself expressly provides for exemption from its operation. Senators who can bring themselves within its terms are bound on all questions except those involving a construction of the Constitution or upon which a Senator has made pledges to his constituents.

Speaking for myself alone, I fling it back into the very teeth of the Senator from Missouri [Mr. STONE] that his denunciation of my conduct is as unjust and unjustifiable a proceeding as was ever heard upon this floor as between two Senators who belong to the same party, or even to different parties, for that matter. In the campaign that I made in the State of Georgia for the Democratic nomination for the Senate, which finally, of course, resulted in my election to this body, I pledged to the people of Georgia in almost every one of about 200 speeches which I made in that great Commonwealth—I stated to them rather, because I did not put it in the form of a pledge—my unalterable opposition to any form, kind, shape, or fashion of Government ownership of transportation facilities.

It is true this shipping bill was not mentioned because, as far as I know, it was not pending then. It certainly was not being generally discussed then. Nobody in Georgia at least was considering it. I got into that position because one of the distinguished and able gentlemen who were my competitors for that nomination insisted that I occupied a reactionary position, because I had been unwilling to agree to an extension of the weight limit and of the distance zone of the Parcel Post System. I met that attack by stating frankly that I had been opposed even to going as far as we had gone, that I would not under any circumstances go one inch farther in that direction, because if we were to go into the business of transporting freight for hire it meant necessarily and inevitably the Government ownership and operation of transportation facilities which must carry that freight. To that form of government activity I avowed in almost every county of my beloved Commonwealth my unalterable opposition.

Now, I appeal to my colleagues who have been inclined to criticize my conduct, while I am new in the service here, I can accept no man's judgment upon what my position shall be, but I want them to consider the position in which I find myself. I had rather be a Senator of the United States from the great State of Georgia for three weeks, my own man, and voting my own convictions, than to be here for three decades somebody else's man and voicing somebody else's convictions.

What am I to do? What ought I to have done? Could I tell the people of Georgia in the very campaign that resulted in my election that I was opposed to this form of governmental activity and then embrace it before the echoes of the campaign have died away? I can not. I will not. No 38 men, no 38,000,000 men can make me do it; and if I understand the genius of democratic institutions and the rules of the Democratic Party in this House and in the other House, too, there is no rule of any caucus that attempts to do it.

Mr. President, it is also true, for the purpose of enabling any gentleman who wants to criticize me here or elsewhere to have his full and fair oportunity to do so. I say now in that same campaign in Georgia I did proclaim in a general way my devotion to the great Democrat who sits in the White House at present. And let me pause right here long enough to say that while I differ from him on this question honestly and conscientiously, because I am bound to do it as a matter of conscience unless I stultify my own mentality, yet I regard him as the greatest Democrat who has ever lived in this land since the days of Thomas Jefferson. He is not perfect; he is not infallible. I do not think Jefferson was that; no mortal man has ever been. I simply can not agree with him about this question, because my judgment, my mind, and my conscience do not lead me in the same way that this bill leads.

In a general way the people of Georgia understood that I hoped to have the privilege and pleasure of supporting that great Democrat in this administration. So I shall, but not upon a matter about which my express and explicit declaration is expressly and explicitly to the contrary.

Furthermore, I took occasion in that contest—and then I will pass from these localisms; they can not entertain the Senate, and they weary me; I simply do it in order that I may state my own case as briefly as may be—I took occasion in that campaign to say, while expressing my admiration for this great Democrat, of the great work he had helped us to do here, that on certain questions I had already disagreed with President Wilson, and one question particularly that I proposed never to allow a certain thing he was suspected of wanting to do to be done in this Chamber, unless the rules of the Senate were changed or I was carried from this floor feet foremost first. So any fair construction of friend or foe in my own State or elsewhere can not mean that I was pledged to slavish agreement with the President of the United States or with anybody else. I would not willingly serve here a single day on such degrading terms.

Now, Mr. President, passing on to certain other general matters connected with this matter, there are one or two more exceptions from the operations of this caucus rule that, while they are not expressed, are, in my judgment, necessarily and unavoidably implied. First of all, I do not think that any one of my Democratic brethren would contend, and certainly if they did so contend I know that no considerable body of men anywhere in this Republic would sustain them in that contention, that the caucus can or would undertake to bind men in matters of conscience, to bind men to do things that they themselves honestly believed were wrong. I do not think it has ever undertaken to do that, and I do not believe any member of it would contend that it possessed such an authority.

Furthermore, I lay down the proposition as sound for my own party and sound for any party, and as sound for the Republic and as absolutely necessary for the independence and dignity and power of this great body, that there is one other exception to this rule that all parties must observe unless they want to get into trouble just like the present one. And what is that? By mere caucus dictum, by mere caucus action, no party ought to attempt to make a matter that is not declared party policy or principle a party matter. Whenever it is undertaken, woe for that party that makes the effort to do it, unless its virility is gone, unless the fires of independence have died out of the heart of its sons.

And yet that very course has been adopted here in respect to this matter. Pardon me in this connection if I venture to bring to my support on that great question the recent conduct and the recent words of the distinguished President of the United

States. Only a day or so ago he found occasion to disagree with more than two-thirds of his associates in this body and with almost two-thirds of his Democratic associates at the other end of the Capitol. It was about a matter that there was no Democratic platform declaration—upon the literacy test of the immigration bill. President Wilson used this language:

If the people of this country have made up their minds to limit the number of immigrants by arbitrary tests and so reverse the policy of all the generations of Americans that have gone before them, it is their right to do so. I am their servant and have no license to stand in their way. But I do not believe that they have. I respectfully submit that no one can quote their mandate to that effect. Has any political party ever avowed a policy of restriction in this fundamental matter, gone to the country on it, and been commissioned to control its legislation? Does this bill rest upon the conscious and universal assent and desire of the American people? I doubt it. It is because I doubt it that I make bold to dissent from it.

Gentlemen, I am on the other side of that question from the President of the United States, and, by the way, I so stated in my campaign, and yet, while I should willingly have voted to have overriden that veto if I had had the opportunity, I have not in my heart or head the slightest criticism for the manly way in which the President has exercised his undoubted right and has discharged his duty as he sees it.

But it is to be observed in this connection, first, that the President of the United States takes to himself the right to differ from a vast majority of his party associates and colleagues in the two Houses of Congress upon a matter, because it is not a matter of declared party policy or principle.

Second. That the President of the United States exercises an undoubted right—and his bold exercise of it is one of the things that makes him a great man—and exercises his own mental independence to dissent from his colleagues on this immigration bill. All right. But I want to inquire of the American people and of the American Senate, Has the day yet arrived when a Senator of the United States has less right to independence about legislation that he must vote upon than the President has about vetoing it? Must a Senator be constrained on a matter that is not a matter of declared party policy and principle when the President refuses to be so constrained? Must the "teamwork" be all on one side, or is the "teamwork" to be reciprocal?

Senators, I do not believe that the President of the United States has any desire to be autocratic. I could not have honestly and truthfully said of him what I said just now, that I regard him as the greatest Democrat since Thomas Jefferson, if I thought that or if I believed that. In the past I have had occasion to differ from him vitally on important questions. Never yet have I seen him either intolerant or unjust. Surely, Senators, we have not a Democratic President in the White House to-day who claims to exercise for himself rights that he undertakes or that his friends undertake to deny to Senators of the United States who belong to his own party.

This shipping bill is not a matter of declared party precedent or policy according to the tenets of Democratic faith, and I believe I can demonstrate that. It contradicts every declaration of Democratic faith on the subject in many years. If so, I wish to ask what 40 men in this body or in all this American Republic who are for it, or 40,000, for that matter, can bind Democrats to vote for it? If we had a solemn conference or a caucus—I do not care which—over the tariff question, and some Democratic Senator formally and eloquently presented a resolution that the Committee on Finance of the Senate be instructed to construct a tariff bill along protective-tariff lines it would not be binding on me—not for one-half a second. I will suggest that. You can not bind me to do that sort of thing. Of course it would not be done, but I am illustrating and taking an extreme case to illustrate with.

I want, first, to read from the national platform of the Democratic Party of 1880. We made this declaration on the shipping question then:

Free ships and a living chance for American commerce on the seas and on the land.

Our record, then declared and published to the world, was for free ships; the removal of tariff duties so that ships might be built on American soil by American builders as cheaply as they could be built on foreign soil by foreign builders.

Again, in 1884 the Democratic Party made this declaration; it is more of an oration at that time, it happens, in regard to the matter, but I will read it, because it sounds good to me:

Under a long period of Democratic rule and policy our merchant marine was fast overtaking and on the point of outstripping that of Great Britain. Under 20 years of Republican rule and policy our commerce has been left to British bottoms, and the American flag has almost been swept off the high seas. Instead of the Republican Party's British policy, we demand for the people of the United States an American policy. Under Democratic rule and policy our merchants and sailors, flying the Stars and Stripes in every port, successfully searched out a market for the varied products of American industry; under a quarter of a century of Republican rule and policy—despite our manifest advantage over all other nations in high-paid labor, favorable climate, and teeming soils; despite freedom of trade among all these United States; despite their population by the foremost races of men, and an annual immigration of the young, thrifty, and adventurous of all nations; despite our freedom here from the inherited burdens of life and industry in the Old World monarchies, their costly war navies, their vast tax-consuming, nonproducing standing armies; despite 20 years of peace—that Republican rule and policy have managed to surrender to Great Britain, along with our commerce, the control of the markets of the world. Instead of the Republican Party's British policy, we demand, in behalf of the American Democracy, an American policy. Instead of the Republican Party's discredited scheme and false pretense of friendship for American labor, expressed by imposing taxes, we demand in behalf of the Democracy freedom for American labor, by reducing taxes, to the end that these United States may compete with unhindered powers for the primacy among nations in all the arts of peace and fruits of liberty.

So your party declaration went in the year of grace 1884, when we first elected Grover Cleveland, the first Democratic President after the Civil War. In 1888, in 1892, in 1896, and in 1900 there seemed to have been no declarations of any party policy or principle in regard to this matter; but beginning with the year 1904, when Judge Parker, of New York, was our candidate for President, we find this subject again recurring in Democratic platforms. I read next, Mr. President, from the Democratic platform of the year 1904. In that year we said this:

We favor the upbuilding of a merchant marine without new or additional burdens upon the people and without bounties from the Public Treasury.

In 1908 we repeated that language, except that we said "we believe in" instead of saying "we favor."

In 1912—the last campaign, the one which resulted in President Wilson's election—we used this language:

We believe in fostering, by constitutional regulation—

Were those words put there for nothing? It seems to me as though in this present moment and in its full light they have a significant and powerful meaning.

MERCHANT MARINE.

We believe in fostering, by constitutional regulation of commerce, the growth of a merchant marine, which shall develop and strengthen the commercial ties which bind us to our sister Republics of the south, but without imposing additional burdens upon the people and without bounties or subsidies from the Public Treasury.

Ah, Senators, I told you just now that, as I regarded my own circumstances, I was pledged specifically to the people of Georgia against Government ownership of almost every kind. I tell you now that, in my honest judgment, taking this platform as it is written and giving it a thorough and just construction, every Democratic Senator who has been elected since its adoption or who concurred in its sentiments in the campaign in which it was promulgated is likewise bound not to support any proposition to build an American merchant marine by bounties or out of the Public Treasury. And yet the pending bill proposes to build these ships entirely out of the Public Treasury and at the expense of the taxpayers. And yet some of our colleagues say that we who favor recommittal are recreant to Democratic faith because we do not take their judgment in this matter, which is either not a declared matter of party principle or policy, or, so far as we can fairly and reasonably judge from what has been declared, is in the teeth of every platform that the national Democracy of this great Republic has ever written. Instead of being the "new freedom" it is the "new departure," and for one I am unwilling to take it.

Senators, in the beginning—and I have enough faith and confidence in the President to believe it is so even yet—the President occupied a position on this particular measure that was not incompatible with the ancient Democratic faith nor with the declared principles and policies of our party on this great question. In the beginning President Wilson insisted—and, so far as I now know or have a right to say, he still insists, in spite of the action of this body or of any Democratic conference of this body—that this was to be a temporary measure. I can prove that to you not only from the address that he made to the Congress of the United States when Congress assembled in December last, but also from the recent speech that he made in the city of Indianapolis on the 8th day of last January.

Referring to this bill, which was then pending in the House of Representatives, not yet incubated in this august body, the President of the United States used this language on the 8th day of December last, when he addressed the two Houses of Congress in joint session assembled:

Hence the pending shipping bill, discussed at the last session but as yet—

And I emphasize the words "as yet"—

passed by neither House. In my judgment such legislation is imperatively needed and can not wisely be postponed. The Government must open these gates of trade, and open them wide.

Senators, if you will pardon me an aside for just a moment, the "gates of trade" to which the President referred on the

8th of December were the "gates of trade" between this country and South America. Now, it seems that for political reasons it is contended in this body that the "gates of trade" which it is desired to open are those between this country and Europe, in order to ship our cotton and grain and products of that kind, so as to put the impelling force of the people who think they will get something out of it behind this measure.

The Government must open these gates of trade, and open them wide; open them before it is altogether profitable to open them, or altogether reasonable to ask private capital to open them at a venture. It is not a question of the Government monopolizing the field. It should take action to make it certain that transportation at reasonable rates will be promptly provided, even where the carriage is not at first profitable—

Now, mark this language, Senators, particularly—

and then, when the carriage has become sufficiently profitable to attract and engage private capital, and engage it in abundance, the Government ought to withdraw.

Showing that the great President of the United States himself recognized the soundness of the Democratic position I have taken to-day on this floor and that has been enunciated in many national declarations of our party, and was urging this as a temporary war measure to meet an abnormal situation for a brief period of time until normal conditions should return.

Not only that, but in his speech at Indianapolis, delivered on the 8th day of January, the anniversary of Jackson's victory at New Orleans, in discussing the shipping bill, the President of the United States used these words to his audience:

Do you know, gentlemen, that the ocean freight rates have gone up in some instances to ten times their ordinary figure, and that the farmers of the United States—those who raise grain and those who raise cotton, these things that are absolutely necessary to the world as well as to ourselves—can not get any profit out of the great prices that they are willing to pay for these things on the other side of the sea because the whole profit is eaten up by the extortionate charges for ocean carriage? In the midst of this the Democrats propose a temporary measure of relief in a shipping bill.

Senators, I have the shipping bill before me, the last substitute offered on this floor by the distinguished and able Senator from Florida [Mr. FLETCHER], and I defy any Senator in charge of this bill, or any other Senator on this floor—and I gladly invite interruption on this point—to show me anything in it which makes this a temporary measure by its terms as written. On the contrary, I want to read you some provisions to indicate that, so far as this bill is concerned, it is a permanent departure that we are engaged in if we vote for this bill in its present form and shape. I read now from the last substitute presented by the Senator from Florida:

SEC. 7. That, with the approval of the Congress, such shipping board may at any time sell the stock of such corporation owned by the United States.

In other words, until Congress passes a law repealing this measure, it is to remain in force forever and ever, and unless Congress at some future date does pass a law repealing this measure, then it is to be of full force and effect forever and a day. Again:

SEC. 10. That the shipping board shall make to Congress, at the beginning of each regular session, a report—

And so forth.

Ah, gentlemen, the President of the United States, recognizing the true and ancient Democratic faith, but insisting that a great emergency had arisen in which normal rules could not be applied and normal principles could not be strictly adhered to, asks you to give to the people of this country a temporary measure to meet a great war emergency. Yet you have given us a bill that, so far as the law itself is concerned, is permanent and perpetual in its operation and is in conflict with every tenet of Democratic faith from Jefferson's day to this. You did not do it in the way and put it on the ground that the President of the United States insisted upon—that it was a great war emergency measure to meet an abnormal condition, an enterprise which was to be abandoned as soon as the normality of the situation could be restored.

So I say that as this bill now stands it is not in accordance with what the President of the United States recommended and urged upon the Congress of the United States or upon the people of the United States; it is not in accordance with Democratic faith, and we can not justify it upon that basis; and men who feel as I do, and who are pledged as I am, and who entertain the convictions of a lifetime as I do on this subject, can not and will not do it; that is all.

Not only that, but to make it worse, piling Pelion upon Ossa in this matter, I propose to show now that this Democratic caucus that denounces seven of us for standing true to the faith of the fathers and standing even by the President himself upon the proposition of whether or not this measure shall be temporary, voted down a proposition calculated and intended to make this measure a temporary one. It was when I learned of that action, when I saw that purpose written into words and expressed in the bill, and heard that they had denied the proposition that this measure should be made temporary in its character and in its duration, I made up my mind that, as a Democrat who had been nurtured in the school of the ancient faith and as a man who had made the pledges and declarations to his constituency that I have made, I could not, without self-stultification, support the bill in such a form, permanent and epoch making instead of temporary.

I trust I will not be considered as having referred improperly to conference secrets or caucus secrets when I mention the fact that my own distinguished colleague from Georgia [Mr. SMITH] offered this proposition. It was overwhelmingly voted down. I got the information from the press, for, because I long had feared that this bill might evolve from that caucus in such a shape that I could not support it, I had not felt at liberty to continue to attend a conference whose work I might not be able to uphold. My colleague, however, offered this amendment, and if I may judge from the public press and from the references made to it here on the floor by Democratic Senators and one Republican Senator, it was overwhelmingly defeated.

I have a great many doubts on the practical and business aspects of this question, but I say frankly that they are not such doubts as would cause me, standing alone and by themselves, except on possibly one question, to venture to dissent at so early a period in my service from the judgment of a vast majority of my colleagues; and yet, when added to the other objections that I have, they may have to some extent influenced my judgment and position about this matter.

If I support this bill at all—and I should like to do it if the necessity for it is as great as is contended, and I should like to do it in order to live and dwell in harmony, so far as my convictions will permit me, with my party associates here and elsewhere—it has to be a temporary measure; and if it is a temporary measure, if that is what it means, if we are standing on President Wilson's message to the Congress on this subject or on his Indianapolis speech, either or both, let me ask, Is it a practical proposition as a temporary question?

If we pass this bill we have got either to build these ships or to buy them. If we buy them, unless we are going to pay extortionate prices, where will we get them except from the belligerent powers? I have no doubt that we could make fairly reasonable trades for these interned German vessels; but, for one, I must confess that I would never, under present circumstances, vote to give to any shipping board on this earth a power that might involve us in grave international troubles and that might lead us into the most ruinous war that we have ever had.

Sometimes I think, when I look at the desolate condition of the South, that about the only blessing we have left down there at the present moment is peace; and I am not going to surrender its safeguarding to any board on this earth, whether made up of Cabinet officers or otherwise. I am not going by my vote to give them the chance or the possibility to do something which I believe, in all probability, will lead us into international complications so grave as to precipitate a great war upon this country.

Well, if we are not going to buy the German ships, the interned vessels—and that seems to be pretty generally conceded now—where are we going to buy them? If the freight rates are as high as the proponents of this bill insist when they urge it, the proposition on which they started on December 8 of last year is unsound, because private capital is then reaping the richest harvest it has ever reaped since the beginning of time in this sort of venture; and if that be true, what man with a ship that can make its value on almost every voyage it takes will sell it unless he gets a value proportionate to the profits he would now make if he retains it? Therefore, unless the Government is to buy either a war or a gold brick, it will buy no ships.

How, then, are we to get them? Of course there is one other way to get them. We might build them. I made some investigation of that subject. The contentions vary as to the length of time it will take to build ships. I will take a 7,500-ton ship as a standard. The contentions as to how long it would take to build such a ship vary from 6 months, as suggested by the Senator from Florida [Mr. FLETCHER], to about 18 months, if my memory serves me correctly, as suggested by the Senator from Ohio [Mr. BURTON]. If the truth lies between these two extremes, as it usually does, and is somewhere or other about halfway between them, it would take probably about 12 months at least to construct these ships and get them ready to operate, and by that time, in all human probability, I believe—I hope, at least—this great war will be over, and then, before you can get this temporary expedient rigged up, the necessity for it will pass.

Mr. President, there have been various statements made, with more or less temper and acerbity, about the conduct and position of myself and other Senators who have ventured, have dared, on this question to stand squarely, four-footed on our own feet and do what we thought was right. We have been assailed in and out of this Chamber by men who ought to have more self-respect than to condemn us for venturing to have a soul that each of us calls his own. Ah, Senators, think on what slender ground this condemnation, this judgment of conduct, rests. All that we have done in this matter so far is to say that we think this bill ought to be recommitted. We have no agreement, no understanding, no sort of contract, express or implied, with anybody on this earth except to recommit this bill to the Committee on Commerce.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia yield to the Senator from Colorado?

Mr. HARDWICK. I do; yes.

Mr. THOMAS. If it will not interrupt the Senator, I should like to ask him a question.

Mr. HARDWICK. Not at all.

Mr. THOMAS. Does the Senator believe, if this bill is recommitted, that there is any probability whatever of its being reported back to the Senate during this session?

Mr. HARDWICK. I will answer the Senator frankly. Of course he understands that I answer absolutely and only for myself.

Mr. THOMAS. Certainly.

Mr. HARDWICK. I can answer for no one except myself. I can tell the Senator what I know, so far as I am concerned, and what I believe—that if this bill is recommitted to the Committee on Commerce and the Committee on Commerce amends it, as I believe it will amend it, so as to make the measure a temporary measure to meet a great and abnormal war situation, as the President recommended and urged, and so that it contains also a provision that no shipping board shall be allowed to purchase interned ships without the consent of the opposite belligerent powers, so that we may not involve this country in a war, then I believe the bill will be promptly re-reported and, as far as I am concerned, will be passed. With these amendments I could support it.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia further yield to the Senator from Colorado?

Mr. HARDWICK. I yield, of course.

Mr. THOMAS. The Senator says that if the bill is reported back and if certain amendments are made he believes it will be passed. He, of course, is more familiar than I with the purposes of those members of the Committee on Commerce with whom——

Mr. HARDWICK. Will the Senator pardon me for just a moment? Let me interrupt the Senator. I notice that the public press of New York contains a statement substantially like that from the junior Senator from New York [Mr. O'GORMAN], who entertains practically the views that I do on this question. I mention that merely as corroborating the answer I have given.

Mr. THOMAS. Can the Senator inform us, upon the assumption that the bill will be amended and reported back, why the Republican minority has taken this method of getting rid of the bill?

Mr. HARDWICK. I will ask the Senator, in answer to that question, to inform me why certain Republican Senators are reported to have entered into a compact with the majority in order to amend a so-called Democratic bill?

Mr. THOMAS. Mr. President, I will answer that question, so far as I can, by saying that I do not know that this is the situation.

Mr. HARDWICK. I will ask the Senator another question, then. Does the Senator know whether the Democratic caucus appointed a committee of Senators to see how many Republican votes they could secure for this bill by making concessions to Republicans?

Mr. THOMAS. Mr. President, I will be equally frank. A committee was appointed such as the Senator mentions——

Mr. HARDWICK. For that purpose?

Mr. THOMAS. To confer with Senators upon the other side whose objections to this bill were said not to be fundamental except as it is now framed, but who would be perfectly satisfied with a bill containing some modifications, and whose opinions have never been concealed, but have been openly expressed by one of them at least upon this floor, a situation made necessary by the present attitude of the Senator and his associates.

Mr. HARDWICK. Very well. The Senator and I understand each other very well, and I think the Senate and the country understand the situation. There are certain Democrats here who are not willing to vote for this bill without amendment and are not going to do it, and there is not enough power in the United States to make them do it.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia further yield to the Senator from Colorado?

Mr. HARDWICK. I do.

Mr. THOMAS. I do not doubt the word of the Senator, because he has stated his position very clearly and very positively several times—that he does not intend to and will not vote for the measure.

Mr. HARDWICK. As now framed, if the Senator will pardon me.

Mr. THOMAS. As now framed. It is that circumstance which has made it necessary to meet and appoint committees to see what, under the circumstances, can be done with other Senators, and which I hope will be done, for the purpose of making this bill effectual.

Mr. HARDWICK. Of course, Mr. President, I can understand full well why the Senator from Colorado feels that way. I have the highest public and private regard for the Senator, and yet, from his speech yesterday, I find myself as far away from him as the South Pole is from the North Pole. The Senator avowed that he was fast becoming a convert to this new idea of Government ownership; that he at first looked upon it with alarm, then with complacency, and was now about to embrace it.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia further yield to the Senator from Colorado?

Mr. HARDWICK. I do.

Mr. THOMAS. The Senator is always frank, and I have no doubt about the positiveness of his convictions. It is true that upon this and perhaps some other matters of public concern we are wide asunder. The fact is equally true over there.

Mr. HARDWICK. Yes, sir.

Mr. THOMAS. It simply shows that party organizations at present are held together by the force of party tradition. It simply means that public opinion and party organizations are in flux. I trust the time will soon come when the forces of political gravitation will bring about an alignment which sooner or later is inevitable, since divergence of opinion between the units of parties as they are now organized necessarily means difference, and difference means party dissension. These conditions will bring about a new alignment, and then of course these situations can be met and disposed of, as they should be, by men working in harmony who are now divided by party names.

Mr. HARDWICK. The observation of the Senator from Colorado but confirms the argument I made at an earlier stage of this address against the senseless and futile attempt to make a party question of a matter that is not a party question, and about which men in the same party entertain honest and deep-seated and fundamental differences of opinion.

Mr. THOMAS. Mr. President——

The VICE PRESIDENT. Does the Senator from Georgia further yield to the Senator from Colorado?

Mr. HARDWICK. I do.

Mr. THOMAS. If there is a single question of national importance upon which Republicans, so called, or Democrats, so called, are a unit, I do not know what it is. We are on this side of the Chamber because we call ourselves Democrats. Senators on the other side of the Chamber are there because they call themselves Republicans. I venture the assertion that there is not, and for the past 10 years has not been, a question of overshadowing public importance upon which the members of these two great organizations have been a unit upon either side of it.

Mr. HARDWICK. Mr. President, I want to submit now for the consideration of my distinguished friend from Colorado, and of certain other Senators on this side who have busied themselves about this matter, this question: Why are you so willing to trade, even on the contents of the measure itself, with Republicans rather than with your own associates, who are demanding no more of you than the President of the United States requested of us all?

Mr. THOMAS. Mr. President, without conceding the last remark to be correct, we are doing so because of the position which the Senator has announced so positively, that we can not under any circumstances longer agree upon our own side of the Chamber, and in his own case I meet the question by repeating it and ask whether it was not necessary for the Senator to make the arrangements they evidently have made with the other side because of his objections?

Mr. HARDWICK. I will answer that.

The VICE PRESIDENT. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The SECRETARY. A bill (S. 6856) to authorize the United States, acting through a shipping board, to subscribe to the capital stock of a corporation, to be organized under the laws of the United States or of a State thereof or of the District of Columbia, to purchase, construct, equip, maintain, and operate merchant vessels in the foreign trade of the United States, and for other purposes.

The VICE PRESIDENT. The Senator from Georgia will continue.

Mr. HARDWICK. Now, in the subsequent part of my remarks I wish to refer again to the difference between my friend from Colorado and myself. To the charge, certainly as far as I am concerned, that I have bolted the Democratic Party, I answer that it is untrue.

Mr. THOMAS. Mr. President, I have not made that charge.

Mr. HARDWICK. Not expressly. I am not alluding to the Senator from Colorado.

Mr. THOMAS. I should very greatly deplore the fact if it were true.

Mr. HARDWICK. The Senator knows it is not true. It is untrue. Under the express rules of the caucus itself, I have not been bound to support this measure from the beginning, but the charge that we did not advise Democrats on this side whom we knew were opposed to this motion to recommit of the fact that it was about to be made, I answer that it is manifestly foolish to expect sensible, practical men who want to adopt a motion to recommit or any other parliamentary motion in any legislative body to go to the enemies of the particular proposition they have in mind for support when they know in advance that they can not get it under any circumstances. The Senator knows, of course, full well, as all his associates do, that in the Democratic caucus we made repeated demands and repeated pleas for these things that we now ask publicly before the Senate and before the people of the United States.

Mr. LEE of Maryland. Mr. President——

The PRESIDING OFFICER (Mr. LEA of Tennessee in the chair). Does the Senator from Georgia yield to the Senator from Maryland?

Mr. HARDWICK. I yield to the Senator from Maryland.

Mr. LEE of Maryland. I was present at the Democratic caucus all the time the Senator was there, and I do not recall that the Senator made any repeated demands or repeated appeals or repeated arguments along the line he now presents.

Mr. HARDWICK. If the Senator from Maryland will do me the honor to read in the RECORD in the morning my exact language, he will see that I did not claim I did it myself. Being a young and modest member of the caucus and of the Senate, I left most of the talking to others. But I want to say this to the Senator: I stayed in the caucus until I became convinced that it was no longer a free conference, such as Democrats have been holding in this body for, lo, these many years, and that an attempt to gag and bind me was against my convictions. I discovered you were not going to follow the path your President and mine had pointed out to both of us, and that you were going to make this measure permanent instead of temporary, as he had urged. I stayed in caucus until I became convinced that if I should support the measure as the caucus proposed and framed it I would stultify my mentality in the matter and violate my pledges to my own constituency.

Mr. THOMAS. I wish to ask the Senator if he gave to his associates knowledge of the fact that he was going to leave the caucus?

Mr. HARDWICK. If the Senator will pardon me, I am just about to come to that very point. The Senator's interruption is timely. When I discovered what the situation was and what the result of this conference in all probability would be I conferred with my distinguished colleague from my own State, advising him of my conviction and of my views, and I requested him to inform the caucus—and I have been informed since that he informed the caucus—of my position and state that the measure as originally framed would not, unless amended, receive my support, owing to the pledges I had made to my own constituency.

Now, referring once more to the charge, disingenious and insincere, of secret dealing, of conspiracy, if you please, that the distinguished diplomatic and wise Senator from Missouri [Mr. STONE]—I am sorry he is not here—ventured to make on this floor against certain of his Democratic associates; if we conferred with certain Republican Members of this body to find out whether or not they intended to support this motion if made, we did so, as I said just now, without committing ourselves to the defeat of this bill in any form, without committing ourselves to vote for or against any amendment. If we conferred, we had a distinguished example. We had distinguished company. Before this time Senators in this Chamber and the Chief Executives of both parties have not hesitated to confer with Senators of the opposite party about various legislative matters. In this particular matter the Senate Democratic conference appointed a committee of three, if I may believe the public press, to confer with Republican Senators. A committee of three, consisting of the Senator from Virginia [Mr. MARTIN], the Senator from Florida [Mr. FLETCHER], and the Senator from North Carolina [Mr. SIMMONS], were appointed to confer. To confer with whom? To confer with their Democratic associates who had troubles about the bill in its present form, but might be able to support it if concessions were made to them? Not primarily, at least, but to confer with certain distinguished Senators on the other side of the aisle, to go to them with hands up and say, "Help us, Cassius, or we sink. What do you want? What do you demand? What is your price? We will let Republican Senators really write this bill rather than to concede to our own colleagues, who base their stand on Democratic principles and Democratic doctrine as old as the fathers of this Republic." You conferred with them. You did this because we, forsooth, did not like the way they acted about this matter, because we found Democratic principle and precedent set at naught. We were ignored, and they said, "We will go to the Republicans and let them write this bill."

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Colorado?

Mr. HARDWICK. I do, with pleasure.

Mr. THOMAS. I think it only fair that the Senator should state that the committee to which he has just referred was instructed first to confer with him and his associates.

Mr. HARDWICK. I thought it was the other way. I am glad the Senator has advised me to the contrary.

Mr. THOMAS. And we consented to an adjournment of 24 hours at the request of the President pro tempore of the Senate for that purpose, but our intended negotiations, as we feared, proved abortive.

Mr. HARDWICK. If it will not embarrass the Senator and he will not object, let me ask him this question: Were the same Senators who were instructed to confer with these Senators also instructed to confer with the Republicans?

Mr. THOMAS. Oh, yes, Mr. President. We apprehended, as the situation afterwards proved, that the attempt which the Senator says we should have made would prove, as it did prove, disappointing.

Mr. HARDWICK. It was the very reverse, with all deference to my friend.

Mr. THOMAS. I do not think I am mistaken. If I am, I stand corrected.

Mr. HARDWICK. I do not mean to question the fact, but I am simply stating what I heard. The very reverse, as I understand it, is the true situation. On the question of appointing the same committee at one and the same time to confer about the bill reaching this way and that way I will not characterize it. It was not very respectful nor appropriate.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield further to the Senator from Colorado?

Mr. HARDWICK. I do.

Mr. THOMAS. If the Senator and his associates had only let us know in advance that his idea of the ceremony to be observed would have been the appointment of two separate committees, then we would have done it in the caucus. If that is the objection which caused them to refuse to accede to our request, we will appoint a separate committee now.

Mr. HARDWICK. Oh, no. That is a mere matter of taste. De gustibus non est disputandum. There is nothing further to say about it.

But the proposition that we declined to consider anything I can not allow to go unchallenged. What we did do was this: We asked the committee to agree to the motion to recommit, and further we explained the views we had and the amendments we would like to have made. We discussed that with our associates with candor and with some fullness.

Mr. THOMAS. I think that is correct, Mr. President. There is no difference between us.

Mr. HARDWICK. All right. I am glad we are at last together on one point.

Mr. THOMAS. We are together on that proposition, but if the Senator will pardon me——

The PRESIDING OFFICER. Does the Senator from Georgia yield further?

Mr. HARDWICK. I do.

Mr. THOMAS. If they had informed the committee that they had committed themselves and were in honor bound to vote to recommit this bill, as we would know full well that that meant to settle it for all time, so far as this session was concerned, we necessarily would have had to accept it as a finality. I am here to say, Mr. President, that I believe if this bill is recommitted without positive and mandatory instructions to report it, it is "as dead as Cæsar" at this session of Congress.

Mr. HARDWICK. I want to say to the Senator when he makes that statement he takes a great deal upon himself.

Mr. THOMAS. Mr. President, it is my belief, and I will assume all the responsibility.

Mr. HARDWICK. It is an awful responsibility for a Member of this body to take about the conduct of his associates with which he is not informed.

Mr. THOMAS. I said that was the assumption made in consequence of negotiations ended, and also that it is my belief and my conviction that the recommittal of the bill means its death, in so far as this session is concerned.

Mr. HARDWICK. That any bill will pass at all at this session is a matter of great doubt under these rules and with vigorous and determined opposition to a measure of this kind. At this present session of Congress the Senator knows as well as I do that it is almost beyond our power to pass such a measure unless we were harmoniously united on a certain proposition, and even then it is doubtful.

But what I do say to the Senator, and what I do not want him to get wrong, is this, that it is possible that this bill might be amended so as to meet some of the most serious objections of Senators on this side so that we all might have a chance to agree on it and to see that a united Democratic, or practically a solid Democratic, support should be given to it.

Mr. President, I had intended, before I discovered how much time I was consuming, to make some few references to some of the gentle and diplomatic statements of my two friends, the distinguished Senators from Missouri. The junior Senator from Missouri [Mr. REED] is one of my warmest personal friends in this body. He is one of the gentlemen who made me welcome in it, and he has done all he could in a personal way to make my short stay in this body pleasant. So far as the junior Senator from Missouri, whom personally I like very much, undertook to read us a lecture about the "poor old Shipping Trust," of course he did not mean to do it; he was speaking upon the spur of the moment and in excitement when he intimated that this Shipping Trust had somebody by the throat. If the Senator meant to apply that to any one of his colleagues on this side, either he or the Senator in question would be unworthy of a seat here. I know the Senator from Missouri did not mean anything of the kind. It just shows to what extreme men can go when they get excited. And yet I have heard such suggestions as that thrown out on this floor on all sides in debate. They are simply disgusting. They are unworthy of Senators and unworthy of the Senate, and can not be made legitimately under the rules of this body.

Now, I will not say any more on that. It is beneath my notice, and I have not intended to hurt the Senator's feelings in saying that much. I say it is beneath my notice and beneath my dignity and worthy only of contempt. So far as I am concerned, I shall make no reply to such vile suggestions. Of course the Senator meant nothing personal by it, but I say this to the junior Senator from Missouri, his present rôle is both refreshing and unusual. With all the zeal of a recent convert he rushes to attack a position that he thinks the President now holds, and assails the position that the President assumes in public speech and public message. Oh, gentlemen, if I had not made these remarks too long and if good nature permitted me, I would be glad to read to the Senate and the country a few chapters from REED on Regularity.

Mr. REED. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Missouri?

Mr. HARDWICK. Certainly.

Mr. REED. I trust the gentleman will do so. If he can find where I have ever violated a Democratic platform, where I have ever broken a caucus regulation, where I ever have either gone into a caucus or stayed out of a caucus and refused to obey the will of the majority of my associates expressed in caucus, I shall be very glad to have him present the evidence.

Mr. HARDWICK. If I could do it, I would not.

Mr. REED. Mr. President, the distinguished Senator can not do it.

Mr. HARDWICK. Well, I might call attention to some things.

Mr. REED. Mr. President——

Mr. HARDWICK. I could call attention to some recent performances of the Senator. I do not know whether you made the banking and currency bill a party measure or not. Did you? They did in the other House?

Mr. REED. Mr. President, we took the banking and currency bill into caucus. I sat in caucus and I helped to frame it in caucus. I made a speech for it on the floor. I defended it from attack on the floor. I voted for it.

Mr. HARDWICK. What was the Senator trying to do when he was kicking up so much stir over here?

Mr. REED. I expect I was agitating a number of misinformed gentlemen who did not know what the committee was doing or what I was doing. We were trying to make the bill a good and workable bill.

Mr. HARDWICK. That is what we are trying to do with this one.

Mr. REED. No; the cases are not parallel.

Mr. HARDWICK. All right.

Mr. REED. That hole in the fence is not large enough even for the gentleman to squeeze through. If the Senator will allow me——

Mr. HARDWICK. Certainly, I will yield to the Senator as long as he likes.

Mr. REED. I am glad the Senator has brought up this matter. The banking and currency bill came from the House of Representatives and went to the Committee on Banking and Currency. Many grave questions came up in the committee which the committee discussed from time to time. One of the early questions was whether there should be hearings. In company with some others I insisted upon hearings. We continued the hearings for about two weeks, with the result that the chairman of the committee, who had himself introduced into the Senate an exact duplicate of the House bill, wrote and submitted some 234 amendments. Thereafter we continued our deliberations, various important amendments being made. Then came a division in the committee, which I think never ought to have occurred. In company with the Senator from New York [Mr. O'GORMAN] I joined the four Democrats who had seen fit to leave the committee; we joined them and sat with them and continued to amend the bill. Finally a caucus was called, and we carried the bill to the caucus of our associates. We debated it with them; we took party counsel upon it; and when the caucus had passed upon the bill, we came on the floor of the Senate and defended it.

Now, that is the fact, no matter what the fuss may have been. I say frankly to the Senator I do not blame him for laboring under a misunderstanding, because there was a good deal of wild talk at that time, but, so far as my part is concerned, if a man's party regularity can be demonstrated by his acts, my regularity and devotion to the party was demonstrated by my every act in regard to that bill. As is well known, I gave up many things that I thought were important, yielding to the judgment of my associates, and finally spoke and voted for the bill as the caucus had directed. Moreover, as one of the conferees of the Senate, I contended stubbornly to sustain in conference the mandates of the Democratic caucus.

Now, if the Senator knows of any other particular irregularity of mine, I would be glad to have him mention it.

Mr. HARDWICK. Well, I do not believe I will; I might.

Mr. REED. I should be glad to have the Senator try. He could do it if anybody could.

Mr. HARDWICK. As far as that is concerned, let me say to the Senator that to my mind consistency is one of the important virtues, and I would be the last man in the world to criticize him for some of his performances, even if they were untenable, as I thought they were. So I will not pursue the subject. I accept the statement the Senator makes about his own conduct. He knows better than anybody else in the world. I had an idea that he had been kicking up a good deal, and that the rôle of President's defender and champion of the party caucus was a new one for him. But I am new to the Senate, and I may not know.

Mr. REED. Will the Senator pardon a further interruption?

Mr. HARDWICK. Certainly.

Mr. REED. I am not posing as the President's defender. I have not undertaken that rôle. I have not been requested to assume it. I think the President is not likely to call on anyone to act as his mouthpiece or champion. This particular bill commended itself to my judgment, not in every respect but in its main features. I went into the party caucus. By going into the caucus, I in effect said to every other member of the caucus, "I meet with you; I shall insist upon my views; if I get them, I will be happy and you must abide the result. If, on the other hand, my views are not accepted and yours are, I shall likewise abide by the result." That has been my attitude.

I made a speech here the other day, as the Senator says, on the spur of the moment. If he will permit me just one word, I did not in that speech say the Senator from Georgia or any Senator was owned by the Shipping Trust. I meant nothing of the kind. I meant to say that the action they had taken seriously endangered if not, in fact, killed the shipping bill. I meant to say that the Shipping Trust had been opposing this bill, as it has been opposing nearly every other bill that has been introduced in Congress for many years which in any way trenches upon its supreme control of the shipping business of the seas. I said, and now say, that the votes which had then just been cast had made the trust very happy. I did not mean to say that the trust had reached, by improper influences, any Senator. Indeed I know some Senators who voted for the motion to refer the bill who were inspired by the loftiest, although the most mistaken, of motives. I know that; but unfortunately those lofty motives led them to take action which exactly coordinated with the desires of the Shipping Trust, and so I made a few remarks about the Shipping Trust.

As far as the personal honor, honesty, and integrity of the Senator from Georgia are concerned, no man has ever questioned it. I certainly would be the last to do so.

Mr. HARDWICK. I thank the Senator. Of course I knew he felt that way. I know further that if the Senator from Missouri had in his campaign made pledges to his constituency inconsistent with the support of this measure, in its pending form at least, he would not abate therefrom one jot or tittle. No party conference or caucus could require such a sacrifice of any Senator. It would be infamous if it sought to do so.

Mr. President, I have almost concluded the remarks that I wished to make. In the beginning of my remarks to-day I told the Senate and the country my high estimate of the present President of the United States. At a time when many Senators on this floor who now are almost sycophantic in their attitude were fighting him from one end of this Republic to the other and were asserting that he was unworthy of the Democratic nomination for the Presidency, I was at home campaigning my own State for him and doing my best there and elsewhere for his nomination as well as election. I did not then agree, and I did not thereby agree, to surrender my manhood to him, to surrender my judgment to him, to surrender my principles to him, and I should never have had the high respect for him I have if I thought he was a man to even desire such a sacrifice of any man.

Mr. President, I will say one thing, because it ought to be said, and it ought to be said in this presence, on this floor, and now, in my honest judgment. I do not know what has led the President into a position of appearing to coerce the Congress. I sometimes think the Members of both Houses of Congress have gone to him and pushed him into these things, have sought to unload their troubles on him, to unload their responsibilities on his broad and magnificent shoulders, until we have gotten into a situation, in my judgment, which is unfortunate for this country.

For one I believe in the coordination of powers. I believe in the legislative, executive, and judicial powers of this Government remaining independent, separate, and coordinate and coequal. For one I dare assert in this presence, here and now, that it will be a sad day for this Republic, a sad day for the Democratic Party, a sad day for whatever party establishes the practice or the doctrine that legislation is to be written by the executive departments of the Government and that this great Senate, so long the sheet anchor of American Government, in many respects surrenders its independence to any man, however great. God forbid that that day should come. I should feel recreant to the oath I took at that stand, I should feel unworthy of the imperial State whose commission I bear on this floor, if I did not stand in my manhood against any such thing as that.

The President of the United States in vetoing the immigration bill used this expression in withholding his approval, as I said a moment ago, from a measure on which almost two-thirds of his legislative colleagues in the Democratic Party dissent from him. He used these words:

> But candor and a sense of duty with regard to the responsibility so clearly imposed upon me by the Constitution in matters of legislation leave me no choice but to dissent.

The President is right, everlastingly right, although I disagree with him fundamentally on that particular question. If his judgment and his conscience do not approve a measure, if every Democrat in both Houses of Congress voted for it, he ought to veto it; but I say that same doctrine applies to a Senator of these United States and to a Member of the House of Representatives. They, too, have constitutional functions to perform; they, too, have sacred public duties to discharge. I say that any one of them would be false to the highest and best conception of American government if he did not stand for his own convictions, if he did not do what he believed to be right. I do not mean by that to say that we must not have party cooperation, and even party action, on subjects that are real party matters; but I do say that a man ought to stand by his conscience and his judgment as to what is right and wrong in legislation, and he ought to keep the pledges he has made, just as it is reported—and, of course, there is no doubt about it—that the President was keeping a pledge made in the campaign when he vetoed the immigration bill.

I read again from President Woodrow Wilson's speech at Indianapolis on Jackson Day, in which he himself describes his concept of his duties and responsibilities as to matters of this kind. He said:

> I am not an independent voter, but I hope I can claim to be an independent person.

Ah, Senators, I am not an independent voter, but I hope I can claim to be an independent Senator when it comes to these great fundamental questions on which I am pledged to my own people, and which I have a right not only in party forums but in that higher forum of conscience and of honor and of duty to assert my convictions. The President said:

> I am not an independent voter, but I hope I can claim to be an independent person; and I want to say this distinctly, I do not love any party any longer than it continues to serve the immediate and pressing needs of America. I have been bred in the Democratic Party, but I love America a great deal more than I love the Democratic Party.

A broad, independent, patriotic statement from a great American. I am not reading it to criticize him, but I am reading it to ask the Senate and the people of this country how seven Senators, who, following a profound conviction of public duty, have dared to be independent, have dared to voice their convictions for what is best, for what is right, and for what is necessary for the people of this country, can be criticized for exercising that same independence for which we glorify our great President.

Mr. VARDAMAN. Mr. President——

The PRESIDING OFFICER (Mr. LEA of Tennessee in the chair). The Senator from Mississippi.

Mr. VARDAMAN. Mr. President, the able argument just delivered by the distinguished junior Senator from Georgia [Mr. HARDWICK] leaves very little for me to say or rather makes it necessary for me to say but very little in defense of the position which I have taken on this bill, and for which I have been, along with the other six recalcitrants, very bitterly and cruelly criticized.

Mr. President, the Democratic Party is greater than any man, or self-selected set of men, however great they may be in their own conceit. The virtue of the Democratic Party is in the purity of its principles, and its strength lies in the consentient judgment, the moral qualities, and intellectual acquirements of its adherents. In the realm of reason there is no proscription and where pure democracy prevails shackles are unknown.

> "We must be free or die who speak the tongue
> That Shakespeare spake: the faith and morals hold
> Which Milton held."

The hour has struck, the time has arrived when calmness and serious thought, undisturbed by passion and uncolored by prejudice, should characterize the deliberations of this body. An angered brain is the storm center of indiscretion—the Pandora box of infinite evil. A wise economy of words in debate may probably serve to cement and unite the Democrats of this body in the service of the Nation. Let me commend to the Senate, and especially my brethren on this side, the wise words of an ancient Greek, whose heroic soul had felt the hot iron of adversity and experienced the trials and vicissitudes of a stormy public career:

> "Tossed on a sea of troubles, Soul, my Soul,
> Thyself do thou control;
> And to the weapons of advancing foes
> A stubborn breast oppose;
> Undaunted 'mid the hostile might
> Of squadrons burning for the fight,
> Thine be no boasting when the victor's crown
> Wins thee deserved renown;
> Thine no dejected sorrow, when defeat
> Would urge a base retreat:
> Rejoice in joyous things—nor overmuch
> Let grief thy bosom touch
> 'Midst evil, and still bear in mind
> How changeful are the ways of humankind."

Mr. President, we were regaled with a very remarkable fulmination in this Chamber from one of the Members of this body on Wednesday afternoon. I shall not emulate the example of

the distinguished senior Senator from Missouri in the manner of his oratory or the viciousness and egotism of the subject matter of his extraordinary discourse. His verbal evacuation is flavored with the bile of malice and smells to heaven with the odor of duplicity and the stifling fumes of injustice. His arrogant assumption of leadership of the Democratic Party in the United States Senate would be considered immodest and unbecoming—aye, unexpected—of one less gifted in the art of political tergiversation and sleight-of-hand performance in the rôle of statecraft. His fame for performing acrobatic feats and the harmonizing accomplishments of the chameleon, like the fame of Joshua of old, has been noised abroad throughout the land. I would not transgress the rules of this body or be guilty of the indecorum of which I would be guilty if I dared to reciprocate in kind the courtesies shown by the distinguished Senator in debate to the seven Senators who were the targets of his obloquy and biting criticism by relating all that rumor whispers—much of which may be true, but I trust not, of the peculiar antics cut in politics, in days gone by, by the learned and choleric senatorial scold from Missouri. Behold him as he appeared on that occasion in this Chamber. A past grand master in the rôle of mock heroics, with a countenance clouded with the gathering storm of affected righteous indignation, his lips pouting like the mouth of the blowfish emptying its belly of bad air, eyes streaked with the fury of the tempest raging in his outraged soul, he holds up to the scorn and contempt of the American people Senators whose only offense was refusal to yield to his imperious dictation—to crook the pregnant hinges of the knee that patronage might follow fawning—to violate their every sense of obligation to their constituents and repudiate every idea of loyalty to the Democratic Party, its platform of principles, and its sacred, time-honored traditions, to follow his lead.

Mr. President, in the name of all the dead gods of ancient Greece at once, upon what meat doth this great Senator feed that he hath suddenly grown so puffed up? Mr. President, the issue which confronts the Democratic Party and the Nation at this moment is an important one. The present is pregnant with much good or much harm to the Republic. It may be the turning point of time in the economic policy of this great Government; it may be the inauguration of a policy which may work for the good of all the people, for the preservation of our institutions, and for the general welfare of humanity. On the other hand, the result may be the contrary of what I have described and for which we all hope. I trust, however, the former may be its fate. I believe in Democratic principles. I believe in the Democratic polity of government. I believe that upon the right understanding and correct application of Democratic principles depends the life of the Republic. I am also profoundly of the opinion that Democratic ideas and principles can not be enacted into law without maintaining a compact, efficient, militant organization. As a matter of truth no great governmental scheme or principle of political economy was ever enacted into law but that had behind it the all-impelling force to that end, of a well organized and disciplined political faction. For that reason I have always believed in party primaries and conventions. I have always maintained that political platforms should be carefully framed and thoroughly considered, and when adopted by the people they should be carried out religiously in letter and spirit by the public servants of the people. They should be the political confession of faith for every man and woman who maintains allegiance to that organization. There is no obligation so binding upon me in the performance of my duties as a United States Senator as the platform promises enunciated at Baltimore upon which Gov. Woodrow Wilson ran and was elected President of these United States. That platform is the chart which shall guide me over the political seas during the next two years as it has been the chart to guide me in the two years just past. That platform shall be the polar star by which my political craft shall be steered. To that platform I owe allegiance and I shall not respect or recognize the right of any one man, or 36 men, behind closed doors, away from the searching eye of public scrutiny, under the direction, probably, of some extraneous influence, to do and utter things which many of them in their hearts may not believe or approve, to instruct me to violate that platform.

Now, let us consider this question for a moment. Let us see if there is anything in the Baltimore platform touching upon the question at issue. The Democratic platform of 1912 contains this plank:

"We believe in fostering, by constitutional regulation of commerce, the growth of a merchant marine, which shall develop and strengthen the commercial ties which bind us to our sister Republics of the south, but without imposing additional burdens upon the people and without bounties or subsidies from the Public Treasury."

Is there anything in this bill demanded by this plank of the platform? Are the ships proposed to be bought to be run at public expense? The President announced in the outset that the venture was to be of such a doubtful nature that private capital could not be expected to invest. "Big business" could not afford it, but the patient toiler who can not help himself may be taxed to supply the necessary funds. Is it proposed to take any money out of the Public Treasury for the purpose of carrying on this losing business? Is any additional burden to be put upon the aching stoop of the man who tills the soil? Is toll to be exacted of the man who delves into the bowels of the earth and takes out the coal that makes the steam that turns the wheels of commerce? The laboring men on the railroads, in the shops, and factories—are they expected to make good the losses of this business?

The farmers of Mississippi and the South were forced to sell their cotton last fall at less than one half of its value because of the conditions brought about by the war in Europe for which they were in no way responsible, and when we went to the Federal Government, when we implored the President, to help us pass the bill providing for lending the Government's credit that the farmers might be enabled to hold their cotton and wait for normal conditions to be restored before being forced to sell we were met with the statement that such a proposition was socialistic, populistic, and visionary. We were told that the head and not the heart must settle this problem. It was socialism to help the toiler; it was populism run mad to help protect the man whose labor clothes and feeds the world; but it is orthodox democracy, sound political economy, and the flowering of justice now to take the money contributed for the support of the Government by the suffering laborer and spend it to maintain a line of boats to carry the cotton to foreign markets for the speculator and the broker. Not content with permiting the farmer to be robbed of the products of his patient toil he must now be burdened with another debt in order that the great masters of finance, the promoters of "big business" shall enjoy larger profits. And I as the representative, the servant, of that toiler, commissioned by him and all classes of people in my State to do equal and exact justice to all and special favors to none in matters of legislation, am commanded by the secret caucus to vote to pile higher and higher still the burden under which he is now groaning.

Mr. President, the suggestion is monstrous. It outrages every idea of loyalty and sense of fidelity to a sacred trust. I believe a man can stay in Washington long enough to lose the common touch, to forget him who, bowed by the weight of taxation, leans upon his hoe and gazes upon the ground, the tragedy of injustice written upon his sad face and on his back the burden of the world. Rather than betray him in that way I would surrender my commission—my right to a seat in this Chamber—and go back to the quiet shades of private life.

I have no fear of the withering scorn of the self-constituted censor of the secret caucus, the petulent senior Senator from Missouri; his threat of political ostracism has no terrors for me at all. I despise with all my heart and spurn with ineffable contempt the suggestion. My service to the Democratic Party in this body does not depend upon what somebody may think, say, or do. I am not a mere parasite, existing upon the patronage of power or the prestige of place. I shall live by my own convictions. I shall act the things I believe. "No pleasure to me is comparable to standing upon the vantage ground of truth." And from the altitude of that high purpose I shall look down with pitying contempt on the unfortunate individual who would question my right to do so.

But let us go a little further. The Democrats, in the platform of 1908, had this to say:

"We believe in upbuilding the American merchant marine without new or additional burdens upon the people and without bounties from the Public Treasury."

When was that command withdrawn? Who authorized the self-idolized leaders of the immortal thirty-six to revoke that order?

But that is not all. The platform of 1904 has something to say on this subject also:

"We denounce the ship-subsidy bill recently passed by the United States Senate as an iniquitous appropriation of public funds for private purposes and a wasteful, illogical, and useless attempt to overcome by subsidy the obstructions raised by Republican legislation to the growth and development of American commerce on the sea. We favor the upbuilding of a merchant marine without new or additional burdens upon the people and without bounties from the Public Treasury."

There is no doubt about the meaning of that language either. It has no uncertain sound. It is the voice of the unterrified, patriotic, brave masses of this Republic—the men who really keep the banner of democracy in the air—men who would "spurn with contumely the power that bends the coward's knees and forces from the lips of treachery the lies of praise." If it was the truth then—principles do not, like Senators, change; they are immortal—it is the truth now, and I will not violate it.

Mr. President, I have searched the annals of the Democratic Party. I have studied carefully its platform announcements. I have read the great debates of able Senators—George, of Mississippi, one of the greatest constitutional lawyers who ever sat in this body; the erudite and accomplished Vest, of Missouri, in whose seat the scolding Senator from that State now expands; and scores of others—who have discussed the question of ship subsidy in this Chamber, and I have failed utterly to discover or find one scintilla of argument of approval in the history of the party in favor of the principles involved in this ship-purchase bill. To my mind it is the worst form of subsidy, because we do not know how much it is going to cost the taxpayers. It is vaguely indefinite—the flowering of legislative disingenuousness. It is also class legislation of the most indefensible and atrocious type. Whatever may be its purpose or design, there is one thing certain—it will not do the laborer, the farmer, the producer, any good. As I said a moment ago, the laborer will bear the burden and somebody else will reap the profits.

No, it will not benefit the men who need help, but, on the contrary, the patient, silent, long-suffering many will be forced by this law to contribute their hard-earned pennies to the already plethoric purses of the favored few.

You can not build up a merchant marine such as is contemplated in the Democratic platform of 1912—such as all patriotic Americans desire, such as I with all my heart desire—at the expense of the Government unless you are going to build up a permanent Government-owned merchant marine. It has been clearly and unmistakably demonstrated in this Chamber that in order to make a shipping business profitable there must be land connections, there must be feeders to give the ships cargoes. You can no more build up a profitable, independent, permanent merchant marine under this bill than you can teach a child to walk without putting its feet on the floor.

Now, if it is the purpose of the President to embark the United States Government upon a new policy—if the principles for which the Democratic Party has stood during all of its history are to be set aside and the National Government is to go into the business of owning ships and other agencies of transportation and commerce—I shall be glad to cooperate with the President in the development of a plan looking to that end. But it is a matter that can not be worked out in a day. For such an undertaking to succeed the foundations for the superstructure must be laid broad and deep. Perfect symmetry must be preserved if the system shall endure. And I do not think that the Democratic administration would be justified in embarking upon this entirely new policy until the people shall have been given an opportunity to pass upon it. I have infinite faith in the good judgment and divine common sense of the masses. This is their Government, and before taking a step which involves a measure of such far-reaching consequences I prefer to hear from the people.

Discussing this question, the historian Bancroft said—and I quote his language as the better expression of my own views:

"If reason is a universal faculty, universal decision is the nearest criterion of truth. The common mind winnows opinions; it is the sieve which separates error from certainty. The exercise by many of the same faculty on the same subject would naturally lead to the same conclusions. But if not, the very differences of opinion that arise prove the supreme judgment of the general mind.

* * * * * * *

"The public is wiser than the wisest critic. In Athens the arts were carried to perfection when the 'fierce democracy' was in the ascendant; the temple of Minerva and the works of Phidias were planned and perfected to please the common people. When Greece yielded to tyrants her genius for excellence in art expired, or, rather, the purity of taste disappeared, because the artist then endeavored to gratify a patron and therefore humored his caprice, while before he had endeavored to delight the race.

* * * * *

"In like manner, the best government rests on the people and not on the few, on persons and not on property, on the free development of public opinion and not on authority, because the munificent Author of our being has conferred the gifts of mind upon every member of the human race without distinction of outward circumstances. Whatever of other possessions may be engrossed, the mind asserts its own independence. Lands, estates, the produce of minds, the prolific abundance of the seas, may be usurped by a privileged class. Avarice assuming the form of ambitious power may grasp realm after realm, subdue continents, compass the earth in its schemes of aggrandizement, and sigh after worlds, but mind eludes the power of appropriation; it exists only in its own individuality. It is a property which can not be confiscated and can not be torn away. It laughs at chance, it bursts from imprisonment, it defies monopoly. A government of equal rights must, therefore, rest upon mind, not wealth, not brute force; some of the moral intelligence of the community should rule the state. Proscription can no more assume to be a valid plea for political injustice; society studies to eradicate established abuses and to bring social institutions and laws into harmony with moral right—not dismayed by the natural and necessary imperfections of all human effort, and not giving way to despair because every hope does not at once ripen into fruit.

* * * * *

"It is hard for the pride of cultivated philosophy to put its ear to the ground and listen reverently to the voice of lowly humanity; yet the people collectively are wiser than the most gifted individual, for all his wisdom constitutes but a part of others. When the great sculptor of Greece was endeavoring to fashion the perfect model of beauty he did not passively imitate the form of the loveliest woman of his age, but he gleaned the several lineaments of his faultless work from the many. And so it is that a perfect judgment is the result of comparison, where error eliminates error and truth is established by concurring witnesses. The organ of truth is the invisible decision of the unbiased world; she pleads before no tribunal but public opinion; she owns no safe interpreter but the common mind; she knows no court of appeals but the soul of humanity. It is when the multitude give counsel that right purposes find safety; theirs is the fixedness that can not be shaken; theirs is the understanding which exceeds in wisdom; theirs is the heart of which the largeness is as the sand on the seashore.

* * * * * * *

"It is alone by infusing great principles into the common mind that revolutions in human society are brought about. They never have been, they never can be, effected by superior individual excellence. The age of the Antonines is the age of the greatest glory of the Roman Empire. Men distinguished by every accomplishment of culture and science for a century in succession possessed undisputed sway over more than 100,000,000 men, until at last, in the person of Marcus Aurelius, philosophy herself seemed to mount the throne. And did she stay the downward tendencies of the Roman Empire? Did she infuse new elements of life into the decaying constitution? Did she commence one great beneficent reform? Not one permanent amelioration was effected. Philosophy was clothed with absolute power, and yet absolute power accomplished nothing for humanity. It could accomplish nothing. Had it been possible Aurelius would have wrought a change. Society can be regenerated, the human race can be advanced only by moral principles diffused through the multitude."

As to the wisdom of waiting for an expression from the people, I take the same position on this question that the President does on the question of woman suffrage, and in his veto message on the immigration bill. While it is not pertinent to the question at issue, it is not out of place at this time for me to say in this connection that I do not agree with a great many of my colleagues on the question of Government ownership of public utilities. I remember when the Hon. W. J. Bryan, some years ago, made the prediction that Government ownership of railroads would come in the course of time. His prediction raised such a violent storm of protest in the ranks of the Democratic Party that it looked for a while like the idol of Democracy was going to be knocked into a cocked hat, but not with dignity. I was editing a newspaper in Mississippi at the time, and I was among the few who defended that great statesman's views. Government ownership of railroads, telephones, telegraph lines, and other public utilities has no terror for me. Nor am I opposed to Government ownership of steamboat lines, when I am sure that they are going to be run for the benefit of all the people and contribute to the well-being of society. But this is a matter that can not be entered into in a moment. It is a system that can not be established in a day. The suggestion that it is an emergency measure has no merit in truth.

Now, I want to again asseverate my desire and loyalty to every proposition to build up a merchant marine. Since I came to the Senate as a Member of this body I have voted for every

measure looking to the proper upbuilding of a merchant marine. I have endeavored to carry out the platform as interpreted by the President when he was a candidate for the Presidency in building up a merchant marine. By giving them free passage through the canal, I hoped to stimulate the spirit of enterprise tending to that end. And I also maintained that we have the legal and moral right to extend these special privileges to our own ships, not only ships engaged in coastwise trade but ships engaged in over-seas commerce. With all my heart I believe in building up a merchant marine according to constitutional methods and sound economic principles. But I do not think it would be safe to embark upon a policy of Government ownership at this time for the reasons I have already stated.

Now, something has been said in this discussion about the influence of the Shipping Trust upon certain Senators whose position on this bill does not please a majority on this side of the Chamber. That same unjust intimation was made when a majority of the Democrats, followed the lead of the distinguished Senator from New York [Mr. ROOT], in violation of the Democratic platform on the tolls question. They charged us with protecting the coastwise shipping monopoly. But when an opportunity came to open up to the shipbuilders and shipowners of every country in the world the privilege of engaging in the coastwise trade of America these same Democratic Senators who were inclined to denounce the monopoly when the tolls bill was up voted to exclude foreign-built ships.

O, consistency, I fear thou art not the choicest jewel of the senatorial soul!

But, Mr. President, I do not like to dwell upon this phase of this subject. It is indisputable evidence of weakness of any cause for its advocates to abandon the high plane of legitimate argument and descend into the mire of villification. It is unworthy and unbecoming a Senator to indulge in such dishonest and contemptible methods. Their cause must be a weak one if to support it they must resort to such miserable and disingenuous schemes. If the agents of the shipowners of Europe and America have appeared upon the scene, if one of them has discussed this question with a Democratic Senator, be he for or against the bill, I have not heard of it. I am sure such a one has not favored me with the courtesy of a call. I am not, Mr. President, a very hospitable host to the man who is lobbying for legislation in his own interest, and therefore I am not at all surprised that I have been overlooked.

But, Mr. President, the suggestion, I repeat, is too contemptible to deserve even a passing notice. Such a statement, if intended for me, falls absolutely harmless at my feet. Conscious of the rectitude of my position, with no other desire save to serve the people of Mississippi and America as God has given me the light to see it, I can view with serenity the miserable machinations of those who would attempt to injure me. No; it does not hurt me in the least, but it places the man who suggests it in antithesis to truth. He is the antipodal of veracity. He injures his own soul by his mendacity, but does not hurt me. I should despise myself if I had nothing to support my position on this measure but mere suspicion that some banker or his kinsman close to the administration had suggested the purchase of the interned German ships in order that some official high in authority might ultimately profit by it. I do not believe anything of the kind. I believe the President and his Cabinet and the majority of Senators on this floor are doing what they believe to be their duty under the circumstances. Whatever may be their motives, it in no way affects my own. And I despise with all my heart the methods of the assassin of character, it matters not by whom practiced.

But we have been criticized for conferring with the Republicans on this measure. I see nothing morally or politically wrong in that. I have discussed a great many public questions which have come before the Senate with the Republicans of the Senate. But I have not gone to the Republicans in this instance. The Republicans have come to me. I am standing on the indestructible rock of Democratic truth and intrenched behind Democratic precedent. The Republicans have abandoned their former position on the question of ship subsidy and have come over to help us defend the Baltimore platform against its former friends.

Times change and men change with them.

> "Now the good god forbid
> That our renown'd Rome, whose gratitude
> Toward her deserved children is enroll'd
> In Jove's own books, like an unnatural dam
> Should now eat up her own."

But, admitting for the sake of this discussion that the majority of my Democratic colleagues are correct, can it possibly be any worse or more of a crime for me to confer with the Republicans than for the Democratic President and his Don Quixote lieutenant, the astute senior Senator [Mr. STONE] from Missouri, to plow with the heifers of the Progressive element of the Republican Party? It does not lie in the mouth of you gentlemen who have been offering to members of the Republican Party the privilege of amending the bill and going into partnership with you in its formation to criticize me or any other Senator for conferring with the Republicans to the end that we may defeat what we believe to be a measure congenitally pernicious.

Now, I do not object to the President conferring with the Republican Senators. He can do it if he will, but people who live in glass houses ought not to carry too many rocks about in their pockets. Really, Mr. President, I think if this bill shall be passed at all, it should be passed with Republican votes. It is essentially a Republican measure.

Now, a matter personal to myself. It is always distasteful to me to be in discord with the head of my party and those with whom I affiliate politically. But if I am so mentally constituted that I can not change my views on a serious and important matter just to please some one else, I must do one of two things—I must stand by my own convictions and bear the odium of being characterized as a recalcitrant, or prostitute myself by becoming a mere puppet to be moved by the presidential pull. That I will not do. The President may be right. He is a man of great learning. I have never questioned his patriotism. He has his duty to perform as President of this Republic. I honor him for doing it according to the dictates of his own conscience. I sympathize with him, and he has my best wishes. I honor the man—

> "Born and taught
> That serveth not another's will,
> Whose armour is his honest thought,
> And simple truth his utmost skill."

And I arrogate to myself nothing that I do not cheerfully concede to every other man. When this bill came before the Committee on Commerce, I studied it carefully and I endeavored to find out its purposes and to reach a conclusion as to its ultimate effect. I thought the bill should provide that the ships to be purchased should engage in the coastwise trade. My purpose was to reduce the loss to the minimum, and at the same time lower freight rates and thereby break the coastwise shipping monopoly. Some of my colleagues agreed with me, but they said that if that provision were inserted it would result in defeating the bill. They were endeavoring to carry out the President's wishes. They insisted that the measure was temporary in its character—a mere makeshift. It was expected to be a losing investment at first; but they hoped that after a while, when the gates of commerce should be opened wide, it would become profitable, after which the Government was to turn the business over to private enterprise. I said that I could not vote for the bill. I gave my reasons for it in the following interview, which appeared in the public press long before anybody except possibly those who are permitted to enter the holy of holies of the White House thought of making the measure a party question.

I ask permission to have this appear in my remarks without reading, Mr. President.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

"I am opposed to this bill because I believe it is the most indefensible form of subsidy yet proposed. It is one of those peculiarly dishonest measures which will 'keep the word of promise to the ear and break it to the hope.' It is violative of every tradition and platform declaration of the Democratic Party. The scheme, as interpreted by the President, is a mistake in policy, wrong in morals, pernicious in principle, and therefore will be disappointing in its ultimate results.

"FINDS NO JUSTIFICATION.

"If the Government ownership and operation of steamboat and railroad lines is to become a permanent policy, there might be some little excuse or justification for this measure; but when we are told by the President that it is only a temporary makeshift—and who will question the authority of the President to speak in this matter?—it leaves it without excuse or justification. In his address to Congress on the 8th of December last the President said: 'It should take action to make it certain that transportation at reasonable rates will be promptly provided, even when the carriage is not at first profitable; and then, when the carriage has become sufficiently profitable to attract and engage private capital and engage it in abundance, the Government ought to withdraw.'

"It is a peculiar character of mind which reasons to a conclusion and justifies the appropriation and expenditure of

funds contributed by all the people to an enterprise of this character, which it is admitted must be a losing and unprofitable investment from the start. Congress has just as much right to donate funds from the Public Treasury to the cotton growers of the South who, because of the war in Europe, have lost by the depreciation of the product of their farms something like $450,000,000 this year. Congress has just as much authority to subsidize the cane growers of Louisiana, the beet growers of the Northwest, and the manufacturers of the Northeast as it has to appropriate money to buy ships to carry the manufacturers' products to foreign markets at the cost of all the taxpayers. The cotton growers of the South proposed to give the Government unquestioned security for the loan of $250,000,000 of credit in order to save themselves a loss of $500,000,000, but the Congress, headed by the President, turned a deaf ear to their appeal.

"If their demand was without merits or wrong in principle, who will say this measure is right? I am opposed to this bill because it is class legislation, pernicious in its conception, and necessarily unjust in its execution.

"SEES WASTE OF MONEY.

"It will be remembered that the bill provides for ships to engage in the foreign trade exclusively. The cast-iron, rock-ribbed, Government-favored coastwise monopoly is treated as a sacred thing—too sacred to be touched. The Government-owned boats are to be mere pioneers or business missionaries, as it were. Regardless of the expense, they are expected to go to the waste places of the earth and work up the business to be turned over later to private individuals, who are to reap the profits of a business which has been built up at the expense of all the people. The whole scheme, to my mind, involves an unwarranted, illegal, and immoral prodigality of money coined by the sweat and blood of the masses of this country and extorted from them by unjust and immoral laws.

"It is a dangerous departure, an innovation upon our time-honored system, violative of the spirit of our Government, and, I fear, the issue will be trouble to the party that proposes it and chagrin for the men who conceive it. I am in favor of an American merchant marine. I shall vote for such measures as may be necessary to put our ships on the dead level of opportunity with the ships of all other countries that come into our ports. If we shall by law, which we have a right to do, improve the standard of living for the sailors, we will at the same time elevate the standard of character and manhood of the men who operate the ships.

"OPPOSES HOTHOUSE ECONOMICS.

"I am opposed to the hothouse methods of economics in governmental matters. I do not think it is fair to take the money from the pocket of the wealth producers of this country and donate it to the owners of ships. Such a policy can not be justified by any other rule than that of the rule of might. It can not be defended upon any other theory than that might is right. The contention that the ships be bought under the terms of this bill will facilitate the transportation of cotton grown in the South to the foreign markets is not the proper spissitude to fool anybody. The suggestion that the Government of the United States will send its ships to places where privately owned ships flying the American flag will not go is absurd. As a matter of fact, Government-owned ships will be more careful not to violate the laws of neutrality. They will be more careful to avoid every possible complication with the belligerent powers of Europe than will ships owned by private individuals.

"But there is one thing that would happen, I am quite sure. A lot of unprofitable property in ships that are floating idly in the ports of this country in order to hide from the gunboats of hostile nations would be unloaded upon the Government of the United States at a good profit. And I am sure that after the war is over, and especially after the people of the United States shall have had an opportunity to pass judgment upon this proposed bill, that these same ships will be resold to private owners, and the American people will pocket a loss of $75,000,000 to $100,000,000. No; to my mind, the bill is a legislative evil without a mitigating incident, and, from the depths of my heart, I sincerely hope it may be defeated."

Mr. VARDAMAN. This statement was published. Little thought I at the time that the pressure from the White House would ever lead the Democratic Senators to undertake to make this indefensible measure, as I regard it, a party question; a measure which is a flagrant violation of the letter and the spirit of the party platform. When the caucus was called to consider it I told the chairman of the caucus, the honorable junior Senator from Indiana [Mr. KERN], that I would not attend the caucus. I did not expect to support the bill, and I did not care to take part in framing the bill when I felt sure what the conclusion of the caucus would be. I believed then what I now know, that the White House had ordered it, and that the Senators would obey that order, and I did not want to place myself in the indelicate position of being present while the measure was being framed when I was sure that my sense of duty would lead me to oppose it on the floor of the Senate. So I remained away from the caucus. And when I was told that I was bound as a Democrat by certain of my colleagues, who behind closed doors had determined to buck and gag every Senator who differed from them, to override my wishes, strangle my independence, humiliate my manhood, in a word, for me to violate my sense of duty and obligations to my constituents and betray the Democratic platform and support this measure, Mr. President, I simply declined to make the sacrifice. I declined to yield my own individuality. I must refuse to violate my idea of duty to myself and my constituents in order that I might win the much-coveted, approving smile of the seldom-smiling senior Senator from Missouri as reward for party regularity.

No; "I shall not be carried about by every wind of doctrine" that may blow from the wind centers of sycophancy. I shall not permit any man to make and brand my Democracy. Nor shall I permit any number of men to dictate to me how I shall perform my duty to my constituents as United States Senator. To paraphrase the language of another, "While I breathe heaven's air and Heaven looks down on me and smiles at my best meaning, I remain master of mine own self," and shall control my own vote, particularly in this matter.

Mr. President, the times are not propitious; the clouds that overhang the sky cast a somber shadow. The sea of passion rolls high. No good can possibly come of quarreling. Crimination and recrimination will not promote solidarity in the Democratic ranks. Men can not be driven. Decent Senators can not be bought either with flattery or patronage. Bickerings promote disintegration. I have no desire to interfere with the honest thought, nor do I question the patriotism of any Senator in this Chamber. I would not be the keeper of his conscience. I would not be responsible for his performance of the duties of his place. He understands to whom he owes allegiance, and I am not going to be so uncharitable, so egotistical, so contemptible, vulgar, and indecent as to question the honesty and patriotism of his motives because he happens to differ from me. I believe that my position is right. I shall maintain it. I do not arrogate to myself infallibility. I realize that I have all the limitations that encompass about and beset other men. But—

"If I am right, Thy grace impart,
Still in the right to stay;
If I am wrong, O teach my heart
To find the better way.

* * * * *

Teach me to feel another's woe,
To hide the faults I see;
That mercy I to others show,
That mercy show to me."

Mr. JAMES. Mr. President——

The PRESIDING OFFICER. The Senator from Kentucky.

Mr. JAMES. I have listened with a great deal of interest to the beautiful composition upon the Roman Empire. I was wondering whether or not my genial friend the Senator from Mississippi, from that lofty pinnacle upon which he placed himself, could see such an insignificant object as the Senator from Missouri.

Whatever the Senator from Mississippi may say about the Senator from Missouri, he ought to recollect that that great Commonwealth has been more lavish with her honors upon him than any other one of her many illustrious sons. The fact of his election as governor, the fact that he was three times elected to Congress—twice elected to this body, and at the last election returned here by an unprecedented majority—is sufficient attestation to the character, aye, to the Democracy, of the Senator from Missouri, no matter from what quarter the assault upon him may come; and do not you know there is something about the conduct of the Senator from Missouri that warms my heart to him? So long honored by his party, reelected, with six years in front of him, he comes back and takes the same old Democratic sword in his hand, and does not get too big to fight the battles of the party that has honored him so long and so greatly. Mr. President, that is a lesson that would not be a bad one for some other Senators to follow.

My friend from Mississippi told us that we went to Republicans for recruits. Senator, there are two kinds of Republicans, just like there are two kinds of Democrats. The difference is this: You went to the standpatters, we went to the Progressives, for aid; but we did not do it until, like a shot from a subma-

rine fired upon our party, we found ourselves hopeless and helpless within our own ranks.

Why, sir, when Gorman and Smith, in the sad days of Cleveland's administration, sought to separate themselves from their party, they did not do it by ambush. They did not do it by sudden attack. They stood upon the floor of the Democratic caucus and sounded the alarm and gave the notice to the party that it might expect such an attack.

I want to say here and now that I believe in Democracy. I can not agree with some Senators in the announcement that has been made upon this floor that party obligations rest heavily upon the people from whom they seek their commission and rest lightly upon those who wear the senatorial toga.

I should not have risen upon this floor to discuss this bill, Mr. President, but for the fact that I find myself going one road and my colleague [Mr. CAMDEN] traveling another one.

The highest honor that the proud people of Kentucky can bestow upon one of her sons has been given to me, as to him. It was given to both of us by the Democratic Party of Kentucky; and as I love the banner of Democracy in Kentucky, and proudly bear her commission here given me by 300,000 brave Democrats, I shall not desert it now upon this floor.

What is the law in Kentucky about a primary election? And let me pause here to observe that a primary election in Kentucky is but another name for a caucus here. The only difference is that a caucus of Senators usually assembles at 8 o'clock and adjourns at 12. A Democratic primary is called under the law of our State, and the officers assembled to hold it, and the voters commence to cast their ballots at 6 o'clock and continue until 4.

When my friend Senator CAMDEN ran for the Senate, before he could run for that great office he had to be able under our law to say that at the last regular election he supported the nominees of the Democratic Party. But for that, under the law of Kentucky, his name could not have gone upon the ballot as a candidate for the Democratic nomination for Senator. A voter that comes to cast his ballot there must be able to state that at the last regular election he supported the Democratic ticket. More than that, Mr. President, he has to say that he will support the nominee of the Democratic primary, whether it is his own choice or his neighbor's choice. The Democratic Party's nominee then takes the banner, and he goes from one end of the State to the other appealing for support. The same rules and regulations apply to candidates for a Republican nomination. It is held under a State-wide primary law. But when, the other day, my friend the junior Senator from Kentucky [Mr. CAMDEN], in colloquy with the senior Senator from Missouri [Mr. STONE], said, "I did not attend the Democratic caucus," that was no excuse.

Who would have heard a Kentucky Democrat say in the last election, when my friend was appealing for support as the nominee of his party, "I am not bound to support the nominee because I did not attend the primary election"? The question is, "Senator CAMDEN, why did you not attend the caucus? You were elected by the Democratic Party. You affiliated with the Democratic Party in Kentucky, and sought its honor and its nomination, and received election by reason of its votes"; and I insist that when he comes here he should associate himself with the party that honored him.

Why, Mr. President, at every Democratic national convention that assembles the Democrats are sent from the various States, and when they are sent there every man must sacrifice something. Why, gentlemen, we can not all have our way. No great law ever was written upon the statute books of this country by reason of the force or power of one individual. It is only the power of the collection of numbers, through great political parties. When the Democratic national convention was assembled the various States sent their representatives there, and they all considered the platform. They took a vote upon the question, and the majority ruled. While it takes two-thirds to nominate a candidate of the Democratic Party for President, a majority pronounces its faith and declares its platform.

Suppose a Kentucky Democrat should say, "Well, that platform does not suit me. I can not agree to everything in it. I want an amendment to it." Then here comes up another one, "I can not vote the Democratic ticket, because the platform does not meet my views. I want this amendment added to it." And here comes another Democrat and says, "I can not agree to the platform because I want to offer an amendment to it." The result would be, instead of a great, cohesive Democracy marching shoulder to shoulder against the serried ranks of a common enemy, that we would have 8,000,000 different Democratic Parties, and so the power of Democracy would die.

Mr. CAMDEN. Mr. President, may I interrupt the Senator for a moment?

Mr. JAMES. Certainly.

Mr. CAMDEN. Wherein the senior Senator from Kentucky and myself differ is that the platform does suit me. I came here and I conscientiously voted for and supported every Democratic measure. I have stated my reasons—that this shipping bill is not in the party platform.

Mr. JAMES. I am glad to know that we had one Democratic platform that suited the Senator.

Mr. CAMDEN. This suited me very well.

Mr. JAMES. How about the other platforms in 1896, 1900, and 1908? Did they suit the Senator?

Mr. CAMDEN. Mr. President, this is not germane to the subject, but I am very glad, indeed, to say that more people in Kentucky agreed with me about that platform than agreed with the senior Senator from Kentucky.

Mr. JAMES. Two hundred thousand of them were Republicans, however. [Laughter on the floor and in the galleries.]

The VICE PRESIDENT. The Chair is not going to continue to be a megaphone for the benefit of the galleries. There is a rule of the Senate that the occupants of the galleries shall not interrupt by applause or otherwise. The Chair has been sitting here day after day and making that announcement. He is not going to do it again. The galleries will be cleared unless the occupants of the galleries obey the rule of the Senate.

Mr. JAMES. The answer of the Senator from Kentucky means this, that he voted with the enemies of Democracy in 1896, and they carried all the electors but one. Am I right? What about 1900? You did not vote with the majority then, nor did you vote with the majority in 1908, because Democracy triumphed in both elections in Kentucky.

But aside from that, you say you stand on this platform. I greet you with delight. What is there about this platform that in any way contravenes the question that is now at issue?

I thank God I belong to a party that in a great war, an emergency like this, is not hugging a technical delusion to our bosom in order that the sea may be made the subject of the piracy of a great trust and monopoly that was undertaking to rob all the consumers of the world.

But even more than that, Mr. President, my colleague, the Senator from Kentucky, I may say, is pledged to support this bill, and I believe that I can show it. It is a matter with him. What I am saying to him is emphatic and positive, not in anger. Great God, I am willing, in the name of the 300,000 Democrats in Kentucky, to put my arms around him and pray with him to come back into the Democratic Party. The Democracy of the mountains of Kentucky, across her waving blue grass, over the pennyroyal, and, through the purchase, on to the Mississippi River, are praying this day that the Senator from Kentucky will come back to the old Democratic household. Mr. President:

> The moving finger writes; and having writ,
> Moves on; nor all your piety nor wit
> Shall lure it back to cancel half a line,
> Nor all your tears wash out a word of it.

The junior Senator from Kentucky made a speech when he was running for the Senate, and I have it here. I will read from the Courier Journal of Thursday morning, October 27, 1914. Here it is:

> The all-important question in the November election—
>
> Said Senator CAMDEN—
>
> The all-important question in the November election, said Senator CAMDEN, is not so much the personnel of the candidates for United States Senator "as it is whether the people will give Woodrow Wilson and the Democratic administration the encouragement of their indorsement by electing Democrats to assist and uphold the hands of the President in further carrying out his great program of constructive legislation."

The people in Kentucky thought that Senator CAMDEN meant by that that he was not only going to uphold his hands by speech but by vote in every way it was possible. But it seems like they were mistaken. What the Senator from Kentucky meant when he said he was going to hold up President Wilson's hands was that he was going to hold them up while the Republican Party tied them. [Laughter.] That is the Senator's own statement to the people in Kentucky——

Mr. CAMDEN. May I interrupt again?

Mr. JAMES. Certainly.

Mr. CAMDEN. Mr. President, there is nothing more misleading than a statement that is half true. If the Senator will go back several paragraphs he will find I said that we will aid the President on the party platform pledges.

Mr. JAMES. Oh, Mr. President, I have no sort of objection to going back just as far as the Senator will have me go and quote all of it. It is a speech of a column and a half.

Mr. CAMDEN. All right, sir.

Mr. JAMES. If there is anything in it the Senator said that qualifies in any way what I have quoted I shall gladly put it in the RECORD.

Mr. CAMDEN. I will state that I did not pretend to indorse everything the President said, because, if I mistake not, somebody at one time wanted to knock somebody else into a cocked hat.

Mr. JAMES. Yes; and the Democrats of Kentucky are going to knock somebody else into a cocked hat, too, when they get a chance. [Laughter on the floor and in the galleries.]

The VICE PRESIDENT. Just one moment. The Chair is compelled to enforce silence in the galleries by the rules of the Senate. The Chair is also in duty bound by the rules of the Senate to preserve order in the Senate Chamber.

Mr. JAMES. Mr. President, I am perfectly happy to go back and read if the Senator will only indicate where I shall read. Senator CAMDEN discusses the Federal reserve act, and he says:

Senator CAMDEN discussed the Federal reserve act, which, he said, "stands out as possibly of more vital importance in the country than even the passage of the downward-revised tariff bill," and to which he referred as an "unspeakable blessing to the country at large" and "especially helpful to agriculture."

In strong terms the Speaker praised President Wilson's foreign policy, saying that if, when assailed by a pitiless storm of criticism and abuse, the President had been less courageous and less firm in his conviction of what a strong and powerful nation's duty toward a weak and distracted one was, we would be engaged in a bloody conflict, the end of which could not be seen, with both continents plunged in war.

"Don't you know," said he, "that we owe it to Wilson that we are permitted now to have the inspiring vision of this great country towering sublimely above the clouds of war that encompass despairing nations, and that the standard of Democratic civilization has been placed upon high and unassailable ground?"

Why, then, Mr. President, it seems the Senator from Kentucky [Mr. CAMDEN] had great confidence in the President of the United States. That was the one name to be conjured with in Kentucky. The Wilson banner was the one flag that everybody wanted to bear. The Senator said that he would uphold the President and the Democracy of Kentucky if he were elected into a seat in this body.

Mr. CAMDEN. May I interrupt the Senator?

Mr. JAMES. Certainly.

Mr. CAMDEN. I should like to ask the Senator whether he voted with the President in 1896.

Mr. JAMES. I voted with the Democratic Party then as I am voting with the Democratic Party now.

Mr. CAMDEN. But with the President?

Mr. JAMES. That is a matter you will have to settle with the President. I voted with the Democratic Party. The Democratic Party to me is greater than any man in the Nation though he occupies the lofty station of President. But at the time the Senator from Kentucky told the people that if elected here he would uphold the hands of President Wilson in enacting into law his great constructive policy, the one thing that stood out like a column of light, that the President was advocating at that time, was the shipping bill. I have here before me an interview which was published in all the papers of the country, which I shall put in the RECORD, where the President, September 24, 1914, and also September 28, 1914, nearly a month before the speech of Senator CAMDEN was delivered, stated that he was urging the passage of the shipping bill, and he was going to insist upon it when Congress reconvened in December:

[From newspaper interview with the President, Thursday, September 24, 1914.]

Does the ship-purchasing bill remain a part of the legislative program or has there been an agreement to defer action?

The PRESIDENT. It remains a part of the program. I think it is very necessary in order to handle things that private enterprise can not be expected to be asked to handle.

Do the number of applications for registry under the ship-registry law come up to the expectations of the administration?

The PRESIDENT. I have not even inquired about that.

Have you been informed of any disinclination on the part of the House——

The PRESIDENT. I have heard of the opposition of individual Members.

[From interview, September 28, 1914.]

Mr. President, with reference to the shipping bill, do you share the general feeling that the urgency is passed?

The PRESIDENT. No; not in the least. The urgency has increased.

Mr. President, Judge ALEXANDER said Saturday that his advices were that the emergency for it was over; that there were plenty of ships for it.

The PRESIDENT. For the ordinary trade, yes; but that is not what it is for. It is chiefly for the development of American trade where it will be unprofitable for private capital to develop it and where I know for a certainty that private capital will not develop it. It could not be expected to.

Mr. President, you told us last week that the opposition to the bill was rather negligible.

The PRESIDENT. So I was then informed.

Do you not think that it has grown?

The PRESIDENT. Apparently it has. I do not know whether it is apparently or really. You know a few persons can make a great deal of noise sometimes, particularly a few persons who are interested from an investment point of view.

Does that alter your views or position any?

The PRESIDENT. No, sir; because the circumstances are not altered. Opposition does not alter me; circumstances, I hope, do.

Mr. President, is not that opposition chiefly toward taking it up at the present time rather than toward the proposition?

The PRESIDENT. That may be. I do not know. I am going to confer with some of the Members of the House just as soon as I can find space on my calendar. I will find that out; that may be all there is in it.

Can you say anything of the visit of Mr. ALEXANDER or Mr. UNDERWOOD to-day?

The PRESIDENT. That is about that subject.

Your present judgment is, Mr. President, that it ought to pass at this session of Congress?

The PRESIDENT. Unless I learn something that changes my judgment in the matter. I do not mean something about the opposition to it, but something about the urgency.

Mr. President, if the day shall ever come, which God forbid, that I no longer can affiliate with the great party that has honored me with their commission here, I shall have the courage at least, and the honor at most, to tender back to the brave Democracy that honored me the commission I accepted, to the end that they may send some one here who can fight their battles, speak their language, and cast their votes.

Mr. CAMDEN. Let me again interrupt the Senator.

Mr. JAMES. Certainly.

Mr. CAMDEN. It seems to me that the people of Kentucky have passed upon my election. If I am not mistaken I received a larger popular vote than you ever did.

Mr. JAMES. Than I did?

Mr. CAMDEN. Yes, sir.

Mr. JAMES. The Senator knows when I ran for the Senate I was nominated in the popular primary and got over 100,000 more votes than the other man's name who was on the ticket received. He had even withdrawn, but his name still remained on the ballot. How many votes did the Senator get? You never got 100,000 majority nor anything that in any way approached it. So that much of this dispute seems to me to be well understood.

Mr. President, I listened to the Senator from Georgia [Mr. HARDWICK]. I served with him for 10 years in the House. He is a brilliant Democrat, at least he was when he spoke in the House on March 27. I want to read you how he goes after a bolter when he thinks he is one. On page 5957 of the CONGRESSIONAL RECORD of March 27, 1914, they had under consideration the tolls bill. Of course, there had been no caucus on that measure in the House. The Speaker of the House, Mr. CLARK—CHAMP CLARK—took an opposite view of that question from the President. Not being bound by party caucus in the House to take another view or to yield his judgment to the will of the majority of the party he made his speech there. He let it be understood that he was going to speak on it and that he was going to take that position. Let me show you the handsome fashion in which my friend the Senator from Georgia [Mr. HARDWICK] trimmed him up:

"Oh," they say, "you have not given to us a reasonable opportunity for amendment." I say we have given you full, ample opportunity—all the opportunity that this question requires. [Laughter.] Oh, gentlemen, possess your souls in patience. This is not a tariff bill with 4,000 items that might be raised or lowered. This is not a currency bill with many and difficult and complex provisions that might be changed. This is not an appropriation bill with hundreds and thousands of items that might be increased or decreased. This is a plain, simple proposition: Shall we give these American ships this exemption or not? And we can answer that question "yes" or "no." There is no need of dodging; there is no need of evading it; there is no need of amendment. Let this Congress answer "yes" or "no." Will you stand by this great Democratic President in his plea for the national honor? Yes or no? Under which flag will you fight? Will you fight under the flag of these gentlemen, who assail their own party leadership and desert their own administration?

Mr. HARDWICK. Mr. President——

Mr. JAMES. I gladly yield to the Senator.

Mr. HARDWICK. The men to whom I had special reference on that occasion in the speech from which the Senator quotes did not claim to be acting under the instructions of a caucus nor in accordance with the principles of the party or the belief that the proposition was a fundamental tenet of Democracy, as I understand.

Mr. JAMES. I am not familiar——

Mr. HARDWICK. Nor, if the Senator will let me add one word——

Mr. JAMES. Certainly.

Mr. HARDWICK. Nor on any constitutional ground did we have any doubt or political differences. If the Senator from Kentucky had listened to the few remarks I submitted to-day, he would know that I still entertain the same high regard for our great Democratic President who sits in the White House that I have ever had, and it is a matter of regret that from my constitutional view and my sense of what is absolutely right I can not support him in this matter. I would not impute improper motives to them under any circumstances, and I cer-

tainly would not attempt to criticize them for their own independence, and, if my language can be so construed, I freely confess now I do not recall it.

Mr. JAMES. I am not through reading this.

Mr. HARDWICK. Read it all.

Mr. JAMES (reading)—

Let this Congress answer "yes" or "no." Will you stand by this great Democratic President in his plea for the national honor? Yes or no? Under which flag will you fight? Will you fight under the flag of these gentlemen—

Not seven; I do not know the number—

who assail their own party leadership and desert their own administration, stabbing it in the back without a moment's notice and without an instant's warning, or will you follow that glorious Democrat from New Jersey who has made this country its greatest President since the days of Thomas Jefferson? [Applause.]

Senator HARDWICK, that is one of the ablest speeches you ever made. [Laughter.] Of course, I can understand, and I question no Senator's motives. You put it on the ground of conscience. A man named Shakespeare once said, "Conscience doth make cowards of us all," and now an additional sin is added to it, it makes bolters of some. But every Senator at last must explain his own acts to the people, and they alone can judge. I am perfectly willing that my acts shall be subjected to their final judgment.

But of all things most surprising to me is that when our Democratic friends went into this alliance with the Republicans they did not give us a chance, as my friend Senator HUGHES said, to get the women and children off the ship before they submarined it. The days of auld lang syne would at least have entitled us to that right, if nothing more.

And as to the other side, the Republicans—with what delight I saw them coming over here! When I would see them get up to one of the seven Senators who had left our party and get their arms around him and get to whispering sweet things into his ear and then go off smiling and wink the other eye I knew they could see indeed visions of two years' advance of the old fleshpots. They could hear coming back the same old brigade. They could see the same old standpatters in control. Yes; and our friends upon the other side of course felt delighted. I do not blame them. There is nothing on earth that is as dear to the Republican side, the standpat Republican view, as an idle man except a bolting Democrat. [Laughter.]

But this bill, Mr. President, what about that? Who are the gentlemen who filibustered here for days and days, speaking 13 and 14 hours at a time? They are Republicans. They are the same men who advocated a ship subsidy. To do what? Not to build ships to be operated by the Government of the United States in order to make rates reasonable, in order to deliver the products of the farmer, the merchant, and of the manufacturer to people abroad. They were willing to take $9,000,000 a year of the people's money out of the Treasury and do what with it? To put it into the pockets of the Shipping Trust that is at this very hour robbing in a conscienceless way every single shipper in the United States who wants to send anything to the other side. If you had given them that subsidy then, which the Democratic Party prevented you from doing, they would have been robbing in the same old way as they are to-day. Even our working people, the toiling millions, the school children, are giving of their mite to send food and other supplies abroad to suffering people, but when they go to the dock to put them on the ship it is standing there, this conscienceless monopoly, that says, "No; though you gathered from the humble walks of life, yet we must have a freight rate in order to take it abroad that is not only oppressive but practically confiscatory."

I know that our Republican friends, of course, do not want this bill to pass, and why? To-day, when half the world is on fire, the greatest war in all the history of mankind, our factories and our people have more orders than ever before. We want to fill those orders. We want the laboring people to be employed. You gentlemen are doing in this contest what you have done all during the Sixty-third Congress. You are seeking to keep this Government from returning to prosperity, because you know that when it does return to prosperity your day and your hope are passed.

It even commenced, Mr. President, when we were considering the tariff bill. Day after day these gentlemen would put in the CONGRESSIONAL RECORD, which it will show, clipping after clipping from newspapers showing that somebody was out of work, that some factory was going to shut down. What a delight it was to them. But the standpat Republican does not live who can point to a single article that he put in the CONGRESSIONAL RECORD showing returning prosperity, or the employment of people, or of great orders being placed with the manufacturers of the United States.

Of course, you Republicans are not for this bill. You know that when it passes the factories will commence to hum; you know that you can find no idle men; you know that the farmers' products will go abroad; you know that this country will bloom and blossom with prosperity never known before. It is no wonder that you filibustered all night long, and put up your great leader, Mr. SMOOT, to break the record in a 13-hour speech. You are fighting for the life of the Republican Party.

They say that it will bring war. When did you get that idea? For almost two years I have heard the Republicans on the other side rise and assail the President of the United States for his "watchful waiting." How you sneered at him! How you said he was a weakling! How you talked about Mexico, Mexico. But the President, the greatest advocate of peace who has appeared upon this earth since the Prince of Peace stood at the Sea of Galilee, prevented his country from going to war. And now what is the matter? We have not ships to send our products abroad, because you are afraid that this man who stood for peace even under your bitter attack after attack will do what? Force the country into war.

You know the war they are afraid of, Mr. President. The war that the Shipping Trust is afraid of is not a war between countries; it is a war upon their outrageous and confiscatory rates upon the American shippers, the farmers of this land, the manufacturers of this Nation. That is the war they are alarmed about.

But let us see about that. You do not believe that President Wilson would force the country into a war. You will have an opportunity to vote for amendments putting that even beyond all possible doubt. My friend from Kentucky, Senator CAMDEN, gives in his speech his idea about this thing, and I want to read it in order to be accurate:

Democratic Senators, I solemnly warn you that it is madness to push this bill to embark our Government upon this perilous and uncharted business sea. Does not Britain well know that if one of this country's boats should be sunk by a floating mine—in an accidental way—we might say, then, we would not only be feeding Britain, but we would find ourselves fighting for her, which she well knows.

Now, the idea that because one of our vessels was over there close to Liverpool, and by accident, as Senator CAMDEN says, should be destroyed, that this Government should go to war for Great Britain! Gentleman, just to state that, just to read it, is to show the weakness to which men are driven in order to make some criticism of this bill.

Mr. President, this Government would not go to war because one of our vessels was accidentally sunken. Not at all. This great Government here would not do for itself, for all the people, of this great Government what it would be unwilling to do for the humblest citizen in the land. This Government would no more quickly go to war in order to resent an injury done to a vessel owned by itself than it would go to war to resent an injury done to a vessel owned by the humblest sailor who is upon the sea. If it would, it is unworthy to be a government of all the people. The injury of one is the concern of all. If Senator CAMDEN's fear is to be dissipated, we would have to call to port every ship we have upon the sea at this time.

Mr. WILLIAMS. Mr. President——

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from Mississippi?

Mr. JAMES. Certainly.

Mr. WILLIAMS. Does not the bill itself say in so many words that these ships——

The VICE PRESIDENT. There must be some way whereby the reporters can get the statements or inquiries of Senators.

Mr. GALLINGER. I was about to raise the point of order that Senators seem to have colloquies between themselves and do not face the Chair.

Mr. WILLIAMS. Does not the bill itself say that these ships shall be subject to the liabilities and shall enjoy the advantages of the ships of private citizens of the United States? In substance, is not that the express provision of the bill?

Mr. JAMES. Oh, certainly. Of course, the suggestion of war is ridiculous; but let us see.

My friend from Kentucky [Mr. CAMDEN] said that he sold his wheat and his cattle at better prices than ever before. Well, I am happy to know that; but there are other farmers in Kentucky, Mr. President, beside those who own fine herds and a great amount of wheat. The great money crop in Kentucky is tobacco. What about that? Tobacco to-day is selling for nothing, or it is hardly selling at all. The tobacco planters in my section of the country are unable to get more than five and six dollars per hundred for the dark tobacco. That tobacco is a great export tobacco. It is shipped abroad. It is sold in my section to the buyers from France, from Germany, from Austria, from England, and from all the rest of the world. What has been

the effect upon tobacco? The farmers of Kentucky want to know. I want to read to the Senate a letter upon that question:

BALTIMORE, MD., *December 26, 1914.*

The DEPARTMENT OF COMMERCE,
Washington, D. C.

GENTLEMEN: Responding to your request for proofs of how shipments of American goods to Europe are handicapped or made entirely prohibitive on account of high ocean freight rates, we beg to submit the following:

We are shippers of Maryland, Ohio, Kentucky, and Virginia tobacco to Europe, and most of our shipments are consigned to Holland, Germany, Austria, Italy, Norway, and Belgium. At present only shipments to Holland, Italy, and Norway are possible at prohibitive rates. In fact, the latter have become so high that now cable orders "Stop buying" have been received.

Although we have made a yearly contract with the Holland-American Line—the only shipping opportunity from here to Holland—as per copy inclosed, this line has arbitrarily raised its rates 100 to 300 per cent, and even at the raised rates shipments can be booked only "for first available room."

Rates to Italy also have become entirely too high—i. e., from $4 per hogshead of Maryland tobacco to about $27, or nearly 3½ cents a pound—so that tobacco shipments have become out of question.

The Holland-American Line, which raised the rates on December 7, 1914, has now again suspended them, indicating another raise.

Trusting that the aforegoing statement will interest you, we are, dear sirs,

Very respectfully, J. D. KREMELBERG & CO.

Our people in Kentucky have their great tobacco crop practically unsold. Some Senators here say, "Well, you can not get the ships in time to ship this crop." Well, if we can not get them in time to ship this crop, let us get them in time to ship the next crop. Who knows how long this war will last? No one. Here is the freight rate upon the great money crop of my State, upon the great tobacco farmers, as patriotic and splendid a class of people as live in the world, who stood by me and have been my friends, and the rate has been raised upon their tobacco 700 per cent. I can not find it in my heart to stand upon this floor and fail to express what I know is their desire and their hope of this American Congress. I now read from page 15 of this document by Secretary McAdoo, which is a complete and powerful analysis of the whole situation:

BURDEN UPON AMERICAN BUSINESS.

Annexed hereto, as Exhibit 1, is a summary of our sea trade and the estimated freight cost of handling it from July to December, 1914, inclusive, prepared by the actuary of the Treasury Department.

From this it appears that our total exports by sea for July, 1914 (before the war), were $139,225,479, and the ocean freight cost was $7,833,482, or 5.63 per cent; the total of such exports for December, 1914, were $226,000,000 (estimated), and the ocean freight cost was $30,742,500, or 13.6 per cent—an increase over July of 141 per cent.

If the ocean freight cost on December exports had been at the same rate as July, viz, 5.63 per cent, the total freight charge on our exports for December would have been $12,723,800 instead of $30,742,500. In other words, the increased ocean freight tax arbitrarily imposed upon our farmers and business men for the month of December, 1914, only was $18,018,700. If exports by sea continue for the 12 months of 1915 at the December, 1914, rate and the ocean freight charges are the same as for December, 1914, the American farmers and business men will pay to shipowners (principally foreign) increased freight charges above the normal rate of $216,224,400, or more than five times the $40,000,000 which the Government proposes by the shipping bill to put into American ships for the protection of our foreign commerce.

In two months and seven days the increased ocean freight charges (above the normal rates prevailing in July, 1914) exacted on our foreign trade at the December, 1914, rate would amount to $40,241,761, or more than the total amount, viz, $40,000,000, which the shipping bill authorizes for investment in an American merchant marine.

In 12 months, as before stated, the total increase in the freight tax levied by steamship owners, mostly foreign, upon our export trade, at the December, 1914, rate would amount to the sum of $216,224,400. If the same be applied to our import trade, there would be an additional increase of $95,640,000, or a total increased ocean freight charge on exports and imports by sea in one year of $311,864,400, or 141.6 per cent over the usual cost. (See Exhibit 2.)

Thus far we have been dealing only with the increased ocean freight charges over and above the normal rates prevailing in July, 1914. Including these normal rates, and assuming that the December, 1914, total ocean freight charges, viz, $44,342,500, represent an average for each month of 1915, the total ocean freight charges on American import and export trade by sea for the year 1915 would amount to the enormous total of $532,110,000. (See Exhibit 1.) Almost the whole of this huge sum would be paid to foreign steamship owners and would have an important bearing upon our foreign trade balances; it might, in fact, turn these balances against us.

MAXIMUM NOT IN SIGHT.

While this report is being written information is received that rates are higher than those given in some of the tables herein presented, and that even at these extraordinary figures it is difficult to obtain cargo space for earlier sailings than March and April.

SUMMARY OF THE MOST STRIKING INCREASES.

From the foregoing tables it will be observed that ocean freight rates on grain from New York to Rotterdam have been increased since the outbreak of the war 900 per cent; on flour, 500 per cent; on cotton, 700 per cent.

From New York to Liverpool the rates on the same commodities have increased from 300 to 500 per cent.

From Baltimore to European ports (excepting German) rates have been increased on grain 900 per cent; on flour, 364 per cent; on cotton, 614 per cent.

From Norfolk to Liverpool rates on grain have been increased from 157 to 260 per cent; on cotton, 186 per cent.

From Norfolk to Rotterdam the rates on cotton have been increased 471 per cent; to Bremen the rates have increased on cotton 1,100 per cent, namely, from $1.25 per bale to $15 per bale.

From Savannah to Liverpool the rates have been increased on cotton 250 per cent; to Bremen the rates have been increased on cotton 900 per cent.

From Galveston to Liverpool the rates have been increased on grain 174 per cent; on cotton, 361 per cent; to Bremen the rates have been increased on cotton 1,061 to 1,150 per cent.

CONTROL OF RATE SITUATION BY STEAMSHIP INTERESTS.

Ocean freight rates are still rising, and are limited only by the greed of the steamship owners on the one hand and by what the traffic can stand on the other.

The Government has no power to control or regulate ocean freight rates. It can not under existing law protect our foreign trade against these extortionate and hurtful charges. The steamship owners can increase rates without notice and upon the instant, and our business men are helpless. The steamship companies are their own masters and do as they please with the transportation of our exports. As already shown, they are seriously checking our foreign trade, and in some cases, such as lumber and coal, are stopping it altogether.

What is another objection urged here? That it may lead to Government ownership. That is a great bugaboo that the Shipping Trust gets up—Government ownership! Mr. President, we can regulate our railroad rates; we can regulate every other business in the United States; but the one thing we can not regulate is the over-seas traffic charges, because these ships are owned by foreigners—the foreign trust is not under our jurisdiction. Every shipper, every farmer, every manufacturer of this Nation is subject to whatever the foreign monopolists seek to lay upon the citizen of this land who wants to ship his product abroad. In addition to that, some of these gentlemen say that Government ownership of this line in this great emergency and condition that no man could foresee will finally lead to Government ownership everywhere.

Mr. HARDWICK. Mr. President, will it disturb the Senator from Kentucky if I interrupt him just there?

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from Georgia?

Mr. JAMES. I do.

Mr. HARDWICK. The Senator from Kentucky has suggested that the Congress of the United States has no power to protect the domestic shippers against these foreign combines. The Senator doubtless remembers the legislation we passed providing for the safety of life at sea, by which we refused to allow a ship to clear from one of our ports or to enter our ports until it had been equipped with certain paraphernalia—lifeboats, and so forth. Have we not got the same power to provide that no ship shall enter or clear from ports of the United States unless it charges not more than certain freight rates, and to regulate the matter in that way?

Mr. JAMES. I do not believe the Government of the United States has a right to regulate foreign ships or to say what charges they may lay upon shippers; but, of course, the Senator from Georgia, I take it, is one of those who are afraid of foreign complications. I should imagine that there would be nothing that would more quickly subject us to trouble with a foreign Government than an undertaking of that sort.

Mr. HARDWICK. If the Senator will pardon me, there is not the slightest danger of that.

Mr. JAMES. I am willing, then, to do that if we can do it; but let us do something. Do not let us stand here and say we can do this and that, but let us do it if we can. We have got this bill up now, and let us do this; and then, if we can do what you desire, we shall do that also.

But our friends say, and the junior Senator from Kentucky [Mr. CAMDEN] declared, that the Government is incapable of handling anything; that it would not make a success of it. That is not the record nor the history of our Government. We manage the operation of a Navy costing hundreds of millions of dollars, and we do it successfully. We managed the construction of the Panama Canal at an expenditure of $400,000,000, and did it with great success and to the pride of every American citizen. There was no favoritism shown there, and no charge of it; there was no political manipulation of offices there, and there was no charge of it.

But, oh, the Shipping Trust! Whenever you try to engage in the business in which they have got a monopoly, the cry is raised that you have not got the skill to do it; that you will allow political favoritism to creep into it; you will have to go to the Treasury to reimburse yourselves for the great loss that will fall upon the people of the United States. Whenever we undertake to establish competition to the great monopoly that now holds the American people by the throat, that is urged. Well, let us see. I read, Mr. President, a letter from the president of the Panama Canal Co. That company is owned by the Government of the United States. It operates a line of ships and has been operating them for several years now. Let us see what has been the effect of that:

Up to May 31, 1914, we have charged up $358,653.35 to the depreciation of steamers owned by our company; we have maintained a rate of $3.50 for rough goods between New York and Colon and $4.50

per ton on general cargo, as against the $8 rate in effect previous to the time the Government assumed control of our company—

Now, here is a case where, when the Government took control of these ships, the rate charged was $8 per ton, and it forced its competitors to come down to the price the Government was hauling freight for—

and as against a rate of $6 that is now being charged by steamship lines operating vessels between New York and ports contiguous to the Canal Zone; we have carried thousands of employees of the Government and their families from New York to the Canal Zone at the $20 and $30 rates, as against the $75 rate prevailing by other steamship lines; we have competed with foreign lines for the freight traffic moving between New York and ports on the Pacific coast both north and south of Panama, without being parties to rebates, reduced freight rates, or concessions in passenger fares to the important shippers interested in this traffic; we have assisted in the development of traffic between the Atlantic and Pacific coasts of the United States as against the transcontinental railroads by allowing steamship cocarriers on the Pacific a proportion of the through rates sufficiently remunerative to enable them to maintain their steamers in the traffic and accepting a proportion for our Atlantic haul that in most cases result in a loss to our line; we have by the operation of our steamship line induced our Pacific Ocean carriers to agree to a gradual reduction in the rates to and from the United States and Pacific ports of Mexico, Central and South America, to the level of the rates to and from Europe, thereby doing away with the discrimination that has for years existed in favor of the European market; by our action in maintaining low and yet reasonable rates between New York and the Canal Zone we have saved the Government very considerable money in the shipments that have been forwarded by other lines that were forced to meet our rates, and notwithstanding all this the operation of the steamship line has been financially successful, as you will note by the following table:

	Profits.	Deficits.
1905	$157,245.49	
1906		$37,158.21
1907	158,562.95	
1908		178,810.67
1909	104,995.98	
1910	167,952.25	
1911	77,187.97	
1912		201,761.13
1913	221,489.92	
11 months to May 31, 1914	267,019.29	
Total	1,154,453.85	418,730.01

I shall print all of the letter in the RECORD, Mr. President, with the consent of the Senate, but I shall not take the time of the Senate to read all of it.

The VICE PRESIDENT. Without objection, permission to do so is granted.

The entire letter referred to is as follows:

PANAMA RAILROAD CO.,
New York, September 15, 1914.

Hon. J. W. BRYAN,
House of Representatives, Washington, D. C.

MY DEAR MR. BRYAN: Your letter of the 5th instant has just been received by me.

When the United States Government secured control of our company we were operating a steamship line between New York and Colon as a feeder for the railroad. It consisted of the steamships *Allianca*, *Advance*, and *Finance*, which were owned by the company, together with other chartered steamers that were secured from time to time, as warranted by the traffic.

The maximum freight rate then existing between New York and Colon was $8 per ton, and outside of a few of our employees, who were carried at lower rates, the prevailing fare for passengers was $75 each way.

The three steamers we had in the service were not, of course, of sufficient capacity to meet the demands for transportation of freight and passengers when the construction of the canal was commenced, and the Isthmian Canal Commission, the department of the Government in charge of the work, purchased the steamships *Colon* and *Panama* from the Ward Line and turned them over to us for operation on the basis of our company paying interest, charter hire, and depreciation.

The minimum freight rate was gradually reduced from $8 to $3.50 per ton, and is still effective, and practically all of our passenger accommodations have been availed of for the transportation of Government employees. These demands have been so urgent that we have not been able to accommodate the tariff passengers desiring to sail on our steamers, who have consequently patronized the other lines running between New York and the Canal Zone.

When the steamships *Ancon* and *Cristobal* were purchased for the transportation of cement to the Canal Zone, they were turned over to us without charter expense, because it was realized that any charge of this character assessed against us would be reflected in the rate established for the transportation of cement; and with a view to reducing this to the lowest possible limit, we were relieved from the obligation of paying charter hire for the steamships *Colon* and *Panama* upon the understanding that cement would be carried on the *Ancon* and *Cristobal* at actual cost, and that in arriving at this cost we would credit the Panama Canal with the amount we would pay for the charter of the steamships *Colon* and *Panama*. As a result of this arrangement all of the cement carried by our steamers in connection with the construction of the canal has been burdened with a transportation charge of only $1.25 per ton of 2,000 pounds, while on tramp steamers that we have been obliged to charter from time to time because our steamers were not of sufficient capacity to carry all of the cement needed in the work, the Government has incurred an expense of from $2.25 to $3 per ton of 2,240 pounds.

Up to the middle of August, when we turned over the steamship *Cristobal* to the Quartermaster's Department for the return of American tourists in Europe, we were operating six steamers—the *Ancon* and *Cristobal*, the *Colon* and *Panama*, and the *Alliance* and *Advance*. The last two are the property of our company, the *Finance* having been lost in New York Harbor about four years ago.

Up to May 31, 1914, we have charged up $358,653.35 to the depreciation of steamers owned by our company; we have maintained a rate of $3.50 for rough goods between New York and Colon, and $4.50 per ton on general cargo, as against the $8 rate in effect previous to the time the Government assumed control of our company, and as against a rate of $6 that is now being charged by steamship lines operating vessels between New York and ports contiguous to the Canal Zone; we have carried thousands of employees of the Government and their families from New York to the Canal Zone at the $20 and $30 rates, as against the $75 rate prevailing by other steamship lines; we have competed with foreign lines for the freight traffic moving between New York and ports on the Pacific coast both north and south of Panama, without being parties to rebates, reduced freight rates, or concessions in passenger fares to the important shippers interested in this traffic; we have assisted in the development of traffic between the Atlantic and Pacific coasts of the United States as against the transcontinental railroads by allowing steamship cocarriers on the Pacific a proportion of the through rates sufficiently remunerative to enable them to maintain their steamers in the traffic and accepting a proportion for our Atlantic haul that in most cases results in a loss to our line; we have by the operation of our steamship line induced our Pacific Ocean carriers to agree to a gradual reduction in the rates to and from the United States and Pacific ports of Mexico, Central and South America, to the level of the rates to and from Europe, thereby doing away with the discrimination that has for years existed in favor of the European market; by our action in maintaining low and yet reasonable rates between New York and the Canal Zone we have saved the Government very considerable money in the shipments that have been forwarded by other lines that were forced to meet our rates, and notwithstanding all this the operations of the steamship line have been financially successful, as you will note by the following table:

	Profits.	Deficits.
1905	$157,245.49	
1906		$37,158.21
1907	158,562.95	
1908		178,810.67
1909	104,995.98	
1910	167,952.25	
1911	77,187.97	
1912		201,761.13
1913	221,489.92	
11 months to May 31, 1914	267,019.29	
Total	1,154,453.85	418,730.01

I believe the above will give you in a concise manner the result of the operation of our steamship line since its control by the Government, but if there are any further details that you require regarding expenses, earnings, charter, depreciation, or anything else that you think would be of any interest to you, I shall be very glad to furnish them to you.

Yours, very truly,

E. A. DRAKE, *Vice President.*

Mr. JAMES. So, Mr. President, in the light of this letter, what becomes of the argument that we have heard here that the Government can not operate anything successfully? The Government has operated the Panama steamship line successfully and is doing so now, and the Government would operate the lines proposed under this bill successfully.

Mr. President, of course many objections can be raised to legislation of this character. There is no trouble to find fault; but the thing in which we are most interested now is not to try to find fault, but to try to find some remedy. The Democratic Party is in control of this Government. The people look to us for relief. Not a single one of the great laws recently put on the statute books would have been written but for party action. Now shall Democrats here, in control of the Senate, in control of the House of Representatives, and with a Democrat in the White House, fail to meet this great emergency and give relief to the people of the United States of America?

Why, Mr. President, the rate upon cotton has increased from $1.25 a bale, they tell me, to $30 a bale. The cotton crop has not been sold to any great extent. The passage of this bill will give us 80 ships. In addition to that, the bill provides that the auxiliaries of the Navy which are not being used, which are now idle, shall be brought into this service. There are 40 of those vessels, making 120 in all, that we can employ at our various ports in the work of transporting abroad the tobacco and cotton of our farmers and the goods of our manufacturers. Why not take advantage of that opportunity? Why be prevented from giving this relief by a cry that you fear something that in no way has come to us when we have operated other ships, and have been doing it for 10 long years, as in the case of the line from New York to Panama?

In regard to the caucus, there is one caucus everybody attends, and that is the caucus called to give out committee assignments and patronage. No Senator stays away from that; nobody bolts that; that is when we are to get something. Now, when we have a chance to give the people back home something, let us all stick together just like we do when we are seeking something for ourselves.

When there were many Americans stranded abroad—and they were over there enjoying the delights of the Old World—we sent ships over there after them; we sent money over there

to bring them back home. They were stranded. The Kentucky farmer with his tobacco, the cotton farmer down South, and the manufacturer of this land with his products are stranded now. Let us afford them some relief, too. They do not ask you to send money over there to aid them; but they are stranded, just as many of the rich Americans abroad at the time of the outbreak of the war were stranded. They were worth their millions, but they could not get a dollar, just like our farmers have got their hogshead upon hogshead of tobacco and their bale upon bale of cotton, but can not sell it for the price of production, and the manufacturers of this land, with their thousand upon thousand of orders from all the world. They are stranded. Do not let us make flesh of one and fowl of the other.

When we sent ships abroad that gave this relief, it did not call forth the great cry of Government ownership.

Why, Mr. President, the fact is that when these Senators cry out that this bill will be a failure, that is exactly what the Shipping Trust does not believe. If they did, they would be for this bill more strongly than I am. If I could assure Wall Street that this measure would result in a failure and loss to the people of the United States, I could raise $20,000,000 to-morrow in order to aid in the passage of this bill, but that is the very thing they do not believe. What they fear is that it will be a great success; they are afraid that it will drive monopoly off the sea and free the ocean from its piracy. That is what they are afraid of—nothing more.

Mr. President, the people of this country are aroused to the great importance of this issue. The people of Kentucky are aroused. They are for this measure, and they want to see it passed.

To my Democratic friends who have seen proper to bolt their party caucus, to refuse to act with their party after it has registered its decree, I am here to beg them to return to the Democratic Party. Come back. "There is a vacant chair awaiting there; arise and say you will come." It is the party that has honored you; it is the party that has lived for more than a hundred and thirty years; and it is a party so great that no man and no set of men with their betrayal can destroy it. It will live on. I beg these Senators to remember that the smiles upon the other side of this Chamber would not play across their countenances if it were not for the fact that they see in this breach between the Democrats upon this side their only hope of success.

I am not going to be unkind or going to say bitter things to any of the Democratic Senators who have left our party on this question, because I can see plainly written across their once smiling countenances the furrows of regret, and whenever they have further time to think of this question they will come back, I hope, to the Democratic Party.

But, Mr. President, above everything, if this bill must go down, if this great constructive measure must fail, if this must be the first defeat for the greatest President who has occupied that chair in 50 years, if he must fall and above his body the wild shouts of a triumphant Republican Party shall rise, I do pray God that I may be spared the humiliation of reaching down to pull from his body a dagger bearing the impress of the hand of a Kentucky Senator.

RECESS.

Mr. CLARKE of Arkansas. Mr. President——

The VICE PRESIDENT. The Senator from Arkansas.

Mr. CLARKE of Arkansas. I move that the Senate take a recess until Monday next at 12 o'clock noon.

The motion was agreed to; and (at 4 o'clock and 25 minutes p. m.) the Senate took a recess until Monday, February 8, 1915, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

FRIDAY, *February 5, 1915.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Our Father who art in heaven, once more in faith and confidence we approach Thee in prayer. Make us, we beseech Thee, tractable, that we may be led by the holy spirit of truth to a faithful and conscientious disposition of every duty devolving upon us, so that when we are called upon to leave this existence men shall rise up and call us blessed, and, above all, that we may have Thine approval, which will be more blessed than all things else. This we ask in the name of Him who taught us faith, virtue, love, and good will to all men. Amen.

The Journal of the proceedings of yesterday was read and approved.

MILITARY ACADEMY BILL.

Mr. HAY, chairman of the Committee on Military Affairs, by direction of that committee, reported the bill (H. R. 21328) making appropriations for the support of the Military Academy for the fiscal year ending June 30, 1916, and for other purposes, which was read a first and second time and, with accompanying papers, ordered printed and referred to the Committee of the Whole House on the state of the Union. (H. Rept. 1369.)

Mr. MANN reserved all points of order on the bill.

NAVAL APPROPRIATION BILL.

Mr. PADGETT. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 20975, the naval appropriation bill.

The SPEAKER. The gentleman from Tennessee moves that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the naval appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. HAY in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the consideration of the naval appropriation bill, of which the Clerk will read the title.

The Clerk read as follows:

A bill (H. R. 20975) making appropriations for the naval service for the fiscal year ending June 30, 1916, and for other purposes.

Mr. SLAYDEN. Mr. Chairman, I would like to ask the chairman of the committee a question. I have no desire to make any speech in a general way. I am going to offer a substitute for a paragraph in the bill, and I would like to ask whether it is contemplated that there will be any extra time devoted to debate more than is allowed ordinarily under the five-minute rule? I am not asking for it, but it was done, I think, a year or two years ago.

Mr. PADGETT. The practice has varied somewhat. Sometimes there has been a little debate, and then a liberal discussion under the five-minute rule. I have no desire to hold down hard and fast under the rule, but I am willing to allow a liberal debate under the five-minute rule.

Mr. SLAYDEN. That is perfectly satisfactory to me.

The CHAIRMAN. The Clerk will proceed with the reading of the bill.

The Clerk read as follows:

INCREASE OF THE NAVY.

That for the purpose of further increasing the Naval Establishment of the United States the President is hereby authorized to have constructed two first-class battleships, carrying as heavy armor and as powerful armament as any vessel of their class, to have the highest practicable speed and greatest desirable radius of action, and to cost, exclusive of armor and armament, not to exceed $7,800,000 each.

Mr. SLAYDEN. Mr. Chairman, I offer a substitute for the paragraph that has just been read.

Mr. HOBSON. Mr. Chairman, I desire to offer an amendment to strike out the word "two" and insert the word "four."

The Clerk read as follows:

Amendment by Mr. SLAYDEN:
On page 64 of the bill, under "Increase of the Navy," lines 2 to 8, inclusive, strike out the provision for two first-class battleships and insert in lieu of the provision for the same the following:

"Three submarines of seagoing type, to have a surface speed of not less than 20 knots, at a total cost not exceeding $1,600,000 each, and 30 submarines of coast-defense type, at a total cost not exceeding $665,000 each, and the sum of $10,000,000 is hereby appropriated for said purposes, to be available until expended."

Mr. MANN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. PADGETT. I want to reserve a point of order against the amendment.

Mr. MANN. What is this amendment a substitute for?

Mr. SLAYDEN. For the paragraph at the top of page 64.

Mr. HOBSON. Mr. Chairman, I desire to offer an amendment, but I will allow the chairman of the committee to first discuss his point of order to the amendment of the gentleman from Texas.

The CHAIRMAN. Does the gentleman from Tennessee make or reserve the point of order?

Mr. PADGETT. I will reserve the point of order.

Mr. MANN. If one of them is subject to a point of order, the other is.

Mr. HOBSON. Mr. Chairman, I will ask the Chair to recognize me to offer an amendment as a member of the committee.

The CHAIRMAN. The Chair will recognize the gentleman to perfect the paragraph, but the gentleman is not now in order because the gentleman from Tennessee has reserved a point of order.

Mr. HOBSON. Then I will wait until the point of order is disposed of.

Mr. SLAYDEN. Mr. Chairman, I regret to say that parliamentary law per se has never appealed to me as an entertaining branch of study. I am almost ashamed to admit that I am not familiar with the rules, and I doubt if I have ever read them through. They do not appeal to me particularly; but the substitute for this paragraph which I propose is in the interest of economy, and if my motion should prevail it would, in my judgment, give us a much more effective Navy, a Navy certainly immeasurably better for defensive purposes and, I believe, a much more effective aggressive Navy; and, moreover, I believe it is in order because it proposes a saving.

As I have figured it out, and I think with approximate accuracy, the adoption of the substitute for the paragraph on the top of page 64 which I offer will result in saving to the Treasury $5,116,227.50, to which might be added, as a consolation to gentlemen who possibly would regret the giving up of these majestic but useless battleships, a greater security for the people. There can be no question, in view of what has happened within the last 60 days and what is happening every day, that the weak point of the Navy of the United States and of some other navies of the world, which I will forego mentioning, is an insufficient supply of submarines.

No vessel of war, no implement of war, has grown more steadily and I may say more rapidly into complete effectiveness. The fact is that the activity of the German submarine at this hour has terrified the greatest navel power on earth as naval powers have heretofore been reckoned. That Government which has sailors of rare skill, men of unimpeachable courage, backed up by resources almost unmatched by any other Government on earth, has been to some degree paralyzed by the activity and the intelligent handling of the German submarines. A few days ago these submarines turned their attention from acts of hostility directed at war vessels to the merchant vessels of Great Britain, and, Mr. Chairman, in that connection I would like to call attention to some publications anent that new phase of this great and horrible war. Of course these are newspapers which are the source of my information, but none of us has any better sources of information except, perhaps, the great departments of the Government, and we must rely on that common source of information open to all of the people of the country. I mention that fact because some gentlemen may impeach the authority:

A London dispatch states that the recent destructive raids by German submarines in the Irish Sea, following bold and extensive operations in the North Sea, the Channel, and off the north coast of Ireland, has convinced the British that no waters, no port even, is quite safe from Germany's submersible destroyers. Lloyd's insurance on coastwise traffic jumped at a bound from 5 to 15 per cent. It is reported that a German submarine was observed in the Irish Sea 18 miles from Liverpool yesterday morning.

That is from the New York Sun of a very recent date. The same paper in an editorial says:

WHAT DEFENSE AGAINST THE SUBMARINE?

By sinking two British merchantmen in the Irish Sea the German naval authorities have again disclosed the high state of practicability to which they have developed the submarine boat. The exploits of the U 21 prove that Conan Doyle was not a dreamer when he predicted exactly such attacks on England's ocean-borne commerce, and that Admiral von Tirpitz when last December he suggested the starvation of England by the destruction of her ships off her own coast was revealing a plan, and not speculating as to a possibility.

The New York Commercial, of February 1, says:

A SUBMARINE BLOCKADE.

Like a flash of lightning out of a blue sky came the news that a German submarine captured and sank two and probably three British merchant vessels almost at the mouth of Liverpool Harbor.

Mr. Chairman, within the last week there has been discussion in the English press, echoes of which have been cabled to this country, to the effect that people living up the Mersey from Liverpool are apprehensive that there may be a raid from these German submarine boats.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. SLAYDEN. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SLAYDEN. The New York World says:

THE SUBMARINE'S LATEST.

The presence in the Irish Sea of a powerful German submarine, 800 miles by the most direct route from its nearest base, is one of the most significant developments of the war. If one hostile undersea boat can invade waters that are practically a British lake and carry terror to the mouth of the Mersey, others may be expected to follow its example.

While it is hardly to be expected that the Germans will be able right away to execute Admiral von Tirpitz's threat to cut off Great Britain's food supply by this means, there can be no doubt that Saturday's raid puts the greater part of the United Kingdom's commerce upon warning. Henceforth the ocean lanes between New York and Liverpool, no matter how well patrolled they may be in midocean, will present dangers adjacent to the British coast that can not be ignored.

Mr. Chairman, I do not want to abuse the patience of the House, but I have submitted an amendment, in the nature of a substitute for this paragraph at the top of page 64, which will effect a very material saving to the Treasury, and that will effect a saving which will run up into millions and which, if agreed to, will, in my judgment, add very largely to the security of this country.

Mr. SHERWOOD. Mr. Chairman, will the gentleman yield?

Mr. SLAYDEN. Yes.

Mr. SHERWOOD. How much saving does the gentleman estimate it will make?

Mr. SLAYDEN. Between five and six million dollars. From the defensive point of view of the submarine, I am going to quote a line or two from the testimony of that great man, Admiral Fletcher, whose splendid poise, whose calm judgment, whose patience under trying circumstances, and whose skill in handling delicate relations with another people have given him a high place in the estimation of the people of this country. He says:

The use of the submarine with its torpedoes in warfare may be designated as a weapon of opportunity. If the opportunity occurs for its use it is formidable and destructive, but a skillful enemy need not permit the opportunity to occur.

Possibly not, Mr. Chairman, but one of the most skillful enemies in the history of naval warfare has not been able to overcome the opportunity. The submarine makes its own opportunity. Admiral Fletcher says, in reply to a question by Mr. BUTLER, of Pennsylvania, a member of the committee:

It is very effective for the protection of a port or harbor if ships attempt to enter that port or to lie off the port and to obstruct the commerce of the port. It is probable that a fleet would not be able to do that effectively unless protected against submarines.

Elsewhere in this testimony—I have not the time to quote it—Admiral Fletcher says that there has not yet been found any effective protection against submarines, although he anticipates it will develop in time, and perhaps it may. No one can tell what is in the lap of the gods.

Mr. GARDNER. Mr. Chairman, will the gentleman yield?

Mr. SLAYDEN. I have only two or three minutes, but I will yield to the gentleman.

Mr. GARDNER. Admiral Fletcher says also:

The use of the submarine with its torpedoes in warfare may be designated as a weapon of opportunity. If the opportunity occurs for its use it is formidable and destructive, but a skillful enemy need not permit the opportunity to occur.

Mr. SLAYDEN. Mr. Chairman, I have read just precisely that statement of the admiral, and I can not yield time to the gentleman to repeat what I had already stated to the House. Admiral Fletcher says in reply to a question from Mr. BUTLER:

No; they [the enemy] would not pretend to land in the presence of the submarines, unless they had assurance that they had secured a safe place of operation where submarines could not attack them.

Mr. Chairman, that seems to me to be a confession of the enormous superiority of these weapons. Speaking of conditions in the Spanish War, Admiral Fletcher says:

The fleet would not have attempted a close blockade. It would have been impracticable to do it that way with effective submarines in the harbor.

He also says:

Submarines could be effectively used against a close blockade. The fleet may have been off 100 miles from the harbor, and yet have been in a position to intercept the Spanish fleet when it came out.

Mr. Chairman, I have not time to quote further from the testimony of this great admiral of our Navy. I wish I had, because I think his testimony sustains the contention that I make. I believe that this amendment will help to secure for our Navy the greatest engines of war that have ever been devised, and at the same time will make an important saving to the Treasury. Right now it is impossible for us to tell how soon it may happen that the relative naval rank of the nations may change. In 24 hours, as I said the other day, we may become the greatest navy in the world, even measured in terms of dreadnaughts.

The CHAIRMAN. The time of the gentleman from Texas has again expired.

Mr. FOSTER. Mr. Chairman, I ask unanimous consent that his time be extended for one minute in order that I may ask him a question.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FOSTER. I notice the gentleman's amendment provides for the cost of these submarines at $3,340,000 each?

Mr. SLAYDEN. Oh, no. Mr. Chairman, I ask the Clerk to again report the amendment.

The CHAIRMAN. Without objection, the Clerk will again report the amendment.

There was no objection, and the Clerk again reported the amendment.

The CHAIRMAN. Does the gentleman from Tennessee still reserve the point of order?

Mr. PADGETT. I do not think it is germane to this paragraph.

The CHAIRMAN. Does the gentleman from Tennessee make the point of order?

Mr. PADGETT. Yes, sir.

The CHAIRMAN. Inasmuch as the paragraph beginning line 12, page 64, deals with the question of submarines and the paragraph to which the substitute has been offered deals with the question of first-class battleships, the Chair is of the opinion that the amendment is not germane, and the Chair sustains the point of order.

Mr. SLAYDEN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. SLAYDEN. Mr. Chairman, inasmuch as this substitute which I propose was ruled out on the point of order, I would like to be informed by the Chair whether or not it may be properly reintroduced in the next paragraph but one?

The CHAIRMAN. The Chair thinks so.

Mr. HOBSON. Mr. Chairman, I desire to offer an amendment to the paragraph.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

On page 64, line 4, after the word "constructed," strike out the word "two" and insert the word "four."

Mr. HOBSON. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes.

The CHAIRMAN. The gentleman from Alabama asks unanimous consent to proceed for 10 minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. HOBSON. Mr. Chairman, my amendment is offered for the purpose of having the bill make adequate provision on a minimum basis for our national defense. I am sure that in the present disturbed condition of the world every proposition bearing upon our naval program will meet the very careful and earnest consideration of all Members. I desire very briefly to point out the reasons why this amendment is on the minimum basis. We have vast vital interests that are exposed; larger interests than any other country in the world; in fact, about the equivalent of the exposed interests of all other countries combined. By "exposed" I mean interests within gunshot of the water. Furthermore, those interests of ours are more exposed than similar interests of any other country. We are not a military people. We are a nonmilitary people. We have no great mobile army; other nations have. If other nations get control of the sea, they can strike us without any appreciable resistance on our part. I do not mean to say that in our vital mainland that they could permanently maintain a base, but what I do say is that they could make what is known as "raids" without serious opposition; and a raid in the region of New York, or, say, within 150 or 200 miles of New York, or two or three raids simultaneously, could not possibly be resisted by the available military forces we have. The enemy could levy tribute upon more than half of all the wealth of the Nation. Now, to imagine they would not levy tribute, would be simply to fly in the face of history and of current events. Then the enemy could retire with his tribute, and we would have no possible chance to strike back at him. Moreover, when he retired, he would have destroyed the plants of our shipyards, navy yards, arsenals, and the factories for military supplies, and put us in such a position that for months, if not years, we would be unable to make the preparation necessary to prosecute a war to a successful termination. As to our outlying possessions, the Philippines, Hawaii, Alaska, the Panama Canal, Cuba, Porto Rico, an enemy in control of the sea can seize and permanently occupy these without serious resistance. Therefore I lay down this as fundamental: Being thus defenseless, having such vast values exposed, America can not afford permanently to live in a status where a military nation of Europe, having a great standing army all ready, has control of the sea.

Mr. SLAYDEN. Will the gentleman yield for an interruption?

Mr. HOBSON. Certainly.

Mr. SLAYDEN. The gentleman has just stated that our seacoast cities—he did not use the phrase, but I understood him to mean that—are utterly defenseless in the presence of a raid of an enemy's fleet. Admiral Fletcher says that the present forts, supplemented by mines, are expected to be able to prevent any fleet from bombarding New York. How does the gentleman reconcile that difference of opinion?

Mr. HOBSON. If the gentleman would study the plans worked out by the War College as to how an attack would be made on New York City or farther down the coast, he would find that an enemy would not have to stand up and bombard New York City. He would land one or more Army corps on Long Island and on the coast of New Jersey and approach New York from the rear.

Mr. GARDNER. Will the gentleman yield?

Mr. HOBSON. I will be glad to, but I want to say if my time is thus taken up I shall have to ask an extension.

Mr. SLAYDEN. I shall ask an extension for the gentleman.

Mr. HOBSON. Certainly; I will yield.

Mr. SLAYDEN. I want to call the attention of the gentleman to another statement of Admiral Fletcher. Mr. BATHRICK asked him the question if an enemy would be likely to approach a harbor if they knew submarines were located there, and Admiral Fletcher answered no; so, according to the opinion of Admiral Fletcher, who is a fair authority on naval matters, I supposed we had adequate defense.

Mr. HOBSON. The gentleman, of course, is aware of the fact that the Germans have submarines in the English Channel, and yet the English troops have been landing in France without interference and British transports are continually passing without hesitation. I now yield to the gentleman from Massachusetts.

Mr. GARDNER. Has not there been evidence in the last two or three days before the fortifications committee tending to show that New York can be bombarded?

Mr. HOBSON. I understand that it can, and I believe that it can.

Mr. GARDNER. And did not Admiral Fletcher's evidence show that he was unaware of the fact that foreign superdreadnaughts were now carrying guns which outranged the guns on our seacoast defenses?

Mr. HOBSON. I do not know as to that. I do know that the standard coast-defense 12-inch gun of disappearing type was never built with carriages for long ranges, such as would be chosen in a bombardment. These short-range guns are the types upon which we now chiefly depend for our coast defenses.

Now, Mr. Chairman, I lay it down, and it can not be disputed successfully, that as a living policy, a status of defense for this Nation, as a permanent policy, we can not safely permit any great military nation of Europe that has a great standing army and has a vast merchant marine supplying transportation, and therefore always ready to have what is known as the control of the sea between its shores and ours. We could not strike them back if we had control of the sea, because we would have no Army, and the fleet alone can not go ashore, but if they have control of the sea they can strike us almost instantly without any chances of resistance on our part. The same principle applies to the Pacific Ocean. We can not safely permit a nation in Asia that is a great military nation, with a vast standing army available and a merchant marine ready for transportation, to be in control of the sea in that ocean. Now, then, these oceans are so far apart that we can not permit this condition to exist in either ocean. Therefore a single-fleet Navy will not answer. We must maintain as a living proposition a fleet in the Pacific Ocean superior to the navy of Japan and a fleet in the Atlantic Ocean superior to the navy of Germany, both at the same time.

Now, Mr. Chairman, the Panama Canal is not a sea-level canal like the Suez Canal, and there is a question whether the Suez Canal is going to remain permanently open even when it is under the protection of a nation in control of the sea. If we are in control of the sea, troops can not land on the Panama Canal. We may be able to give it such protection as to insure its integrity so that when occasion permits and the strategy demands we may then be able to concentrate our two fleets and get the superiority that will insure us the victory. But we can not depend upon it. Having no great standing army there, if an enemy gets control of the sea he will soon control the Panama Canal. Of course, we might destroy the locks before we surrender it, but then it would be out of use for us as well as for the enemy.

Therefore I lay it down as a fundamental principle of self-preservation that this Nation to-day ought to establish its naval strength on the basis of being equal to the navy of Germany and of Japan combined.

Mr. MONTAGUE. Will the gentleman yield?

Mr. HOBSON. Certainly.

Mr. MONTAGUE. Why would you limit the equality to Germany? Why not to England?

Mr. HOBSON. I am coming to that now, if the gentleman will permit.

Mr. Chairman, the war in Europe has brought out certain matters of cardinal importance in their bearing upon our national defense.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. SLAYDEN. Mr. Chairman, I ask unanimous consent that the gentleman be permitted to proceed for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HOBSON. Mr. Chairman, it is clear that if a belligerent of Europe has undisputed control of the sea, that belligerent will curtail the rights of neutrals in time of war. America is the chief of all the neutrals of the world. You might call her a chronic neutral. The nations of Europe are chronic belligerents. In the interest of our own commerce it is clear that we can not conduct that commerce and expand it in time of war when the European nations are belligerent and when one of the belligerents has undisputed control of the sea. In the years to come it will be realized more and more as a result of this war that a chronic belligerent can not in justice to all the neutrals, can not in justice to the weak nations of the world, can not in justice to the cause of general peace—whose commerce ought not to be entirely dislocated when war exists—be safely intrusted with the undisputed control of the high seas. With such control it is clear that not only a belligerent can overthrow what otherwise would be peaceful over-sea commerce of its enemies, but it can overthrow the peaceful commerce of neutrals. The English undisputed control of the sea to-day not only is tending to throttle Germany, but it is tending to prevent the development of America and her over-sea commerce.

Now, Mr. Chairman, we can not ignore a fact that this war has brought out. The Anglo-Japanese alliance is offensive and defensive. No matter where the war may take place, such is the case. Now, Mr. Chairman——

Mr. PADGETT. Will the gentleman yield?

Mr. HOBSON. Will the gentleman help me to get a little more time in case I yield?

Mr. PADGETT. No; I do not think so.

Mr. HOBSON. Then I will go ahead.

Mr. Chairman, one of those nations would have undisputed control of the sea. The other would have a great army, and the one would have the bases for operation right along our shores and contiguous to our own frontier. In addition to these vital interests affected fundamentally, there is the Monroe doctrine, which is a permanent part of our international policy, though not accepted by international law. The American people are going to maintain in the Western Hemisphere the principle of protecting the weak people of this hemisphere against the oppression of the strong military nations of Europe, and maintain the principle of equal opportunity in trading with this hemisphere—fair chance and no favor.

Mr. BARKLEY. Mr. Chairman——

Mr. HOBSON. I have had to decline to yield to one colleague, and I must do the same with my friend.

Likewise in the Pacific——

Mr. MANN. Will the gentleman yield?

Mr. HOBSON. The gentleman knows that I have declined to yield.

Mr. MANN. I was going to ask unanimous consent that the gentleman might have a little more time.

Mr. HOBSON. Pardon me, then.

Mr. MANN. Mr. Chairman, how soon does the gentleman's time run out?

The CHAIRMAN. In one minute.

Mr. MANN. Mr. Chairman, I ask that the gentleman from Alabama have 10 minutes more.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the gentleman from Alabama may proceed for 10 minutes more. Is there objection? [After a pause.] The Chair hears none.

Mr. HOBSON. Now I will be very glad to yield to the gentleman from Tennessee [Mr. PADGETT].

Mr. PADGETT. The question I want to ask you is, if I remember correctly, several years ago the question of the alliance between Japan and England came up, and at the request of England Japan consented to a modification of that alliance agreement whereby the United States was excepted from its operations?

Mr. HOBSON. And I remember very well, Mr. Chairman, that also not very long ago, since the period to which the gentleman refers, when the question of our relations with Japan over the matter of land-ownership bills passed by the Legislature of California was cleared up, and everything was straightened out, the English papers distinctly stated how relieved they were to find it so. They said, in effect, that if trouble had come they would have felt the obligations of their alliance.

Now I yield to the gentleman from Kentucky.

Mr. PADGETT. Mr. Chairman, will the gentleman yield first to me for a moment at that point?

Mr. HOBSON. Yes.

Mr. PADGETT. It was the California dispute that called for a revision of the treaty of alliance, and England asked for the revision because of the California dispute?

Mr. HOBSON. Yes; and it was felt—the feeling was expressed—that they were happy that the relations had not become more strained between America and Japan, because of the obligations of their alliance.

Now I yield to the gentleman from Kentucky.

Mr. BARKLEY. My question was prompted largely by the question propounded by the gentleman from Tennessee [Mr. PADGETT]. What I desired the gentleman to explain was whether he had any basis for the statement that there was an alliance between England and Japan, both offensive and defensive, that applied to the United States?

Mr. HOBSON. Well, I can state it in the terms of the treaty. If the gentleman will read the treaty he will find that its words specify cooperation in upholding common interests in the Far East. Now, I am coming to that in the next minute, and I will show how the treaty will apply, irrespective of all other considerations, because "interests" are now being affected.

Mr. BARKLEY. If it be true, then, that Japan and England are in an alliance that will require England to come to the assistance of Japan in case of war with the United States, whoever might bring on the war, does not the gentleman think it would be well for us to build a series of several hundred forts along the Canadian boundary line that might protect us from invasion by Great Britain from Canada—along a boundary line which has been unprotected for over a hundred years?

Mr. HOBSON. Well, I will say to the gentleman that I do not think a series of forts spread along a 3,000-mile boundary line would be any more effective or expedient than to build a series of forts up and down the 3,000-mile coast line.

Mr. BARKLEY. Any more than a series of forts between France and Germany, which could be avoided by the invasion of Belgium?

Mr. HOBSON. Oh, no. To-day Japan has made 21 demands upon China. We have not the power to interpellate the administration in this country, but we have the right to get information. I now call on the Secretary of State to give to us and to the people of America the substance of the 21 demands that Japan has made upon China. What is the occasion for making these demands? Japan has occupied Kiaochow. When China declared that the fighting was over at Kiaochow and abolished the war zone, Japan said it was an unfriendly act. And now Japan has opened up negotiations direct with China to determine the future development of the Chinese Empire, and England has O. K'd Japan's demands, thus making community of interest. When Japan went into Manchuria, to determine the future development of Manchuria, the very next year we lost $20,000,000 of our market for cotton goods, and we all know that the system of distribution there gives the advantage to Japan.

Mr. Chairman, the fate of China and the open-door policy are now hanging in the balance. The European nations that helped to promulgate the open-door policy in China are now tied hand and foot in Europe. It remains for America alone to maintain the open-door policy, to safeguard the integrity of China and the principle of a fair chance and no favor, the principle of justice and right in the Far East, where we have vital interests and have fundamental rights. We joined gladly in proclaiming the open-door policy. It now devolves upon America, and America alone, to say whether the open-door policy is to be a discard forever, whether China is to become a vassal nation to the necessary prejudice of our commerce throughout that whole nation as we have suffered in Manchuria and Korea.

Now, then, what applies to-day will apply for years to come. America has vital interests in the Far East. No one can deny it. America can not sit still and see the Chinese Republic made a vassal nation of a military monarchy.

Mr. SLAYDEN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Alabama yield to the gentleman from Texas?

Mr. HOBSON. Certainly.

Mr. SLAYDEN. Will the gentleman tell us how we are going to prevent it if the Chinese reconcile themselves to such a situation? Are you going to shoot them into behaving?

Mr. HOBSON. The gentleman knows that the Chinese would not reconcile themselves to the domination of any outside power willingly. She yields to force, and she is compelled to yield because she is not prepared to defend herself.

Now, Mr. Chairman, reviewing the first proposition, we must have a Navy in the Atlantic equal to that of Germany and a Navy in the Pacific equal to that of Japan; and, consequently, we must have a total Navy equal to the combined navies of the two countries.

Now for the second conclusion brought out by this war.

Mr. BARKLEY. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman from Alabama yield to the gentleman from Kentucky?

Mr. HOBSON. Yes.

Mr. BARKLEY. If Japan and England have brought themselves into alliance, why do you limit the necessities of the American Navy to being equal to the navy of Germany and the navy of Japan and not make it equal in addition to the navy of Great Britain?

Mr. HOBSON. I am coming to that. Mr. Chairman, the march of history can not be set aside. America can not escape her responsibilities, even if she would. As Members we may temporarily ignore them here, but the mighty march of destiny in the progress of civilization and the advance of the race is going to demand that in the interests of humanity America shall supplant Great Britain upon the high seas of the world. [Applause.]

The present exigencies may involve the Monroe doctrine in an acute stage in Mexico. We are not certain that after the war is over, if Great Britain should be victorious, she would consent to America's continued paramountcy in Mexico. Our paramountcy in Mexico under the Monroe doctrine and the open-door policy and integrity of China are our settled foreign policies. These foreign policies demand that America should have a Navy as big as the navies of Great Britain and Japan combined. In other words, instead of the British two-power policy it must hereafter be an American two-power policy.

Mr. MONTAGUE. Mr. Chairman, will the gentleman permit me to ask him a question there?

Mr. HOBSON. Yes.

Mr. MONTAGUE. I want the gentleman's practical opinion. I am more interested in that than in his forecast of the policies of nations. How long will it take us to realize this vast combination of units that the gentleman suggests, and what would be the annual appropriations with which to reach it in any approximate length of time?

Mr. HOBSON. I will now come to that. To start with, for such a vast establishment as our Naval Establishment must be there must be system. The money that we put in must be economically expended. There must be a proper organization. Naval policy is a part of the great scheme of national defense; the whole question of national defense must be determined by adequate and scientific agencies. You may refuse to establish a council of national defense while I am in Congress, but the day will come when you will establish it. The Secretary of War is already inaugurating an informal, irresponsible conference of members of the Cabinet and chairmen of defense committees of Congress—an admission of the need of such a council.

Mr. MONTAGUE. Mr. Chairman, will the gentleman pardon me one suggestion?

Mr. HOBSON. Yes.

Mr. MONTAGUE. The gentleman accentuates with great zeal the need of national defense, but if we are going to resist the invasion of China by Japan, have we not embarked beyond the realm of national defense and gone into the great theater of international offense?

Mr. HOBSON. I think not. It is in the protection of our vital interests in China, a protection that all the nations of the world, including Japan, have actually pledged, protection of the integrity of the Chinese Empire—a defense of China and not an offense against Japan.

Mr. BARKLEY. Will the gentleman yield?

Mr. HOBSON. In just a moment; then I shall have finished my remarks and will answer any additional questions.

In addition to the investigation and scientific determination of the great question of national defense we must have a similar coordination in the Navy Department. You may throw out this bureau of strategy, so called, on a point of order, but you will come to it. The time is coming when you will be compelled to have one.

Now, when we have established a council of national defense and the office of chief of naval operations, then we can balance our measures of defense, take the question out of politics, and insure efficiency and economy in a businesslike way, like Germany, Japan, and England. If these countries continue the general programs they have followed for the last eight years, our program each year will have to provide at least six capital ships. It is on this basis that I am urging four dreadnaughts and two battle cruisers in this bill.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUTLER. Mr. Chairman, I rise to oppose the amendment proposed by the gentleman from Alabama [Mr. HOBSON], although I do not for one moment imagine that this amendment will be approved by this committee, because I know that it ought not to be. I do not imagine that it will even be seriously considered at this time, although it is offered in sincerity by a very earnest gentleman of conviction who is well acquainted with naval affairs. It is an additional pleasure to say that it is offered by a gentleman for whom I have a fondness, and I regret that he is so soon to leave the House.

Mr. Chairman, if we are going to fight, we have not sufficient armament. If we are going to have peace, we have too much armament. [Applause.] This Nation has never had a policy upon the subject of armament. If gentlemen will give me their attention, I will endeavor to not tire them. I do not attempt to persuade or convince anybody. This question involves morals and not, in my judgment, economy. I would not think of economizing if it became absolutely necessary to increase our military in order to defend our national honor, but I do not think the proposed increase necessary at this time. Although, as I repeat, this Nation has never had a fixed policy upon naval development, we have always had sufficient armament to protect ourselves and keep us from harm. Permit me for a moment to refer to myself. For many years I have endeavored to learn what was the right position to take in the way of providing a sufficient armament for the protection of our country, or what is known as a national defense. I am glad to say that no political division has ever shown itself in this House on this subject, and it ought not. Parties in their platforms have from time to time declared that we ought to have an adequate defense. What is an adequate defense? I suppose it is one that defends. I quite agree with the gentleman from Alabama [Mr. HOBSON] that if we are to arm ourselves against all nations and against all emergencies we are not now doing nearly as much in the way of preparation as we ought to do, but in my opinion it is unnecessary at this time.

Mr. SLAYDEN. Mr. Chairman, will the gentleman permit a question?

Mr. BUTLER. Yes.

Mr. SLAYDEN. The gentleman spoke of agreeing with the gentleman from Alabama in some respects. Does the gentleman from Pennsylvania go with him so far as to think that we ought to defend ourselves by invading the Asiatic danger zone?

Mr. BUTLER. Oh, no.

Mr. ALEXANDER. Does the gentleman think we ought to have a navy large enough to police the world?

Mr. BUTLER. I do not. I would invade no territory——

Mr. SLAYDEN. That is satisfactory to me.

Mr. BUTLER. Unless it became necessary as a part of our defense during an attack—positively no.

Mr. SLAYDEN. That is the point of my question. Does the gentleman believe it is necessary, in order to defend ourselves, for us to go across the world and go into the Asiatic war zone and into foreign questions?

Mr. BUTLER. Mr. Chairman, I am not enough of a military man to answer that question, and I want to keep away, as far as I can, from foreign complications. Eighteen years ago I asked to be appointed a member of the Naval Affairs Committee in order that I might prevent the coming of what I very greatly fear will come to us in the near future if we do not stay at home and behave ourselves as we ought to do. [Applause.]

Mr. HUMPHREY of Washington. Will the gentleman yield for a question?

Mr. BUTLER. Yes.

Mr. HUMPHREY of Washington. The gentleman is a member of the Committee on Naval Affairs, and I should like to get his views on this subject: Suppose—and I do not know that it is a very violent presumption—suppose we should wake up some morning and find that there was a declaration of war against us by Japan. Will the gentleman explain how we would defend the Pacific coast?

Mr. BUTLER. I would leave that to those who know better than I do. I want to answer the gentleman just as civilly as I can.

Mr. HUMPHREY of Washington. I want to know what your theory is.

Mr. BUTLER. Not being able to answer, because I do not know, I will refer the gentleman to those who know better than I do—the military men—but I have no fear of an attack from Japan. I believe that we are thoroughly prepared for any assault that Japan may make upon us. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. BUTLER. I ask for a little more time.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent that his time be extended five minutes. Is there objection?

There was no objection.

Mr. HENSLEY. Will the gentleman yield right there?

Mr. BUTLER. Of course I will.

Mr. HENSLEY. I have great respect for the opinion of the gentleman from Pennsylvania, and I am desirous of knowing whether or not he has heretofore subscribed to the doctrine that preparedness is an insurance against war; and if so, how he feels upon that proposition now, in the light of recent events?

Mr. BUTLER. Mr. Chairman, I am one with a bursted theory [laughter], but I am thankful to God Almighty that I am strong enough to admit my mistake. [Laughter and applause.] I never for one minute imagined that the civilized nations of the world would be fighting to exterminate themselves, as they are now doing, but my theory has failed, and I believe now, as I will until my mind changes, that nations prepared to fight will fight. [Applause.] And the better their preparation to fight the quicker they will go to it. [Laughter and applause.]

However, I do not propose, as far as I am able and as far as I can see light, to leave this country absolutely unprepared and defenseless. We ask no quarters from anybody. [Applause.] We are both independent and able. We are positively willing at all times to provide for ourselves in our own way, as this great body may see fit.

Mr. HENSLEY. Will the gentleman yield?

Mr. BUTLER. I will yield to the gentleman.

Mr. HENSLEY. Does not the gentleman believe that this great Government should take a more advanced stand and do more toward bringing about pleasant relationship between other countries, to the end that disarmament may be given to the world, than it has done in the past?

Mr. BUTLER. Of course I do; I would rather visit than fight any day. [Laughter.]

Mr. MILLER. Will the gentleman yield?

Mr. BUTLER. In just a moment. I will confess in my ignorance that I can not see distinctly. I am like a man walking in the dark; I do not know what is the best to do on the present occasion in the direction of a national defense. I want to do what is right, and as soon as I can see it then I am ready for my share of responsibility. I am against any increase of armament at this time above that which we usually provide in time of peace, because I assume—I may be mistaken again as I reckon with human nature and my knowledge of it—yet I assume that after the present great war is over, when these nations are bankrupt, when the people face the miseries of this war, they will be willing to join with us in an agreement limiting armament for a number of years; and if we can obtain that concession we will have done more than civilization has done since Christ appeared upon the earth. [Applause.]

I am not sure that I will then be a Member of this House; but if I am and these present belligerents insist upon increasing their armament, insist upon rebuilding the armament lost in the present war and greatly increasing it, I will join with the American people in increasing ours, because I think it will then be necessary. But until that time comes, until we have an opportunity to make an honest effort with the belligerent nations to reach such an agreement by which we will limit armament, and thereby secure ourselves greater safety, I am unwilling to increase our armament beyond that which we have usually provided. Therefore, if the amendment of the gentleman from Alabama should prevail, it will be without my approval and against my opposition. Now, I will yield to the gentleman from Minnesota.

Mr. MILLER. My question was pertinent at the time I asked the gentleman to yield, but it may not be now. Does the gentleman think when we are in the presence of an armed enemy we ought to discontinue all preparations to protect ourselves against any aggressive act?

Mr. BUTLER. I do not; but I do not think we are in the presence of a hostile country.

Mr. MILLER. I did not say "hostile."

Mr. BUTLER. I do not think we are to be attacked. If I did, I would join with the gentleman and all others in making the necessary defense.

Mr. WITHERSPOON and Mr. GARDNER rose.

The CHAIRMAN. The gentleman from Mississippi is recognized.

Mr. GARDNER. Mr. Chairman, the gentleman from Pennsylvania has just spoken on the same side.

The CHAIRMAN. The Chair will recognize the gentleman from Mississippi [Mr. WITHERSPOON].

Mr. GARDNER. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. GARDNER. Is it proper to recognize two gentlemen in succession to speak in the negative of a proposition when somebody arises to speak in the affirmative?

The CHAIRMAN. The Chair thinks it is within the discretion of the Chair. The Chair will recognize all gentlemen.

Mr. WITHERSPOON. Mr. Chairman, the gentleman from Massachusetts [Mr. GARDNER] is mistaken in saying that the gentleman from Pennsylvania and I are on the same side. I ask unanimous consent, Mr. Chairman, to proceed for 10 minutes.

The CHAIRMAN. The gentleman from Mississippi asks unanimous consent to proceed for 10 minutes. Is there objection?

Mr. GARDNER. Reserving the right to object, I call the gentleman's attention to my statement, that on the pending amendment the gentleman from Mississippi and the gentleman from Pennsylvania are on the same side.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. WITHERSPOON. Mr. Chairman, I want to address the House solely for this reason: I want the House to be put in possession of the facts. My service on the Naval Affairs Committee of four years has thoroughly convinced me that with a great deal of study I know nothing about the Navy, and that the only way in which a Member of this House can vote intelligently upon the various questions that arise on this appropriation bill is to get the facts from the only witnesses who know the facts, and they are the naval officers.

In addressing the House a few days ago I reviewed the statements of a number of naval officers who testified substantially that we already have a sufficient Navy, an adequate Navy, to protect us against any attack by any nation on earth except that of England.

I desire to speak this morning in order to call your attention to the testimony of another naval officer, a member of the general board, a rear admiral of the Navy, Rear Admiral Fiske. No man can take his testimony and study it and understand it and believe that there is the slightest excuse for another battleship. If you will give me the time, I will show you that and disprove the necessity for any such appropriation as this bill contains. Let me read you from page 1007 of the hearings. He says:

> But there is one serious fact about naval engagements, especially modern naval engagements, and that is that the victor comes off without very much injury.
>
> The cause for that is mathematical. Say one nation has a slight superiority in gunfire at the start, that puts the other fellow at a disadvantage. That increases, and it increases with accumulative effect.
>
> I published some tables about 10 years ago in the proceedings of the Naval Institute to show how when two forces engaged with each other, if one hit the other 10 times and the second one hit the first one 9 times, in a comparatively short time the relation of those two forces from that standpoint would be 2 to 1 instead of 10 to 9; and it increases very rapidly after that. That explains why in the Battle of Manila Bay, in the Battle of Santiago, the Battle of Tsushima, and in the recent battle off the west coast of Chile, the victors came off almost uninjured.
>
> Mr. ROBERTS. It is a geometrical progression?
>
> Admiral FISKE. Yes.

Mark that. He tells you that where two naval forces oppose each other with just a slight advantage in gunfire on one side, where they stand at the beginning in point of power in the relation of ten to nine, that in a short time the result of having a slight advantage in gunfire will reduce their relation to two to one instead of ten to nine. That is his statement. According to his testimony that is the fact, and I want to apply that to the relation of the American Navy and the German Navy, which is admittedly the greatest on earth except that of England. Admiral Fiske was asked to take up the list of battleships in these two navies and compare them, and he testified as a result of that that ship for ship the American Navy is the most powerful on earth. Take, for instance, the last two ships in the program of each nation. The two German ships are armed with eight 15-inch guns.

The corresponding ships in the American Navy are armed with twelve 14-inch guns, and every naval officer that has testified says that those two last ships in the American Navy are more powerful than the German ships. Take the next three ships in the American Navy and the next three in the German Navy. The German Navy ships are armed with ten 12-inch guns, and the corresponding American ships are armed with twelve 14-inch guns. Not only has each one of them two more guns, but the guns in the American Navy are much more powerful. Then after these five take the next four ships in the American Navy. They are armed with ten 14-inch guns, while the German corresponding ships are armed with ten 12-inch guns. That makes nine. In those nine ships we have one hundred 14-inch guns, and in the corresponding nine ships of the German Navy there are eighty-six 12-inch guns and sixteen 15-inch guns, fourteen less on their ships than on ours; and if you will carry the whole list through to the very beginning you will find there is the same superiority. While the Germans were equipping their battleships with 9 and 14 inch guns we were equipping ours with 13-inch guns. While they were equipping theirs with 11-inch guns we were equipping ours with 12-inch guns. That superiority in gunfire stands from the first to the last ship in both Navies.

Let us see what that amounts to. I asked Admiral Fiske if he did not think that was an immense advantage in gunfire. He said that he would not call it an immense advantage, but he would call it an advantage in gunfire. I then said to him that we were told by Admiral Twining, the Chief of the Bureau of Ordnance, that a 14-inch gun has a destructive force 50 per cent greater than a 12-inch gun and shoots with 30 per cent more accuracy than a 12-inch gun. I asked him whether he approved or disapproved of that statement. He said that it had been such a long time since he had anything to do with ordnance that he would not put his judgment up against that of Admiral Twining.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. WITHERSPOON. Mr. Chairman, I ask unanimous consent to proceed for five minutes longer.

The CHAIRMAN. Is there objection?

Mr. GARDNER. Mr. Chairman, reserving the right to object, can we not come to some sort of agreement on this thing as to time?

Mr. PADGETT. Mr. Chairman, I thought that we could run along a reasonable time and allow this debate. Later on in the bill there will not be necessity for so much debate. I think we can run along with liberality and brotherly love at the present time.

Mr. GARDNER. I wanted to see if we could not come to something reasonable. There are so many amendments besides this one to consider that I think we ought to come to some agreement on time.

Mr. PADGETT. It will not be very long, I think, before we can dispose of this.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. WITHERSPOON. Mr. Chairman, I then said to him, supposing now the statement of Admiral Twining that each one of these 14-inch guns with which our ships are armed, amounting to 100, has a destructive force 50 per cent greater than the 12-inch guns on the corresponding German ships, is accurate, and it has been approved by Admiral Strauss, the successor of Admiral Twining, as Chief of the Bureau of Ordnance—supposing that is true, and he said he could not question it, then I asked him if he would consider that just an advantage or whether he would consider it an immense advantage. He then said, if that statement were true, it would be an immense advantage in gun fire. Then I asked if the other part of that statement is true, that these two Chiefs of Ordnance, the greatest experts in the Navy on that subject, are correct in their statement that a 14-inch gun shoots with 30 per cent more accuracy than a 12-inch gun, whether that would be a slight or an immense advantage. He then said that he hardly believed that that was true. He did not question it at first, but when he saw the immense advantage it amounted to, then he began to question the statement. Then I said, "Admiral, let us see whether you approve it or not. The reason given by these ordnance experts why the American gun of 14 inches in diameter shoots with an accuracy 30 per cent greater than the German 12-inch gun is based by them on the fact that it has a flatter trajectory. Suppose you are shooting at this target with a rifle, if you aim right at the book, which is the target, you would hit it every time." He said, yes, that that was true, and that it would not make any difference how far away it was, if it were within the range of the gun and the gun were aimed at it, you would hit it. Then I said that in shooting these big guns they did not shoot right at the target, but that they have to shoot up and the shell comes down. He agreed with that statement. Then I said, "The great problem in accurate shooting is to determine the exact distance to the target." He said, "Yes; that is true." I said, "If you take a 14-inch gun that has a trajectory that comes over like this, very flat, and a 12-inch gun that has a trajectory which has to go away up and then come down, does not the accuracy of the shooting and the chances of hitting increase as the trajectory is flattened and becomes more like a rifle that shoots directly at the target?" He said that that was true. He then admitted that the 14-inch gun was bound to shoot with more accuracy than the 12-inch gun, because it had a flatter trajectory. Then I said, "Admiral, the experts have calculated that accuracy to be 30 per cent, and I ask you again if that would not be of immense advantage in favor of our fleet?" and he said, yes, that it would be of immense advantage.

That is the testimony of this expert. Mr. Chairman, if it be true, as he says, that a slight advantage in gunfire resulted at Santiago in destroying all of the enemy's ships without losing any of our own; if, as he says, a slight advantage in gunfire resulted in our destroying all of the enemy's ships at Manila Bay without losing any of our ships; if, as he says, a slight advantage in gunfire resulted in the battle of Tsushima in the Japanese destroying all of the Russian ships with very little loss to themselves; if, as he says, a slight advantage off the coast of Chile enabled the victors to destroy all of the enemy's ships without losing any of theirs; if that is the result of a slight advantage in gunfire, I put it up to you, what would be the result in a contest between our Navy and the German Navy, with our having what Admiral Fiske admits is an immense advantage in gunfire?

The CHAIRMAN. The time of the gentleman from Mississippi has again expired.

Mr. STEPHENS of California. Mr. Chairman, I favor the amendment proposed by the gentleman from Alabama [Mr. HOBSON], because I favor fair protection and defense for every part of this great country. I rise particularly at this time to reply to the question asked of Mr. BUTLER, of Pennsylvania, by the gentleman from Washington [Mr. HUMPHREY] as to the adequacy of defense on the Pacific coast. The gentleman from Pennsylvania [Mr. BUTLER] is always so fair that I am sure he will correct that part of his statement concerning the defense of the Pacific coast. Mr. Chairman, we have very little defense on the Pacific coast. We are not only not prepared for war, but we are not prepared to keep the peace or to defend ourselves against whatever nation might attack us. I am not a naval expert, but I can imagine, and so can you, that any country expecting to attack the United States could have some of its ships within one or two thousand miles of the Pacific coast and we not be fully aware of the purpose. They could attack the Pacific coast before the vessels of our Navy could get from the Atlantic coast to San Francisco. It takes 23 days, it has been testified to, for a battleship to travel from New York to San Francisco, and I submit that the vessels of any nation that might want to go to war with us on the Pacific coast could get nearer than 23 days before we would know much, if anything, about it.

Mr. Chairman, if war should break out to-morrow in the Pacific Ocean the Pacific coast would be attacked and some of our cities destroyed, perhaps, before we could bring the battle fleet from the Atlantic against the enemy. There is not a first-line battleship out there. The only one we have is the grand old *Oregon*, 20 years of age. We have had no battleships there at any time except when the fleet stopped for a day at each of our ports on the way round the world.

Mr. MONTAGUE. Will the gentleman yield for a question?

Mr. STEPHENS of California. Yes; I yield.

Mr. MONTAGUE. I desire to ask the gentleman whether or not there are coast fortifications on the Pacific coast?

Mr. STEPHENS of California. There are.

Mr. MONTAGUE. Have not you very considerable fortifications to protect San Francisco?

Mr. STEPHENS of California. There are fortifications at San Francisco, but the largest guns there are 12-inch guns. There are fortifications at Puget Sound, but the largest guns there are 12-inch guns, while there are ships built or building for the German Navy that carry 15-inch guns and for the British Navy with 15-inch guns. There is no first-class battleship to-day that does not carry at least 12-inch guns.

Mr. McKELLAR. Will the gentleman yield?

Mr. STEPHENS of California. I yield.

Mr. McKELLAR. Is the gentleman afraid that the ships of the German Navy may reach San Francisco or Panama before the vessels of the American Navy can get there?

Mr. STEPHENS of California. We are not going to war with Germany or any other nation, but whenever a nation desires to attack this country it will have its ships nearer our Pacific coast line, if that is the plan of attack, than 23 days away.

Mr. GARDNER. Will the gentleman yield?

Mr. STEPHENS of California. I will.

Mr. GARDNER. Is it not true that Japan is building four battleships which each twelve 14-inch guns and two battle cruisers carrying each eight 14-inch guns?

Mr. STEPHENS of California. I think the gentleman's statement is quite correct. I am sure that Japan is building battleships that carry larger guns than we have in our coast defenses. Now, Mr. Chairman, I am not one of the Members of this House who believes we are to be attacked by Japan at any early date, if ever at all, but I do believe this country should be adequately prepared to defend itself against all comers.

Mr. CALLAWAY. Will the gentleman yield?

Mr. STEPHENS of California. I will.

Mr. CALLAWAY. I have heard it stated that if Pearl Harbor was properly fortified the Japs could not get to this country until they broke through those fortifications, and I was talking to an Army strategist who was preparing fortifications at the Panama Canal, and he stated that with our fortifications properly equipped at Pearl Harbor it would take Japan a year to get to the western coast. Does the gentleman know anything about that?

Mr. STEPHENS of California. I am not a naval expert, and if the gentleman from Texas pretends to be I would like his opinion on that.

The CHAIRMAN. The time of the gentleman has expired.

Mr. CALLAWAY. I do not pretend to be an expert.

Mr. BUTLER. Mr. Chairman, I ask unanimous consent that the gentleman may have five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania? [After a pause] The Chair hears none.

Mr. CALLAWAY. I was talking to an Army strategist, Morrison, who was sent to Panama to lay out the fortifications for Panama; I went down on the same boat with him——

Mr. STEPHENS of California. In further answer to the gentleman I will say that while I am not a naval expert I can not believe the Army strategist meant what the gentleman thinks he did. The gentleman can see how easy it would be to go far from and not near Hawaii.

Mr. MILLER. Will the gentleman from California permit?

Mr. CALLAWAY. Will the gentleman wait until I get through with this?

Mr. MILLER. I want to make a little statement in connection with the gentleman's inquiry.

Mr. CALLAWAY. I am making an inquiry now. If it is necessary for us to have naval equipment enough to meet any possible assault from the Pacific side, would it not be necessary for us under the gentleman's contention to have a Navy over on the Pacific side larger than Japan or any Government that might attack us from that side?

Mr. STEPHENS of California. Mr. Chairman, that would be desirable, but in any event I would like a part of the Navy over there at all times. We have nothing now on the Pacific coast except the grand old *Oregon*, 20 years old, a few armored cruisers, and from three to five submarines.

Mr. CALLAWAY. Is it not a fact that a half of a Navy over there when you need a whole one would not be any defense, that if a war should call for a defense from our Navy that half a Navy would not meet any possible attack?

Mr. STEPHENS of California. Mr. Chairman, if I was starving I think half a loaf of bread would help my case, and if there was an attack on the Pacific coast and we had a fleet half as large as the fleet on the Atlantic coast it could hold off the enemy until the larger fleet from the Atlantic coast could get to the Pacific.

Mr. CALLAWAY. But it would not be a real defense on the Pacific coast, according to your idea.

Mr. STEPHENS of California. It would help. We have so little defense now. I yield to the gentleman from Minnesota [Mr. MILLER].

Mr. MILLER. I wanted to ask the gentleman if it is not a fact that Pearl Harbor as a defense is only such if we have a powerful Navy? It is a center on which a navy can operate, and a defense that we speak of as being afforded by Pearl Harbor is but that defense that will come from a superior fleet that will radiate from Pearl Harbor as a base.

Mr. STEPHENS of California. What the gentleman says is true. I do not believe it can be seriously contended by men who know and have studied the question of defense that the Pacific coast is fairly protected to-day. With but two fortifications, one second-line battleship, a few battle cruisers, and three to five submarines along our entire coast we certainly are poorly protected. Mr. Chairman, it seems to me we are hardly protected at all.

Mr. HENSLEY. Mr. Chairman, I ask unanimous consent that I may continue for 10 minutes.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent that he may continue for 10 minutes. Is there objection?

There was no objection.

Mr. HENSLEY. Mr. Chairman, I would be pleased, indeed, if I could get the attention of the committee. I do not consume so very much of the time of the House and shall only take this brief time to present some views I have upon this subject. I want to lay down the proposition, Mr. Chairman, that, in my judgment, can not be disputed, and that is this, that the state of preparedness on the part of a nation as well as on the part of an individual determines the degree of aggression. Do you catch that point? I can take the hearings, the testimony given before the Naval Affairs Committee by admirals of the Navy, and they will establish that proposition in a way that no Member of this House can gainsay. The better prepared we are the more insistent we are upon other nations of the world observing what we conceive to be our rights. We are not as willing then as we are, perhaps, under other conditions to submit whatever questions are involved in the dispute to a fair and just consideration before resorting to the use of armaments. But we insist when armed and prepared, as young men frequently insist upon others observing their rights, because we are in a state of preparedness. It occurs to me, Mr. Chairman, that Members of this Congress now, after having witnessed what we all have, after having seen what has occurred across the ocean, would hesitate some time before they would get up before this body and insist that preparedness in the way of armament means an insurance against war. Was not Germany prepared and did Germany avoid war? By no means. Did the state of preparedness prevent Great Britain from going to war? By no means.

The gentleman from Alabama [Mr. HOBSON] would insist at all times on this Nation being in a state of preparedness for war. My God, let me say to you that there is no department on either side of that great struggle over there that is prepared upon a war basis to-day. Why, even the hospital facilities are not adequate to meet the needs of those armies. On a war basis the gentleman insists. Why, did you know the gravediggers over there are not upon a war basis; they are not in numbers sufficient to lay away those that have given up their lives in that struggle. Talk to me about a nation being in a state of preparedness for war at all times. Gentlemen, let me say this to you here now, I believe in an adequate Navy, a Navy that will meet the needs of this country, but the question of adequacy I do not want to have determined by men who are interested in these increases. I do not want those who are getting the profits out of it to be the ones who are laying down the policy of this great Government of ours as to what constitutes an adequate Navy on the part of this country of ours.

Now, if we want a Navy to meet the needs of this Government, if it is our purpose to have a Navy for defensive purposes, let us take into consideration the fact that in this war over in Europe Germany has had sunk by submarines something like 200,000 tons of armament. England has had something like 150,000 tons of armament that has gone to the bottom of the sea because of submarines operating on the part of either side party to the conflict. The greatest dangers those men can be exposed to is to put them on board a battleship, unless you hide and conceal your ship so the men operating the submarines can not find them.

I maintain, my friends, that if this war continues for the next six months or a year, beyond any sort of question we can not only pit the armament of this country, in a naval way, against Germany, but we will have the most powerful Navy afloat. You all have observed how the navies of the Old World are being whittled down from time to time. Let me say here and now, that if we accept the position taken by the great concerns that are supplying the material to our Navy, if we take their views as to what constitutes an adequate Navy, we never on earth will have a Navy sufficient to meet the needs of the country, according to their views. If we had a Navy to-day twice as strong as the British Navy, do you mean to tell me that these great supply companies would be satisfied, and that

they would not be clamoring at every session of Congress for other increases in armament?

Mr. CALLAWAY and Mr. HOBSON rose.

The CHAIRMAN. To whom does the gentleman from Missouri yield?

Mr. HENSLEY. I will first yield to my colleague on the committee, the gentleman from Alabama.

Mr. HOBSON. Mr. Chairman, I desire to ask the gentleman in case that it were possible to have the Government itself manufacture practically all of its material, would the gentleman then change his position and vote for larger equipment?

Mr. HENSLEY. I can not determine that. I will vote for whatever I conceive to be the needs of this Government from time to time. But let me say to the gentleman from Alabama that if the Government establishes its own plants for the furnishing of materials and all those things, so as to take the profit out of the increases in the Navy—profit out of war, if you please—you would not find the clamor over the country for increases of armament that we find to-day. [Applause.] And the gentleman knows well that that is the correct statement of the facts. If I had time, I could convince even those who are fixed in their views on this proposition that it is the supply companies, the men directly interested in this line, who are clamoring and holding up to the American people the needs of the Navy from year to year.

Mr. CALLAWAY and Mr. MILLER rose.

The CHAIRMAN. Does the gentleman yield?

Mr. MILLER. I know that the gentleman has given a great deal of study to the details of this question, and——

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield to me?

Mr. HENSLEY. Yes; I will yield first to the gentleman from Texas.

Mr. CALLAWAY. I have one question to ask. That is about the limitation of these armaments. These people contend that we should have an adequate Navy, and I have been listening to them until I have gotten the notion of their idea of adequacy, that it must be large enough to meet any possible navy or combination of navies that could be brought against the United States. I want to know if it would be, in the judgment of the gentleman, possible for this Nation, with its taxing powers and the resources we have, to make a Navy big enough to satisfy these fellows that are scared, or these men who are now interested in increasing the Navy, or these men that want to take the whole earth under their protecting wing and administer it under the protection of the Federal Government, like the gentleman from Alabama [Mr. HOBSON]?

Mr. HENSLEY. I will answer the gentleman from Texas in this way: He recalls that only in the last Congress the gentleman from Alabama——

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. HENSLEY. Mr. Chairman, I would like to have two minutes more.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to proceed for two minutes more. Is there objection?

There was no objection.

Mr. HENSLEY. The gentleman from Alabama [Mr. HOBSON] upon the floor of this House in his speeches in former Congresses has insisted that we should have a Navy equal to Germany's Navy in the Atlantic and a Navy equal to that of Japan in the Pacific, and here to-day he comes and presents his views and insists that we should have a Navy in the Atlantic equal to that of Great Britain and a Navy in the Pacific equal to that of Japan. The gentleman a few years ago, as you all know, did not confine his speeches to this House, but went all over the country, and insisted that in a very short period of time this country would find itself involved in a war with Japan. I rejoice over the fact that his prophecy never came true. I am sometimes in doubt as to whether others get the pleasure out of that fact that I do. I sometimes think that folks wedded to their views are disappointed because those prophecies did not come true. I truly hope that my friend from Alabama is not in this category.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. GARDNER. Mr. Chairman, I ask unanimous consent to proceed for 15 minutes.

The CHAIRMAN. The gentleman from Massachusetts asks unanimous consent to proceed for 15 minutes. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Massachusetts is recognized for 15 minutes.

Mr. GARDNER. Mr. Chairman, I have read in a good many newspapers the statement that this campaign which I am carrying on for a proper armament is inspired by those who make war materials. Recently, in the St. Louis Post-Dispatch, I read an editorial headed, if I recollect rightly, "Gardner's suspicious crusade." There was a peace meeting here in Washington the other night where at least two Members of Congress were present. There the statement was made that this campaign was inspired by the manufacturers of war material.

Mr. Chairman, those statements, whoever make them, are noisome slanders; noisome slanders—I repeat it in case any gentleman on the floor of this House objects to the term.

Mr. BUTLER. Mr. Chairman, will the gentleman yield there for a question?

The CHAIRMAN. Does the gentleman from Massachusetts yield to the gentleman from Pennsylvania?

Mr. GARDNER. I do.

Mr. BUTLER. Does the gentleman suppose that any Member of this House would for one instant charge such a selfish motive as that which the gentleman has spoken of?

Mr. GARDNER. I have read a certain petition prepared at a certain peace meeting, or at least I have read in the newspapers what purported to be the petition—the petition addressed to the Committee on Military Affairs, or something purporting to be the substance of it. I have not seen the petition itself. This petition, according to the newspapers, stated that the manufacturers of war material are at the bottom of this movement for increased armament. It may not have been so worded.

Is there any gentleman on the floor of this House who wishes to comment on that statement of mine? [After a pause.] Then, Mr. Chairman, I shall go on. I am speaking for good old American spunk, and I am speaking against this doctrine that the right way to protect ourselves is with a supine, pliable spine, because that is the doctrine that is being preached to you, gentlemen, and this statement that being prepared for war brings on war simply shows the confusion of men's minds.

Being prepared for war as Germany was prepared for war may induce the bringing on of war, but being prepared against war, which is what I contend for, will never bring about any war. In fact it would tend to prevent war. It would have prevented this war if Great Britain had been prepared, and preparation would perhaps have saved little Belgium.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman from Massachusetts yield to the gentleman from Texas?

Mr. GARDNER. Yes; but I would rather not have my thread of thought interrupted.

Mr. CALLAWAY. I want to ask the gentleman a question. I would like to have the gentleman's idea of the amount of equipment that would prepare us for war?

Mr. GARDNER. Oh, let the gentleman possess his soul in patience for a moment. I have always subscribed for what is known as the Liberal Yearbook of Great Britain. It is the political bible of the Liberal Party. I have noted the textbooks which are recommended to the English Liberals to read. I find that the Liberal textbooks are pacificist textbooks. Mr. Norman Angell is one of the favorite authors whose works are in the textbook list of the Liberal Party. Mr. Angell, like so many of my fellow Members, last year prophesied that there never was going to be another war, because the bankers would not permit it and the laboring men of Europe would not fight each other.

Mr. Chairman, it was those teachings, it was those textbooks, which the Liberal Party allowed to guide them, and so left England unprepared for war. I hope that we shall find ourselves confronted with no such result here.

Now, Mr. Chairman, I was astonished this morning to hear extracts read from Admiral Fiske's evidence and extracts from Admiral Fletcher's evidence, tending to show that this demand for dreadnaughts is unreasonable.

Why, Mr. Chairman, if I were to take extracts from the testimony of those gentlemen and not read the context, I could prove anything on earth. But everybody knows that Admiral Fiske is one of the three rear admirals on the General Board which made this recommendation for four battleships which is provided by the gentleman from Alabama [Mr. HOBSON] in this very amendment which we are now considering.

But the gentleman from Mississippi [Mr. WITHERSPOON] went into a long explanation of the superiority of our 14-inch guns over somebody's else 12-inch guns. He did not tell you that there are 14 British dreadnaughts built and building and 3 German dreadnaughts built and building which carry 15-inch

guns of 45 calibers each. Our largest Navy guns are 14-inch guns. I am not an expert, so I can not say which is best—our 14-inch guns or the British and German 15-inch guns. There was a big fight in the North Sea the other Sunday. Nine big ships were engaged. Every one of them was faster than the fastest battleship we have in our Navy. The slowest ship, the *Blücher*, was sunk because she could not keep up with her sister ships. Her speed was 5 knots an hour less than the others and she was sunk. Yet the *Blücher* was faster than the fastest ship we have in the United States Navy, except the small fry, like submarines and destroyers. Now, gentlemen, you can not get away from facts of that sort even by saying that the people on the Mersey are terrified for fear of attack from some German submarine. How do we know they are terrified? Because the headlines say so? The papers said that London was terrified at the prospect of Zeppelin raids; that early in the winter London was going to be attacked by a fleet of Zeppelins. That prophecy has not as yet been fulfilled. I have had many letters from those with whom I worked in London last summer. Up to date they have not heard of the terror over there.

Now, as to these submarines, I do not know whether the people are terrified by them or not. I am a great believer in plenty of submarines, especially ocean-going submarines, but I want fighting ships more.

In reply to the question of the gentleman from Texas [Mr. CALLAWAY] as to how big an armament I believe in, I answer in this way: The gentleman from Washington [Mr. HUMPHREY] asked the gentleman from Pennsylvania [Mr. BUTLER] how he proposed to protect the Pacific coast against Japan in case of war, and the gentleman from Pennsylvania replied, "I leave that to the military experts." That is the most sensible remark anybody has made on the floor of this House to-day. What is the use of taking the best officers in the Navy and putting them on the General Board and then, when they report year after year what we need in the way of armament, what is the sense of always telling them, "Oh, that is all wrong. You gentlemen do not know what you are talking about. You are all rascals who are trying to increase your rank. That is what you are. We congressional experts are the only people who know"?

Supposing that we Congressmen are actually the real people who know. Perhaps we know by intuition. We certainly do not know from listening to debates, because we do not listen, and on a good many questions we do not vote because we are in our offices when the Committee of the Whole divides. I took the RECORD of last Monday to find how many of us were present when the votes were ordered on questions relating to the plucking board of the Navy. I found that—counting everybody who came out of the smoking rooms, counting everybody within sound of the division bell, counting everybody from the lobby, and counting everybody in their seats—about 80 Members out of over 400 decided all these questions. By the way, I doubt whether there are more than 80 Members in the Hall at the present moment. There may not be so many. Of those present I venture to say that there are not a dozen who can tell us, as a matter of fact, what armaments our dreadnaughts carry or how many dreadnaughts we have completed.

Mr. HELM. Will the gentleman yield a moment?

Mr. GARDNER. Yes.

Mr. HELM. You stated a moment ago that the *Blücher* was the slowest ship in the German Navy.

Mr. GARDNER. Not exactly.

Mr. HELM. In that engagement.

Mr. GARDNER. I stated that she was the slowest of the nine big ships engaged.

Mr. HELM. She was the slowest in that engagement.

Mr. GARDNER. Of the nine engaged.

Mr. HELM. And that she was faster than our fastest battleship.

Mr. GARDNER. Our fastest battleship or any other ship except the small fry.

Mr. HELM. Who is to blame for the defect in the construction of our battleships, that do not measure up to the worst ship that was in that engagement, almost all of which battleships have been constructed since the construction of the *Blücher*?

Mr. GARDNER. Do you mean to say, Is the Republican Party to blame?

Mr. HELM. No; just a moment, please.

Mr. GARDNER. I am going to answer.

Mr. HELM. I want the gentleman to understand the purpose of my question.

Mr. GARDNER. What the gentleman wants to know is whose fault it is. It is the fault of the people of the United States, that we cut and pare. When the General Board told us we must have 48 battleships, we have given them 37 instead. When they told us we ought to have 192 destroyers, we have given them 68 odd. Every year we have chopped and cheeseparred until now we have a navy which is a bad third to Great Britain and Germany; and when the ships of France that were built and building on July 1, 1914, are completed and our own ships under construction at the same date are completed, we shall be fourth.

Mr. HELM. Now will the gentleman yield?

Mr. GARDNER. Yes.

Mr. HELM. Is it not a fact that this defect is a defect of speed, not a defect of numbers? And, as a matter of fact, instead of having in my mind that it is a dereliction of the Republican Party, if I were going to place the blame, answering my own question, I should place it on the Navy Department and not upon Congress.

Mr. GARDNER. All right. Now, Mr. Chairman, if I have my way, I will accept an amendment to the proposition of the gentleman from Alabama and couple his amendment asking for two more battleships with another amendment sending to the scrap heap our three oldest battleships, for they are over 20 years old.

Mr. FITZGERALD. Will the gentleman yield?

Mr. GARDNER. Yes.

Mr. FITZGERALD. There were no battleships engaged in that fight.

Mr. GARDNER. There were nine battle cruisers.

Mr. FITZGERALD. But no battleships.

Mr. GARDNER. I shall correct that in the permanent RECORD. The battle cruisers engaged were the *Indomitable*, the *Lion*, the *Princess Royal*, the *New Zealand*, the *Tiger*, the *Blücher*, the *Moltke*, the *Seydlitz*, and the *Derfflinger*.

Mr. FITZGERALD. Those are in a distinct class from the battleships.

Mr. GARDNER. I want to correct that. The *Blücher* is not a battle cruiser, but is an armored cruiser.

Mr. FITZGERALD. The battle cruiser is a different type of vessel from the battleship.

Mr. GARDNER. As I said, the *Blücher* is not a battle cruiser, but an armored cruiser far inferior, with a 23-knot speed; but that is not the point.

Mr. FITZGERALD. Yes; it is the point.

Mr. GARDNER. It is not the point. The point is that we have not got in the Navy vessels that can compete in speed with the fleets which they would have to fight in case of war.

Mr. FITZGERALD. Let me ask the gentleman——

Mr. GARDNER. The gentleman will not let me complete my answer.

Mr. FITZGERALD. I was trying to keep the gentleman calm.

Mr. GARDNER. What is the question?

Mr. FITZGERALD. I ask the gentleman if the criticism that we have not the speed of these battle cruisers is not due to the fact that the General Board has not recommended and Congress has not provided battle cruisers, which are needed chiefly for their high speed and for armament, and that the General Board, and Congress following its recommendations, has provided for battleships, which are distinct from the battle cruiser by not having such high speed and being more fully protected by armor.

Mr. GARDNER. The gentleman says that the General Board has not recommended battle cruisers.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. BUTLER. Mr. Chairman, I ask unanimous consent that the gentleman's time be extended five minutes.

The CHAIRMAN (Mr. JOHNSON of South Carolina). The gentleman from Pennsylvania asks that the time of the gentleman from Massachusetts be extended five minutes. Is there objection?

Mr. HAMLIN. Mr. Chairman, reserving the right to object, I want to say that the other day I was allowed 10 minutes in which to present some arguments, and when the time was up I had not quite finished and I asked to have my time extended, and the gentleman from Massachusetts graciously objected. I then asked to extend my remarks in the RECORD, and he objected to that.

Mr. GARDNER. Oh, I did not. I went to the gentleman and told him that I should not object the second time.

Mr. HAMLIN. Well, I beg the gentleman's pardon; but he objected to my proceeding.

Mr. GARDNER. The gentleman knows that the objection was not directed at him, but at the minority leader.

Mr. HAMLIN. I am not going to act as graciously as the gentleman from Massachusetts did. I am going, as far as I am concerned, to permit him to extend his remarks for five minutes.

The CHAIRMAN. Is there objection?

Mr. GARDNER. One moment, Mr. Chairman. I was entitled to recognition, in my opinion, some time ago under the custom of the House, but the Chair thought otherwise and recognized two gentlemen in succession who opposed the amendment. I am going to incorporate in the RECORD a reference to section 1445 of Hinds' Precedents:

> A member of the committee having occupied the floor in favor of a measure, a member opposing should be recognized, even though he be not a member of the committee.

If the gentleman from Missouri will recall, I explained to him that my objection was not directed at him, but arose owing to a difference with the minority leader. I went to him and said if he would ask again I should not object, whereupon he did ask permission and some other gentleman objected.

Mr. HAMLIN. At any rate, the gentleman's objection was effective and I could not extend my remarks. I am not going to object.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none and the gentleman from Massachusetts is recognized.

Mr. GARDNER. Mr. Chairman, now will the gentleman from New York answer my question? I understood him to say that the general board has not recommended any battle cruisers.

Mr. FITZGERALD. My understanding is that the board has insisted on battleships as the vital feature of the Navy, and has especially emphasized the recommendation for additional battleships and has not requested battle cruisers.

Mr. GARDNER. I think the gentleman is mistaken and that the general board recommended one battle cruiser last year, but it was turned down. If I am mistaken, I shall correct the mistake later in the day.

Mr. FITZGERALD. I am not talking about last year. They have recommended four battleships for eight years past and have been turned down every year. Such action did not discourage them, but they renewed the recommendation from year to year.

Mr. GARDNER. The gentleman may be right; but the fact remains that we do not have in the United States Navy a battleship of any kind that is as fast as the nine ships that fought the battle in the North Sea.

Mr. GREEN of Iowa. Will the gentleman yield?

Mr. GARDNER. Yes.

Mr. GREEN of Iowa. The *Blücher* was an armored cruiser, was she not?

Mr. GARDNER. Yes.

Mr. GREEN of Iowa. The largest and most powerful the Germans had?

Mr. GARDNER. I think so.

Mr. GREEN of Iowa. Would it not be fair to compare it with our own armored cruisers, and would you not find that we had two superior to it in armament and equal in speed?

Mr. GARDNER. Very likely; but there would still be the question as to how we would come out of such a battle as that which took place in the North Sea. I hear some one say, "We should lick 'em." That's the talk. We can lick all creation. Yes; we can send our Naval Militia to man the sound steamers, and they can leave their counting houses some fine afternoon and go out and thrash the British Navy. The gentleman who spoke a few minutes ago says that we may wake up to-morrow and find the British fleet at the bottom of the sea and that we can "lick" what remains. Why, Mr. Chairman, there is no use in building a single battleship. We can swim and "lick 'em"! [Laughter and applause.]

Mr. UNDERWOOD. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. UNDERWOOD. Mr. Chairman, I am not a naval expert, neither am I a student of war conditions, and I do not propose to involve myself in an argument of that kind; but this House and the country is facing a serious financial condition. According to my estimates of the receipts for next year and the expenditures that are now proposed, the ordinary expenditures will exceed the receipts by some $20,000,000. That is not due to a falling off in the revenue, because the additional revenue or emergency revenue bill that we passed last fall will supplement the revenues that we lose at the customhouses by reason of the war in Europe, but it is due to your increased appropriations. In addition to that—the deficit in ordinary expenditures—there will be a deficit in the Post Office Department, due to a falling off of postal receipts, of at least $14,000,000, unless conditions change very much. Of course that condition has been brought about to a large extent by reason of the war in Europe. Our foreign mail service is not paying the revenues to the Government that it has paid in the past, which is natural, and the cost of the service is practically the same. So that as this condition faces the country and the House, unless you are willing to retrench in expenditures, or unless when the next Congress meets you are willing to increase the taxation, you are going to face a deficit in the Treasury of something like $35,000,000. That is a problem for this House to determine, as to whether or not you propose to go on increasing the expenditures, and when the time comes next year supplement that increase of expenditures by additional taxation, or whether you are willing to retrench in your expenditures.

This bill, as I understand it, carries appropriations for an increase in the Navy of some $58,000,000. I believe that is seven or eight millions of dollars in excess of what the bill carried last year.

Mr. PADGETT. The authorization is $53,000,000.

Mr. UNDERWOOD. Fifty-three million dollars, with an excess of seven or eight millions over what was authorized last year. The question that confronts this House is as to whether or not you are willing to make some reasonable cuts in this bill or whether you think the exigencies that confront the country now justify you in increasing appropriations for armor and armament, notwithstanding the fact that you must, if you go on with your increases, levy additional taxes on the American people to meet these increases. As I say, I am not a naval expert, but I have always believed that the man who carries the pistol around in his back pocket is in very much greater danger of getting into trouble than the man who goes unarmed. [Applause.] I believe that if you propose to enter into a race of armaments because you believe you are behind other nations in your military forces and your naval equipment, the end of the story will mean war. [Applause.] I believe we ought to have a reasonable navy and a reasonable army, but I do not want to see my country have either a navy or an army that will invite us to make issues that may precipitate our people into the caldron of bloodshed and disaster. [Applause.]

Mr. HOBSON. Mr. Chairman, will the gentleman yield?

Mr. UNDERWOOD. I do not like not to yield to the gentleman.

Mr. HOBSON. I will make the question very brief. Would the gentleman surrender the Monroe doctrine and the open-door policy rather than to fight, or either of them?

Mr. UNDERWOOD. I do not think the time will ever come when it will be necessary for this country to maintain the great principles of our fathers at the point of the sword. [Applause.] I have no fear whatever that my countrymen will maintain their position in this world, their position for what is right and what is just, and as long as we only maintain for our National Government a position of what is right and what is just, in my judgment we will succeed without the arbitrament to the battle field. [Applause.] But I believe that you can make a reasonable cut in the appropriations provided for in this bill without endangering your position in the family of nations and at the same time go a long way toward meeting the exigency of your Treasury Department.

I suggest that if you would cut out of this bill one battleship it would save for the next year $5,678,000. If you cut out of this bill five submarines, it would save $1,385,000.

Mr. MANN. Mr. Chairman, will the gentleman yield for a question?

Mr. UNDERWOOD. Yes.

Mr. MANN. On the question of the battleship which is authorized this year, would there be $6,000,000 expended on it in the next fiscal year?

Mr. UNDERWOOD. I asked the chairman of the committee to give me the figures.

Mr. MANN. Of course, this bill carries an appropriation——

Mr. PADGETT. That is the authorization.

Mr. MANN. Would there be that much expended?

Mr. UNDERWOOD. There would be that much appropriation in the bill.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. MANN. Mr. Chairman, I ask that the gentleman have more time.

Mr. UNDERWOOD. Mr. Chairman, I would like to have 10 minutes more.

Mr. MANN. I ask that the gentleman from Alabama proceed for 10 minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MANN. I did not suppose it was possible if the battleship was authorized now to expend $6,000,000 upon it in the next fiscal year.

Mr. UNDERWOOD. I will say to the gentleman that I am not an expert on these questions; and not being an expert, not having the knowledge myself, I asked the opinion of the chairman of the committee.

Mr. WITHERSPOON. Mr. Chairman, I wish the gentleman would yield for a moment in order that I may correct one of his statements. The gentleman stated that if we would strike out five submarines we would save between one and two million dollars. The testimony before our committee is that those submarines cost $550,000 each, and five submarines knocked out of this bill would save nearly $3,000,000.

Mr. PADGETT. That is authorization and not appropriation. The gentleman from Alabama is giving the figures as to the appropriation for the next year carried in this bill for the different authorizations.

Mr. UNDERWOOD. In other words, that the boats would not be finished entirely next year.

Mr. PADGETT. In other words, the authorization of a battleship is on a cost of about $15,000,000, but of that amount we appropriate the first year only $3,678,999.

Mr. UNDERWOOD. I am not giving the figures which would ultimately be saved to the Government.

Mr. PADGETT. In regard to the submarines, each submarine is $220,000 in construction and machinery and $57,000 in armor and armament. That would be $277,000 each, and five times that much for five submarines would be the gentleman's figures.

Mr. UNDERWOOD. The figures which I have here are those given to me at my request by the chairman of the committee. They do not represent the ultimate cost of these boats, but merely the saving which we would save next year. That is the point I have in mind. Now, if you cut out of the bill one hospital ship, you would save $500,000. If you strike out the transport, you would save $1,125,000 for next year, making a total that you can save in this bill in the construction of one battleship, five submarines, a hospital ship, and a transport, of $8,088,000, or about the amount that you are increasing this bill over last year.

Mr. PADGETT. Will the gentleman yield?

Mr. UNDERWOOD. Yes.

Mr. PADGETT. The authorizations are about $8,000,000 more; the appropriations are about $4,000,000 more.

Mr. UNDERWOOD. What I say to the House is this: You are in no more danger of war to-day than you were when the naval appropriation bill was passed last winter a year ago. [Applause.] Evidently you are in less danger of war, because the various nations of Europe are locking horns between themselves, and if this Government pursues its own way wisely and safely, as I believe it will, under the administration of the President of the United States, we are in less danger of war than we have been for many years before. Now, as to the armament, I am no judge of what battleships we should build or what submarines, but I do know this, that the entire naval armament of the world is being tested to-day. The world is learning its first great lesson in the school of experience on the battle line, as to what ships are best to build and what ships in the future may be abandoned as worthless in naval affairs. Therefore it seems to me to-day is a wise time, and instead of increasing your appropriations at least to cut them down to what you have been appropriating in the past, and let the experience of Europe in this war teach you where you can wisely and most efficiently expend your money in the future. Now, before I take my seat I propose to offer an amendment to the pending amendment to strike out four battleships and make it one battleship.

SEVERAL MEMBERS. Two.

Mr. UNDERWOOD. Well, there is an amendment to that; I expect to amend the amendment, so that the House may have an opportunity directly to vote upon this question. If I understand that the sentiment of the House is willing to have that reduction, I will then propose to cut down the submarine boats by five, which will reduce them to the number proposed, as I understand, by the naval authorities themselves; but, of course, if the sentiment of this House is to go on with this increase, why, then, I will have to submit, and will submit cheerfully.

Mr. PADGETT. Will the gentleman yield for just a moment?

Mr. UNDERWOOD. I will.

Mr. PADGETT. The Secretary of the Navy recommended 8 submarines. The general board recommended 16 what we call coast-defense vessels, costing about $550,000, and 3 large seagoing. The 12 of which the gentleman and myself were speaking, and my personal expression to him was made in reference to what I had suggested to the committee, and that is where the 12 came in.

Mr. UNDERWOOD. The 12 would be at least in a mean between the general board's recommendation and the Secretary of the Navy. Now, in conclusion I only want to say this: Here is an opportunity where you can cut out of this bill between eight and nine million dollars without in any way affecting the efficiency of the public service. There is no imminent danger of war. On account of the conditions that have been brought about by the war in Europe in the Treasury Department you are facing a deficit unless you cut your appropriations, or unless you are willing to go to your constituencies and say that you propose to increase the burden of taxation on them in order that you can increase your expenditures. [Applause.]

Mr. BUTLER. Will the gentleman yield for just one question?

Mr. SHERWOOD. Will the gentleman yield?

Mr. UNDERWOOD. I yield to the gentleman from Ohio.

Mr. SHERWOOD. As the gentleman says there is no danger of war and we have more battleships now than we know what to do with, why should not we cut out all the battleships and reduce the amount by $15,000,000?

Mr. UNDERWOOD. I will say to the gentleman from Ohio that if I were following my own desire in the matter I would cut out both battleships at the present time. [Applause.] But I want to accomplish something; I want to try to work out a plan that can succeed or has hopes of succeeding. Now, I know that there are a good many men in this House who would not be willing to go too far on such a program, but I think the exigencies of the Treasury Department are such that we ought to make an earnest effort to cut down some of these appropriations, and therefore I am willing to compromise on both sides of the House and strike a golden mean and leave one battleship in there if the House is willing to agree to a reasonable program.

The CHAIRMAN. The time of the gentleman from Alabama has again expired.

Mr. BATHRICK. Mr. Chairman, I ask unanimous consent that I may proceed for 15 minutes on this subject.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent that he may proceed for 15 minutes.

Mr. PADGETT. Mr. Chairman, reserving the right to object, I want to ask unanimous consent that debate on this paragraph and all amendments thereto close at 2 o'clock. That will be a half an hour, and we have already spent nearly three hours in debate on this question.

Mr. PARKER of New Jersey. Mr. Chairman, I have an amendment which I desire to offer. I do not desire to speak on the number of ships, but I do desire to have five minutes to speak upon the speed of ships and to offer and speak upon an amendment which I offered, and which was carried four years ago, providing that they should have a speed at least equal to the highest speed of any battleship in the world. I desire to offer that amendment, and I must have five minutes' time in which to speak upon it. Will the gentleman from Tennessee yield me five minutes for that purpose?

Mr. UNDERWOOD. Mr. Chairman, if the gentleman will allow me just a moment. I failed to offer my amendment. If the committee will allow me, I would like to move to amend the amendment of the gentleman from Alabama by striking out "four" and inserting "one."

The CHAIRMAN. Without objection, the Clerk will report the amendment offered by the gentleman from Alabama [Mr. UNDERWOOD].

The Clerk read as follows:

Amend the amendment by striking out the word "four" and inserting in lieu thereof the word "one."

Mr. WITHERSPOON. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. No other amendments are now in order. Two amendments have already been offered.

Mr. WITHERSPOON. I offer a substitute for the amendment as amended.

Mr. MOORE. Mr. Chairman, I demand the regular order.

The CHAIRMAN. The Chair thinks it is in order. The gentleman offers a substitute for the pending amendment.

Mr. MANN. Mr. Chairman, I understood the gentleman wanted to move to strike out the paragraph. I think that would be in order.

Mr. WITHERSPOON. That is what I move to do—to strike out the paragraph

The CHAIRMAN. That will be in order. The Clerk will report the amendment.

The Clerk read as follows:

Strike out the paragraph beginning with line 2 and ending with line 8 on page 64 of the bill.

Mr. PADGETT. Mr. Chairman, I wish to modify my request. We have already been debating the matter about two and one-half hours now. I ask unanimous consent that debate upon this paragraph and all amendments thereto close at half past 2 o'clock.

The CHAIRMAN. The gentleman from Tennessee [Mr. PADGETT] asks unanimous consent that all debate on this paragraph and all amendments thereto close at half past 2 o'clock. Is there objection?

Mr. MANN. Mr. Chairman, I reserve the right to object.

Mr. GRAY. I reserve the right to object, Mr. Chairman.

Mr. BARKLEY. Mr. Chairman——

The CHAIRMAN. Is there objection to the request?

Mr. MANN. Mr. Chairman, I reserve the right to object.

Mr. GRAY. Mr. Chairman——

Mr. MANN. Mr. Chairman, I take it that this is the main feature of the bill, probably.

Mr. PADGETT. Largely so; yes, sir.

Mr. MANN. We can finish the bill to-day and to-night, anyhow. Let us find out how much time the gentlemen want.

Mr. PADGETT. Mr. Chairman, I will modify my request again and try to accommodate the Members as best I can. I ask unanimous consent that all debate upon this paragraph and all amendments thereto close in two hours.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent——

Mr. MANN. I would like to control an hour on this side.

Mr. PADGETT. I was going to leave it to the Chair to control.

The CHAIRMAN. The Chair prefers the gentlemen shall control the time.

Mr. MANN. I would like to control an hour on this side.

Mr. PADGETT. That the gentleman from Illinois control one hour and I control the other. I will divide that time among the number applying for time.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that all debate on this paragraph close in two hours, one hour to be controlled by the gentleman from Illinois [Mr. MANN] and the other hour to be controlled by himself. Is there objection?

Mr. CULLOP. Mr. Chairman, I reserve the right to object.

Mr. WITHERSPOON. Mr. Chairman, I want 10 minutes to speak in support of my amendment, and I object unless I can get it.

The CHAIRMAN. The gentleman from Mississippi objects.

Mr. BATHRICK. He stated he would not object if he could get the time he asked for.

Mr. PADGETT. I move that debate on this paragraph and all amendments thereto close in two hours.

The CHAIRMAN. The gentleman from Tennessee moves that all debate on this paragraph and all amendments thereto close in two hours.

The question was taken, and the Chair announced that the ayes seemed to have it.

Mr. FOWLER and Mr. BATHRICK demanded a division.

The committee divided; and there were—ayes 66, noes 26.

So the motion was agreed to.

Mr. MANN. Mr. Chairman, I ask unanimous consent that I may consume one hour of that time.

The CHAIRMAN. Without objection, the gentleman from Illinois will control an hour and the gentleman from Tennessee an hour. [After a pause.] The Chair hears no objection.

Mr. FOWLER. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Illinois makes the point that there is no quorum present. The Chair will count. [After counting.] One hundred and thirty-six Members are present—a quorum. The gentleman from Tennessee [Mr. PADGETT] is recognized for one hour.

Mr. STEPHENS of California. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. STEPHENS of California. I desire to offer an amendment to the paragraph. When will it be in order?

The CHAIRMAN. It will not be in order until the amendments now pending are disposed of.

Mr. HOBSON. A parliamentary inquiry, Mr. Chairman.

Mr. MANN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MANN. As I understand, the committee gave me control of one hour.

Mr. HOBSON. That is what I wanted to ask about.

Mr. FOWLER. I object to anybody controlling any of the time except the Chair.

The CHAIRMAN. The gentleman's objection comes too late. The Chair stated the proposition and nobody objected, and the gentleman from Tennessee [Mr. PADGETT] is recognized for one hour.

Mr. FOWLER. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. FOWLER. There are Members on the floor who desire to offer amendments to this paragraph. I desire to know if there will be any opportunity given for the purpose of offering additional amendments and for debate thereon?

The CHAIRMAN. The Chair will state to the gentleman from Illinois that there are now pending an amendment offered by the gentleman from Mississippi [Mr. WITHERSPOON] to strike out the paragraph and an amendment offered by the gentleman from Alabama [Mr. HOBSON], and an amendment to that amendment offered by the gentleman from Alabama [Mr. UNDERWOOD], and until the last amendment is disposed of, no other amendment will be in order; but when that is disposed of, the gentleman will have an opportunity to offer an amendment.

Mr. FOWLER. Mr. Chairman, I desire to ask the Chair if it is not parliamentary to offer an amendment to the substitute?

The CHAIRMAN. The Chair thinks not. The Chair thinks it might be in order to offer an amendment to perfect the paragraph, but two amendments are now pending for that purpose.

Mr. FOWLER. But is it not parliamentary to offer an amendment to the substitute?

The CHAIRMAN. It would be, but there is no substitute pending.

Mr. FOWLER. I understand that there is, Mr. Chairman.

The CHAIRMAN. But the Chair understands otherwise. The gentleman from Tennessee [Mr. PADGETT] is recognized for an hour.

Mr. FOWLER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. FOWLER. I desire to have the privilege of offering a substitute for the amendment now pending.

The CHAIRMAN. But a substitute is not in order for the reason that there are two amendments now pending, and it is not in order to offer an amendment when two amendments are pending, a substitute being an amendment.

Mr. BARKLEY. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BARKLEY. What are these two amendments that are now pending?

The CHAIRMAN. The amendment offered by the gentleman from Alabama [Mr. HOBSON] and the amendment offered by the gentleman from Alabama [Mr. UNDERWOOD].

Mr. BARKLEY. Is it not true, Mr. Chairman, that the gentleman from Mississippi [Mr. WITHERSPOON] offered a substitute?

The CHAIRMAN. He offered an amendment to strike out the paragraph.

Mr. BARKLEY. That was in the form of a substitute, was it not?

The CHAIRMAN. Not at all. The other amendments are for the purpose of perfecting the paragraph, and they will be disposed of before the amendment of the gentleman from Mississippi.

Mr. WITHERSPOON. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. WITHERSPOON. I understand that the rule adopted is that the debate on the paragraph and amendments to it will conclude in two hours. Does that cover the substitute I offered for the amendment?

The CHAIRMAN. It does. It covers the gentleman's amendment, together with all other amendments which have been offered and which may be offered. Now the gentleman from Tennessee [Mr. PADGETT] is recognized for one hour.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Kentucky [Mr. HELM].

The CHAIRMAN. The gentleman from Kentucky [Mr. HELM] is recognized for five minutes.

Mr. HELM. Mr. Chairman, I am not assuming the attitude before this House of a military or naval expert. I am simply trying to apply some plain common sense to the conditions that I find exist from a careful reading of the newspapers. The first thing that attracts me in this morning's newspapers is that an ex-Secretary of the Navy states that the inefficiency of our Navy is due to politicians. Now, every Member of Congress knows the department must submit its estimates and recommend the type of ship, including speed, armor, and size of guns, and Congress has almost always followed the department's lead. The

Congress of the United States has been extremely liberal not only with the War Department but with the Navy Department in all of its requests. Neither of these departments can claim that they have not had ample funds. For the last 14 years, according to this statement coming from ex-Secretary of the Navy Meyer, the total appropriations for our Navy from 1900 to 1914 were $1,656,000,000, while the appropriations for the same period for Germany's Navy were $1,137,000,000.

We have not as effective a fighting organization in our Navy as Germany has in hers. Nobody would dare get on this floor and say that we can go into battle in anything like the state of efficiency that Germany stands to-day. Her navy is organized on a fighting basis. The combined navies of Great Britain and France can not protect their commerce against her.

Mr. KELLEY of Michigan. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Kentucky yield to the gentleman from Michigan?

Mr. HELM. Yes.

Mr. KELLEY of Michigan. One of the chief items of expense in our Army and Navy is the pay of the men.

Mr. HELM. My good friend, if you had been here at former sessions of Congress and heard me criticize the excessive pay and emoluments the officers in the Army have been getting, you would be convinced that you are mistaken. Why, Members have almost been ready to get up and fight because I have been contending for years that the War Department and the Navy Department had not an organization fitted for fighting purposes. It has not been so long since promotions in the Army were based on proficiency as a landscape gardener; the officer that kept his post in attractive order was advanced for that reason. That is the fight I have been trying to make and maintain here for several years. The difficulty is that these departments have not been directing their efforts to the business of building up a fighting machine, but the attention of the Army and the Navy has been directed to getting more pay and emoluments out of the United States Treasury and to the social equation. That has been the line of my fight.

Mr. KELLEY of Michigan. Does the gentleman think the enlisted man gets too much or too little pay?

Mr. HELM. No; but the officers do.

Mr. KELLEY of Michigan. But the greater part of the expenditure is for the pay of the enlisted men.

Mr. HELM. Oh, no; you are dead wrong, my dear fellow. The pay for these officers of the Army and Navy runs up into millions and millions.

Now, I am trying to point out some of the defects that are so glaring that an unskilled and inexperienced layman as myself can see; the trouble is that everybody here seems to think that the whole problem depends on the number of battleships we have in the Navy and the number of soldiers we have in the Army, when the fact is that both armies and navies consist of a number of organizations perfected into a fighting machine. Please tell me, when gentlemen get up here and show that we have only one submarine that is capable of submerging, what fighting efficiency there is in that? It is an indictment of somebody. We have heard the chairman of the Committee on Naval Affairs go down the line and prove that while several of our submarines can be used for some purposes, only one of them is a perfect machine.

Whose fault is that? The department has been granted almost all the money it has asked for, yet the speed of our ships is too slow, according to a published statement of an ex-Secretary of the Navy, while the gentleman from Massachusetts [Mr. GARDNER], if I understood him correctly, says our battleships are fitted out with torpedo tubes that never have been fired. Am I correct in that?

Mr. GARDNER. No. Does the gentleman want to know what I did say?

Mr. HELM. Yes.

Mr. GARDNER. I quoted from the report of the Chief of the Bureau of Ordnance, Admiral Straus, in which he says:

> At present all these vessels—
>
> Referring to battleships anterior to the *Nevada* and *Oklahoma*—in other words, every battleship now complete—
>
> all these vessels are equipped with a short-range torpedo, which may be considered obsolete for the battle fleet.

Mr. HELM. There you are. That is the kind of defect I am complaining about. Here is the gentleman from Alabama, Capt. HOBSON, asking for the building of four more battleships, which, according to his own statement, will be supplied with ineffective 12-inch shells. He ought to know whether this statement is right or wrong. It is a serious statement and a vital matter. If our battleships have been supplied with shells that are to all effects and purposes worthless, have we not incurred the risk of being compelled to go into a naval engagement with no ammunition at all? Whose fault is it, and where does the blame rest? These are some of the fatal defects that I am trying to point out and am trying to get before the attention of the House. [Applause.]

Mr. MANN. I yield 10 minutes to the gentleman from Washington [Mr. HUMPHREY].

Mr. HUMPHREY of Washington. Mr. Chairman, a few moments ago the distinguished leader of the majority [Mr. UNDERWOOD] made a plea for economy, and claimed, of course, that the condition of the Treasury was due to the war, and he is pleading for economy upon the ground that the Treasury is empty. Now, if the condition of the Treasury to-day is due to lack of customs revenues, I wish that the distinguished leader had stayed on the floor long enough to explain why it was that the customs revenues last year, as compared with January, 1913, decreased over $5,000,000 seven months before the war. Was that due to the war in Europe? How did it happen that the customs revenues last February, six months before the war, decreased $9,900,000? Was that due to the war in Europe? I wish that some of my mathematical friends on the other side of the aisle would figure out how we happen to have a deficiency of $70,000,000 in the National Treasury due to the falling off of the customs revenues, due to the war, when the figures just issued by the Treasury Department show that our imports last year were only $3,200,000 less than they were in 1913.

Mr. FOWLER. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Illinois makes the point of order that there is no quorum present. The Chair will count. [After counting.] One hundred and one Members present—a quorum.

Mr. HUMPHREY of Washington. Mr. Chairman, when the point of no quorum was made I had just asked that some mathematical genius arise and enlighten the world as to how we could lose $70,000,000 of revenues upon $3,200,000 worth of imports, one-half of which are on the free list.

Referring to the condition of the revenues for just a moment—in May, 1916, sugar will be on the free list, and we shall lose $53,000,000 there. In 1916 the present so-called war tax will end, and we will lose $54,000,000 there. Adding that to the present deficiency, and in 1916 we will have a deficiency of $177,000,000 in the National Treasury. When this happens are you going to quit building a navy entirely? Instead of striking out a battleship would it not be better to place the tariff back upon sugar and revive that industry in the South, and take that much money away from the Sugar Trust and give it to the Government? Although we have already lost $12,000,000 revenue on sugar, will any man on this floor rise and say that he has bought a pound of sugar for one cent less? Would it not be better to restore the duty upon wool and get $15,000,000 into the National Treasury from that source rather than strike out a battleship? Will anyone claim we are buying clothes for less? What are you going to do? Are you going to leave this country without any protection simply because you have not the courage to enact a tariff bill that will produce the necessary revenue? My distinguished friend from Alabama [Mr. UNDERWOOD] said that the man who carried a pistol is much more apt to get into a quarrel than one who does not. Perhaps that is true. It depends on circumstances. If somebody knew that I had in my home something that he wanted, and was determined to break into my house and get it, I would think I would be very much less apt to have trouble with that gentleman if I was armed and he knew it. China is to-day without a pistol. Shall we imitate her?

Now, I want to turn just for a moment to the Pacific coast. I asked my distinguished friend from Pennsylvania [Mr. BUTLER] this morning—I am sorry he is not on the floor at this moment—how we would protect the Pacific coast if we had war to-day? His answer was that we were prepared to defend it. How? He did not tell you. On the Pacific coast it is not a question of adequate Navy. We have none there. There is now, and has been for years, but one battleship upon the Pacific. We do not have ample fortifications. The largest battle squadron in the world can go right up to the wharves at Bellingham, a town of 25,000 people, without coming within 15 miles of any gun, and there they can take control of three great transcontinental railroads. Do you tell me that is protection?

Mr. HENSLEY. Will the gentleman yield right there?

Mr. HUMPHREY of Washington. Yes.

Mr. HENSLEY. The Pacific coast has not suffered any because of that situation, has it?

Mr. HUMPHREY of Washington. I do not know what the gentleman means by that.

Mr. HENSLEY. You say you have but one battleship over on the Pacific coast. I ask you whether the Pacific coast has suffered any because of that situation?

Mr. HUMPHREY of Washington. Maybe not, but will the gentleman pretend to say that one battleship is sufficient protection for the Pacific coast? Is that the argument he wants to make?

Mr. HENSLEY. Has it not been sufficient?

Mr. HUMPHREY of Washington. Oh, yes; and we need not have had any Navy on that theory. Why do we need a navy on the Atlantic coast if that argument is good?

Mr. HENSLEY. Why are you so frightened about it right now?

Mr. HUMPHREY of Washington. I will not stop to answer so absurd a proposition as that. The gentleman stands as the best illustration of the valor of ignorance that I have ever witnessed.

Mr. HENSLEY. "Upon what meat doth this our Cæsar feed that he is grown so great?"

Mr. HUMPHREY of Washington. I do not feed on the same that the gentleman does, for I would not make the exhibition of myself on the floor of this House that he has made. If the gentleman wants to interrupt again, why, let him come ahead.

Now, Mr. Chairman, when we talk about protection upon the Pacific coast the reply always made so far has been that we do not need to fortify those cities, because they have told us that an unfortified city would not be attacked in time of war.

We have seen the answer to that in Europe. We know that if we had a war the great cities of the Pacific coast, if the enemy could reach them, would be captured and placed under tribute. But the reply they make is that we have our battleship squadron which can be sent through the Panama Canal to the Pacific coast. What are the facts about that? You let war be declared to-morrow, and if it was with Japan and she was prepared exactly as we are prepared—and the presumption is that she would be in much better shape because she would know that she was going to declare war; but suppose she is in no better shape than we are—a battleship squadron from Japan would reach Puget Sound two weeks before you could possibly get our squadron there. What protection would our battleship squadron be to the Pacific coast two weeks after the Japanese squadron had been there? Gentlemen who make the statement ought to study their geography. Take down your map and look at it, and you will see that from Panama, when you are through the canal, to Seattle is almost the same distance as it is from Seattle to Yokohama. We must have a squadron through the canal and on the Pacific Ocean before we would be on equal terms with a squadron starting from Japan.

Gentlemen apparently lose sight of that. We on the Pacific coast have always supported the naval bill but have not received any benefits from it. We have been left absolutely unprotected. We believe that we are still a part of the Union. We think that when we are paying the taxes we ought to receive some consideration. There is not a man on the floor of this House on either side who will stand up in his place now and for one moment say that the Pacific coast is protected from attack. The only thing they say is, "Oh, we can defend the Pacific." How? These boasts do not have much weight. I sometimes think that that class of men—unintentionally, of course—honest, patriotic as any of us, who talk this way, who say that we can raise a million men overnight and that we could defeat any enemy without guns or ammunition; who say, as the gentleman from Massachusetts said; who think that we could swim out and sink these fleets—while they are sincere, I think they are doing the country great injury. If statements of that kind were made by a foreigner, how quickly you would resent it and reach the conclusion that they were doing that only to throw us off our guard. As one man from the Pacific coast, I believe that the only protection to that coast, the greatest guaranty of peace, is in the Navy. I do not advocate a great standing Army, although I would like to see it larger than it now is; but to spend a reasonable amount for the Navy, as a protection for the Pacific coast, is the best guaranty for peace. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. FOWLER. Mr. Chairman, I make the point that no quorum is present.

Mr. MANN. I hope the gentleman will withhold his point of order for a moment.

Mr. FOWLER. I will withhold it.

Mr. MANN. I had figured upon giving 5 minutes more to the gentleman from Washington, but as he does not want it I will be glad to yield it to my colleague from Illinois.

The CHAIRMAN. The gentleman from Illinois yields 5 minutes to the gentleman from Illinois [Mr. FOWLER].

Mr. HOBSON. And the chairman has yielded 5 minutes to the gentleman from Illinois [Mr. FOWLER], which makes 10 minutes. I ask the gentleman from Illinois if he will not withdraw his point of no quorum in the interest of expediting business?

The CHAIRMAN. Does the gentleman from Tennessee yield 5 minutes to the gentleman from Illinois?

Mr. PADGETT. Yes.

Mr. FOWLER. Mr. Chairman, I renew my point of order.

The CHAIRMAN. The gentleman from Illinois makes the point of order that no quorum is present. The Chair will count. [After counting.] One hundred and one Members are present—a quorum.

Mr. PADGETT. Mr. Chairman, just at this point, while Members are here, I want to make a suggestion. The gentleman from Illinois [Mr. FOWLER] has notified me that he intends to make continued points of no quorum. I am going to ask the House to remain in session to-night until we pass this bill. If Members will stay here and maintain a quorum, it will expedite the passage of the bill. If they do not remain here, it will be just that much more inconvenience for Members and will delay the adjournment to-night. I hope that Members will stay on the floor and avoid that necessity.

Now, Mr. Chairman, I understand from the gentleman from Illinois [Mr. FOWLER] that I am to have the 5 minutes which the gentleman from Illinois [Mr. MANN] yielded to him. I will yield to the gentleman from Illinois [Mr. FOWLER] 10 minutes.

The CHAIRMAN. The Chair understood the gentleman from Illinois to yield 5 minutes to his colleague from Illinois.

Mr. PADGETT. I am to have the 5 minutes that the gentleman from Illinois [Mr. MANN] yielded to the gentleman from Illinois [Mr. FOWLER].

Mr. MANN. What is that?

The CHAIRMAN. The Chair understands the chairman of the committee proposes to yield 10 minutes to the gentleman from Illinois [Mr. FOWLER], provided the gentleman from Illinois [Mr. MANN] yields him the 5 minutes that he yielded to Mr. FOWLER.

Mr. MANN. I decline to do that.

Mr. PADGETT. Then, Mr. Chairman, I have yielded my time and I have only 5 minutes remaining, which I yield to the gentleman from Illinois [Mr. FOWLER].

Mr. FOWLER. Mr. Chairman, we have just witnessed a most wonderful performance on the floor of this House. This paragraph provides for two battleships, but the gentleman from Alabama [Mr. HOBSON] has offered an amendment for four. We have debated this amendment for more than an hour, and now it is proposed to debate it for two hours more, and at the end of that time the debate upon this paragraph and all amendments thereto is to be closed.

Mr. Chairman, there are Members here on the floor of the House who believe that our Navy is weak and inefficient because of the slowness of our war vessels and a failure to equip them with high explosive shells. We have been led to believe that when we reached this paragraph we would be given an opportunity to offer amendments and ample time to debate these important features, but by the action of the chairman of the Committee on Naval Affairs [Mr. PADGETT], aided by a few men of his type, we are deprived of such opportunity. Now in order to allay our outraged feelings he and the gentleman from Illinois [Mr. MANN] generously propose to yield to us 10 minutes in which to present our views. Our disappointment can only be measured by our bitter contempt for such conduct, and I denounce it as an outrage not only upon the American Navy but upon the American people. Such offer to contribute this crumb of time to me is no inducement to me to keep quiet while wrongs are being committed against the welfare of my country. I would not consent to the compromise of any matter, however great or important to me personally, if in doing so it carried with it the compromise of my own honor or the honor of my country.

Mr. Chairman, it is well known, not only in America, but to the people throughout the civilized countries of the world, that the speed of the American Navy drops down so low that it becomes a tub as compared with the other navies of the world. The speed of our dreadnaughts will not average more than 14 to 18 knots. The greatest speed claimed for any of them is 21 knots, while most of them have a much less speed; whereas the speed of the dreadnaught type of other countries such as Great Britain, Germany, Japan, Russia, and even the least country which claims to be a naval power, Italy, is 25 knots. Yet our tub Navy drags along year after year under the influence of a spell thrown over Congress which is like the spell thrown over the king and his audience at the appearance of Banquo's ghost. From what source this spell comes I am unable

to say, but when I was a member of the Illinois Legislature I saw spells come over that body, and when I saw leading Democratic members and leading Republican members hugging and kissing each other in and about the capitol and walking leisurely in arms to the hotels it meant the planning for and final division of a jack pot.

Mr. Chairman, there is an invisible force, an undercurrent influence which permeates some of the greatest affairs of our Government. The Armor Trust has played its part most skillfully, and the only man in the Department of the Navy who has ever had enough courage to beard this lion in his den was Hon. H. A. Herbert, Secretary of the Navy under Mr. Cleveland, until the present Secretary of the Navy, Hon. Josephus Daniels, arrived on the scene. In both of his annual reports he denounced this infamous, mottled, and many-angled concern as a highwayman, criminally holding him up in naval contracts.

Mr. Chairman, some of the Members of Congress have been studying the philosophy of modern naval engagements abroad and have come to the conclusion that we should not only increase the speed of our war vessels but that we should equip them with high-explosive shells, and we are anxious to offer amendments at this juncture, as it is the only place in the bill which will permit such amendments to be offered without encountering the shoals of points of order, which would be promptly made and which would be just as promptly sustained, but by an arrangement which has been perfected by the influence of the chairman of the Committee on Naval Affairs we are absolutely cut off from offering an amendment for that purpose. Members on the other side of the aisle wanted to offer such amendments——

Mr. BUTLER. Mr. Chairman, will the gentleman yield?

Mr. FOWLER. Yes; I always yield to the gentleman.

Mr. BUTLER. I thank the gentleman very much. Does the gentleman know that those fast battle cruisers cost $22,000,000 each?

Mr. FOWLER. No; I do not know it; but on the other hand I have consulted experts, as great experts as live in this country, and they say that if those two vessels that we are about to authorize were constructed on the battle-cruiser type we would save $3,000,000.

Mr. BUTLER. That is not according to the information given to us.

Mr. FOWLER. That is the report I received, and I submitted the question to one of the greatest naval experts in the world. Mr. Chairman, if the American Congress could get a fair opportunity to debate the question of the speed and character of the explosives on these two vessels I have no doubt but that we would find a majority on the floor of the House to-day in favor of both increasing the speed and supplying them with high-explosive shell.

HIGH SPEED IS THE LIFE OF A NAVY.

Mr. Chairman, about a dozen years ago Great Britain began to increase the speed of her warships. Up to that time her battleships had a speed of 17 and 18 knots. Her armored cruisers had a speed of 20 to 22 knots. This was practically the speed of the battleships and armored cruisers of the naval powers of the world, such as Germany, United States, France, Japan, Russia, and Italy. Apparently no effort had been made prior to this date to excel in speed, naval genius having been employed in a desperate struggle to produce on the one hand an armor plate so thick and so tough that it could not be penetrated by a projectile, while on the other side an equally desperate effort had been made to produce a shell which could penetrate the most perfect armor. This rivalry developed the kruppized nickel armor and the armor-piercing shell; both sides were claiming the victory.

Just about this time two high-explosive shells made their appearance in naval circles. They were both invented by Americans—Gathman and Isham. Gathman used guncotton as an explosive and Isham used trinitrotoluol. Each of these inventors claimed that his shell could be thrown out of a gun at long range and that on striking a vessel it would explode and sink the ship.

In 1907 Great Britain decided to drop the armored cruiser and planned the construction of the battle cruiser with a high speed. Critics, not only in Great Britain but in all naval circles, condemned this new type of warship. The advantages of this new ship are summed up in an editorial by the editor of the Naval and Military Record, a British weekly magazine, page 72. I quote the last paragraph:

"We owe the critics of the battle cruiser a debt of gratitude. Despite their activity they did not succeed in deflecting the admiralty from its policy except for a very short period, when money was scarce and the needs of the navy in other directions insistent. The naval authorities persisted in the construction of battle cruisers, and, happily, the Dominions provided two others, raising the total number to 10. And then, at last, in the *Queen Elizabeth* class they evolved the apotheosis of the battle cruiser in which, owing to the substitution of oil for coal and the consequent saving of weight, we obtained a ship with a speed exceeding that of any large cruiser in the world in combination with gun power and armament superior to those of any other battleships built or building for service under any foreign flag. The debt which we owe to critics of the battle cruiser rests upon the assumption that they were in some measure responsible for the failure of other naval powers to imitate our policy and build battle cruisers. The only two nations which realized the value of this type were Germany and Japan. Fortunately, the enemy laid down only one vessel every year, and equally fortunately her strength in effective ships of this class has from one cause and another been steadily reduced. The *Goeben* is lost; the *Von der Tann*, if not lost, is missing; and the *Seydlitz* and *Derfflinger* are evidently out of action for several months. On the other hand, we still possess almost unimpaired the immense advantage which our margin of strength in vessels of this type confers upon us."

Germany soon followed Great Britain and Japan came in later on, and now Russia has four battle cruisers ordered for 1916. At the beginning of the European war Great Britain had 10 of these fast cruisers, with a speed of 27 to 35 knots. Germany had 5, with 3 more ordered, with a speed of 27 to 29 knots. Japan had 2 and 2 building, with a speed of 27 and 28 knots. Besides, Great Britain has increased her dreadnaughts to 25 knots. She now has 4 completed and 4 more building. Germany has increased hers to 23 knots, Italy has increased hers to 25 knots, and Japan and France have increased theirs to 22 knots. United States has stood still.

Just what success may be attained by a fleet of fast vessels can be more accurately ascertained by turning our attention to the naval engagements which have taken place between the British and German fleets since last July. Two decisive battles have been fought. One off the coast of Falkland Islands and the other on the North Sea.

In the battle off Falkland Islands the German fleet consisted of five vessels. The *Scharnhorst* and *Gneisenau*, armored cruisers, with a speed of 22 knots, the *Leipzig*, a cruiser, and *Nurnberg*, auxiliary cruiser, both of low speed, were all sunk. The British fleet was made up of fast battle cruisers, among which were the *Invincible* and *Inflexible*, with a speed of 28 knots. It is reported that the *Lion*, of 31 knots, was also there. It was a fight between low speed and little guns and high speed and big guns. The result was a complete victory for high speed and big guns.

In the battle on the North Sea the British and German fleets were more evenly matched in point of speed and guns. The Germans had four big ships, one armored cruiser, the *Blücher*, of 26 knots, and three battle cruisers, the *Seydlitz* and the *Derfflinger*, of 27 knots each, and the *Moltke*, with 28 knots. The British fleet had at least five battle cruisers, the *New Zealand*, 26 knots, the *Indomitable*, 28 knots, the *Tiger*, 29 knots, the *Lion*, 31 knots, and the *Princess Royal*, 34 knots. The *Blücher* was the slowest German ship in the fight, and she was the only ship that was sunk. Twenty-six knots proved to be too slow in a running fight and emphasizes the advantage of high speed over low speed.

Vice Admiral Sir David Beatty was in command of the English fleet, and in his report of the battle, found on page 70 of the Naval and Military Record of England, February 3, 1915, he says: "The situation developed by degrees into a stern chase. Speed was worked up to 28 and 29 knots, and the enemy were gradually being overhauled. At about 18,000 yards slow and deliberate fire was opened, and we began to hit at a range of 17,000 yards. * * * The result of the action was the *Blücher* sunk and two other battle cruisers very heavily on fire and seriously damaged." On page 71 of the same periodical, under the head of "The naval outlook," a French correspondent says: "The new victory of Admiral Beatty * * * is held to be a striking confirmation of the lesson of the battle of the Falkland Islands, once more demonstrating that speed, combined with superior caliber, enables the admiral that possesses such assets to force an unwilling enemy to fight and select the range at which crushing concentration of fire can be best realized with the maximum of results and the minimum risk."

Mr. Chairman, the Scientific American of February 6, 1915, page 128, in commenting on the efficiency of the American Navy, says:

"The predreadnaught, because of its slow speed and inferior gun power, would be unable to stand up in the battle

line against modern dreadnaughts. * * * It would seem that our Navy has at last come around to the recognition of the great strategic and practical value of the fast and heavily armed battle cruisers which undoubtedly have done the most work thus far in naval warfare."

The wish of the author of this language certainly is father to the thought, for as a matter of fact no such policy has been recommended by the Department of the Navy or the Committee on Naval Affairs. Many of us have been fighting for such a policy for the last four years, but those who have had charge of the appropriation bills for the Navy have invariably used their skill and power to defeat us, and they have succeeded in doing so.

All other naval powers have fast battle cruisers with a speed ranging from 25 to 35 knots, and ordinary common sense and patriotism demand that we should have them; and we would have them if Congress could free itself from the paralyzing influence of the armor trust. The Scientific American, on the same page referred to above, says:

"In addition to the vessels shown, the United States Navy includes 18 old cruisers of various out-of-date types, vessels which if used for makeshift scouts would be in danger of destruction by the swift and powerfully armed modern scouts and high-speed battle cruisers, of which the leading foreign nations possess so many."

In an editorial of January 26, 1915, the Washington Post, in commenting upon the results of this unfortunate event, under the heading "Big guns and swift ships most perfect defense," said:

"Sunday's encounter between British and German warships in the North Sea was a fair, open fight, with the opponents fairly well matched. The victory went to the British fleet because of large guns and because one of the German battle cruisers was overmatched in speed. * * * Admiral Craddock's big ships went down before heavier guns off the Chilean coast. Admiral von Spee, who defeated him, was in turn defeated, losing his squadron and his life off the Falkland Islands, when he encountered heavier guns and speedier ships. Now, the German squadron in the North Sea is beaten by speedier ships with bigger guns.

"Is any more evidence required by Congress as to the kind of vessels that should be provided for the United States Navy? Great Britain and Germany have furnished an object lesson to the United States that is priceless if heeded. The strongest and most effective defense that the United States can provide is a Navy of swift ships mounting the largest guns that can be turned out."

Mr. Chairman, it is said that the chameleon, a lizard-like animal of Africa, often becomes agitated, one portion of his body trying to go one way and the other part trying to go another way, which renders him unable to move at all. This more clearly represents the attitude of those charged with responsibility of furnishing America with an efficient navy.

HIGH EXPLOSIVE SHELLS.

Mr. Chairman, it is well known to all naval experts that high-explosive shells can be successfully used in naval warfare. In the present European war they have been employed by all of the warring nations, both on land and sea, and have proved to be the most destructive of all other projectiles. These shells were first used by Japan in naval warfare at the battle of Tsushima in 1905. In this battle Russia had eight battleships supplied with armor-piercing shells, while Japan had only four battleships, but equipped with high-explosive shells. By this advantage Japan was able to destroy the Russian fleet with but little damage to her own fleet.

In a target practice in 1911 at the mouth of Chesapeake Bay one high-explosive shell was sufficient to sink the *Puritan*. In November, 1913, the British navy, in a target practice, the *Empress of India* being used as the target, at a range of 17,000 yards, tore holes like great lock gates in her sides by high-explosive shells. In the siege of Liege in 1914 one high-explosive shell, thrown at long range from a big siege gun by the Germans, destroyed a mighty fort and killed 150 men.

Mr. Chairman, both the army and navy of every important country in the world are supplied with these modern high-explosive shells. But neither the Army or Navy nor the coast defense of America is supplied with them, yet they were invented by an American, who has offered us the use of his patent without cost. Admiral Strauss, chief of the Bureau of Naval Ordnance, says they are dangerous and without practical virtue, overestimated, and a delusion. This in the face of the tests which we have made with marvelous results—the destruction of the Russian fleet by Japan in 1905 by high-explosive shells, and the dreadful wholesale destruction of the strongest forts in the world during the present European war. Admiral, you had better get your ear to the ground. Something is going to happen.

THE TORPEDO DIVING SHELL.

At the mouth of the Chesapeake Bay a few days ago, Mr. Chairman, I witnessed a most wonderful test with a torpedo diving shell, fired from a 12-inch gun with a velocity that would give it a range equal to the longest range at which a ship can be seen. When this shell struck the water it did not ricochet like other shells, but it took the water and ran forward 100 to 200 feet and then exploded, throwing up a large column of water, as a submarine mine would do. Had it encountered a war vessel in its path it would have exploded immediately upon striking it. I was informed by a naval expert who was present that former tests made with this shell demonstrated that an impact with the thinnest plate on a torpedo boat, or even a periscope of a submarine boat, was sufficient to cause the shell to explode immediately.

This marvelous experiment proves that this shell is destined to open up a new field in naval warfare. Henceforth torpedo shells may be fired through the air with the range and accuracy of other shells, and in addition to the deadly effect which will result on striking the vessel of the enemy, they may be made to strike the water in front of the vessel and dive under it and then explode against the most tender parts of the vessel with the most deadly effects. Mines may be planted by guns at long range.

The advent of the torpedo diving shell will render armor plate less useful, since it attacks a ship where it is not and can not be protected by armor. Moreover, the underwater part of a ship is a much larger target than that protected by armor; hence the probability of hitting a ship in its most tender parts and destroying it is much greater than the probability of hitting the armored parts. These tests demonstrate that a torpedo shell is available that will destroy any kind of a ship, from the heaviest dreadnaught down to the smallest torpedo boat or submarine, without even hitting them, and independent of their armor protection.

I am informed, Mr. Chairman, that it is the intention to charge these shells with trinitrotoluol, an explosive which, I understand, is perfectly safe. Now, if the Department of the Navy will supply the 28 battleships which the General Board of the Navy says are outranged and defenseless against fast ships having heavier guns in foreign navies with torpedo shells, the efficiency of the Navy may be vastly improved at a very small cost. If the Department of the Navy is sincere in its demand for greater battleship strength, it can be secured at once by supplying our old ships with these torpedo diving shells, thereby adding to our Navy fighting strength which is not possessed by any other navy in the world.

Mr. Chairman, on looking into the history of the high-explosive shell, I find it has been before Congress and this country for about 16 years. That during this period the advantages of fast warships equipped with these shells have been continuously urged by the inventor. Other countries recognizing the advantage of these modern inventions have built fast ships and equipped them with high-explosive shells, while we have adhered to a policy which has made our Navy the laughingstock of naval experts and the eyesore of those responsible for its inefficiency. The torpedo, the mine, the submarine, the turreted battleship, and nearly every other valuable invention in naval warfare are the inventions of Americans, and this crowning invention, the torpedo diving shell, which supplements all of these, is the invention of an American—Mr. Isham—and he should not only have credit for it, but America should have the advantage of appropriating its use to the exclusion of all other nations.

Like the great Ericsson, Mr. Isham is an engineer. He has gained international distinction in his profession by his works in three countries, and it is as an engineer rather than as an inventor that he has developed his new and wonderful system of attack. In unprejudiced circles Mr. Isham stands very high, and in order that Congress may give more attention to his splendid ideas with a view of securing his inventions for the benefit of our Navy I hereby quote what I recently heard an admiral of our Navy say concerning his ability, which was this: "I regard him"—meaning Mr. Isham—"as the highest authority in the United States on the use of high-explosive shells and their use in warfare."

Should America, through her Congress and Navy Department, fail to take the advantages of this shell and permit it to fall into the hands of other nations, it would certainly be a big blunder, if not a crime.

Mr. Chairman, those who have been charged with the responsibility of furnishing America with an efficient, up-to-date Navy must certainly begin to feel the weight of public criticism

during these troublesome times of wholesale bloodshed. They know that speed, long-range guns, torpedo shells, and torpedo diving shells are elements of strength. All of these are within easy reach and a failure to incorporate them in the future additions to our Navy will be good cause for retirement from public life. The nation which attains superiority in the speed of her ships, in the size and range of her guns, and in the size and explosive force of her shells will be able to control the high seas and dictate the commercial policy of the world.

Mr. MANN. Mr. Chairman, I yield five minutes to the gentleman from Iowa [Mr. GREEN].

Mr. GREEN of Iowa. Mr. Chairman, a few years ago it was common to brag of our Navy, and Fourth of July orators often expressed unbounded confidence in our ability to "whip all creation." I never was in accord with this boastful spirit, which so often gave just offense to foreign nations, and if the only effect of the statements of those who defend a larger Navy was to silence these empty vaporings and raise the standard of efficiency in our fleets the result would be highly beneficial. Unfortunately, there are many critics of the Navy who are neither temperate nor accurate. Alarmists in the press and pessimists in Congress have assumed that a great conflict was impending and have gloomily predicted that in case of war our fleet would be annihilated, our coast towns bombarded, our territory invaded, and our national existence only saved by the payment of an immense ransom. The country at large has been astounded and terrified by these reckless assertions. Many whose opinion of the real conditions is based upon these erroneous statements have been clamoring for large additions to the Army and Navy, and, without stopping to think that the cost would not be confined to millions of dollars, but would run into billions, have demanded that we should have a Navy powerful enough to overcome that of any other nation.

Mr. Chairman, I can not claim to have had experience in the Navy, like the gentleman from Alabama [Mr. HOBSON], but I do not belong to the list of those who do not know how many dreadnaughts we have in our own Navy, nor what their armament is, and who have been referred to by the gentleman from Massachusetts [Mr. GARDNER]. I have, as the gentleman from Alabama [Mr. HOBSON] suggested, made some study of these matters in the light of history and past events, and in the light of the lessons as I read them a conflict with England is so highly improbable as to be practically impossible, and a conflict with Japan is so many years away as to make it a remote possibility indeed. If England desired a war with this country, this is not the time that she would seek it. She had her opportunity many years ago, when we ourselves invited it. During a prior Democratic administration, that of Mr. Cleveland, we issued to England, through the message of the President, what was practically an ultimatum on a subject as to which it afterwards developed we were entirely in error if not absolutely in the wrong. At that time our Navy was weak indeed. England's Navy was then so much more powerful than ours as to make our fleet insignificant in comparison. No other international complications at that time troubled England. There was no danger that any other country would make war upon her. An unparalleled opportunity was then presented had England desired to have war with this Nation. This opportunity will never again present itself. England is now engaged in a conflict which will drain her resources for years to come and put war with us out of consideration. It was fortunate for us at that time that England did not call the bluff that we made, for it was more or less of a bluff; and it was fortunate also for England herself, because a conflict between this great Nation and that other great nation would not only be a calamity to the vanquished, but in only a lesser degree a calamity to the victor.

Our Navy is, indeed, much inferior to that of England—so much so that it is doubtful whether it would be possible for us to overtake that nation even if we put no limit upon expenditure. But we do not need such a navy any more than we need forts along the boundary line between us and Canada. The English Government has announced that it does not take into consideration the possibility of a war with this Nation, and we do not need to prepare for it.

It has been intimated that we are in danger of conflict with Japan. Japan is a poor nation, and is to-day in the throes of a financial and industrial depression. It is in urgent need of money, but it is so deficient in resources that its people are to-day groaning under the weight of taxation with which they are oppressed. Count Okuma in a recent public address said that the present war was a great financial and economic injury. When her last Parliament recently added $50,000,000 to their budget in order to pay the expenses of the war in which she is now engaged, the action precipitated a riot on the streets of Tokyo, and the ministry was compelled to resign. The Emperor dissolved the Parliament and new elections were called, to the end that some method might be devised to lessen the national burdens.

Let me say in this connection also, as showing the determination of England not to enter into conflict with us, that while Japan's alliance with England is both offensive and defensive, when Japan protested against the action of California, England had the United States excepted from the treaty which created this alliance in case of war between us and Japan.

Why it should be thought that in the midst of her financial difficulties Japan is seeking to cross swords with a nation like our own, which has a much stronger Navy and resources so much greater, is difficult to comprehend. Japan does not need more territory. It now has Korea, Formosa, and half of the great island of Sakhalin, only partially developed. There is plenty of room in these regions for its surplus population, and its statesmen realize that its future greatness must depend not so much upon its career in war as in the development of the arts of peace. It seems to be thought that it is a comparatively easy task for Japan to sail some 4,000 or 5,000 miles across the Pacific Ocean and attack our western coast. All naval experts have pronounced it to be a stupendous undertaking. Japan has not a single naval base on the way. It has no opportunity to replenish its navy, to keep up its supplies, and satisfactorily provide for its ships on that long voyage. An expedition of that kind would be of a nature that has never been undertaken in all the history of war—and, in my judgment, never will be. Let me say in this connection also, since gentlemen talk so easily of hostile fleets bombarding our coasts, that never in the history of modern naval warfare has any commander attempted or even thought of placing his vessels under the fire of half-way efficient coast defenses.

Even in the war which we had with Spain none of our admirals ever thought for a moment of putting his fleet under the fire of such antiquated fortifications as existed at Havana.

Mr. GARDNER. Will the gentleman yield?

Mr. GREEN of Iowa. I will.

Mr. GARDNER. Was not that because they could land at Santiago?

Mr. GREEN of Iowa. Oh, no. If we could have bombarded Havana we would have done so and forced its surrender.

Mr. GARDNER. But did not, because there were plenty of other places to land.

Mr. GREEN of Iowa. Not at all.

Mr. GARDNER. That is what Admiral Fletcher said in his testimony.

Mr. GREEN of Iowa. He was speaking of another matter.

Gentlemen seem to talk as if there was no way of protecting Puget Sound from the attack of a hostile fleet. They say that its fortifications are insufficient. If this is so, they should make a plea to the committee on fortifications.

Puget Sound presents a region that is most highly adapted for mining and can be fully protected in that way. Gentlemen remember that in the recent battle in the North Sea the British fleet stopped 70 miles from Helgoland on account of the mines and submarines, and yet the gentleman from Alabama [Mr. HOBSON] talks of a hostile fleet not merely making some raid on an unfortified place, like the Germans made on England, but actually capturing our naval stations without any efficient resistance.

I know the gentleman has had the benefit of actual experience in warfare, but a much higher officer, one of our admirals, who has had a much longer and more varied experience, has testified that our ports are actually overfortified; yet it is assumed that a hostile fleet could run past the forts without injury and disregard the mines and submarines. Let us look abroad for some lessons. The English fleet is far superior to that of Germany, yet it never ventures in sight of the German coast, and its commanders have adopted the only safe and practical policy. In this connection I observe that some gentlemen have airily spoken of an enemy's fleet landing a great army upon our open coast as if it were some easy and trifling matter. Mr. Chairman, a fleet of transports engaged as it would be for days in landing an army by small boats would afford the finest target for submarines that could possibly be imagined. Gentlemen forget, also, that warships can not successfully defend such a fleet against an equal hostile force. No naval commander would think of organizing such an expedition until our vessels of war had been defeated and at least half of them sent to the bottom of the ocean.

I do not wish to overlook Germany. It is said that her navy is more powerful than ours. This may be, although it is a matter of some dispute. Offensively our fleets can fire a heavier

broadside, although their tonnage is less; and the effects of the present war, of which I wish to say more later, are rapidly being manifested. Since the war began, Germany has lost 45 armed vessels altogether and about 20 of her regular navy, among which were her best armored cruisers. She has more dreadnaughts than we, but our battleships are more numerous and more powerful. More than this, the German Navy was evidently not built for a campaign across the ocean. Something like 20 of her battleships do not carry enough coal to enable them to safely cross in war times. Germany has, it is true, more fast ships, but our Navy was built to fight and not to run away; to defend our coasts, not to chase merchant vessels.

It is not necessary, however, that I should pursue these comparisons. From every point of view, Mr. Chairman, we are less in danger of war than at any time since our national existence began.

We are most happily situated. We have no territory that any other nation seeks to possess, and we neither need nor covet the possessions of any other nation. However much we may disagree as to the cause of the great conflict now raging in Europe, we must all agree that whatever may have been its cause it has no connection or relation to our situation. A wide expanse of ocean separates us from the great powers, and thousands of miles of water make a barrier superior to any fortifications.

Why, Mr. Chairman, should any nation desire a conflict with us? Assuming that there is some nation animated by a spirit of aggression which seeks new fields to conquer, why should it select one of the greatest and most powerful countries of the world as an easy victim? In the continent south of us are found other and smaller nations, with cities second only to New York and Chicago in population, abounding in wealth, yet with an army inferior to our own and a navy which could not oppose an effectual resistance. Here, also, are vast regions but little populated, which seem to invite rather than repel invasion, yet none of the nations of South America seem to be in fear of aggression. Some may say that this is because of the Monroe doctrine, which binds us to protect them; but all of these nations have manifested a desire to repudiate this principle. They do not ask for our protection, and the fears and terrors of invasion which seem to excite so many of our people are entirely wanting among them, for they believe they are able to protect themselves.

Situated as we are with reference to other nations, there must be somewhere a golden mean between those who want the strongest navy in the world and those who think it already larger than is necessary. The true rule, I consider to be, that our Navy need not be large enough for the purpose of aggression, nor should it be so small that it could not be relied upon for defense. The two dreadnaughts provided for in this bill will cost $15,000,000 each and $1,000,000 each year they are in service. But surely we can afford, and ought to have, a better navy than so poor a nation as Japan, and if we are to preserve our superiority we must make some additions. The value of the submarine, particularly as a weapon of defense, has been demonstrated, and we should add the 16 provided by the bill, together with the large seagoing submarine. The additions to the Navy provided by the bill are reasonable, and should not be reduced.

The great powers of Europe are now engaged in a life-and-death struggle, into which each is now casting the last man and the last dollar. This frightful cataclysm has already absorbed the flower of the youth of each nation and strained their financial resources to the point of breaking. The torch of war has left smoking ruins of great cities and spread devastation through smiling lands. The German casualties to date have been over 2,000,000, and the allies, including prisoners, have lost far more. The cost to Great Britain for war expenses is about $10,000,000 a day, to Germany perhaps a little less, but the total loss to the five great powers, including commercial losses, is now estimated at the staggering sum of $25,000,000,000. Apparently it must continue until both sides are utterly exhausted. In any event the victors in such a war can not recover for half a century.

Mr. Chairman, among these warring nations there is scarcely a household that is not in mourning; there is not a business, profession, or occupation that is not crushed with the burdens of war taxes; each day chronicles the failure of more business houses; each hour extends further the long list of the dead and dying. Can anyone believe any of these belligerents now wishes to add another nation to its opponents? Will it be claimed that when this war ends any will be so bereft of sense and reason as to plan to attack the one great power whose resources in men and money are as yet untouched? Should we not, on the contrary, expect that when it ends they will turn their attention again to peaceful pursuits and seek to restore their shattered resources?

Mr. Chairman, it is fortunate indeed that we as a people have never been imbued with the spirit of aggrandizement, for if we were inclined to aggression a navy more powerful than that of most nations would be an incentive to war. In the final analysis all our greatest protection against war must be in our capacity to act justly and deal honorably as a nation. We should be big and strong morally as well as physically if we would avoid conflict, and our size should never lead us to impose on weaker nations. Thus may we lead the march of nations, not in war's cruelties and barbarities, but in the arts of peace and in the cause of morality and religion. Then when new generations view our wonderful prosperity and happiness, in contrast with nation-wide wreck and ruin—the only result of the sacrifice of countless lives—they will turn in horror from another conflict of nations, and this will be the last great war.

Mr. PADGETT. I yield five minutes to the gentleman from Ohio [Mr. BATHRICK].

Mr. BATHRICK. Mr. Chairman, I want to make a startling statement to this House, and I want to make it in the brief time given me. I want to invite your attention to this diagram which I have drawn on cardboard, and I will show you how to take 12 of the obsolete battleships and put them in as a live part of our efficient fighting force. We put in the bill the other day an amendment to compel the Navy Department to cease purchasing 12-inch armor-piercing shells until they had proven that these 12-inch shells could penetrate 10 inches of armor at a distance of 12,000 yards. Now, let us see how the armor-piercing shell acts on the water. This diagram is supposed to illustrate the armor-piercing shell fired from this gun, pointed to strike the water near the vessel that is fired at. If it strikes the water at this point, it ricochets over the vessel. If it does not ricochet, it explodes instantly on contact with the water, and the shot is lost. It is a miss. Suppose this armor-piercing shell hits. This is the angle of the trajectory, and you see it comes over and strikes at an angle to the armor: it does not strike the armor plate squarely. We have been experimenting at Indianhead with different charges of powder, firing armor-piercing shells for years. By these experiments at short distances they got a theoretical trajectory, and because they pierced through armor plate under experimental conditions they have considered for years that they could pierce armor plate at 6 miles' distance, or 12,000 yards; but when they experimented by actually shooting these shells at 12,000 yards they could not pierce the armor.

Our subcommittee on armor and armament of the Committee on Naval Affairs and others saw this; it is of record, and everyone should be willing to admit it. Nevertheless, it is insisted that we must go on building millions of dollars worth of those armor-piercing shells of the same alleged type that they have been using. We want them to experiment with this explosive shell, which we have demonstrated will do as shown in this diagram. Notice this trajectory [indicating]. Suppose this shell strikes near the target; it will run on the water, and will not ricochet, and then it will sink and explode. If it explodes within 15 or 20 feet of the vessel—and this has been experimented with and proven—it will cave in that part of the vessel below the water line. Again, if it hits the vessel fairly, it will explode 180 pounds of a powerful explosive, with disastrous results to the ship. For 16 years the inventor of this shell has been working to get it before the attention of the Navy Department, and has met with remarkable and almost inexplicable obstacles. That was what that amendment was for the other day—to force these people to stop buying these armor-piercing shells of 12-inch diameter until they demonstrated that they have an armor-piercing shell that will pierce armor at 12,000 yards and be an effective projectile. The experience in Europe shows that 12,000 yards is the minimum war range; and, that being true, the armor-piercing shell is of little use to us.

Mr. HOBSON. The Chief of Ordnance, Admiral Twining, was asked this question:

> At what range can 10-inch K. C. armor be penetrated by 12-inch armor-piercing shells if they be fired with 2,850 foot-seconds velocity?

And his answer was:

> Nineteen thousand yards, if the impact on armor is normal.

Mr. BATHRICK. Showing how badly he is mistaken.

Mr. HOBSON. And now they are not willing to have that put down to 12,000.

Mr. BATHRICK. Showing they are absolutely mistaken. The real purpose of the shell is to get it through the armor and have it explode on the inside. No such result has been attained

in practice at 12,000 yards. It has been proven incontrovertibly, to anybody with reasonable intelligence, that explosive shells have come in use by foreign nations, and we want the department to try out this shell here. If you vote down the amendment that we got into the bill, they will keep on buying these armor-piercing shells which will not pierce, although we have a very large stock of them now and a sufficient surplus.

I append a letter to me from Mr. Isham, inventor of the shell:

Hon. ELLSWORTH R. BATHRICK,
Member Subcommittee on Ordnance Tests,
House of Representatives.

SIR: Our naval strength is vested in battleships. The value of a battleship is dependent upon the projectile it employs. If this is inefficient, the battleship is worthless. The Navy Department now acknowledges that armor-piercing projectiles can not penetrate even 10-inch armor at 12,000 yards. Then why are they placing 13½-inch armor on our battleships? Three years ago Admiral Twining stated before the House Naval Committee that the 12-inch guns could penetrate 10-inch armor at 19,000 yards. I was accused on the floor of the House of slandering that officer because I branded it as a misstatement. They are now exerting every effort to show that our armor-piercing shells are the best in the world, and that the supply of them must not be restricted by compelling them to be able to penetrate a 10-inch plate at 12,000 yards. If these armor-piercing shells are incapable of doing this, they and the battleships which carry them are useless, numerous decisions having been rendered to show that the vitals of foreign battleships are protected by even thicker armor, for which reason all tests of torpedo shells have been demanded by the department to be made against 12-inch plates. Moreover, 12,000 yards is less than the range at which naval battles are being decided in the present war. It has also been shown by the Proceedings of the Naval Institute and other technical journals that have been quoted on the floor of the House that the *Empress of India* was sunk by British warships employing British shells in a test at a range between 16,000 and 18,000 yards, the shells "blowing holes in her like lock gates."

Nearly 17 years ago I was sent to this Government by our ambassador to Mexico to demonstrate my torpedo shell, which had demonstrated there as a principal advantage over armor-piercing shells that it could destroy a battleship by exploding near as by hitting it. Last week I had my first test in this country to establish that it could be done. It was admitted for all these years that if a shell carrying 100 pounds or more of high explosive could be exploded within 15 feet of a battleship it would destroy it as a mine would do, but they claimed this could not be done; that the shell would ricochet the same as the armor-piercing shell did, and there was no trial until last week, when it was found that this result could be secured. All countries recognize, and the European war has demonstrated, that the torpedo has compelled a minimum battle range of at least 10,000 yards. This test last week showed that at any battle range my shells bite and dive beneath the water, which the armor-piercing shells will not do. The test also showed that after running underneath the water from 100 to 200 feet they will explode; some of them did not because of a too close fitting locking pin. Black powder was used in the shell at the suggestion of the board, but it is obvious that any explosive may be used. Hence the test proved:

1. That battleships may be destroyed by such shells.
2. That armor plate is no protection against such underwater attack.
3. That the target offered to underwater attack is at least five times as great as the armored parts forming the target for armor-piercing shell attack.

If any further advantages over armor-piercing shells were necessary they are supplied by a test made recently at Indianhead, which showed that the same torpedo shell would destroy an 8-inch plate or explode immediately if it struck even the thinnest plating employed on a torpedo boat or a submarine.

To attain these results has required persistent effort for more than 16 years. The question then arises whether this delay has resulted from the influence of interests involved. When the Congress in 1901 authorized the purchase of my torpedo shell—which purchase was never consummated—Gen. Miles and others stated that it discounted the employment of armor plate. Hence, it is possible that for all these years the Armor-Plate Trust may have used its specious arguments to prevent the use of torpedo shells. Again, with the development of guns it has been decided by the General Board of the Navy that 28 of our older battleships are outranged by late ships and are to be set aside as obsolete. But since torpedo shells make all the guns on these old ships effective up to the limit of vision at sea and prevent the ships from becoming obsolete, is it not possible that the shipbuilding companies are trying to prevent the adoption of torpedo shells? Furthermore, it is established that submarines can be discovered by air craft and also by underwater detectors, and although heretofore they could not be destroyed by shell fire, last week's tests showed that this can now be done. Hence, it is believed that an investigation will show that therein can be discovered the source of a growing opposition in certain quarters to torpedo shells. From time to time have been uttered such statements as might be most useful to prevent the test and use of torpedo shells. Year after year I have called the attention of the Congress to these incorrect statements and to the resulting menace to our national defenses. On the 30th day of last September I made five serious charges respecting the failure to investigate these matters before the Senate Committee on Naval Affairs. These charges were recently inserted in the House record by Mr. GRAHAM of Illinois, but it is not expected that action will result until such publicity is given to existing conditions that the people in this country will see what cost they are paying to the special interests engaged in the manufacture of materials and sentiment of war.

Respectfully, WILLARD S. ISHAM.

Mr. MANN. Mr. Chairman, I yield five minutes to the gentleman from New Jersey [Mr. PARKER].

OUR SHIPS ARE SLOW.

Mr. PARKER of New Jersey. Mr. Chairman, I am not going to deal with any foreign questions, but with the exact paragraph that is before us. Leave out all questions as to the number of battleships that Congress shall appropriate for. If we appropriate for any, we wish the best ships in the world. The paragraph always intended this. It said that our battleships should have as heavy armor and as powerful armament as any vessel of their class, and then went on to provide that they should be of the "highest practicable speed." I propose to add after that word "speed" an amendment that was carried through the House a few years ago, so that the speed shall be "at least equal to that of any known battleship." In our desire for armor and armament and to save money we somehow or other have built the slowest fleet in the world—ships that are as much behind those of other nations in speed as our monitors were behind the armored fleets of other nations some years after the Civil War.

SPEED ALWAYS WON.

Speed is a vital characteristic of a ship. Do we not remember how speed took English cruisers under Drake all over the world, how they could not be caught, and how Drake's small fleet with gun power and speed vanquished the Spanish Armada? Do we forget that it was speed that kept the *Constitution* and the *President* afloat when all the English fleets were in chase, and that it was speed which enabled the *Alabama* in the old days to go around the world and capture merchantmen as it pleased, and that enabled the *Emden* to do the same thing quite recently? Do we forget the battle of Tsushima Straits, where the Japanese fleet by their speed could select their place of attack and meet the head of the Russian line with broadsides?

VITAL TO ALL NAVAL WORK.

Without speed you can neither give battle nor evade it. You can neither raid nor catch an enemy's raider. You can not select your position when you go into battle. You can not escape in defeat or complete a victory. You can not make an effective blockade nor can you evade blockade. You can not safely divide your own fleet nor can you concentrate your fleet upon the divided parts of an enemy's fleet. Without speed you can not take a fleet where it is not expected to make an unexpected attack. Speed is the essence, next to gun power, of naval efficiency. We ought to have at least one battleship which is a battle cruiser, that can perform the prodigies that have been performed in this war by swift vessels that could get away from any submarine because of their speed, and could make their own attack where they pleased. In the present great conflict the dreadnaughts have either lurked in harbors, unable to get anywhere, not daring to form a battle line, or else they have come out only to be sunk, as the *Blücher* was sunk the other day, by a swifter squadron. Let us have the best ships we can get, at any rate. We now have no 30-knot battle cruisers. We have not even any fast scout cruisers, such as the *Emden* or the *Karlsruhe* or the *Glasgow*, the only survivor of the English fleet in the battle in the Pacific.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PARKER of New Jersey. May I have one minute more?

Mr. MANN. I yield one minute more to the gentleman.

Mr. PARKER of New Jersey. I say that we have not even any fast cruisers for scouting. They are almost as essential as the battle cruiser. Whether we have few or many, we want to learn how to make these vessels. Vessels are made on a pattern, and I do not believe there is a shipbuilder in the United States now who has made or planned or knows how to make a 30-knot scout cruiser or a 30-knot battle cruiser. We want specimens, at least, in our Navy of every valuable type. I am myself for a larger Navy. But I appeal to gentlemen who are for a small Navy to insist at any rate that it shall be the very best of its size. [Applause.]

Mr. MANN. Mr. Chairman, I yield five minutes to the gentleman from California [Mr. KENT].

The CHAIRMAN. The gentleman from California is recognized for five minutes.

Mr. KENT. Mr. Chairman and gentlemen, I stand before you as a man who notoriously advocates the interests of peace. A long time ago there was a saying that possibly some of you may have heard, to the effect that "War is hell." Along about the time that that dictum was established there was also established a statement that "one of the saddest and most helpless things that can be imagined is a cat in hell without claws." [Laughter.]

We are surrounded by hostile nations. We are surrounded by a world at war—by a world plotting and planning to involve us—and it is our duty here and now and wherever we find ourselves to stand out and to fight for our position as a pacific Nation, as a Nation that will not accept the inoculation of hydrophobia. Under other conditions, under conditions which

I believe should obtain, under conditions where the world is not afflicted with rabies, has not gone mad, I should continue my advocacy of curtailing preparation for war. But with the conditions that now confront us with the jealousy of foreign nations, with our own selfish advocacy of increasing our own commercial supremacy at the cost of those who are now afflicted with rabies, I think it is a time when we should be prepared to protect ourselves.

Whatever preparation we shall make for war ought to be defensive. If we carry out the wildest plans that anybody has advocated in this House; if we compare such prospective preparations with the armaments of the Old World; if all were adopted, we would not be prepared as an aggressive Nation to beat an egg. [Laughter.] What we must do here and now is to solemnly devote ourselves to the cause of peace, and, furthermore, to say that we shall defend ourselves and shall be able to defend ourselves as a peaceful Nation if we are attacked. [Applause.]

Our greatest defense does not lie in warlike preparation. It rests in our right of embargo. If we find that we can not agree with any nation of this world that is now at war, we always have the right of declining to do business with such nation, and if we exercise that right, all nations at war will either accept our views or starve. If their answer be that they propose to come to our shores and force us to trade with them against our will, then it is time for us to consider how we shall defend ourselves against being drawn into a war not of our choosing. We are always subject to foreign hostility, and to treason at home. We ask for peace, and may be obliged to fight for it.

For my part, it makes no difference to me what a foreign nation declares in regard to the rights of an American resident abroad or to one doing business in a foreign nation. If the Japanese people desire to expel every American there resident and to confiscate his property, well and good. But if, on the other hand, any nation pretends to dictate to us what we shall do concerning our own internal affairs, whether that concerns right of ingress, right of land ownership, or right of citizenship, I am here to say that I would rather fight and die than submit to such dictation. Here is where we must draw the line. We must have a certain amount of force behind us to hold our reasonable, rational rights, our just demands for home rule and neutrality, and because of that necessity, because we are living in a world full of rabies and hatred, I am going to vote for two battleships, for submarines, and for defense as a prevention against oppression and inoculation with hydrophobia. [Applause.]

The CHAIRMAN. The gentleman has used four minutes. He yields back one minute.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Indiana [Mr. CULLOP].

The CHAIRMAN. The gentleman from Indiana [Mr. CULLOP] is recognized for five minutes.

Mr. CULLOP. Mr. Chairman, I shall vote for the Underwood amendment, and, whether it is adopted or not, I shall vote for the motion of the gentleman from Mississippi [Mr. WITHERSPOON] to strike out the entire paragraph. In my judgment there is no occasion now for us to provide for the building of battleships or to increase our Navy.

I do not understand the doctrine of the gentleman from California [Mr. KENT], who has just left the floor, that the best way to promote peace in this country is to build two battleships a year to get in a better position to fight—more equipment for war. This is a strange doctrine, to my mind, that he advocates.

Now, I would like to ask this question: If we were to build a battleship now, what type of battleship would we build? The type that would be proper for to-day, experience is teaching us from the war in Europe, would be obsolete to-morrow; and if we build a battleship, we surely would not float it in water. If we did, a submarine would come along and blow it out of water. So that if battleships are to be built, they ought to be built with the provision that they are to be used only on dry land, in order that we may preserve them. [Laughter and applause.] Experiences of the European nations in the dreadful war raging there clearly demonstrates how helpless these monsters of the seas are when attacked by the powerful submarines.

Talk about war! Throughout the history of this great country no foreign nation has ever attacked us. If we are to judge the future by the past, another century and more will roll by without any attack on us from any foreign nation in the world. In all the wars we have had we have made the attack, and no foreign nation thus far in the nearly 140 years of our history has ever made an attack upon the United States. We have in all our wars with foreign nations been the aggressor. They have been content to let us alone.

But gentlemen say that to preserve peace we must be prepared for war—prepared to provoke war. If we are prepared for war, we are more likely to provoke war; but if we are prepared for peace, we are more likely to preserve peace. Caution will be exercised, and through it peace will be preserved.

What is the condition of the leading nations of the earth to-day? We are the only great nation in all the world enjoying peace. Every other great nation has on its hands to-day all the war that it can handle, and most of them more than they can successfully handle. We would not expect war from Great Britain, because Great Britain to-day is engaged to her fullest capacity in war. We would not expect war from Germany, because Germany is surrounded with nations in war, fighting for her life, spending her treasure, killing off her men who are suitable for war. We would not expect war from Russia. We would not expect war from Japan. We would not expect war from any leading nation in the world. If we should have war with any of these nations, we would have to make the attack, because no leading nation is in a condition to attack us and carry on a war with us, and will not be for years to come.

And yet gentlemen who advocate a large Navy policy are proclaiming that that policy is to be inaugurated for the purpose of preserving peace instead of provoking war—a strange doctrine indeed. [Applause.] It is the policy of this Nation to maintain peace and avert war, a most humanitarian policy and one that meets the commendation of the people of the world, one that is winning us renown throughout the length and breadth of all civilized nations. It is giving us a commanding position among other nations and one that is winning for us the first place among nations as a world power. We are attempting to lead the world into the great field of industrialism, away from militarism, so that the standard of civilization will be advanced and the happiness of the people assured. [Applause.]

But, sir, this high ideal can not be accomplished, this great humanitarian work promoted, this better era for all mankind secured, by pursuing a policy of militarism, one that is calculated to earn respect through fear, or maintain our position by force. If we are to pursue that policy, the time will come when other nations will resent it and we will have to resort to force to maintain it. Then our situation will be as deplorable as that of the European nations to-day. They are suffering because of the militarism inaugurated years ago, and in the rivalry of the nations of Continental Europe in maintaining that policy they have brought on the pitiable situation in which they are found and from which they are unable to extricate themselves, save alone through the bloodiest war the world has ever witnessed. Their example should be an impressive lesson to us, and one that warns us we should steer clear of such a policy and avoid the consequences it is sure, if maintained, to bring upon us. [Applause.] Let us hope we will.

But, Mr. Chairman, ever since I became a Member of this great lawmaking body, in March, 1909, the building of battleships in the naval appropriation bill each year has provoked more animated controversy than any other subject discussed by Members of Congress. For some reason Members entertain decided views on this question which are altogether irreconcilable. It occurs to me the leaders in these discussions make greater preparation for the debate on this subject than any other, and more tenaciously defend their positions, both pro and con, than is done in any controversy held on the floor of the House.

Evidently the principles underlying this subject are of a nature about which men may widely differ and each have sound basis upon which to found his contention. The motives of both seem to emanate from the highest order of patriotism, and therefore challenge the respect and admiration of all.

For myself, I hope to take a practical consideration of this question, viewing it from a utilitarian standpoint, carefully relying on the conditions which in my judgment should have their influence in solving the question as to how I should vote on the pending measure. It is not alone a satisfactory reason, to my mind, that we should do this or that because some other rival nation is doing something. That would not be a good "hard-and-fast rule" to follow in things, and especially on this question. I have heard the argument made on this floor by the advocates of a big Navy that England was building three battleships; therefore we should build two; or that Germany was building four battleships, and therefore we should build three. Supposing that England is building three and Germany four; why should that make it necessary for us to build two each year? Must we do as England and Germany in a matter of this

kind? Are we the imitators simply of these great nations? Should there not be a better reason than this advanced for our action? Doubtless many people believe that these nations are now reaping, to their sorrow, their own folly in this regard. Perchance if these and other European nations had pursued the policy of keeping peace instead of preparing for war the deplorable situation in which they are found to-day would not exist. Who knows but what if they had been preparing for peace instead of war to-day they would be enjoying peace instead of being involved in the most disastrous war known in all the annals of time, a war which threatens the disruption of nations and a changing of the map of Europe.

For years it has been the settled policy of leading nations of Europe to prepare for war, and they are now reaping the inevitable result of the policy they have so constantly pursued. They can not complain that these policies have brought about the result for which they were calculated. They have boasted about their splendid navies, and they have the natural consequences of their rash preparations. Surely these great navies were not organized for peace, but for war; and war they have. We have been following their examples, and if we continue we are sure to experience the same result. Should not their unhappy condition, as the result of their Navy policy, be an object lesson to us, and we should for that reason follow it no longer. Look at the anomalous position—all these years preaching peace, eternal peace, and yet yearly increasing the preparations for war. What an inconsistent position; one that misleads nobody nor deceives anybody. The world knows what such a policy means. If we are in earnest about establishing universal peace, we should abandon the policy of increasing our preparations for war; if we do not, we will have war sooner than we expect.

If we believe in the doctrine of universal peace and that it can be established by intermediation, as proposed, we should practice what we preach and not the reverse of it. Can we hope to convert the world to our doctrine unless we show by our own action our own conversion? Is it contended by the advocates of this doctrine that we can by speech declare for peace and by our every action show that yearly we are making greater preparations for war convince the world we are for universal peace? Does anyone believe but that the nations of the world will draw their own inferences from the difference between what we are saying and what we are doing, and that they will place more reliance on what we are doing than on what we are saying? Is not being prepared for war more likely, on little provocation, to precipitate war than peace? People assume, and correctly so, that a person prepared for trouble is not only expecting trouble, but is sure to find it. What is true of individuals is true of nations in this respect.

We proceed yearly to increase, instead of curtail, our preparations for war; and when protest is made against this course the response is heralded back that England, Germany, and other countries are increasing their armaments and we must do likewise in order to keep up with the procession. This is not a sufficient reason. If some other country is blundering in this matter, wasting its treasure, pursuing an indefensible policy, they furnish no reason for us to do likewise. We are not required to do as they are doing. Armies and navies produce nothing; they consume only—destroy and waste. The eyes of the world are turned upon production, eliminating wasteful and destructive agencies in order that every available means of human endeavor may be employed in production, creating wealth and enriching the world. [Applause.]

Before the war now raging in Europe it was estimated that the world powers were burdened with the enormous debt of more than $35,000,000,000, practically all of which was incurred for wars and the results of war. The interest on it is paid by the people, the poor as well as the rich, the employee as well as the employer. In our country more than 70 per cent of annual expenditures are made for military purposes, past and present, and the sum grows annually. It constitutes an enormous burden on the people, against which they protest, but in vain. It has been freely stated prior to this year that the nations of the world are annually spending $2,000,000,000 on armaments to enable them to be able, if they desire, to annihilate each other; that more than 20,000,000 men have been taken from the fields of productive labor to man the armies and navies, which entails a loss of approximately $500,000,000 a year. Consider that if these were returned to productive employment what an impetus it would furnish the energies of the world and what a material contribution it would make to the progress of mechanical, industrial, and intellectual life throughout the world. It might well be said, then, that arts of peace are paramount to arts of war; that intellect dominates, and not brute force.

For years England has been spending four and a quarter times as much for militarism as for education; France, 4.3; Austria, 4.5; Italy, nine times as much; and Russia, twelve times as much. Every nation in the world except Switzerland is paying more for militarism than for education. Even our own country is doing so, much to the chagrin, be it said, of the American people, who are peace-loving and God-fearing people. In the last 10 years we have expended more than $1,500,000,000 on our Army and Navy—preaching peace and constantly and expensively preparing for war. This sum applied to education would have educated in our best colleges 2,000,000 young men and women and equipped them to meet the highest responsibilities of citizenship whereby they could have contributed to the advancement of civilization and elevated the standard of a truly national glory. The sum we have thus appropriated for militarism in the last decade exceeds the entire interest-bearing debt of the United States by approximately $500,000,000. This enormous sum has been turned from the field of production into nonproductive channels. Is it not time to change the course of the ship of state in this regard, abandon this policy for one more remunerative, better adapted to promote civilizing influences which will improve, promote, and glorify our age? [Applause.]

Our people have not been a war-serving or war-loving people. We deprecate war, and our people have devoted their energies and abilities to the development of our natural resources, our agricultural and manufacturing interests, accomplishing marvels in these great and useful fields of endeavor until they now outrival almost every other nation in the world. Our national wealth has grown so rapidly that now it aggregates the startling sum of more than $150,000,000,000, the greatest of any nation in the world. So that we have not felt or stopped to consider the enormous growth of our military expenditures. But now, as the growth is so rapid and the sum so large, we are beginning to feel it, and its burden is weighing heavily on the people who must bear it, and they are raising protest against it and appealing for relief.

Because of the deplorable war in Europe we are now pressed for financial relief in governmental expenditures; we deny any intention of engaging in war; we applaud every peaceful effort and frown upon every attempt to precipitate a resort to arms. Then why swell at this time the appropriation to build great dreadnaughts which, if our purposes are realized, will rot at the docks in our harbors? We know that if we appropriate the money to build the battleships provided for in this bill it will be four or five years before the work of their construction will be commenced; that the wars now raging in Europe and in Mexico will have been ended and passed into history long before their hulls will have moved from the dry docks at the place of their construction to the waters of the adjacent harbors, there to be fitted for use. What excuse can we render to our constituents for such inexcusable conduct? Will they not censure our course as indefensible?

If we do not expect war, why make this vast expenditure preparing for war? Why build these great ships to lie idle in our harbors? If we build them, why not dedicate them and those already built to commerce? Why not employ them in the transportation of our surplus products to the markets of the world, where they will bring remunerative prices, realizing attractive profits to our producers—convert them into money-makers for our people instead of burdens on the taxpayers? If half of our naval fleet to-day was employed in the transportation of our surplus products to the foreign markets it would relieve the congested condition here, inspire industry, and add vastly to the prosperity of the country. Convert them into argosies of commerce while peace with us abides and stimulate prosperity. Make them instruments of profit instead of expense. If peril should present itself, they could be easily withdrawn from the marts of commerce and returned to the purpose of national defense. If they were employed for this useful and beneficial purpose they would perform a greatly needed function and save our people the expenditure of many millions, and accelerate the wheels of prosperity. Expenditures of public money should only be made for public benefits and in such channels as will enable it to return profits to the people who are compelled to furnish the same as a toll levied to raise revenues. If adapted to any other purpose it fails to meet the requirements for which governments were organized, and sooner or later it will arouse the opposition of the people and bring the party responsible therefor into disrepute. [Applause.]

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Indiana [Mr. GRAY].

The CHAIRMAN. The gentleman from Indiana [Mr. GRAY] is recognized for five minutes.

Mr. GRAY. Mr. Speaker, I want to speak to this amendment for four battleships. The "General Board" we hear referred to is a body in the Navy Department unprovided for by law, but which has come into existence on the initiative of naval officers and the Secretary of the Navy. While I have only praise and commendation for the members of this board, yet, like all other great, good, loyal, and patriotic men, they are more or less actuated by pride, sentiment, and enthusiasm for the service to which they have devoted their lives.

These four battleships provided for in this amendment are in pursuance of a program made in 1903 by this General Board for a fleet of 48 ships. Since that year this special number of ships has been annually recommended as the proper number to constitute our fleet.

I have made some inquiry to ascertain upon what basis this special number of 48 ships has been recommended. It has been suggested that this special number has been fixed with reference to the fleets of foreign nations. Since this number was fixed the fleets of other nations and their building programs have varied from time to time, so that a fixed number at one time with reference to foreign fleets could not have been applicable to such fleets at other times. But this number of 48 ships for our fleet has remained unvarying from 1903 to the present. We are not building to equal England, as no such recommendation has ever been made by even the most enthusiastic naval advocate. This program of 48 ships could not have been made with reference to Germany, as the size of the German Navy has changed three times since this program was first recommended. From 1900 to 1906 the German law fixed the German fleet to be constituted of 34 ships. From 1906 to 1912 the German law fixed the number to constitute its fleet at 38 ships, and since 1912 the German law has fixed the number at 41 ships, which now constitutes the German fleet, or at least did constitute that fleet when the war began and before her great losses were incurred. This 48-ship program could not have been made with reference to the navies of nations other than England and Germany, for all have been and are smaller than our own.

An inquiry relative to this special number being required for advantageous distribution or effective operation has failed to disclose a reason for this special number of ships for either of such purposes. The following questions asked by myself and responses thereto by Admiral Fiske during the hearing before the Committee on Naval Affairs are with regard to this fixed number of ships and show the want of grounds for this special number to constitute our fleet and which inquiry appears at page 1048 of the hearings of this session, as follows:

Mr. GRAY. Admiral, I understand you are a member of the General Board, which has made certain recommendations to the Secretary from time to time.

Admiral FISKE. Yes, sir.

Mr. GRAY. Your board has made recommendations from time to time since 1903 for the number of ships to constitute our fleet?

Admiral FISKE. Yes, sir.

Mr. GRAY. Has that number been fixed arbitrarily or has it been made in pursuance of some plan or policy or system for the distribution of the ships and for effective operation?

Admiral FISKE. It has been made with the idea of effective operation. The question of distribution I do not think entered in. The idea would be that the ships would be distributed after they were, of course, in service.

Mr. GRAY. Had the number of ships been discussed a good deal in the board before it reached this number?

Admiral FISKE. I was not in the board then. I have been attached to the board now more or less for something over four years—not continuously, because I was at sea in command of a division—but I do not know previously what led them to that number.

Mr. GRAY. What plan of effective operation would be carried out by this number of 48 ships, if you know?

Admiral FISKE. That is rather hard to answer, because it would lead me to thinking of something I have never thought of before. I never thought of 48 ships, because we have not got them.

Mr. GRAY. I mean, that was the recommendation?

Admiral FISKE. Yes.

Mr. GRAY. That we were to have them or wanted them?

Admiral FISKE. Yes.

Mr. GRAY. I asked this question as I would like to know something about it. I have heard about this 48-ship policy. Do you know what was the policy of effective operations to be carried out?

Admiral FISKE. No; I do not.

Mr. GRAY. You say you never heard that discussed in the board?

Admiral FISKE. Yes, sir; I have heard it discussed, but as a thing which happened a long while before and as only sort of academic interest.

Mr. GRAY. Was there any demand for a smaller number of ships or for a larger number of ships, or were they all agreed on 48?

Admiral FISKE. I do not know. I was not in the board then. I do not know.

Mr. GRAY. Do you know of any reason why, for effective operations, the number should be 48?

Admiral FISKE. No. It might be 47 or 46 or 49 or 50. There is no magic in the number 48.

Mr. GRAY. But this recommendation from time to time has been 48?

Admiral FISKE. Yes.

Mr. GRAY. I observe here on page 816 of the Navy Yearbook that the policy of giving names to these ships is to name the ships after the States,

Admiral FISKE. Yes; I believe that coincidence in numbers is accidental, however.

Mr. GRAY. All the ships up to this time have been named for States?

Admiral FISKE. Yes.

Mr. GRAY. Is it the policy to continue the naming ships for the States?

Admiral FISKE. I do not know, sir.

Mr. GRAY. But you know that has been the policy?

Admiral FISKE. I know it has been the policy to name these battleships after States, but having 48 battleships and having 48 States was purely accidental.

Mr. GRAY. Purely accidental?

Admiral FISKE. So I am told.

The CHAIRMAN. We did not have 48 States when this plan was adopted.

Mr. GRAY. If they would go ahead and complete this program now and carry out the plan, giving the name of a State to every ship, we would just have 48 ships, would we not?

Admiral FISKE. Yes, sir.

Mr. GRAY. We would not have any more or less?

Admiral FISKE. That is, of battleships.

Mr. GRAY. That is the number that your board recommended we should have?

Admiral FISKE. Yes, sir.

Mr. GRAY. Do you think the pride in having a ship named for every State or sentiment had anything to do with the naming of these ships or as affecting the number of ships?

Admiral FISKE. No; I believe not.

Mr. GRAY. Is it not a most remarkable coincidence?

Admiral FISKE. Yes; it is.

Mr. GRAY. That the number which the board arbitrarily fixed upon and the number of States that we have and the policy we pursue of giving the name of every State to a ship would all coincide? Is not that a remarkable coincidence?

Admiral FISKE. Not so remarkable as you might think, sir, because a great many of our armored cruisers—in fact, all of them—were named after States.

Mr. FARR. And we did not have that many States at that time.

Mr. GRAY. But it is true the number coincides with the number of the States and the policy of naming each battleship for a State.

Admiral FISKE. Yes; but at the time that policy was formulated there were not 48 States.

Mr. GRAY. There were 48 States and Territories, and it was known at that time there would be 48 States.

Admiral FISKE. I do not know.

Mr. GRAY. Is it not a matter of geography and history?

Admiral FISKE. I really do not know, sir; I really do not know.

Mr. GRAY. And you know of no reason for any purpose, even for the distribution of the fleet or for effective operations, that would fix the number arbitrarily at 48?

Admiral FISKE. No; it might have been 47 or 50 or 49 or 46 or 51.

Mr. GRAY. But that has not been the recommendation of the board since 1903; on the other hand, it has been 48.

Admiral FISKE. Why they fixed on 48 I really do not know.

The annual cost to maintain the military of the world in time of peace is ascertained to be over $2,000,000,000, a sum of such vast magnitude as to preclude estimate, measurement, or comprehension by the human mind, and which would go far to feed the people of the world or to clothe the people of the world or to house the people of the world or to educate the people of the world if made available and used for such purposes. Out of every dollar collected into the National Treasury as taxes from the people 63 cents has been found to be required on account of war and the military of the United States in time of peace, leaving 37 cents with which to pay the cost of government and promote the institution of civil life.

The cost to maintain the military of the United States has multiplied and increased in a growing ratio with every succeeding year. The appropriations to maintain the Navy alone have increased from $65,140,916.97 in 1900 to $144,868,716.61 in 1914, and for the increase of the Navy from $17,140,699 to $41,091,734 for the same period of time. This year the amount recommended by the General Board, composed of high naval officers, for the increase of the Navy is $128,224,972, or over $87,000,000 more than was appropriated for the increase of the Navy last year.

I here give a statement of the totals of the appropriations carried by the naval acts from 1900 to 1914, showing separately the amounts for increase of the Navy:

Years.	Appropriation.	Amount for increase Navy.
1900	$65,140,916.67	$17,140,699.00
1901	78,101,791.00	25,400,000.00
1902	78,856,363.13	22,703,010.00
1903	81,876,791.43	25,925,632.00
1904	97,505,140.94	32,176,860.00
1905	100,336,679.94	42,255,833.00
1906	102,091,670.27	35,475,829.00
1907	98,958,507.50	23,713,915.00
1908	122,663,885.47	30,307,962.00
1909	136,935,199.05	38,819,595.00
1910	131,350,854.38	33,770,346.00
1911	126,478,338.24	26,005,547.67
1912	123,225,007.76	20,569,373.48
1913	140,800,643.52	35,325,695.00
1914	144,868,716.61	41,091,734.00

I also give the estimate of the General Board, composed of naval officers, as their recommendation for the increase of the Navy for the coming year.

Estimates of cost—General Board's 1916 program.

Vessels.	Increase of the Navy, construction and machinery.	Increase of the Navy, torpedo boats.	Increase of the Navy, armor and armament.	Total.
Four battleships	$31,200,000		$28,532,455	$59,732,455
Sixteen destroyers	14,800,000		5,180,385	19,980,385
Three fleet submarines		$10,740,000	2,187,500	12,927,500
Sixteen coast submarines				
Four scouts	16,000,000		4,499,928	20,499,928
Four gunboats	3,000,000		350,775	3,350,775
Two oil-fuel ships	2,280,000		180,514	2,460,514
One destroyer tender	1,400,000		330,500	1,730,500
One submarine tender	1,140,000		179,150	1,319,150
One Navy transport	1,900,000		229,700	2,129,700
One hospital ship	2,500,000			2,500,000
One supply ship	1,475,000		119,065	1,594,065
Total	75,695,000	10,740,000	41,789,972	128,224,972

These ever increasing and multiplying appropriations evince a policy to build up a world-power Navy and commit this Nation to maintaining such a policy. I am opposed to a world-power navy policy for this Nation. I am opposed to the control of the seas policy for this Nation. I am opposed to a rival naval policy for this Nation. I am opposed to any naval policy for this Nation calling for war and such vast expenditures of money to maintain. Such a policy is not only unavailing for defense and protection, but is fraught with all the dangers of strife, antagonism, and conflict, and a jeopardy to our very national existence. The European war is being waged over a world-power military policy. England is striving to maintain a world-power policy, Germany is striving to gain world power, and the thousands of seamen entombed in the hulls of sunken vessels at the bottom of the sea and the thousands of soldiers whose dead bodies are strewn over the battle fields of France and Belgium all proclaim the criminal folly of a world-power military policy.

The true military policy for this Nation should be defense, adequate defense of our shores, while striving for peace and the settlement of international disputes by courts and tribunals, instead of by cruel devastating warfare. Defense is not only the one policy of war justifiable before men and the civilization of the world to-day, but it is the strongest, the most invincible, impregnable, and advantageous position which a nation can take in warfare, and one which compels the aggressor to assume all the burdens of conflict.

Under the policy of defense and military operations at home small nations have prevailed over the great and the weak against the strong and powerful. Under this policy the Colonies wrung independence from England and the South American Republics declared and maintained their sovereign power against the stronger mother country.

Naval and military men not only recognize this principle and the advantage of military operations at home and the burdens which must be assumed in aggression, but agree that no European power could withdraw from their shores to make available against us more than 50 per cent of their fighting force. With this one-half of their navy available to oppose us, a foreign power must meet and operate against—

All our coast defenses;

All our mines planted at the entrance of harbors;

All our submarines operating out from our coasts and seaboard fleets;

All our air crafts sailing out from our shores and dropping explosives on attacking fleets;

And lastly our Army on land to intercept any hostile force which might overcome all these and attempt to land upon our shores.

With England, the strongest naval power of the world, and with one-half of her navy equaling ours and operating against us and with all the burdens of aggression to assume and all the advantages available to us of defense, we would be impregnable in defending our shores even as against that nation, and more than impregnable against all other nations so long as we adhere to a policy of defense.

Defense not only carries with it great strategic advantages and burdens to aggression, but it calls to arms soldiers with courage, valor, and determination, which invasion can not inspire in men.

We should build and maintain a Navy only for the defense of our shores, and we should prove to the world that such is our policy not only by our claim but by our works, acts, and deeds and all our preparation and accomplishments for war, and thereby, while maintaining full security and adequate protection, hold ourselves acceptable and unprejudiced before the nations of the earth as mediators for the settlement of international disputes and ready and in position to lead the way to peace and final disarmament.

Mr. PADGETT. I yield five minutes to the gentleman from Kentucky [Mr. BARKLEY].

Mr. BARKLEY. Mr. Chairman, I was very much interested in the remarks of the gentleman from Alabama [Mr. HOBSON] this morning. It has been known to this House, of course, for many years that the gentleman from Alabama is an advocate of a very large Navy, but I think this morning is the first occasion when he has been bold enough to go to the extent of advocating a Navy that would equal the combined navies of Germany, Japan, and Great Britain.

Mr. Chairman, during the last 14 years the expenditures of the United States for naval purposes have increased 230 per cent. Those of England have increased 180 per cent, those of Japan 330 per cent, and those of Germany 300 per cent. From 1901 to 1914 the expenditures of the United States for naval purposes have increased from $61,000,000 to $141,000,000 per annum. Those of Great Britain have increased from $141,000,000 per annum to $260,000,000 per annum, those of Japan from about $39,000,000 per annum to $61,000,000 per annum. In other words, according to the percentage of increase in United States naval expenditures in the last 14 years, if that same policy is continued for the next 14 years, the annual appropriation bill for naval purposes will amount to the enormous sum of $324,000,000.

During the last year Great Britain, Japan, and Germany expended the total sum of $442,000,000 upon their naval policy. I would like to ask the gentleman from Alabama if he believes that if the policy of naval expansion to the extent of an American Navy in the Pacific equal to Great Britain and Japan, and in the Atlantic equal to Germany were carried out, the people of the United States would submit even for a single year to the enormous expenditure of $442,000,000 for the purpose of building up an American Navy? And if the gentleman believes they would submit to such an expenditure, and if the same proportion of increase were to be carried out in the next 14 years, as has been carried out by the nations of the world in the last 14 years, the total expenditure by England, Germany, and Japan each year would amount to the enormous sum of $1,193,000,000 per annum. I ask the gentleman from Alabama [Mr. HOBSON], and I ask the Members of this House, and I ask the United States as a Nation, whether or not we are ready to embark upon a saturnalia of naval expenditures that would amount to more each year than our total Government expenditures at the present time?

Mr. HOBSON. My estimate was on a two-power basis, Great Britain and Japan, not three; and if we managed ourselves economically we would have very little more pro rata than they would.

Mr. BARKLEY. Last year Germany spent only $113,000,000 for her navy, whereas we spent $141,000,000 upon our Navy.

Mr. HOBSON. I am not advocating a three-power navy.

Mr. BARKLEY. Mr. Chairman, I am in sympathy with the motion made by the gentleman from Alabama [Mr. UNDERWOOD]. Every business corporation and individual in the United States who has any business capacity is undertaking in every way to pare down expenses during the stringency that is existing while this European war is going on. Everybody knows that by reason of this great cataclysm that has befallen the human race, in which more than half the area and more than half the population of the world is now at war, and the business avenues and connections of the world are disarranged, every man and every corporation and every industry is undertaking to harmonize its conduct with the necessary expenditures and economies brought about by this war. If it be necessary for individuals to economize, if it be necessary for corporations of every description to economize, surely in this hour of turmoil and distress, when the nations of the earth are compelled to spend millions and billions of dollars for defense, we can afford to cut down our expenditures for naval, military, and every other purpose within the purview of appropriations. [Applause.]

Mr. MANN. Mr. Chairman, I yield to the gentleman from Massachusetts [Mr. GARDNER].

Mr. GARDNER. Mr. Chairman, I rise to correct a mistake that I made in a colloquy with the gentleman from New York [Mr. FITZGERALD]. The General Board of the Navy did not recommend one battle cruiser last year, but they recommended four battleships.

Mr. MANN. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. CALDER].

Mr. CALDER. Mr. Chairman, I shall vote for two battleships and the balance of the building program recommended by the

Committee on Naval Affairs. I listened with much interest to the remarks of the gentleman from Kentucky [Mr. BARKLEY], who just preceded me. He made a good argument. He called the attention of the committee to the condition of our Treasury and the fact that the expenditures of the Naval Establishment has been increased each year until it seems as if we would soon reach the point where we could no longer stand the strain; but I say to him that when he has a house or other piece of property he insures it against loss or damage by fire, by hurricane, or flood——

Mr. BARKLEY. Will the gentleman yield?

Mr. CALDER. No; I can not; I have only 5 minutes. The man insures his property, and the Naval Committee, acting on the advice of the Navy Department, come to us with a fair, conservative naval program, which seems to me must appeal to the common sense of this House and the best judgment of the American people. It is a reasonable insurance for the country, and I am confident will meet the expectations of the people.

I wish it were possible for us this year to authorize four battleships and an accompanying program that should go with them, but we know that this is impossible on account of the condition of the Treasury, and we must be satisfied with the estimates submitted by the committee.

I was thinking the other day of this question of preparedness for war, and it reminded me of the police force in the great cities of the country. We do not give the police officer a big stick and a revolver and clothe him with authority for the purpose of going around the country killing and maiming innocent people. We give him the authority and implements of offense and defense, because we need this protection for the lives and property of the people within the country.

So we build a Navy and have a reasonable sized Army to protect the country from invasion from without, and to protect us against an uprising that may occur within our borders.

Much has been said about the cost of the Navy, and I believe that Congress ought to give its very careful attention to this question. Our naval bill this year is approximately $140,000,000, which is an annual increase of $40,000,000 since I have been a Member of this House. I believe it possible to adopt a policy in the conduct of the Navy Department that would materially reduce the charge on the Treasury. We have been fortunate in the men who have served at the head of the Navy Department, and I believe that if we should give the Secretary authority to conduct the department on purely business principles he could save the country at least $10,000,000 a year in the management of the department.

If we are to maintain our position as the great power of the Western Hemisphere, if we propose to insist in the future on a strict observance of the Monroe doctrine, we must have a Navy that can enforce our position if necessary.

Mr. MANN. Mr. Chairman, I yield to the gentleman from Minnesota [Mr. MILLER].

Mr. MILLER. Mr. Chairman, while I do not agree with the gentleman from Alabama [Mr. HOBSON] in the reasons that to him are conclusive why we should have a large Navy, nor do I agree with him as to the magnitude of the Navy that we should have, I do agree with him, and with others, that we should make some very considerable additions to the Navy that we now have.

I have listened to-day, as I have on other occasions in years past, to heated arguments by naval strategists from the interior—about the same region that I come from, so I am qualified to speak respecting them—and I notice with not a little interest that the fighting campaign against Navy increase comes from that section of the country where it is improbable a cannon ball will be able to reach if fired from the sea. [Laughter.]

This is too big a country to find sectionalism in the discussion of this question. National defense, like national honor, is a national question, that knows no sectionalism. There are no interests of one section that run contrary to the interests of other sections, for national defense is but a phase of national integrity, and in it all citizens have an equal interest.

In the time at my disposal I desire to give some of the reasons why I believe our country needs a strong Navy.

Democratic governments such as ours are little prone to foreign conflicts and even less prone to foreign conquests. Our people are essentially peace loving. We covet no man's land, no nation's empire. We do, however, place great value upon our political principles and hold as sacred our free institutions. The perpetuity of these institutions is near our hearts, and should be, since without these institutions our boasted country could not long endure.

These institutions must be ever builded upon strong, virile men. Where there is no manhood there can be no free institutions. I am astounded at the language many gentlemen indulge in these days when speaking of our Military Establishment. From their talk we would be persuaded that the only consideration our country ever should have is to avoid armed conflict. They forget that the possession of these sacred, free institutions was secured through war, and that to preserve them it may be necessary again to fight. A race of withering cowards, without patriotism, without virility enough to shape their destiny aright, even in the midst of foes and hostile elements, would not be worth preserving, and yet that is the race we are to become if these gentlemen's views prevail. I am ashamed of a spirit so weak, so contemptible, and so hopeless. It is unworthy the heritage we have received from our fathers.

I deprecate war; I hope we will never experience another; but if I must choose between war and the destruction of our free institutions, if I must choose between war and the dignity and the future well-being of my country, then give me war.

Many of these gentlemen would be the quickest of all to resent a personal insult. Would they, in fact, meekly endure insult after insult upon their country? Do they not think it now the part of wise men to prepare their country against insult, rather than to risk their all avenging an insult that otherwise will be sure to come.

We all prefer peace; we are all ready to work to preserve peace; but how idle to shut our eyes against the actual conditions in the world. There are some peoples in the world, united into strong and powerful nations, whose mission is not peace, but whose national ambition is national expansion and foreign conquest. The good people of our communities abhor thieving, arson, and murder. Do they cry piteously, "We are for righteousness," and pray that crime shall be no more? No; they hire policemen and peace officers—equip them, arm them—in order that safety of life and property may be enforced. In the community of nations there are to-day warring, ambitious, conquering peoples, and if our integrity is to be preserved, if our free institutions are to be protected, if the welfare of our people is to be insured, we must have the armed strength to hold back the foe.

If gentlemen are to be believed, we should shrink within our shell, withdraw from the world's affairs, quiver, perhaps, as we are kicked, but ever, ever decline to raise an arm for our own protection. Let me assure the gentlemen that it would never be possible to cringe into a shape small enough to escape the attack of a foreign foe when once we had established our reputation as a Nation incapable of defending itself. I speak for a robust Nation, a vigorous, virile people, a power to preserve peace in the world, and capable of protecting its integrity against all comers.

We often hear it said that armed preparation is conducive to conflict. The eminent leader of the majority, Mr. UNDERWOOD, expressed this opinion a few moments ago. I agree that armament may be carried to such an extent as to bring this result, but it never will be brought to that point nor anywhere near that point in America. But the statement is never true of a navy. A navy is essentially an instrumentality of defense. In America it is the only defense we have. Our coast line, our enormous coast line, opens our country wide to the world. We can not possibly build forts that will protect us along our great boundary. Under present conditions the only value of a fort is to make certain that a foe will land at some other point. It is the mission of a navy to make certain that a foe does not land at any point.

Our country will never have a large standing Army. To maintain such an Army is contrary to the genius of our institutions. We must fall back quite exclusively for protection upon the Navy of our country. This, Mr. Chairman, is why I am for a strong Navy.

The American Navy has written the most brilliant pages in American history. Our geographical position makes it essential that our exploits on the sea shall be commensurate with the greatness of a great people.

Those who believe America has a high destiny in the affairs of the world have an added reason for strengthening our Navy. The sea has always been the direct highway, the direct and royal highway, to national greatness. Nations have always honored their sons who have gone down into the sea in ships, and in turn those sons have woven the fabric of their nation's greatness. No country has ever become a leader in the affairs of man unless that country had prestige upon the sea. A purely inland nation has never yet become a world power, and in all ages a nation's greatness has been proportioned to her influence upon the sea. Our Nation's commerce must cover the

earth, and there must be an American Navy reasonably adequate to protect it.

Navy experts are far from agreed as to the value of different types of ships of war. I do not profess to be a navy expert, but it seems to me that all history teaches one thing and all the naval history of the past six months teaches it with special emphasis. The lesson taught by history is that speed is one of the vitally essential things in a fighting ship. This bill provides for two battleships, and the gentleman from Alabama [Mr. HOBSON] moves to increase the two to four. The gentleman from Alabama [Mr. UNDERWOOD] moves to reduce them to one. It is all on the question of battleships. There is no provision in the bill, none suggested, for ships of the battle-cruiser type. I strongly believe our Navy needs a unit of battle cruisers more than it needs an addition of any other fighting craft.

Mr. Chairman, that which made the name of Sir Francis Drake renowned in history, that which made the name of his fellow countryman, Sir Humphrey Gilbert, heroic in the growth of England's power, is that the boats they moved and fought were speedier and faster and quicker than the heavy galleons of Spain. The great Spanish fighting Goliath was no match for the little English David, fleet of foot. Contests on the sea from the day of the first galley's shock down to the present hour have almost always gone to the swiftest boat. And to-day, when the titanic forces man's genius has put into fighting ships have met in struggles on the sea, the two determining factors have been speed and heavy guns. An English fleet in the south Pacific disappeared from the surface of the sea because it met swifter boats with heavier guns. The victors here were with ease destroyed a few weeks later near the Falkland Islands, when they met a fleet still swifter and with still larger guns. The deeds of the swift *Emden* will be remembered as long as sea fights are remembered. The escape of the mighty and swift *Goeben* from Messina still thrills the world. The English victories in the North Sea were both victories of superior speed and larger guns. The boat that sweeps the sea with speed and big guns is the battle cruiser, and we have not one in our Navy.

Naval history is now being made by battle cruisers. When we place beside these boats of 30 knots' speed or greater our clumsy, slow-moving battleships of 17 and 19 knots, armed with guns considerably smaller and with much less range, we must swallow a big lump of American pride. It does not take an expert to know that our fleet needs some boats of the big-gun, battle-cruiser class. Our early naval history is resplendent with the deeds of heroes who swept the sea in swift ships. To-day we find we have the prize turtle navy of the world. While our fleet is moving with ponderous slowness a foreign fleet of swift ships armed with big guns could keep out of our reach and pepper us to pieces. Have our Navy experts become so grooved by the rut of routine that they have permitted other nations to profit by the experiences of humankind while they alone move blindly and stupidly along?

I am for the building of some battle cruisers. I believe our naval officers at heart are for some battle cruisers if only they had the courage to speak out that which they really think. I know and they know and all the world knows that in the recent war the fast battle cruisers have remained afloat and to rule, while the slow ships have gone down to the bottom of the sea.

Prior to the commencement of this great war some of the experts of our Navy refused to enthuse over the battle-cruiser type. We all recall when the great battle cruiser *Moltke*, practically the first of her class, participated in the naval pageant at New York, these experts shook their heads because her armor was too thin. Speed and big guns made no impression. I wonder what these same men think now, after six months of naval warfare.

But recently some of our Navy experts have been willing to admit that the battle cruiser is a powerful ship; but I have heard them say, as doubtless you have, that a navy must consist of units; and a unit consists of four boats, which must be of such similarity in speed and certain other features as to enable them to be maneuvered together. Very well; let us build two each year, and within two years we will have a unit. No nation has built all her battle cruisers at one time; no nation has built four at one time. They are usually produced in pairs, just as we produce battleships. Japan had two of these built in Great Britain, and then she proceeded to build two herself.

In days of ocean greyhounds we are building turtles. We have forgotten the teachings of all naval history. We have even forgotten the teachings of our own. I do not urge battle cruisers to the exclusion of battleships—not for a moment—but we have a considerable fleet of battleships, with no fast battle cruisers; and our Navy, if it is to be a match for any other modern navy, must possess a complement of battle cruisers. If it does not, if we are to drag way behind the procession in naval progress, some day America will pay an awful price for this stubborn adherence to a primitive type.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. MANN. Mr. Chairman, I yield five minutes to the gentleman from Wyoming [Mr. MONDELL].

Mr. MONDELL. Mr. Chairman, though I am from the interior, I am not one of those naval strategists to whom the gentleman from Minnesota [Mr. MILLER] referred. Curiously enough in the splendid Commonwealth which I represent, fifteen hundred miles from the nearest tidewater and a mile or a mile and a half above the sea, there is a strong sentiment in favor of a goodly navy. I think I never cast a vote in this House for battleships where my constituents would not have upheld me had my vote been for a larger number than I voted for. I have been one of those who for a number of years past have been in favor of a two-battleship building program, and now, when in the midst of war's alarm, with a good deal of warm talk at home, the Committee on Naval Affairs keeps its program down to two, and I am inclined to follow the committee, although with the battleship already provided for that would make three this year. The more I have thought of the matter, however, and the more I have read of what is going on over yonder in Europe the more doubt I have had as to the wisdom of building great battleships at this time. Certainly what has occurred in the theater of war about the North Sea has not tended to increase our faith in these mighty leviathans of the deep. We have seen the little deadly wasps of the sea keeping the great battleships under cover of land fortifications, or cowering in midsea fearful to attack, seeking self-protection. In this condition of affairs it seems to me of doubtful wisdom for us to go on building these great ships, which may within a very brief period of time be found to be very largely obsolete or out of date for the battles of the future. It is true that the great naval engagement which is likely to mark the close of the present war may demonstrate the efficiency of the present superdreadnaught; but that is not likely, and in any event the close of this war must find Europe exhausted and in no condition to attack us or threaten us in any way. Then there is another consideration. Whatever caused this war, whether too much militarism or too little in some places, whether it was the lust of power or the desire to use the well-prepared mailed fist, the great nations of Europe are in the most lamentable struggle of all times. Their citizens are being killed by the thousands, their homes laid waste, their property destroyed. In a short time, through sheer exhaustion, this must end, and then inevitably there must be some arrangement for the reduction of armament, and when that time comes this great Nation, the greatest power for peace on earth, would be in an embarrassing position if it had on hand a great program of naval expenditure. In consideration of all these things I shall vote for one battleship. [Applause.]

Mr. MANN. Mr. Chairman, I yield five minutes to the gentleman from California [Mr. STEPHENS].

Mr. STEPHENS of California. Mr. Chairman, I had not intended to offer an amendment, as I later propose to offer, until after the amendment of the gentleman from Alabama [Mr. HOBSON] has been voted upon. My amendment is to further increase our naval program by building battle cruisers, and I want to call the attention of the House and the country to the fact that the American Nation has not one battle cruiser, that Great Britain has nine battle cruisers, with a speed of from 2[illegible] knots to 35.7 knots; that Germany has four battle cruisers with a speed up to 29 knots.

Mr. HOBSON. Mr. Chairman, will the gentleman yield?

Mr. STEPHENS of California. Yes.

Mr. HOBSON. And there are also four additional building in Germany, making eight.

Mr. STEPHENS of California. Yes; there are in addition to those named four under construction by the German Navy. Japan has two battle cruisers, with two under construction. Italy has four battle cruisers. The United States has none. The fastest battleship in the United States has a speed of a little over 21 knots. In the British Navy the fastest battleship has a speed of 25 knots, and in the German 23 knots. The fastest armored cruiser we have is one of 23 knots, and the fastest armored cruiser that Great Britain has has a speed of a little less than 25 knots.

Mr. Chairman, we need ships with speed, and we need submarines. These two classes of fighting and defense craft have the attention of the whole world to-day, because of the remarkable work done by them in recent naval encounters. Mr. Chair-

man, the United States Navy has not a single battle cruiser, while other nations are provided as follows:

Battle cruisers.

Nations.	Built.	Building.	Speed.
			Knots.
Great Britain	9	1	26 to 35
Germany	4	4	27 to 29
Japan	2	2	27 to 28
Russia		4	25
United States	None.	None.	

Mr. Chairman, the fact that our fastest battleship has a speed of only 21.22 knots, against battleships in British Navy of 25 knots and battleships in German Navy of 23 knots emphasizes our positive need of speedy battle cruisers. I hope my amendment, when offered, will carry.

I yield back the remainder of my time.

The CHAIRMAN. The gentleman yields back two minutes.

Mr. PADGETT. Mr. Chairman, I yield to the gentleman from Mississippi [Mr. WITHERSPOON] 10 minutes. [Applause.]

Mr. WITHERSPOON. Mr. Chairman, I just wanted to finish the presentation to the committee of the testimony of Admiral Fiske. As I have already shown you, according to his judgment, our Navy at present is so much superior to the German Navy, and consequently all other navies except England's, that a naval engagement would, in all probability, result in our destroying the entire German Navy without the loss, scarcely, of any of ours. That is what his statements lead to. Now, he went on and then told what was the matter with our Navy. He pointed out the defect about it, and the defect was not that we have not got enough ships, not that we have not sufficient number of dreadnaughts, not that they are not more powerful than any ships in the world, but he said that there are two defects in our Navy. One is that we do not give our personnel a sufficient amount of target practice. His idea is that a slight advantage in the skill of shooting will turn the scale, and that therefore it is all important that we should give our men the highest training that target practice can give them. That is one of the two defects that he pointed out. The other one was that it is not only necessary to give the training to the officers and the men upon each ship, but that it is just as essential that the four ships that make a squadron should be trained to maneuver and to engage in battle exercises and be trained to operate in battle as a unit, and that all the units, all the squadrons in a navy, should be trained and developed to operate not only as an entire battleship fleet, but in connection with all the destroyers and submarines, so as to make one great fighting machine. [Applause.] He says that that is what we have neglected, and it is the truth. It is just like I have told you all the time in my speeches, and you never did believe me; that is, that we have neglected what is vital and important in our Navy because those things do not require any appropriation of money [applause], and everything that requires us to squander the public funds we have never neglected. [Applause.] There is just the trouble about it.

Now, applying that, he says we have 21 of our 33 battleships in good shape, and he says there are 12 of them that have been put out of commission and in ordinary and in reserve; that more than one-third of all our battleships are fixed so that they can not be used in war. He says that it will take five years, if war should break out, even to get those 12 ships in a shape where we could use them. He said we have not got the officers, we have not got the men, and even after we should get them, though we could get them in two years, that after we have the full quota of men and officers to make these 12 battleships useful, it would then take us three years to put them in fighting shape. Now, instead of trying to remedy the defect, we have been doing everything we could, and we are going to repeat it to-day, to make the thing worse. The naval officers tell us that if you authorize two more battleships to-day the only possibility of using them will be to take the officers and men off of two other ships and put them on those two new ones, and then instead of having 12 useless battleships you will have 14, and the more battleships you authorize, the worse you make the condition. At the same time that the battleships are increasing the shortage of officers we have been permitting this plucking board to eliminate 15 more every year. That is the kind of folly we have been indulging in. Now, my friend from Minnesota [Mr. MILLER] gives his view about the thing, and I believe every man in the House has his views. I have my own, but I have always learned this, that when I am sick and I do not know what is the matter with me or how to doctor myself, I go and get a doctor who does know. When a man has a lawsuit and he can not attend to it himself, he goes to a lawyer who does know how to attend to it, and that is the way we do in life in all of its departments. Now, here is the proposition where we are all ignorant, because we have not studied it enough, and I appeal to you to accept the testimony of the only men who do know about it and to act upon the facts that they give you. Nothing else is common sense.

Now, after Admiral Fiske had given that testimony which shows that, according to his judgment, our Navy is absolutely superior to the German Navy on the facts stafed, that the probability of a battle was that it would result in our destroying all of their ships without losing anything, then he was given two opportunities to say something in favor of more battleships, and I want to call the attention of the committee to the fact that the gentleman from Tennessee, the chairman, evidently was disappointed when Admiral Fiske completed his views, and he asked him this question:

The CHAIRMAN. The time of the gentleman has expired.

Mr. WITHERSPOON. Will the gentleman from Illinois yield me a few minutes?

Mr. MANN. I will yield the gentleman three minutes.

Mr. WITHERSPOON. Here is what took place:

The CHAIRMAN. Admiral, in connection with the question that was asked you about the training of men and practice and everything, would you be understood as eliminating the construction of more ships, and devoting all energy to the training of the men and target practice?

Admiral FISKE. No, sir. I am afraid that would be a swing of the pendulum too much the other way. I think we have got to look forward to a good many years of competition, and I think the more we can keep our minds on the idea that it is competition the better off we will be. It is not what we do so much as what the other fellows do. It is wonderfully like a baseball team. It is not what your people do; it is what the team does against which you have to play.

Look at the other fellow, he says; that was his answer to the gentleman from Tennessee. Well, let us look at the other fellow. Who is the other fellow? If Germany is the other fellow, what has she been doing? She has not been increasing her navy, she has actually lost 45 ships and, according to all the probabilities in the future, in the next six months she will lose a great many more than she has up to this time. The same way with England, the same way with France and Russia and all others. The probabilities are that they are going to lose a great many more than they have already lost. Now, if you look at the other fellow, then what is the conclusion? Certainly that we need no more battleships. But that was not satisfactory. So the gentleman from Pennsylvania [Mr. FARR] made an effort to get Admiral Fiske to change this testimony, and here is what he said:

Mr. FARR. What do we lack?

Admiral FISKE. The fundamental thing is a general staff, which shall arrange the plans. That is fundamental.

He did not tell him we lacked any battleships or dreadnaughts or any other kind of ships; he did not answer him as he wanted him to answer. That was not satisfactory to Mr. FARR, and so he said:

What in the way of ships, etc.?

He presses it on him to know if we do not need more ships. Admiral Fiske says:

We have not enough personnel to man all the ships.

That is the testimony of the experts. I will tell you gentlemen of this committee if the Members could take the 1,300 printed pages of testimony and see what the naval officers, the only men who know about it, say, they would not vote for any battleships. No battleship would be put through this House in this bill if there were not profits in it. It is the money power behind it which is the foundation of it. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. MANN. Mr. Chairman, I yield to the gentleman from Massachusetts [Mr. GARDNER], if I may.

Mr. GARDNER. I want to read from Admiral Fiske's evidence:

Admiral FISKE. The policy of the General Board is to cut down what we really think we ought to have, because if we told Congress what we really think we ought to have they would say we are crazy.

Admiral Fiske has asked for four battleships.

Mr. PADGETT. Mr. Chairman, I yield five minutes to the gentleman from Missouri [Mr. HENSLEY].

Mr. HENSLEY. Mr. Chairman, since I have been a member of the Naval Affairs Committee I have to the best of my ability given careful study to the questions that came before the committee. I have discovered this, Mr. Chairman, that upon any proposition where individuals or institutions were interested, where there was something to be gotten out of the project that was proposed to our committee, when a stand has been taken against those projects, invariably the protests made by those directly interested have been exceedingly vicious and ugly. For the position that I have taken upon the naval questions

invariably the press of this country, the press in the sections of the country where the increases in the main go, has been indignant and has said the ugliest things possible about the members of the Naval Affairs Committee who have not supported their views in respect to these increases.

Only a few moments ago the gentleman from Washington [Mr. HUMPHREY] was making an argument, and he insisted that for many years there had been only one battleship in the Pacific Ocean; that the Pacific coast had not been properly defended; that we should have, with the Navy that is in existence and under the control of the Naval Establishment of this country, more battleships in the Pacific Ocean. In that, I say, the gentleman may be right, for they may be needed as badly out there as anywhere, but when I got to my feet and put the question to the gentleman from Washington whether, in the face of that condition, with only one battleship in the Pacific, they had not gotten along first rate and were not doing very well, without anybody suffering, the gentleman from Washington got very indignant and replied to me in a way, as I see it and understand it, that was ungentlemanly, ugly, and insolent.

As soon as I put the question to the gentleman and he answered me in the fashion in which he did, I recalled that the gentleman had been before the Naval Affairs Committee both last year and this year. I did not suppose that because of the opposition of some of the members of that committee to projects that he was insisting upon that the gentleman from Washington entertained any ill feeling for the members of the committee who did not agree with him. Last year when before the Naval Affairs Committee the gentleman from Washington made a very vigorous appeal, a very eloquent plea, for increases in the Naval Establishment, so as to afford them protection along the Pacific coast. But, my friends, at the conclusion of his statement he was as insistent, he was as eloquent, when he came to the proposition of building a dry dock out in his district as he was in any other portion of his statement before the Naval Affairs Committee. And not only that, but only a few days ago the gentleman from Washington appeared before the Naval Affairs Committee, and on that occasion he was appealing for national defense, but at the same time asking for $20,000——

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. HENSLEY. May I have one minute?

Mr. PADGETT. I yield one minute more to the gentleman.

Mr. HENSLEY. Appealing for an appropriation for a building slip, to cost $20,000, in his district. So I say now, my friends, that this is the attitude of these gentlemen who are appealing for increases, who are insisting upon more battleships, and all of those propositions. They are asking for those things that inure to the benefit of the people of their communities. And so I pass over the ugly, the insulting, the insolent remarks made by the gentleman from Washington, knowing full well that the membership of this House know him to be one of the most insulting and partisan Members of the House. [Applause on the Democratic side.]

Mr. PADGETT. Mr. Chairman, I yield three minutes to the gentleman from New York [Mr. LEVY].

Mr. LEVY. Mr. Chairman, in explanation of my vote I desire to say that I am, and always have been, in favor of a large Navy, but under existing circumstances it is my intention to vote for two battleships for the simple reason that should favorable action be taken by this House on the four-battleship proposition it is likely to be misconstrued on the theory that we are in danger of war. I, however, am of an entirely different opinion. My views coincide with those of the distinguished chairman of the Military Affairs Committee [Mr. HAY], who, when the Army appropriation bill was under consideration recently by this body, made the following statement:

> That we are further off from war than at any time in our history.

For that reason, Mr. Chairman, I hope the committee will indorse the two-battleship program, as proposed by the Naval Affairs Committee. [Applause.]

Mr. Chairman, I yield back the balance of my time.

Mr. PADGETT. How much time did the gentleman use?

The CHAIRMAN. The gentleman used two minutes.

Mr. MANN. Mr. Chairman, how does the time stand?

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] has 9 minutes remaining, and the gentleman from Tennessee 13 minutes.

Mr. PADGETT. I will ask the gentleman to use his time.

Mr. MANN. Is the gentleman going to close in one speech?

Mr. PADGETT. Yes.

Mr. MANN. I yield five minutes to the gentleman from Massachusetts [Mr. ROBERTS].

Mr. ROBERTS of Massachusetts. Mr. Chairman, about two hours ago I heard from the lips of the Democratic leader the statement that this country for the fiscal year 1916 would be facing a deficit of forty or fifty millions of dollars, if I remember the figures correctly.

Mr. UNDERWOOD. The gentleman evidently did not hear me correctly.

Mr. ROBERTS of Massachusetts. I read his statement, however.

Mr. UNDERWOOD. I said that there was a probable deficit of $20,000,000 in all expenditures, which, of course, the gentleman understands does not include the Post Office Department.

Mr. ROBERTS of Massachusetts. Let me ask the gentleman on what theory or hypothesis there is to be a deficiency of $20,000,000 in ordinary expenditures?

Mr. UNDERWOOD. Because the estimated expenditures under these appropriation bills will exceed the estimated receipts to that extent.

Mr. ROBERTS of Massachusetts. What affects the receipts for 1916?

Mr. UNDERWOOD. Well, I will say to the gentleman that the estimated receipts are $735,000,000, which, of course, includes the receipts from the new revenue bill. The receipts last year, if the gentleman will allow me, were $734,000,000.

Mr. ROBERTS of Massachusetts. I have only five minutes, and I do not want the gentleman to take up all my time.

Mr. UNDERWOOD. So practically the receipts, including those derived from the new revenue bill, are as much as last year, but the estimated expenditures have increased.

Mr. ROBERTS of Massachusetts. Well, Mr. Chairman, if the estimated deficit of 1916 is no nearer to what will actually occur than the actual receipts under the Democratic internal-revenue and income tax have been, as compared with the estimates respecting them, I think it is fair to say we shall have a deficit of not less than $50,000,000, and probably more, if the same policies and the same laws enacted by the Democracy are continued on the statute books. [Applause on the Republican side.]

If the gentleman from Alabama wants to economize and keep the expenditures within the receipts, why does he select the military defense of the country for the object of his economy? Why not economize in river and harbor appropriations and in public buildings appropriations and in good roads appropriations and in many other of the items in the departmental supply bills, and not effect all economies at the expense of the military efficiency of this Government? And if the gentleman wants to effect these economies, why does he not go the whole limit and cut out all naval building, and by so doing obviate any deficiency in the year 1916?

Mr. Chairman, the building program that has been presented by the committee here is one of the fairest and best-balanced programs that has come out of that committee since I have been a member of it. Many people throughout the country have been swept off their feet by this war in Europe and have clamored that Congress, through its Military Committees, should make extraordinary provisions in the Army appropriation bill and in the Naval appropriation bill. But the Committee on Naval Affairs—and I am glad to say also the Committee on Military Affairs—have not been swept from their moorings by this clamor. They have gone ahead on the even tenor of their way, and this program of 2 battleships, 17 submarines, 6 destroyers, an oil ship, a transport, and a hospital ship is one of the fairest programs that has ever been reported.

The gentleman from Alabama would cripple the battleship feature by cutting out one. He would limit the number of submarines. I want to say, Mr. Chairman, that there is no form of warship that so appeals to the public to-day as the submarine. It has demonstrated itself. [Applause.]

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. MANN. Mr. Chairman, I understand the gentleman from Tennessee [Mr. PADGETT] intends to close in one speech?

Mr. PADGETT. Yes.

Mr. MANN. I have four minutes?

The CHAIRMAN. Yes. The gentleman from Illinois [Mr. MANN] is recognized for four minutes.

Mr. MANN. Mr. Chairman, I really had not intended to speak upon this paragraph at all, but I think I shall use the four minutes in submitting an observation or two.

Under the appropriation bill of last year we authorized an extra battleship over the two that were directly carried in the bill, by reason of having obtained $12,000,000 from Greece on the sale of two battleships. That $12,000,000, however, was covered into the Treasury as miscellaneous receipts and has been expended with other money received in the Treasury, and

the free money in the Treasury now is getting very low, although that battleship has not yet been built. The $12,000,000 we have spent for other purposes, and if we now authorize two battleships in this bill it will mean that in truth we shall be commencing, practically, three new battleships instead of two, and we shall have to pay for the work that is done on the three instead of for the work that is done on the two.

Mr. HOBSON. Mr. Chairman, will the gentleman yield?

Mr. MANN. No; I do not yield to anyone.

Now, I commend the gentleman from Alabama [Mr. UNDERWOOD]. I have always regarded him as a great statesman, and I do now. [Applause.] He accepts the consequences of his folly. Having brought the Government to the condition where the receipts are rapidly becoming less than enough to support the Government, he accepts the situation and proposes to cut down the expenses. Of course I know that the Democratic side of the House conveniently lays upon the European war every difficulty in the way of Government. But we on our side of the House know that the trouble with the receipts of the Government is the Underwood tariff law, and the trouble with the country is Democratic misrule. [Applause on the Republican side.]

Now, it is an old and accepted doctrine that you can not have your cake and eat it, too. The country has placed the Democracy in control of the Government. However much the country may desire the enlargement of the Navy, the country must understand that while the Democrats are running the Government and enacting bad legislation there will not be money enough to provide two battleships a year. Hence I propose to accept the consequences and vote with the gentleman from Alabama for one battleship and in favor of economy. [Applause.] And I will say to my friends on this side of the aisle that I am in favor of economy all along the line. As long as the Democratic policies are in control we shall have trouble about the revenues and the expenditures. When the Republicans again gain the ascendancy we shall have money enough and we can make the necessary expenditures. [Applause on the Republican side.]

Mr. PADGETT. Mr. Chairman, I shall not consume the time of the committee in the useless and futile purpose of replying to the stale and oft-repeated assertions of the gentleman from Illinois [Mr. MANN]. Everybody knows that the country is to be congratulated on the fact that we have a Democratic administration and that Democrats are in control of the Government. [Applause on the Democratic side.] We are meeting many of the extravagances that were put upon the country under Republican administrations. [Applause on the Democratic side.]

Now let us come to the discussion of this matter immediately before the House. The gentleman from Mississippi [Mr. WITHERSPOON] announced a text which I accept. He said if a man was sick and did not know himself, he should go to a doctor and follow the advice of the doctor. If he had a legal matter and did not know himself, he should go to an attorney and follow the advice of his attorney. Those are sound maxims, but the gentleman does not follow them.

Every single expert that we have, without exception; every admiral, every officer that has come before the Committee on Naval Affairs, not only this year but in the years past, has said that the battleships were the mainstay and the defense and the offense in time of war on the sea, and nothing else can or should take their place. They are the fighting machines. They are the machines that will control the sea. Somebody says that the battleships have not fired a gun. They have accomplished the same result. If there had been a battle and they had destroyed every ship that Germany had, what would have been the result? England would have had control of the sea, and nothing more. She has got control of the sea to-day by the power of her battleships having all of the German fleet either interned abroad or hiding in her own ports behind the protection of her forts. England has absolutely destroyed the commerce of Germany, export and import, amounting to more than $5,000,000,000 a year.

The battleship is the important weapon of war. Not only that, but something was said here a moment ago about battle cruisers. A battle cruiser would be a very great weapon for certain purposes, but it is not the principal fighting machine. A battleship constructed under a modern program carries armor of 13½ inches. A battle cruiser carries 8-inch armor. Now, they talk about the speed. That does not settle anything. In the battle that was fought the other day it was the gun power that decided the fight. England had 13½-inch guns and Germany was fighting with 8½-inch guns. On the question of speed, if the cruiser comes within shooting distance of the battleship, the battleship is within shooting distance of the cruiser, so that the battleship would destroy the cruiser if she stood before the battleship's fire.

The purpose of the cruiser is not to fight, but it is to destroy commerce and to act in the nature of a scout. The aeroplane is being developed to do the scouting and the reconnoitering, and is being used for that purpose. England has nine battle cruisers; but if you will notice the statistics, she is building only one at the present time.

Mr. HOBSON. Will the gentleman yield there?

Mr. PADGETT. Yes.

Mr. HOBSON. The gentleman will notice that with the 1 which is now building Great Britain will then have 10.

Mr. PADGETT. That is true.

Mr. HOBSON. Ten to thirty-six, or more than one-quarter as many battle cruisers as battleships.

Mr. PADGETT. Yes.

Mr. HOBSON. While Germany has 8 to 20, Japan 4 to 6, and Russia 4 to 7.

Mr. PADGETT. Yes; but all of them recognize that the battleship is the implement that will ultimately decide the fighting, and so determine the victory or the defeat.

Now, let us take the advice of the men who know. The gentleman spoke in glowing terms of Admiral Fletcher. I am only quoting the language of Admiral Fletcher in this statement that I am making before you. Every single officer who appeared before us said that the supreme demand of our Navy is for battleships. Gentlemen speak of the speed. A cruiser is a fast vessel, sacrificing its fighting power for speed; but a battle cruiser of 30,000 tons displacement would cost $20,000,000, as against $15,000,000 for a battleship. It would cost 25 per cent more a year to operate it than it would a battleship. So that we come down to the vital question in this matter, Shall we stand by and take the recommendation and the opinions of the men who know, and the men upon whom we must rely in the time of battle? They are honorable men, they are learned men, they are true, patriotic men, devoted to the interests and the welfare of the country, and they come without exception and tell us that the battleship is par excellence above every other consideration the thing that the American Navy needs. When we have secured the quota of these that we need, we can turn our attention to other things.

Mr. MILLER. Will the gentleman yield for a question?

Mr. PADGETT. Yes.

Mr. MILLER. Having in mind the present state of the American Navy, does not the gentleman think American naval efficiency would be increased by constructing a unit of four battle cruisers for the immediate future, rather than four battleships?

Mr. PADGETT. I do not, and every officer in the Navy who testified said no. Every one of them recognized and recommended battleships.

Mr. TRIBBLE. Will the gentleman yield on that question?

Mr. PADGETT. Yes.

Mr. TRIBBLE. Does not the gentleman think that the officers on board the ships who have to do the fighting in time of war and who want to be carried safely to victory and to the shore again, would recommend the thing that they thought would do the best fighting?

Mr. PADGETT. Why, of course. That is axiomatic.

Now, Mr. Chairman, I am not going to take up further time in the presentation of this matter. We have these men. We rely upon them in the time of danger. We trust them in the hour of battle. We put them at the front. They have studied these questions. They are responsible for results. Let us, as sensible men, accept the universal, unbroken testimony of these men and stand by their recommendations. There are several propositions here——

Mr. FOWLER. Mr. Chairman——

Mr. PADGETT. I have not time to yield, much as I would like to yield to the gentleman from Illinois. There are several propositions here—one for four battleships. The committee have reported in favor of two. Then there is a proposition to reduce it to one, and there is another proposition to wipe out all and have none. The committee gave careful heed and consideration to them; the department did the same. The committee have recommended two battleships; the department recommended two. The General Board wanted more, but the administration stands for two. It appears in the record that the President has approved the recommendation for two. So we have not only the administration, but we have every officer of the Navy standing solidly behind two battleships as the implements of war that will do the fighting and determine the issue and decide the result of victory or defeat.

I call for a vote.

The CHAIRMAN. The question is on the amendment of the gentleman from Alabama [Mr. UNDERWOOD] to the amendment of the gentleman from Alabama [Mr. HOBSON].

Mr. GORDON. Let it be reported.

The question was taken, and the Chairman announced that the noes appeared to have it.

Mr. UNDERWOOD. I ask for a division, Mr. Chairman.

The committee divided; and there were—ayes 122, noes 123.

Mr. UNDERWOOD. Mr. Chairman, I demand tellers.

Tellers were ordered.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I ask unanimous consent that the amendment be again reported.

The Clerk again reported the amendment, as follows:

Strike out the word "four" in the Hobson amendment and insert "one."

Mr. ROBERTS of Massachusetts. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. ROBERTS of Massachusetts. If the amendment for one battleship is adopted, will there be an opportunity to vote for two battleships?

The CHAIRMAN. That is not a parliamentary inquiry; but there will be, of course.

Mr. MANN. If the amendment is adopted, then the Hobson amendment will come next for a vote.

The Chair appointed as tellers Mr. UNDERWOOD and Mr. HOBSON.

The committee again divided; and the tellers reported that there were 142 ayes and 129 noes.

So the amendment to the amendment was agreed to.

Mr. FOWLER. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

Mr. MANN. But, Mr. Chairman, the vote now recurs on the Hobson amendment.

The CHAIRMAN. The Chair understands that; but it may be that the amendment of the gentleman from Illinois [Mr. FOWLER] is to the Hobson amendment.

Mr. FOWLER. Mr. Chairman, I do not know the exact place my amendment comes in, but I want it to fit in the appropriate place.

The Clerk read as follows:

Amend, page 64, in line 6, by striking out the words "highest practicable speed" and insert in lieu thereof the words "speed of not less than 28 knots per hour."

The CHAIRMAN. That is not germane to the Hobson amendment. The question now is on the Hobson amendment as amended.

Mr. SLAYDEN. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. SLAYDEN. The effect of this if adopted would be to change the paragraph at the top of page 64 and provide for one battleship.

The CHAIRMAN. Yes; if it is adopted.

The question was being taken when Mr. PADGETT demanded tellers.

Tellers were ordered, and the Chair appointed as tellers Mr. UNDERWOOD and Mr. HOBSON.

The committee divided, and the tellers reported that there were 139 ayes and 148 noes.

So the amendment of Mr. HOBSON was rejected.

Mr. STEPHENS of California. Mr. Chairman, I desire to offer an amendment.

Mr. HOBSON. Mr. Chairman, as a member of the committee I desire to offer an amendment.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Illinois [Mr. FOWLER].

The Clerk read as follows:

Amend, page 64, in line 6, by striking out the words "highest practicable speed" and insert in lieu thereof the words "speed of not less than 28 knots per hour."

The CHAIRMAN. Does the gentleman from California desire to offer an amendment to the amendment?

Mr. STEPHENS of California. No; Mr. Chairman, my amendment is to the paragraph.

The CHAIRMAN. Does the gentleman from Alabama desire to offer an amendment to the amendment?

Mr. HOBSON. No; Mr. Chairman.

Mr. PARKER of New Jersey. Mr. Chairman, I offer my amendment as a substitute for the amendment of the gentleman from Illinois.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment to the amendment by Mr. PARKER of New Jersey.
Page 64, line 6, after the words "highest practicable speed," insert the words "at least equal to those of any known battleships."

The CHAIRMAN. The question is on the amendment to the amendment offered by the gentleman from New Jersey.

The question was taken, and the amendment to the amendment was rejected.

The CHAIRMAN. The question now recurs on the amendment offered by the gentleman from Illinois [Mr. FOWLER].

The question was taken; and on a division (demanded by Mr. FOWLER) there were 20 ayes and 113 noes.

So the amendment was rejected.

Mr. FOWLER. Now, Mr. Chairman, I ask that my amendment be modified so as to provide for a speed of not less than 25 knots.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend, page 64, in line 6, by striking out the words "highest practicable speed" and insert in lieu thereof the words "speed of not less than 25 knots per hour."

Mr. FOWLER. Mr. Chairman, I ask unanimous consent to speak upon this amendment for five minutes. [Cries of "Regular order!"]

The CHAIRMAN. The regular order is demanded.

The question was taken, and the amendment was rejected.

Mr. STEPHENS of California. Mr. Chairman, now I offer my amendment to the paragraph.

The CHAIRMAN. The gentleman from Alabama has offered an amendment to the paragraph.

Mr. HOBSON. No, Mr. Chairman; my amendment comes in at the end of the paragraph.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from California [Mr. STEPHENS].

The Clerk read as follows:

Amendment by Mr. STEPHENS of California:
Page 64, in line 4, after the word "battleship," insert the words "and one batttleship cruiser."

The CHAIRMAN. The question is on the amendment offered by the gentleman from California.

The question was taken; and on a division (demanded by Mr. STEPHENS of California) there were—ayes 65, noes 124.

So the amendment was rejected.

Mr. MILLER. Mr. Chairman, I move to amend, in line 4, page 64, by striking out the word "battleship" and substituting the words "battle cruisers."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 64, in line 4, strike out the word "battleship" and insert in lieu thereof the words "battle cruisers."

The CHAIRMAN. The question is on the amendment offered by the gentleman from Minnesota.

The question was taken, and the amendment was rejected.

Mr. FOWLER. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amend, page 64, in line 6, after the word "class," by inserting the following:
"Including not less than four 18-inch guns capable of throwing shells of 500 pounds of high explosives at longest range of battleship guns."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Illinois.

The question was taken; and on a division (demanded by Mr. FOWLER) there were—ayes 5, noes 102.

So the amendment was rejected.

The CHAIRMAN. The question now is on the amendment of the gentleman from Mississippi [Mr. WITHERSPOON] to strike out the paragraph.

The question was taken; and on a division (demanded by Mr. WITHERSPOON) there were—ayes 75, noes 162.

So the amendment was rejected.

Mr. HOBSON. Mr. Chairman, I offer the following amendment as a new paragraph, which I send to the desk and ask to have read.

The Clerk read as follows:

Amendment by Mr. HOBSON: At the end of line 8 insert as a new paragraph the following:
"Two first-class battleships carrying as powerful armament as any vessel of their class, to have the greatest desirable radius of action, with a speed of not less than 30 knots, and as heavy armor as possible to permit the foregoing requirements, and to cost, exclusive of armor and armament, not to exceed $14,000,000."

Mr. FITZGERALD. Mr. Speaker, I make the point of order on that.

Mr. BUTLER. Is that offered as a new paragraph?

The CHAIRMAN. It is.

Mr. HOBSON. Mr. Chairman, I desire to be heard upon the amendment.

Mr. FITZGERALD. Mr. Chairman, I make the point of order that the paragraph just passed is the one to which an amendment providing for battleships is germane.

Mr. HOBSON. Mr. Chairman, I would like to be heard on the proposition.

The CHAIRMAN. The Chair will hear the gentleman on the point of order.

Mr. HOBSON. The point of order is that this is a different type of battleship.

Mr. FITZGERALD. Oh, no; that is not my point of order.

The CHAIRMAN. The gentleman makes the point of order that the gentleman from Alabama should have offered his amendment to the paragraph just passed.

Mr. HOBSON. Mr. Chairman, I feel it ought to be a new paragraph in the bill. If the Chair will read the amendment, he will see that it is not in line with the wording of the battleships provided in the bill, and I felt myself that when the amendment for one battle cruiser was offered as a substitute for battleships in the paragraph it was subject to the point of order. But this is a separate paragraph and is not subject to the point of order. We have a right to make various types of ships in the bill, and this is a type of ship we are going to eventually come to, and I wish to lay it before the Congress, and incidentally before the country, in advance of its final adoption.

Mr. PADGETT. Mr. Chairman, this amendment is simply for battle cruisers. It substitutes the word "cruiser" for the word "ship."

The CHAIRMAN. The Chair will call attention to the fact that it is not for a battle cruiser, but it is an amendment providing for battleships.

Mr. HOBSON. Very well; if the Chair wishes to call it battle cruiser, well and good.

The CHAIRMAN. The Chair does not wish to call it anything.

Mr. HOBSON. I am not going to take time. I ask unanimous consent to change that and to make it a battle cruiser. What is there in a name, Mr. Chairman? I would like to be recognized on the point of order.

The CHAIRMAN. The Chair has not yet decided the point of order.

Mr. HOBSON. I thought the point of order had been withdrawn.

Mr. FITZGERALD. Oh, the gentleman can not withdraw points of order for me.

The CHAIRMAN. The Chair would have sustained the point of order if the amendment had remained as the gentleman introduced it, but as the gentleman has changed it——

Mr. HOBSON. I suggest to change it to battle cruisers. What is there in a name?

The CHAIRMAN. The Chair will overrule the point of order.

Mr. HOBSON. Mr. Chairman, I offer another amendment, with the word "cruiser" substituted.

The CHAIRMAN. Then the Chair sustains the point of order to the first amendment offered by the gentleman from Alabama, and the gentleman now offers another amendment, which the Clerk will report.

The Clerk read as follows:

Two first-class battle cruisers, carrying as powerful armament as any vessel of their class, to have the greatest desirable radius of action, with a speed of not less than 30 knots, and as heavy armor as possible to permit the foregoing requirements, and to cost, exclusive of armor and armament, not to exceed $14,000,000.

Mr. MANN. Mr. Chairman, I make the point of order against the amendment.

The CHAIRMAN. The Chair will hear the gentleman.

Mr. MANN. The rule, as I recall it, is that it is in order to insert a provision for any new fighting ship where the Navy now possesses one of that class, but where a new type of ship is to be provided for, then that is not in continuation of a work now in progress and must come in in the form of legislation.

Now no one claims, I think, certainly if they do claim it it is only for the purpose of argument, that there are now any battle cruisers in the Navy, hence this is an authorization for a new type of fighting ship and not in order under the rulings which have been made from time to time on that subject.

Mr. HOBSON. Mr. Chairman, I do not care to be heard upon the point as to the matter of its being in order, but I will say, if the Chair holds that it is out of order, that I will offer this amendment, and instead of "battle cruiser," offer it simply as a "cruiser."

The CHAIRMAN. The Chair is ready to rule.

Mr. GARDNER. I would like to be heard upon the point of order.

Mr. HOBSON. I will not keep the attention of the House longer.

The CHAIRMAN. The Chair thinks the amendment is clearly in order, and it has been ruled again and again that the naval appropriation bill may carry warships and things of that sort. The Chair, therefore, overrules the point of order.

Mr. HOBSON. Mr. Chairman, this would give a type of ship with qualities that all the world will have inside of 10 years. Now, I am not a prophet nor the son of a prophet, but I will take occasion now to state that at the Naval War College in Newport in 1907, we worked out a series of maneuvers on the war board, and at that time I requested that ships as high as 30,000 tons should be imagined as existing and they were called "Hobsons." It was believed at that time it would be many, many years before the world ever came to the 30,000-ton ship if it ever reached that size, but all the nations are now building them.

The ship called for in my amendment would be of about 40,000 tons. The principle is this: The useful weight—the displacement—varies as to the cube of a linear dimension, and the dead weight—the hull, decks, and the like, like a surface—vary as to the square; so the larger the dimension and the larger the ship then the larger the proportion of the weight will be available for offensive and defensive purposes. We are bound to come to these large ships before long. We should be the first. The vessel would have the high qualities of both the dreadnaught and the dreadnaught cruiser. I realize that this would be a very large increase over what already has been provided; but let me remind my friends that to-day we are not increasing as fast as six nations of the world. Take the matter of capital ships building. Great Britain stands first, with 17; Russia stands second, and ties with Germany, each with 11; France stands fourth, with 8; Japan fifth, with 6; and America comes in sixth, with 4. Now, take the tonnage. In tonnage building to-day Great Britain stands first, with 556,000 tons; Russia stands second, with 407,000 tons; Germany stands third, with 354,000 tons; France stands fourth, with 211,000 tons; Japan stands fifth, with 180,000 tons; and America stands sixth, with 129,000 tons. Do not let anybody imagine that if they vote for my amendment they tend to have the American program on the basis of any two nations. It would barely get America up to fourth place. To-day we are the fourth great nation of the world. We will, when the ships now building are completed, be below France. Even according to this program of two battleships a year, it will not be many years until we are the sixth navy in the world. Now, gentlemen here may take the responsibility. I am going to give them the opportunity. I am going to give them an opportunity to vote down this amendment and say that America shall descend to be the sixth-rate nation in the world.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Alabama.

The question was taken, and the Chairman announced the noes seemed to have it.

Mr. HOBSON. Mr. Chairman, I ask for a division. I would like to look at the Members; I shall not ask for tellers.

The committee divided; and there were—ayes 54, noes 121.

So the amendment was rejected.

Mr. HOBSON. Mr. Chairman, I offer an amendment as an additional paragraph.

The CHAIRMAN. The Clerk will report it.

The Clerk read as follows:

On page 64, at the end of line 8, add as a new paragraph the following:

"Two scouts, to have the highest practicable speed and greatest desirable radius of action and to cost, exclusive of armor and armament, not to exceed $4,000,000 each."

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. HOBSON. Mr. Chairman, I desire to be heard, but I will not use up the five minutes. I want to call the attention of Members to the fact that our fleet to-day is without eyes. It can not see a hundred miles. It ought to see across the Atlantic Ocean, and as far as from the Pacific coast to the Hawaiian Islands, and from there to Asia. It is the only Navy in the world whose fleet has no scouting vessel, and has no vessel that can be used for an ocean scout. The great battle cruisers and special scout cruisers are the eyes of the fleets of Europe. The former can make reconnoissance in force. That is, they can fight while they scout.

The only scout vessels we have are the antiquated type of the *Birmingham* class, that can not keep the seas—little, small cruisers that ought to be used as gunboats or put into the discard. So to-day our fleet, which lacks aeroplanes with which to scout, and lacks Zeppelins with which to scout, and which lacks enough torpedo-boat destroyers to care for the defense of the fleet, has neither battle cruisers to scout with nor any scouts proper. We maintain the 21-battleship fleet in a condition where it simply could not fight on equal terms with a 21-battleship fleet of any other country. Our fleet is in a condition of inferiority that is exceedingly serious. The General Board urged that we provide four scouts in this bill, two for each division of

the fleet. Instead of that we have not a single one. I am not going to dwell on it. This is a proposition not to increase the Navy. You voted down those propositions. The proposition is whether we are going to make the Navy we now have efficient or not, and on that basis I give the membership a chance to vote.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. HOBSON. Division, Mr. Chairman. I want to look at those also.

The committee divided; and there were—ayes 55, noes 99.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Six torpedo-boat destroyers, to have the highest practicable speed, to cost, exclusive of armor and armament, not to exceed $925,000 each.

Mr. HOBSON. Mr. Chairman, I move to make that eight.

The CHAIRMAN. The gentleman from Alabama offers an amendment, which the Clerk will report.

Mr. HOBSON. Make it eight. Strike out the word "six" and insert the word "eight."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 64, line 9, strike out the word "six" and insert the word "eight."

Mr. HOBSON. I do not do that, Mr. Chairman, to increase, as I said. This body has determined on two battleships, but the principle of strategy the world over is that every battleship to be effective and have its defense against submarines ought to have four destroyers. It is simply to make the appropriation for two battleships symmetrical.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the Chair announced that the noes seemed to have it.

Mr. HOBSON. Division, Mr. Chairman.

The committee divided; and there were—ayes 50, noes 101.

So the amendment was rejected.

Mr. HUMPHREY of Washington. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Washington offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 64, after line 11, insert the following:

"*Provided*, That three of said torpedo boats herein authorized shall be built on the Pacific coast: *Provided further*, That the cost of construction on the Pacific coast does not exceed the cost of construction on the Atlantic coast plus the cost of transportation from the Atlantic to the Pacific."

Mr. PADGETT. Mr. Chairman, I have no objection to that.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

Mr. MOORE. Mr. Chairman, I desire to offer an amendment.

The CHAIRMAN. The gentleman from Pennsylvania offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 64, line 11, after the word "each," insert the following:

"*Provided*, Such torpedo-boat destroyers shall be so constructed with respect to draft and beam as to enable them to use such coastal waterways and canals as afford means of safe communication in times of peace and strategic advantage in times of war."

Mr. PADGETT. Mr. Chairman, I make a point of order on that.

Mr. MOORE. I ask the gentleman to reserve his point of order. I did not expect, of course, that this amendment would pass, but——

The CHAIRMAN. Does the gentleman from Tennessee reserve his point of order?

Mr. PADGETT. It is too late.

Mr. MOORE. Just for a moment. I want to make a request for unanimous consent.

Mr. PADGETT. Very well.

Mr. MOORE. I ask unanimous consent, Mr. Chairman, to extend my remarks in the RECORD on this subject.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

The CHAIRMAN. The gentleman from Tennessee [Mr. PADGETT] makes a point of order on the amendment. The Chair sustains the point of order. The Clerk will read.

The Clerk read as follows:

One submarine to be of seagoing type to have a surface speed of not less than 20 knots, to cost, exclusive of armor and armament, not exceeding $1,400,000, and 16 submarines to cost, exclusive of armor and armament, not exceeding $550,000 each, and the sum of $3,405,000 is hereby appropriated for said purposes to be available until expended. The sum of $800,000 is hereby reappropriated out of the total unobligated balances of all annual appropriations for the Naval Establishment for the fiscal year ending June 30, 1914, and made available until expended for the construction of the submarine torpedo boats herein authorized.

Mr. FITZGERALD. Mr. Chairman, I make a point of order on that portion of the paragraph commencing with line 18 down to and including the word "authorized" in line 23.

The CHAIRMAN. The Chair sustains the point of order.

Mr. PADGETT. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Tennessee offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 64, line 18, after the word "expended," insert: "The following sums are hereby reappropriated out of the unobligated balances of the following appropriations for the Naval Establishment for the fiscal year ending June 30, 1914; 'Equipment of vessels,' $625,000; 'Steam machinery,' $175,000, and made available until expended for the construction of the submarine torpedo boats herein authorized."

Mr. FITZGERALD. I make a point of order, Mr. Chairman, against the amendment in that it makes this money available until expended, in contravention of the covering-in act, which requires appropriations to be covered into the Treasury at the end of two years.

Mr. PADGETT. The practice of the Navy is to carry it until it is expended.

The CHAIRMAN. The Chair has no question but that it is subject to a point of order.

Mr. PADGETT. Mr. Chairman, I understand that the "Increase of the Navy" is excepted from the covering-in act. The law exempts the "Increase of the Navy."

Mr. FITZGERALD. Oh, no.

The CHAIRMAN. Has the gentleman any law there?

Mr. PADGETT. I do not have it with me. Does the Chair sustain the point of order?

The CHAIRMAN. The Chair is compelled to sustain it unless the gentleman will cite the law authorizing it.

Mr. PADGETT. I move to strike out the words "and made available until expended."

The CHAIRMAN. The Clerk will report the amendment to the amendment offered by the gentleman from Tennessee.

The Clerk read as follows:

Page 64, line 18, after the word "expended," insert:

"The following sums are hereby reappropriated out of the unobligated balances of the following appropriations for the Naval Establishment for the fiscal year ending June 30, 1914: 'Equipment of vessels,' $625,000; 'Steam machinery,' $175,000, for the construction of the submarine torpedo boats herein authorized."

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the Chairman announced that the ayes seemed to have it.

Mr. FITZGERALD. A division, Mr. Chairman.

The CHAIRMAN. A division is demanded.

The committee divided; and there were—ayes 133, noes 29.

So the amendment was agreed to.

Mr. PADGETT. Mr. Chairman, the Clerk, in reporting the amendment, struck out the words "and made available." The only words to be stricken out are "until expended." It is to be made "available for the construction of the submarines herein authorized." The only words to be stricken out are "until expended."

The CHAIRMAN. Without objection, the amendment will be modified as indicated.

There was no objection.

Mr. SLAYDEN. Mr. Chairman, I offer a substitute for the amendment.

The CHAIRMAN. The gentleman from Texas [Mr. SLAYDEN] offers a substitute for the amendment, which the Clerk will read.

The Clerk read as follows:

Amendment by Mr. SLAYDEN: On page 64 of the bill, under "Increase of the Navy," strike out lines 12 to 23, inclusive, and insert in lieu of the provisions for the same the following:

"Three submarines of seagoing type, to have a surface speed of not less than 20 knots, at a total cost not exceeding $1,600,000 each; and 30 submarines of coast-defense type, at a total cost not exceeding $665,000 each, and the sum of $10,000,000 is hereby appropriated for said purposes, to be available until expended."

Mr. SLAYDEN. Mr. Chairman, I want to say just a word with reference to that. A few moments ago the gentleman from Tennessee [Mr. PADGETT] in his fervid oration in defense of a type of war vessel which, in the opinion of many people, is rapidly disappearing as an effective weapon, and which in the present war has disappeared almost completely by immuring itself in certain harbors and refuges of safety, said that the battle was not to the swift, for which he has scriptural au-

thority, but that it was to the biggest ship and the heaviest guns. That contradicts the report made by the distinguished British admiral, Sir David Beatty, the other day, in reporting the result of the conflict in the North Sea. He said that he abandoned the pursuit of his crippled and retreating enemy because the presence of submarines was suspected. Now, Mr. Chairman, experts differ as to the value of the battleship. Expert PADGETT, of Tennessee, differs from Expert Admiral Sir Percy Scott; and I submit that a man who has spent 40 years on the sea and who has achieved such distinction in his profession, and who has been decorated in the manner in which they reward service of that kind in that country, is better entitled to the confidence of this House on the matter of submarines.

But, Mr. Chairman, the submarines are making their own argument very effectively every day, as reported in this afternoon's paper which I had in my hand only a few minutes ago, and which shows that they are extending the war zone into waters which heretofore have been regarded as practically lakes of the British Empire. The submarines are making their own argument, and I shall not detain the House any further.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas.

The question being taken; on a division (demanded by Mr. SLAYDEN) there were—ayes 53, noes 86.

Accordingly the amendment was rejected.

Mr. WITHERSPOON. Mr. Chairman, I move to strike out the word "sixteen," in line 15, on page 64, and substitute therefor the word "two."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 64, line 15, strike out "sixteen" and insert in lieu thereof "two."

The CHAIRMAN. The question is on the amendment.

Mr. WITHERSPOON. Mr. Chairman, is no debate allowed on this amendment?

The CHAIRMAN. Oh, yes.

Mr. WITHERSPOON. Mr. Chairman, I want to say that, according to all the testimony by the naval experts, there is not the slightest justification for 16 submarines. We already have built, building, and authorized 59. There are only two concerns in the United States that build them, and they have been years and years building those already authorized, and there is just no way to get them built. In addition to that, the naval experts say that we do not need any more submarines. Admiral Fletcher, the commander in chief of the Atlantic Fleet, was urged to say that we needed a large number, and he declined to do it. He said it might be advisable to build a few more, but he told us that 50 were as good as 100 or 500, and that is the testimony of all the experts who have testified on the subject.

Now, Mr. Chairman, I want to call the attention of the committee to this fact, that these experts all say it is an erroneous idea that we ought to have enough submarines to station a number in each harbor to protect it. They say that is not the function of the submarine; that the submarines ought to be organized into a flotilla, to go with the battle fleet in case of war; that they ought to be trained to maneuver under the command of the commander in chief, and that they ought to be divided up into small flotillas, say, of 10 each; and that the only function of the submarine is in the battle, for the commander in chief so to maneuver his fleet as to give them an opportunity; in other words, to maneuver the fleet so that he will force the enemy's fleet to come within striking distance of his submarines. The submarine has such slow speed that it is impossible for it ever to get to another ship. Its only chance is to strike when the other ship comes close to it, because it can not catch up with the other ship. They tell us that 50 would be as good as 500. They tell us that if they can not give 50 an opportunity to strike at the enemy they could not give 500 the opportunity, and that if they can give 50 an opportunity they will destroy the enemy's fleet.

There is absolutely no excuse for this expenditure of money for useless submarines. Therefore I hope the House will adopt my amendment.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I hope the amendment of the gentleman from Mississippi will not be adopted. The Secretary of the Navy this year recommended to Congress that there be at least 8 submarines, 1 of seagoing type. The General Board recommended 16 of the coast-defense type and 3 of the seagoing type, 20 knots or more speed. The Secretary of the Navy in the hearings before the committee said repeatedly that we should have more submarines than he had recommended, and that he hoped the committee would report more if they could do so without sacrificing a battleship. Now, the committee have not gone to the extreme of the General Board's recommendation in that we only report 1 seagoing submarine and 16 of the smaller type. The gentleman quotes one of the naval experts as saying that 50 submarines are enough. I want to call attention to the speech delivered by Rear Admiral Austin M. Knight before the Efficiency Club, of New York City, on the 29th of January, 1915. I presume there is not in this country a more level-headed, a more sagacious, a better-informed man on the needs of the Navy Department to-day than Admiral Knight.

This speech, a copy of which I hold in my hand, has been favorably commented upon from one end of the country to the other. The admiral says:

We should have at least 100 submarines. Now we have less than 60 built and building. The General Board says that we ought to have at least 100.

All the authorities, except one, quoted by the gentleman from Mississippi [Mr. WITHERSPOON] say that we should have not less than 100 submarines. Mr. Chairman, while I am on my feet and before my time expires I ask unanimous consent to insert this address by Admiral Knight in the RECORD. It is a very temperate, a very deliberate discussion of the situation in our Navy Department to-day with regard to the efficiency of the Navy and what is needed to bring it up to its highest state of efficiency, and I commend the reading of it to every Member of the House.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I submit that the recommendation of the committee should be sustained.

The following is the address of Admiral Knight referred to:

ADDRESS BY REAR ADMIRAL AUSTIN M. KNIGHT, UNITED STATES NAVY, AT THE ANNUAL BANQUET OF THE EFFICIENCY CLUB OF NEW YORK CITY, JANUARY 25, 1915.

I appreciate very highly the privilege of addressing you this evening, not alone because of the compliment which the privilege involves, but because of the possibility of usefulness to the Navy and the country which seems to be connected with it. If I do not speak as fully as you might wish me to, I shall at least speak frankly.

It is not my intention to go into questions of the efficiency of individual ships, the results of target practice, and kindred topics. I propose to deal with the efficiency of the Navy as a whole, considering it as a great and very complicated machine, upon which hundreds of millions of dollars have been expended, with one end in view, and only one—the development of a supremely efficient weapon for the defense of the country against any and every enemy which may come against us.

I was asked a few weeks ago what the War College considered that the fleet should do, and I replied:

"The War College considers that every effort of the fleet, and every effort of the department in connection with the fleet, should have for its sole aim the war efficiency of the fleet. Every effort which does not directly contribute to this end is in itself a wasteful expenditure of energy, and so far as it is a diversion from this end is distinctly harmful."

No doubt there are many differences of opinion among those assembled here to-night as to what constitutes an adequate Navy for the defense of the United States. There may even be some present who think that we should have no Navy at all. But on one point I am sure there will be no difference of opinion—that if we are to have a navy it should be as efficient as it possibly can be made. And everybody who knows anything about the Navy knows that this is not its present condition. I am not one of those who hold that it is altogether inefficient. Unsatisfactory as conditions are, it would be very easy to exaggerate them. When things are wrong you can always find extremists to tell you that they are much worse than they actually are. Some people think that this is the only way to make an impression. Others are so constituted temperamentally that they can see nothing good in anything which falls short of perfection as they see it.

I am going to assume that all of you who are gathered here to-night occupy a reasonable middle ground so far as temperament is concerned, and that to make an impression upon you I need not do violence to my own temperament by painting the picture which I shall draw for you in maximum contrast of light and shade.

There is much about the Navy which is splendidly efficient. But as a whole it is far less efficient than it can and ought to be. Our ships are fine. Our officers are capable, industrious, and ambitious. Our enlisted men are the equals of those in other navies. But efficient ships and officers and men do not alone make an efficient navy. They must be welded into an efficient whole by a unity of organization and administration and purpose which coordinates their capabilities and directs their efforts toward a common end, wisely selected and very clearly seen. Here is the first point at which we are lacking. We are lacking also in that harmonious composition of the fleet which is needed to give to every element of it the support that it needs from other elements, to make up a symmetrical and well-balanced whole. And we are lacking to a marked degree in absolutely essential facilities for the care and preservation of our ships, especially in the matter of dry docks.

Finally, we are lacking in efficient organization of the personnel. Here, so far as officers are concerned, the conditions are altogether deplorable. In a service like the Navy, where spirit is everything, where enthusiasm must be the driving power back of every activity, I ask you, to picture the effect of a condition where a young officer, graduating from the Naval Academy full of spirit and enthusiasm, finds himself confronted with a prospect of promotion to the grade of lieutenant at the age of 52 years.

If you ask me who is responsible for these conditions, I can only reply that the responsibility comes home to nearly all of us. Some of it, I am sure, rests with me—much of it, I believe, with you. Certainly it can not be attributed in excessive measure to any one administration of the Navy Department, for it has existed for half a century at least.

So let us not cloud the issue by assuming that it is a new condition, and that all administrations up to some recent date have been models of wisdom and efficiency, or that naval officers themselves always have been ready with good advice. Speaking as the representative of naval officers as a body, I frankly admit that we have not always seen clearly what was needed and have not always worked together even for ends which we did see clearly. As for the Secretaries of the Navy, it is not surprising that many of them have failed to realize that their first duty was to strive, in season and out of season, to promote the war efficiency of the Navy as a whole. Many of them have not remained in office long enough to learn this. Some, perhaps, have realized it more or less clearly, but have not found at hand an organization through which they could produce results. A few have made material contributions toward improved conditions. I shall have the pleasure a little later of calling attention to one important step in advance which was taken by the present Secretary at the very beginning of his term of office.

A large part of the responsibility, especially that connected with the small size and the unbalanced composition of the fleet and the lack of dry docks, rests with Congress, which has always approached naval legislation from the wrong side, so far as efficiency is concerned—asking, not what do we need for efficiency, but what can we afford to spend for efficiency? Behind the responsibility of Congress lies the responsibility of the country—and you, gentlemen, represent the country—because it has not insisted upon having what was needed, without reference to cost. It may be that this attitude of both Congress and the country is necessary and even inevitable. But I am one of those who believe that this great country of ours can afford to have anything in the way of national defense which it needs; and I assume that all present here to-night agree that we need a navy, and if a navy, then an efficient one, and that whatever efficiency costs is the measure of what we can afford to spend.

One particularly unfortunate feature about the application of the policy of "economy first" in naval expenditures is that it often has been invoked to prevent a small appropriation which would have added many times its own cost to the value of those items for which money was cheerfully appropriated. I shall discuss this more at length hereafter.

* * * * * * *

But, after all, is it not rather futile to spend our time in trying to place responsibility for existing conditions? It seems to me that what we ought to do is to recognize the conditions clearly—neither exaggerating nor minimizing them—and to dissociate them absolutely from personalities. We can then proceed with a perfectly open mind to consider how the conditions can be improved.

I ask you to accept this point of view and to banish from your mind all thought of politics and every trace of partisanship and fix your attention upon the question before us as one of national, not of political, significance.

The conditions, then, to which I shall invite your attention are those connected with—

First. The size and composition of the fleet.

Second. The organization of the personnel.

Third. The organization and administration of the Navy Department.

* * * * * * *

First, as to the size of the fleet. I shall not go into this very fully, because my subject is not so much adequacy as efficiency. A small machine may be efficient within the limits fixed by its size. It is from the point of view of efficiency within the Navy as it exists that I wish chiefly to consider my subject this evening. It must be recognized, however, that the actual efficiency for war of a battleship fleet which is efficient within itself may be seriously compromised by the lack of those supporting units which are vitally essential to its operation. There is, moreover, a sense in which we may say that a machine is not efficient if it is too small for the task for which it is designed.

What constitutes an adequate Navy for the United States? The answer will depend, of course, upon the purpose for which we assume that the Navy is to be used. We are all agreed, I presume, that it is not to be used for aggression. Is it, then, to be used solely for defense? If we answer "Yes," we ought to do so with a full recognition of what we are to defend and also of the elementary maxim that the best defense is a vigorous offense. In other words, no matter how resolute we may be to use our Navy only for repelling aggression, it does not follow that we should plan for meeting the aggressor only at our gates. Even if we had no interests outside our borders and no responsibilities for the defense of our outlying possessions and dependencies, we should still, as reasonable beings not wholly ignorant of history, prepare to project our battle line toward the enemy's coasts and to assume a course which would throw upon him the burden of replying to our initiative. In this sense, then, we need a navy for offense; that is to say, for offensive action with a defensive purpose. In shaping our plans along these lines we should not overlook the fact that the policy which dictates the measure of our defense must take full note of the larger national policy which it is to enforce—in relation, for example, to the Monroe doctrine, the Panama Canal, the Philippines, and other matters which are at once of national and of international significance.

The statement is often made—I have heard it made on the floors of Congress—that naval officers themselves do not know what they need. There are naturally differences of opinion among naval officers as to what the strength of the Navy should be and as to the types of which it should be composed. But the country has, in the General Board, a body of mature and experienced officers, whose business it is to study this question and to speak authoritatively upon it. In the main the recommendations of this board from year to year have been consistent with each other and consistent with the best naval sentiment. It has stood, since 1903, for a fleet of 48 battleships and necessary smaller units and auxiliaries. The character of the smaller units and auxiliaries recommended has varied from time to time, following the developments of naval art and science; but the basis of 48 battleships, to be kept up to date by eliminating ships more than 20 years of age and replacing them by new construction, has been steadily adhered to. Now, it may be that we need fewer than 48 battleships or that we need more. Whatever their number is to be, we should have a policy in the matter, looking as far into the future as practicable, and one which, in providing for capital ships, provides also for the smaller units and auxiliaries to round out the fleet into a complete and well-balanced whole, with an appropriate number of cruisers, scouts, destroyers, submarines, colliers, tank ships, supply ships, repair ships, mine-laying ships, tenders, and gunboats.

The program advocated by the General Board would, if it had been followed, have given us 47 battleships, built and building, in 1914. This program has not been followed, and we have at present 37 battleships instead of 47. It seems to me that he would be a bold man who, recalling the history of the last days of August, 1914, when the world passed within a week from a condition of universal peace to one of almost universal war, should say that we do not need the full number of battleships proposed by the General Board, and more.

But battleships alone do not make up a fleet, much less a navy. A fleet without fuel ships is crippled, and one without scouts is blind. It can neither secure information of the enemy's movements nor deny information of its own. To send a fleet thus blind and crippled into hostile waters would be to invite destruction. We have an altogether insufficient number of fuel ships and practically no scouts. Moreover, we are very weak in destroyers, of which a large number should accompany the fleet, to back up the scouts, to act in part as scouts themselves, to stiffen up the screen about the battleships, and to be ready for a dash against the enemy when an opening is presented. The effect of the conditions actually existing is to almost completely nullify the power of our fighting ships. Picture to yourselves the plight of a battleship fleet operating in hostile waters against a fleet much smaller, but with all its elements complete. The smaller fleet, with scouts thrown out a hundred miles or more around its main body, every scout in touch with every other one and with the commander in chief, and with a horde of destroyers backing up the scouts and awaiting the word to attack, would gain and keep touch with the larger fleet while itself evading discovery, and would send its destroyers in at night, unchecked and unnoted by any protecting screen, to drive home an attack which might decide the issue without the main fleets ever having seen each other. And if nothing of this sort occurred, consider the situation where the fleet, with its fuel supply exhausted, finds itself without a reserve supply on which to draw.

There is a widespread and very dangerous opinion that all the fuel ships and scouts we need can be improvised on short notice from merchant vessels. This is one of those miserable fallacies based upon experience in the Civil War and the Spanish War, in both of which we won because our opponents were even more grotesquely unprepared than we were. The Civil War was, I suppose, the most costly war ever fought, and the most unpardonably wasteful in money and in human life. But its cost did not end with the end of the war. Apart from the tremendous pension list, which our most pacific friends insist upon charging up to what they are fond of calling militarism—although it was really the direct result of the criminal folly of unpreparedness—apart from this is the indirect cost of the perpetuation of that folly. Since we were successful in that war—so the implied argument runs—our preparation for it must have been of the kind that makes for success, and we can look for success hereafter from the same policy. To these gentlemen I commend the perusal of a book called "The Military Policy of the United States," by Gen. Emory H. Upton. If any of you here present to-night have failed to read this book, I urge you to read it at once. It exists in conveniently available form as Senate Document No. 494, Sixty-second Congress, second session. It would be interesting to know how many Senators have read it. It is the best antidote I know for the monstrous delusion which sees in every American citizen a soldier, trained, efficient, ready to take his place in the ranks at a moment's notice and sweep the loathed invader from our soil, and in every ship that floats a potential man-of-war complete in everything but guns.

By what seems almost a misfortune, in view of its effect upon the minds of many of our people, the delusion that we, alone of all the nations of the earth, can carry on a successful war without preparation was confirmed by our easy victory in the Spanish War, our opponent, again, being as unprepared as we were. I should be sorry to agree with those who hold that nothing short of an overwhelming defeat in some future war will ever open our eyes to the danger of existing conditions, and I wish to do my part toward opening the eyes of my countrymen before such disaster comes. We must recognize the fact that war is an art, and a very highly specialized art. For every task which it involves there is a need of special tools, efficient in themselves and contributing to the efficiency of the whole organization; and these can not be improvised. Yachts, tugs, and ferryboats can perform certain duties in waters close to our own coasts when they are absolutely unopposed, and any steamer capable of carrying a thousand tons of coal can get the coal to the fleet which is lying quietly outside a quiet port with no threat of interruption to its lines of communication; but no language is strong enough to characterize the fatuity of relying upon such tools for carrying on a real naval war. It is true, no doubt, that there are many fuel-carrying ships that can be utilized by the Navy in time of war; but let us consider, briefly, the characteristics which they should have, and then inquire how many of them we would probably find available in our waters on the sudden outbreak of war. First of all, a goodly proportion of them must carry fuel oil instead of coal or in addition to coal. Second, they must be large. A great number of small craft, manned by untrained crews and commanded by untrained officers, might be a fatal handicap to a fleet operating at sea. Third, they must be fast, for the speed of the fleet will be the speed of the slowest craft accompanying it. Fourth, they must have facilities for handling and transferring their fuel at sea.

I do not know how many such ships there are under the United States flag at this moment, but somebody ought to know how many there are and how and where they can be reached. This should all be provided for in advance; but when it is provided for, it is safe to say that the number will be far short of what a fleet would need, and it is clear that, at the best, such craft could not work at maximum efficiency with a fleet engaged in operations where perfect military coordination is of the first importance.

We need, then, in order to make our 37 or our 47 battleships efficient, more large, fast Navy fuel ships of the *Jupiter* type, many more destroyers, and a considerable number of scout cruisers, designed and built as such, with a speed of not less than 28 knots.

It goes without saying that in these days a scout should carry aeroplanes to be launched from her decks, and this means, of course, that we need a large number of these, and of the most efficient type obtainable. It has been suggested that we can rely upon aeroplanes alone for scouting, sending them out from battleships, and so dispense with cruisers altogether. This might work if no other function were involved than that of locating the enemy, but the screening duty of the outlying line of cruisers is even more important than the scouting duty. To discover an enemy force is helpful; to arrest its advance is far more so, especially when by arresting it we deny the enemy the information about our whereabouts and our movements which it will be his object to secure.

We are weak in submarines; and the submarine, as you are all aware, has within the last few months established its claim to very serious consideration as an element in naval warfare. It has not shown itself the master of the battleship, and I doubt if it will ever do so. But it has taken a more commanding place than most of us have here-

tofore assigned it. I should rejoice if we had to-day 100 submarines instead of less than half that number, built and building. Those that we have are only half efficient, because they lack tenders of the proper type to accompany them and care for their needs and the needs of their personnel. Here again crops up the old idea that a vessel for a special purpose, demanding special characteristics, and vitally necessary to the efficiency of a vital part of our naval force can be improvised out of any old craft which happens to be handy. And here again is illustrated the false economy which in providing a weapon efficient within itself denies it the support outside itself which alone can make it efficient in application.

Running parallel with the omissions in the fleet itself is a corresponding list of omissions in the provision for its upkeep—in dry docks and other navy-yard facilities especially. A fleet without dry docks of suitable capacity and suitably located is only a little less helpless than one without fuel ships.

We have at Guantanamo a station which should be the principal base of our fleet for operations in the Caribbean—the area in which, if anywhere, our control of the Panama Canal will be challenged. But not only have we no dry dock or efficient repair shops there, we have none within a thousand miles of it. Here the expenditure of $2,000,000 might conceivably double the efficiency of the fleet in some critical emergency by making it possible for every ship to go out in perfect condition; and it requires no stretch of the imagination to picture the issue of a war as hinging upon this point alone. After a battle, the importance of a dock close at hand for repairing damages is too apparent to require more than a passing mention. It might enable the fleet to take the sea again after a brief delay, with every advantage over an enemy fleet less favorably situated.

It is understood, of course, that every station which is designed to serve as a base of supply, of repair, or of refuge for the fleet should be adequately fortified. This is a phase of my subject upon which I should like to dwell at considerable length, but time—and other considerations—make it impracticable for me to do so.

If I have made myself clear up to the present point, you will understand by how narrow a margin we have missed efficiency in the composition of our fleet and the provision for its upkeep, and yet of what vast importance is the space that separates us from it. Two per cent, perhaps—5 per cent, certainly—added to our expenditures year after year would have added at least 50 per cent to the efficiency of the fleet as a whole.

* * * * * * * *

I come now to the question of personnel. In an ideal system the development here as regards both officers and men would keep pace automatically with the development of the fleet, through a law by which the authorization for a certain increase in the number of ships would carry with it the authorization for a corresponding increase in officers and men and for a reasonable flow of promotion. Failing this ideal, we should at least have a periodical readjustment, such as to maintain a personnel ample in numbers, amply trained, and so organized as to insure a flow of promotion which will secure contentment, foster ambition, and bring officers to the command of ships and fleets while still in the perfection of their mental and physical powers. Unfortunately, the present conditions are as far from this ideal as could be imagined. To begin with, we have not the officers and men to man our ships efficiently. This is serious enough, but much more serious is the fact that the promotion of officers is so completely blocked that a young man graduating from the Naval Academy must look forward to spending all the best years of his life in the two lowest grades of the service, to performing as a gray-headed man the same duties that he has performed as a boy, and to receiving but a very small increase in salary. I need not point out to you the inevitable effect of this upon efficiency.

For this condition I could not place the responsibility if I would. Congress long has been calling upon the Navy Department for a satisfactory personnel bill. Several bills have been prepared, and every one has had support. But none has had the cordial support of the Navy as a whole. A new one has been presented to Congress this month. I hope it is a good one, but I confess that I do not know.

In this matter, as in that of the fleet, the question of expense stands in the way of every easy solution that can be suggested. Here is the problem in a few words: We need in the three lower grades of the Navy—ensign, junior lieutenant, and lieutenant—a very large number of officers. We can find room in the highest grade, that of rear admiral, for very few. Let us say, simply as an illustration and without any attempt of arithmetical accuracy, that of 100 men who reach the lieutenant's list not more than 5 can ever become rear admirals. Our problem is to eliminate the other 95 between these two grades without injustice to individuals or unreasonable expense to the Government, always remembering that expense is of far less consequence than the efficiency of which it is the price. The interest of the Navy should naturally take precedence over the interest of individuals, yet if it appears that a given scheme, in conducing to the efficiency which we all so much desire, chances to conduce also to the advantage of individuals, it should not on that account be abandoned.

The enlisted personnel is inadequate for the manning of the fleet as it exists to-day, and falls far short of what would be absolutely necessary in time of war. And we have no reserve on which to call. The present shortage is variously estimated at from 5,000 to 18,000 men, the wide difference between these figures being accounted for by different views as to the manning of ships not actually present with the active fleet. The extreme view on one side is that battleships can be laid up at a navy yard for long periods of time, with 50 or 100 men on board, and still be counted as serviceable. The extreme view on the other side is that when a ship is to be laid up approximately half of her crew should remain with her, and she should be kept ready to join the fleet, not in a year or a month, but in 48 hours. If ships in reserve are to be borne on the Navy list, and to stand before the country as available for war, there is no doubt that the second of these views is the correct one. A battleship "in ordinary," as it is called, with less than a hundred men on board, might as well be eliminated from the list of ships available for any service within a reasonable length of time.

Added to the deterioration in the ships themselves, after a certain period of the neglect that is inevitable where crews are greatly reduced, is the fact that among the plans for utilizing the ships in an emergency is one which contemplates manning them with untrained or half-trained reserves. Such reserves may doubtless be made very useful in time of war if they can be distributed throughout the fleet, to be assimilated by the regular crews of active ships. But the fate of the *Good Hope* and the *Monmouth* is an object lesson on the folly of manning ships exclusively or even chiefly with reservists.

Here, again, I want to call attention to the mistake of providing the largest and finest fighting ships in the world—for this is what our dreadnaughts are, and it is largely due to the insistence of Congress that they are so—and balking at the comparatively trifling cost of providing the officers and men to make them fully efficient.

Other factors less concrete than those that I have named have militated and are militating against ideal efficiency. You will all understand that a fleet can not be efficient unless it has abundant opportunity for drilling as a unit. No matter how admirable may be the training and the discipline of the individual ships they will not work together efficiently as a fleet without the teamwork which comes from constant drilling in company with each other under the direction of the commander in chief. And their exercises must be progressive, leading up to war maneuvers on a large scale. We have had too little of this training at all times, and especially within the past year; the necessity of keeping the battleships in Mexican waters having been a controlling factor in all phases of administration of the Navy. This has not made for efficiency, but both the present commander in chief of the fleet and his immediate predecessor testify that the effect upon efficiency has not been as great as might have been expected. Many of the battleships have missed opportunities for target practice; but here, too, the commander in chief reports that the effect has not been disastrous. That conditions remain so good in spite of such extremely unfavorable conditions is a gratifying evidence of the excellence of our ships and the fundamental soundness of our personnel. We must, nevertheless, recognize that the necessity for using battleships in this way is seriously detrimental to their efficiency, and this throws further emphasis upon the importance of an all-around development of our fleet with the demands of peace in mind as well as those of war. If cruisers and gunboats had been available for service in Mexican, Haitian, and Santo Dominican waters, the battleships could have spent the past year together in a good climate carrying on their maneuvers and target practice under favorable conditions.

* * * * * * * *

I come now to what is perhaps the most important part of my subject—the organization of the Navy Department viewed from the standpoint of efficiency. There can be no question that the existing organization is inadequate and would break down under the strain of war. The administration starts from too many sources and flows through too many channels. It lacks the unity of purpose which would come from recognition of the fact that a navy has one excuse for existing, and only one—that it shall always be ready to strike on the minute and with every element of power concentrated behind its blow for the defense of the country.

Do not misunderstand me. I am not telling you that our organization is wholly bad. I am telling you that it is inadequate. In many cases it works rather surprisingly well. But if you analyze these cases you will find that, in so far as the results are good, they are so in spite of the system and because of some personal factor which has compelled efficiency. Moreover—and this is the crux of the whole matter—the cases with which we can deal at the present time are illustrations of peace efficiency, whereas the efficiency upon which our attention should be fixed unwaveringly is war efficiency—not because we are going to have war, but because we may have it, and because the one supreme duty of the Navy is to be ready for it if it comes.

I suppose this relation of the Navy to war, whether possible war or actual war, has always been understood more or less clearly; but it is a singular fact that the organization of the Navy Department takes no account of it. War is the one thing for which no arrangement is made. There are seven bureaus in the department, each with clearly defined duties, but in all the elaborate legislation creating these bureaus and defining their duties there is not a word about the duty of keeping the Navy in readiness for war or preparing plans for war or conducting war after it begins. There would be a certain element of comedy in this if there were not so many elements of possible tragedy. There is a bureau in the department charged with the construction and repair of ships, one with the design of machinery, one with the preparation of ordnance, one with the direction of personnel, and so on; but nowhere is it said, "This bureau shall be responsible for the readiness of the fleet for war, for the preparation of war plans, and for the conduct of war." This, then, is the last and great defect in the efficiency of the Navy. How shall it be remedied? The answer is, I think, by the creation in the Navy Department of a "division of strategy and operations," preferably not coequal with the present bureaus, but superior to them and standing between them and the Secretary. This arrangement would be a recognition of the fact that all the activities of the present bureaus should lead up to the Secretary through a channel which coordinates them all and directs them toward war efficiency.

The title proposed for the new office—division of strategy and operations—covers very completely the ground that I have in mind. As standing for strategy, this division would plan what to do; and as standing for operations, it would direct the execution of its plans. It would correspond more or less closely with the General Staff of the Army and the first sea lord of the British Admiralty, whose duties are thus defined:

"1. Preparation for war: All large questions of naval policy and maritime warfare—to advise.

"2. Fighting and seagoing efficiency of the fleet, its organization and mobilization, including complements of ships as affecting total numbers; system of gunnery and torpedo exercises of the fleet, and tactical employment of air craft, and all military questions connected with the foregoing; distribution and movements of all ships in commission and in reserve.

"3. Superintendence of the war staff and the hydrographic department."

These duties are all performed subject to the general authority of the first lord of the admiralty, who corresponds to our Secretary of the Navy; and I wish to emphasize the fact that I am not advocating a reorganization which would in any way reduce the authority of the Secretary.

I have spoken of strategy as shaping plans which are later carried out by operations. This is a convenient distinction but not an exact one, for in a broad sense strategy both plans and executes. It may be defined as the art of so shaping plans and directing forces as to concentrate the maximum of pressure upon the enemy at the time and place best suited to accomplish the purpose at which we aim. This evidently presupposes a clear conception of what the purpose is at which we aim and a careful preparation—in advance—of the forces and the plans required for attaining the purpose. The strategy of a farsighted nation does not begin with the beginning of war. It has its origin far back in the history of international relations and runs parallel with national policies, taking account of the ends at which these national policies aim and accepting their ends as its own.

First of all, then, strategy is preparation. Secondarily, it is execution; always, if it deserves the name of strategy, through the medium of forces and of plans previously prepared.

I have explained that the defects in the organization of the Navy Department are a lack of coordination of authority, as a result of which the administration starts from too many sources and flows through too many channels, and a total lack of provision for planning and carrying forward the operations of war. It must not be supposed that these defects have escaped recognition or that no efforts have been made to correct them. The most successful of the efforts to secure coordination between the bureaus was the adoption during the last administration of a system of aids to the Secretary, who coordinated the work of the various bureaus, and who, when important questions were under consideration, formed a council upon which he could call for advice. The weak point about this system was and is that the aids never have been legalized by Congress, and therefore have no permanent status whatever. In spite of this, they are in a position to do much toward improving the administration of the department.

The General Board was called into existence in 1900 by an order of the Secretary of the Navy, to provide a body for the consideration of war plans and allied subjects. It has performed, and is performing, work of the very highest importance, but it, like the Council of Aids, lacks legislative sanction, although Congress has for many years past shown great interest in its work and not a little deference to its views.

Another and a very important agency to which the Navy Department looks for a contribution to its work in strategy and other matters connected with preparation for war and the conduct of war is the Naval War College at Newport. The War College has been in existence since 1884 and has been an important factor in the education of officers from the very beginning. For some reason, however, it has failed until very recently to command the full recognition which it has deserved from the Navy Department or even from the officers of the Navy. The present Secretary of the Navy visited the college shortly after coming into office, and, with an insight of which many naval officers have shown themselves incapable, recognized its possibilities for usefulness and pronounced himself its friend. Since that time he has done everything to forward its work which could be dictated by the most thorough comprehension of its mission and its needs, and as a result of this generous support, both moral and material, the college has taken its proper place as an institution for the training of officers for high command, and for the development of the art of naval warfare. Thus the college is enabled to contribute something toward making good the lack of a strategic division in the Navy Department itself.

You will see, therefore, that although no law takes cognizance of the necessity for keeping the Navy ready for war, there are many agencies which cooperate toward that end—the Council of Aids, to which the Secretary would naturally turn in an emergency; the General Board; and the War College. These agencies are so closely in sympathy that they are able to cooperate harmoniously with each other and with the fleet, and this cooperation is having important and very valuable results. This does not change the fact that there should be—that indeed there must be—in the Navy Department itself and close to the Secretary, a coordinating office to bring the efforts of these and other agencies to an administrative focus bearing directly upon the efficiency for war. Such a coordinating office I have already sketched as a division of strategy and operations immediately below the Secretary of the Navy in authority.

The creation of this office would provide a policy for the Navy so far as the activities of the Navy itself are concerned, insuring unity of effort, and shaping plans toward the end which we have recognized to-night as the proper end of all our efforts—preparedness for war.

But a policy within the Navy is not enough. I have said of strategy that it should take account of national policy as applied to international affairs. We need, then, a policy broader than our naval policy and including it. This must be a national policy, dealing with both Army and Navy and bringing the broadest statesmanship as well as the highest technical knowledge to bear upon the whole question of national defense. Its enunciation must come from the highest authority in the land, executive and legislative.

This points to a council of national defense, for the creation of which a bill is already before Congress. In such a council, with the President of the United States at its head, we should have the last word in the coordination of national resources for national defense.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Mississippi.

The question was taken, and the amendment was rejected.

Mr. UNDERWOOD. Mr. Chairman, I move to strike out the word "sixteen" and insert the word "eleven."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

On page 64, line 15, strike out the word "sixteen" and insert the word "eleven."

Mr. UNDERWOOD. Mr. Chairman, I will not occupy the time of the House in any extensive argument. As I stated to-day, if we strike out one battleship and five submarines and the transport and the hospital ship it will amount to a saving of something like between eight and nine million dollars. On account of the deficit in the Treasury, I regret very much that the House has insisted on the two-battleship program. Of course, that is a decision for the House to make. Unless we are willing to cut the expenditures we might as well recognize the fact that we will be responsible for a serious deficit. I do not intend to take up the time of the House in useless debate, but I think it is only proper that I should renew the motion at this point, in order that the House may have another opportunity to say if it is willing to cut this program.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Alabama.

The question was taken; and on a division (demanded by Mr. UNDERWOOD) there were—ayes 85, noes 94.

Mr. UNDERWOOD. I ask for tellers.

Tellers were ordered, and the Chair appointed as tellers Mr. UNDERWOOD and Mr. ROBERTS of Massachusetts.

The committee again divided, and the tellers reported that there were 100 ayes and 96 noes.

So the amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 64, line 16, strike out the figures "3,405,000" and insert in lieu thereof "2,305,000."

The amendment was agreed to.

Mr. BROWNING. Mr. Chairman, I ask unanimous consent to print in the RECORD an article from the Washington Post entitled "Submarines can take supplies from the undersea depots that may soon surround the British Isles."

The CHAIRMAN. The gentleman from New Jersey asks unanimous consent to print an article in the RECORD which he mentions. Is there objection?

There was no objection.

The article is as follows:

SUBMARINES CAN TAKE SUPPLIES FROM THE UNDERSEA DEPOTS THAT MAY SOON SURROUND BRITISH ISLES.

BRIDGEPORT, CONN., *February 4, 1915.*

Simon Lake, the submarine-boat builder, discussing Germany's program of harassing English commerce by undersea attack, to-day stated that the plan was quite practical. With submerged bases of supplies, which undoubtedly already have been planted around the entire island, he said, there is no question in his mind that Germany can soon effect a complete blockade against provisions and arms.

BASES UNDER SEA.

"The success of the German raids," said Mr. Lake, "may be attributed to the use of submerged full and provisions stations, each one of which would supply food and fuel enough for any one submarine to continue activities for months. It is not necessary to look for surface tenders, which would be destroyed by the enemy, and possibly leave the submarine helpless.

"It is now possible to transfer coal from one vessel to another at considerable depth beneath the surface, and it is much simpler to pass liquid from one vessel to another. As far back as 1890 I had constructed a submerged craft of this kind, and successfully transferred a cargo from one boat to another in the Sound off Bridgeport. Sixteen tons of coal were transferred in nine minutes from a sunken barge to a submarine freighter.

AIR LOCKS SOLVE PROBLEM.

"The German submarines are practically Lake boats, as they have adopted all my devices, and it will be recalled that they have diving compartments, which are merely trapdoor contrivances in the bow, connecting the inner portion of the submarine by means of air locks, so that it is a simple matter for a diver to pass from within the boat to the bed of the sea and into another similar diving appliance in a sunken supply ship.

"I believe that, if not already surrounded, England will be soon, with these invisible supply stations, and that the present successes and future blockade of that country by German submarines will be fully accomplished by this method of attack."

The Clerk read as follows:

Eight of the submarine torpedo boats herein authorized shall be built on the Pacific coast: *Provided*, That the cost of construction on the Pacific coast does not exceed the cost of construction on the Atlantic coast plus the cost of transportation from the Atlantic to the Pacific.

Mr. PADGETT. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 64, line 24, strike out the word "eight" and insert the word "five."

The amendment was agreed to.

The Clerk read as follows:

One transport, to cost, exclusive of armor and armament, not to exceed $1,900,000.

Mr. FITZGERALD. Mr. Chairman, I make the point of order against the paragraph. It is not authorized by law. There is no authority to provide for a transport.

The CHAIRMAN. The Chair would ask the gentleman from Tennessee for what purpose this transport is to be used?

Mr. PADGETT. It is for the purpose of transporting marines of the Navy from point to point in the Naval Service.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I would like to be heard on the point of order.

The CHAIRMAN. The Chair is ready to rule. The Chair thinks that with all of the activities that go toward the necessary equipment of a navy, it would be considered a work in continuation of an establishment provided for by law, and the Chair therefore overrules the point of order.

Mr. TRIBBLE. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Amendment by Mr. TRIBBLE:

"I move to strike out lines 5 and 6, page 65."

Mr. TRIBBLE. Mr. Chairman, I do not care to be heard at length upon this question. I propose to offer an amendment to strike out the next two paragraphs. This transport and this hospital ship were not recommended by the Navy Department. They carry an appropriation of $4,150,000. The Secretary of the Navy does not want these naval auxiliaries at this time. He stated that he did not want them. I have a letter in my

office that he wrote to me since the Naval Committee reported this bill, since these provisions were forced upon the Naval Committee by the Republicans on the committee. The chairman did not vote for these provisions, and only two or three Democratic members of the committee voted for them. Nobody wants these ships. They are not fighting vessels. I move to strike them out, and I think I have said enough to show the Democrats that their duty is to vote with me on this amendment. [Applause.]

Mr. FITZGERALD. Mr. Chairman, I hope the amendment will prevail. Marines are carried on fighting ships, and they are expected to be landed as a part of expeditions in which fighting ships are needed. If the Navy Department needs transports to carry marines, it has two transports that are about to be turned over to it. A few years ago Congress appropriated money for the purchase of two vessels of 12,000 tons displacement to be used by the Isthmian Canal Commission in connection with the construction of the Panama Canal. Upon the completion of the canal, or when these vessels are no longer needed, they are to be turned over to the Navy Department as Navy auxiliaries. These two vessels—the *Ancon* and the *Cristobal*—cost $550,000 each, and have a displacement of 12,000 tons each. They are capable of carrying 1,000 men and officers and each has a speed of 12 knots an hour. It has been said that by the installation of an additional boiler in those vessels the speed can be increased to 14 knots an hour. There is no longer need for them in connection with the work of the Isthmian Canal. They were used to transport the heavy materials required in its construction. One of them has already been put out of commission, and has been used by the War Department to convey troops from Vera Cruz to the United States. The other is not expected to make more than a few more trips. If the Navy Department needs transports, it has them. There can not be any excuse at this time, considering the situation relative to the finances of the country, to justify the authorization of a transport for marines to cost practically $2,000,000. I hope the amendment will prevail.

Mr. ROBERTS of Massachusetts. Mr. Chairman, just a word with regard to the transports in the Navy. You will find in Ships' Data, page 106, that we have six so-called transports. One was completed in 1879, and is therefore 36 years old. The youngest of those ships was built in 1895, and is 20 years old. It is a ship of 1,100 tons burden. It is ridiculous to call a ship of 1,100 tons burden a transport. The transport that is most used—the only one, in fact, now fit for use in the Navy Department—is the *Prairie*, of 6,620 tons displacement, which was built in 1890, 25 years ago. The General Board said of these transports:

> Not one of the four improvised transports now in the service of the Navy, the *Hancock*, the *Rainbow*, the *Prairie*, and the *Buffalo*, is of the size or is fitted for the work required, nor of the character of construction needed for safety in ships carrying large bodies of men. All are old, single-skin ships, without proper water-tight subdivisions.

What are they doing? On the *Prairie*, the only decent transport we have, they are carrying between eight and nine hundred marines on a ship that is only fitted to carry between four and five hundred, and instead of these marines being carried directly from a port in the United States to some foreign port and there landed they are kept weeks or months on this transport. They must be until there is necessity for their employment on shore. The quarters are so crowded on this *Prairie* that hundreds—perhaps that is an exaggeration—but scores and scores of the men have to sleep in the open, exposed on the deck, where the spray or the waves from the sea and the rain from the heavens come down on them day and night.

Mr. JOHNSON of South Carolina. Will the gentleman yield to me to ask him a question?

Mr. ROBERTS of Massachusetts. Certainly.

Mr. JOHNSON of South Carolina. Did the gentleman know, when he voted into the bill a provision to build this transport, that the *Cristobal* and the *Ancon* were available?

Mr. ROBERTS of Massachusetts. The *Cristobal* and *Ancon* are old ships, and I——

Mr. JOHNSON of South Carolina. They were built since the Panama Canal was started.

Mr. ROBERTS of Massachusetts. They are older than the Panama Canal.

Mr. FITZGERALD. No; they are not.

Mr. ROBERTS of Massachusetts. And they are not fitted——

Mr. FITZGERALD. They are.

Mr. ROBERTS of Massachusetts (continuing). For transport service.

Mr. FITZGERALD. They are. The testimony of competent men is to the effect that you can easily carry 1,000, and that you could carry 2,000 marines——

Mr. ROBERTS of Massachusetts. For the sake of argument, admitting what the gentleman says, we would then be insufficiently supplied with transports.

Mr. FITZGERALD. We have more than we ever had.

Mr. ROBERTS of Massachusetts. We are building one. If even the *Ancon* and *Cristobal* are all the gentleman claims for them, we then would have a total of four reputable, decent, fit transports on which to carry our marines and sailors.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. ROBERTS of Massachusetts. Certainly.

Mr. HUMPHREY of Washington. The vessels the gentleman mentioned are the Boston Steamship Co.'s vessels which ran years ago out of Puget Sound.

Mr. FITZGERALD. And built in 1905.

Mr. ROBERTS of Massachusetts. Twenty years old, single-skin ships.

Mr. FITZGERALD. Nineteen hundred and five is not 20 years ago. They are the best ships that go from this country to South America.

Mr. ROBERTS of Massachusetts. But they are not properly constructed ships on which to carry from 800 to 1,000 human beings.

Mr. FITZGERALD. The gentleman is mistaken, for I have gone on those ships myself and I know something about them.

Mr. ROBERTS of Massachusetts. The fact the gentleman trusted his life to them has nothing to do with it.

Mr. FITZGERALD. The gentleman does not expect to put the marines in a captain's cabin.

Mr. ROBERTS of Massachusetts. But you expect to put them in some kind of a cabin and not on the open deck.

Mr. BUTLER. Marines are entitled to some place to sleep as much as Members of Congress, and it is——

The CHAIRMAN. The time of the gentleman has expired.

Mr. UNDERWOOD. Mr. Chairman, I understand the Secretary of the Navy has not asked for this transport; that they are building a transport now that was carried in the appropriation bill year before last, and with that the demands of the Navy will be amply met. If this motion is agreed to, it will take out of this bill an appropriation of $1,125,000. Now, it seems to me as far as this side of the House is concerned, no matter if gentlemen may have differences of opinion on the question of battleships and preparedness for war, this is purely a ship of aggression, to carry your Army or your Navy into a foreign field, and facing this Treasury deficit, if this side of the House is not willing to strike this item out of the bill, then you had better resign your commissions on the floor of this House. [Applause.]

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Georgia.

The question was taken, and the Chairman announced the ayes seemed to have it.

Mr. ROBERTS of Massachusetts. Division, Mr. Chairman.

The committee divided, and there were—ayes 111, noes 70.

So the amendment was agreed to.

The Clerk read as follows:

One hospital ship, to cost not to exceed $2,250,000.

Mr. TRIBBLE. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Strike out line 7, page 65.

Mr. TRIBBLE. Mr. Chairman, this House has just saved the country $1,900,000 by voting for my amendment and striking from this bill a transport, which added nothing to the fighting strength of the Navy if it had been built at this enormous expense. I now ask the membership of this House to strike out the hospital ship. The Secretary of the Navy says that this hospital ship is not needed; that even if war comes there are several old vessels now used for no purpose on earth that could be converted into hospital ships. Yet with his statement before us and even over the protest of the Secretary of the Navy and over the protest of the chairman of this committee and all the Democrats, except three on the Naval Committee who joined with the Republicans, this hospital ship, to cost $2,250,000, was inserted in this bill and has the support of the committee. I charge that the Republicans on the committee joined with three Democrats and loaded down this bill with things the Democratic administration did not want, and this ship is one of them. If you will vote for this amendment, we will save the country $4,150,000 in a few minutes, and I appeal to Democrats to support my amendment to strike out this hospital ship. [Applause.] The plucking board is dead; now let us continue to improve this bill and the Navy Department.

Mr. KELLEY of Michigan. Mr. Chairman, whatever the desperate situation of the Treasury may be, I hardly think it is in sufficiently distressed straits that this House will refuse to provide necessary hospital facilities for those defending the flag of the Republic on the high seas. [Applause.] The question, therefore, is whether or not this hospital ship is necessary for the proper care of the sick or wounded men of the Navy.

Mr. CALLAWAY. Mr. Chairman——

Mr. KELLEY of Michigan. I have not time to yield to the gentleman; the gentleman can take time when I get through. There is no question as to the necessity for this hospital ship. I want to say that in the entire Navy Department there is but one such ship—the *Solace*.

That ship was purchased in 1898 and has never been well adapted for the important use to which it has been put. It is an old vessel now, and was a commercial vessel when we purchased it. This Government paid $600,000 for it, in the first place, paid $100,000 to have it remodeled, and since that time has spent in fixing it up and in trying to make it suitable $776,000 more, or a total of $1,476,000. And those in charge of the Navy Department now say that it rolls and tosses upon the sea and is an unfit vessel in which to care for those who have been wounded or are sick. And not only that, but the vessel has practically outlived its usefulness and can not be depended upon any longer. An officer of the Navy Department told me that when the *Solace* brought home the sick and the wounded from Vera Cruz it had to lay up for six weeks at the docks in New York and could not go back to relieve the situation at Vera Cruz any further. Her engines are old, and it will require an expenditure of $40,000 to replace them. When these repairs are undertaken it will require many weeks to complete them before it can join the fleet again. Not only that, Mr. Chairman, but a fleet of 20 battleships is equivalent to a city of 20,000 people out upon the high seas, and you have nothing but this old hospital ship to take care of the sick and the wounded of that floating city, a vessel that was not intended for the purpose in the first place, and can accommodate only 234 patients, anyhow. And, further, in case the fleet is divided, and we have to send a part of it into the Pacific Ocean, we will have no hospital ship for that division of the fleet at all. This extra ship should be authorized in this bill. I want to say to you, Mr. Chairman, that this great Government, the richest on the face of the earth, blessed as no other nation has been in a material way in all the tide of time, has not come to a pass, I trust, when we must sacrifice the sick and wounded of the Nation's defenders in order to help out the Treasury of the United States. [Applause.]

Mr. PADGETT. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto close in 15 minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. GRAY. Mr. Chairman, if I have confidence in the Navy Department in one respect more than another, it is the confidence that these men will ask for enough money to carry on the service of that department. I have confidence that pride, sentiment, and enthusiasm which men have for the life work in which they are engaged, without responsibility to the taxpayers, as well as duty, will always prompt them to recommend sufficient appropriation for all necessary requirements. The Navy Department by its estimates submitted to the committee has said that this ship was not now needed. The Secretary of the Treasury has told us that this ship was not required. The chairman of the committee has urged that this appropriation was not necessary and opposed the provision for it in the bill. No naval officer who came before the committee declared for this ship as such an imperative necessity that it must be provided for at this time. The Members who voted for this ship in the committee were those who stand for a large Navy program regardless of cost to the people, and only by a few Members who stand in a position to be responsible to the taxpayers and for the condition of the Treasury joining with them was this appropriation voted in the bill. It does not represent the deliberate judgment of that part of the committee who recognize such responsibility and who realize the condition of our public finances, and should be stricken out.

Mr. COOPER. Mr. Chairman, I want to ask the gentleman from Massachusetts if these old ships are what are called single-skin ships?

Mr. ROBERTS of Massachusetts. They are; all of them.

Mr. COOPER. The *Titanic*, which sank and drowned 1,500 people, was a single-skin ship.

Mr. ROBERTS of Massachusetts. I do not know about that. These are single-skin ships, unfit to carry people on the ocean.

Again we have Democracy putting partisanship into this question of the increase of the Navy, partisanship in taking care of the national defense, and taking care of the welfare of the men behind the guns. The Democratic Party professes its love for the common, everyday fellow; but when they have an opportunity to express it they express it by giving him a stone instead of bread, and then cry partisanship when the Republicans, with a better appreciation of the men and the service, attempt to provide what is absolutely needed. The gentleman from Indiana [Mr. GRAY] says that not an officer asked for the hospital ship. Why, does he forget that when the Surgeon General was before us he said that we ought to have two hospital ships? Does he forget that Admiral Badger, lately in command of the Atlantic Fleet, said that we should have two hospital ships? Does he forget that Admiral Fletcher, now in command of the Atlantic Fleet, told the committee we should have two hospital ships? And yet he says nobody came before the committee and asked for a hospital ship.

Mr. Chairman and gentlemen, the Secretary of the Navy never made any objection to the transport and the hospital ship until after the bill was in this House.

Mr. GORDON. He did not ask for it, did he?

Mr. ROBERTS of Massachusetts. It is not fair for gentlemen to get up and say that the committee put into this bill these two items over the protest of the Secretary of the Navy. I want to read what the Surgeon General said in the hearings:

> You can not build a hospital ship in a short time in case of war.

He told us we ought to have one with the Atlantic Fleet and one with the Pacific Fleet, one on the east coast, and one on the west coast. And he said they—

> Should be provided in peace times, and if the big fleets go south, far, far away, with the necessity with large bodies of men for giving in many cases a more careful treatment by specialists the necessity for hospital ships is apparent. And also for the transportation back and forth of the various sick we need hospital ships.

And yet the impression is sought to be given out, when this administration discovers it is not competent to raise money to carry on the Government and we must economize in the Navy, that we have forced these things on the department against their protest, which I wish to deny emphatically, because there was no objection to transports from the Secretary of the Navy before the committee when we were making up this increase in the Navy.

The gentleman who made that statement, that we forced this into the bill against the protest of the Secretary, either does not know the condition of affairs or he is making a statement that has no foundation.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. UNDERWOOD. I shall detain the House but for a moment. The gentleman from Massachusetts [Mr. ROBERTS] has been a member of this committee for 16 years. Only in the last six months has he waked up to the necessity of having a hospital ship in the Navy. [Applause on the Democratic side.] The Secretary of the Navy has unquestionably not asked for appropriation of over $2,000,000 for this purpose. There is no doubt in the world but that we have facilities for taking care of the sick and wounded. At Vera Cruz——

Mr. ROBERTS of Massachusetts. Mr. Chairman, will the gentleman pardon me for a moment?

The CHAIRMAN. Does the gentleman from Alabama yield to the gentleman from Massachusetts?

Mr. UNDERWOOD. I yield.

Mr. ROBERTS of Massachusetts. It was at Vera Cruz that the necessity was shown for a hospital ship.

Mr. UNDERWOOD. When it was necessary to transport our sick and wounded from Vera Cruz we brought them here in good condition. There was no complaint made that they were not handled and properly taken care of. The Secretary himself has said so. We are informed by a member of the committee that there are plenty of ships in the Navy that can be used for hospital ships. This time is no time to make appropriations for new ships that are not needed. The gentleman from Massachusetts would vote for every appropriation for a battleship or a naval supply ship, even if it swamped the Treasury of the Government of the United States. [Applause on the Democratic side.]

Mr. ROBERTS of Massachusetts. Oh, Mr. Chairman, the gentleman, if he followed my votes to-day, knows better than that.

Mr. UNDERWOOD. Where did the gentleman vote to-day against anything to increase the expenditures?

Mr. ROBERTS of Massachusetts. I voted against four battleships, and I voted against two battle cruisers. I have voted against the amendment of the gentleman from Texas [Mr. SLAYDEN] for 23 submarines.

Mr. UNDERWOOD. I do not controvert the gentleman's statement.

Mr. ROBERTS of Massachusetts. Do not make a statement of that kind without knowing.

Mr. UNDERWOOD. The gentleman has voted for the full amount of supplies that he could get in this bill.

Mr. ROBERTS of Massachusetts. I challenge that statement. In the committee I voted against big appropriations for a larger number of ships. The roll call will show it.

Mr. UNDERWOOD. I will ask the gentleman a question myself. If you could have put in this bill in committee four battleships instead of two, would you have voted for it?

Mr. ROBERTS of Massachusetts. No, sir. I voted against it in the committee. Is there any other question the gentleman would like to ask?

Mr. UNDERWOOD. Mr. Chairman, I will proceed, if the gentleman will take his seat. I have the floor. The gentleman stands here to advocate the building up of the Navy always. [Applause on the Republican side.]

Mr. ROBERTS of Masssachusetts. I will not deny that charge.

Mr. UNDERWOOD. The first consideration with him is the building up of a great Navy. My contention is that the gentleman from Massachusetts ought not to lead the Democratic side of this House.

Mr. ROBERTS of Massachusetts. I would not attempt it. [Laughter on the Republican side.]

Mr. UNDERWOOD. Mr. Chairman, I call the gentleman from Massachusetts to order. I expect always to treat gentlemen on the floor of this House with decency and politeness.

Mr. ROBERTS of Massachusetts. Does the gentleman call it decency and politeness to say such things to a fellow Member?

Mr. UNDERWOOD. I wish the gentleman to understand that I am willing to yield at the proper time, when he addresses the Chair in the proper way, but I do not propose to be interrupted by ruffian tactics on the floor of this House. [Applause on the Democratic side.]

Mr. ROBERTS of Massachusetts. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Alabama yield to the gentleman from Massachusetts?

Mr. UNDERWOOD. No; I do not yield.

The CHAIRMAN. The gentleman declines to yield.

Mr. ROBERTS of Massachusetts. Will not the gentleman yield a moment?

Mr. UNDERWOOD. I will yield if the gentleman interrupts me properly.

Mr. ROBERTS of Massachusetts. I want to ask the gentleman if he calls it fair and courteous treatment to misrepresent in this House my votes cast in his presence and my vote in committee, of which he knew nothing?

Mr. UNDERWOOD. I do not wish to misrepresent the gentleman's position.

I was under the apprehension that the gentleman had voted for the largest amount. When he said he had not I accepted his statement, but that was no reason why he should interrupt my speech at every sentence——

Mr. ROBERTS of Massachusetts. Mr. Chairman——

Mr. UNDERWOOD. I refuse to yield further.

The CHAIRMAN. The gentleman refuses to yield.

Mr. UNDERWOOD. Now, Mr. Chairman, I want to say to the membership of this House that I am not opposed to a reasonable Navy, that I am not opposed to the protection of our country, but I do say it is time for the Democratic side of the House to take charge of this bill. [Applause on the Democratic side.] I hope they will take charge of it by taking out this hospital ship, and I move to close further debate on this paragraph.

The CHAIRMAN. The gentleman's time has expired. The question is on the amendment offered by the gentleman from Georgia.

The question was taken; and on a division, demanded by Mr. ROBERTS of Massachusetts, there were—ayes 135, noes 73.

Accordingly the amendment was agreed to.

Mr. ROBERTS of Massachusetts. Mr. Chairman, I offer an amendment as a new paragraph. Lines 5 and 6 having gone out, I offer it after line 4. I move to insert the words—

One gunboat, to cost not exceeding $750,000.

Mr. TRIBBLE. I make the point of order that that paragraph has been passed.

The CHAIRMAN. The Chair does not think so.

Mr. TRIBBLE. We passed that paragraph and cut out the two succeeding lines.

The CHAIRMAN. The gentleman must remember that those lines went out, and the gentleman is now offering the paragraph at the only point where he can offer it, and the Chair thinks the amendment is in order.

Mr. TRIBBLE. Will the Chair hear me?

The CHAIRMAN. Certainly.

Mr. TRIBBLE. The gentleman goes back to line 4. On my motion lines 5 and 6 were cut out. Now he proposes to go back.

The CHAIRMAN. He must go back in order to have a place to offer his amendment. The language was cut out on the gentleman's motion, and he has got to go back.

Mr. TRIBBLE. I make the point of order that we have passed that paragraph.

The CHAIRMAN. The Chair overrules the point of order. The Clerk will report the amendment.

The Clerk read as follows:

Page 65, after line 4, insert:
"One gunboat, to cost not exceeding $750,000."

Mr. PADGETT. Mr. Chairman, if the gentleman will yield a moment, I want to ask that that amendment be agreed to. It was recommended by the Secretary, and the gunboats are needed very badly, especially in foreign waters, to do the duty that they can do. Without these gunboats they must use battleships.

Mr. ROBERTS of Massachusetts. I trust the request of the chairman of the committee will be acceded to.

The CHAIRMAN. The question is on the amendment of the gentleman from Massachusetts.

The question was taken; and on a division (demanded by Mr. ROBERTS of Massachusetts) there were—ayes 91, noes 109.

Accordingly the amendment was rejected.

The Clerk read as follows:

Except where otherwise directed, the Secretary of the Navy shall build any of the vessels herein authorized in such navy yards as he may designate should it reasonably appear that the persons, firms, or corporations, or the agents thereof, bidding for the construction of any of said vessels have entered into any combination, agreement, or understanding the effect, object, or purpose of which is to deprive the Government of fair, open, and unrestricted competition in letting contracts for the construction of any of said vessels.

Mr. FOWLER. Mr. Chairman, I move to strike out the word "reasonably," in line 10.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 65, line 10, strike out the word "reasonably."

Mr. FOWLER. Mr. Chairman, I ask for the passage of this amendment because it may be that in the letting of these contracts the Secretary of the Navy might lay too much stress upon the word "reasonably," and feel that before he can refuse to accept the bids of any company or trust for the construction of any of the vessels authorized in this bill he must know to a moral certainty that a conspiracy has been entered into by such company, firm, or trust to destroy competition. He might feel that the proof of such combination should be strong enough to leave no reasonable doubt upon his mind.

There is not much difference in the ordinary practical construction of the terms "reasonably certain" and "certain beyond a reasonable doubt," especially when the interests of the trusts are at stake. I trust that the amendment will be agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois [Mr. FOWLER].

The amendment was rejected.

Mr. COOPER. Mr. Chairman, I move to strike out the last word. I would like to inquire of the chairman of the Committee on Naval Affairs why this paragraph does not provide specifically for the building of at least some of these vessels in the Government yards in order that our mechanics may be kept busy and the Government always be supplied with trained mechanics competent to do such work?

Mr. PADGETT. There is no necessity for it. The Secretary of the Navy is very strong on that side and is building all he can crowd into the yards.

Mr. COOPER. But this paragraph would not permit him to exercise his choice unless he first be convinced that there is a combination which would deprive the Government of fair competition among bidders.

Mr. PADGETT. He can construct them anywhere, and this directs him to do it if he is satisfied there is any combination or agreement depriving the Government of unrestricted competition.

Mr. COOPER. The gentleman is mistaken. That is not the proper interpretation of the language of the bill—

Except where otherwise directed, the Secretary of the Navy shall build any of the vessels herein authorized in such navy yards as he may designate should it reasonably appear that the persons, firms, or corporations, or the agents thereof, bidding for the construction of any of said vessels have entered into any combination, agreement, or under-

standing the effect, object, or purpose of which is to deprive the Government of fair, open, and unrestricted competition in letting contracts for the construction of any of said vessels.

Under that language the Secretary is absolutely prohibited from building any of these vessels in a Government yard unless he shall first be convinced that there is a combination among the persons, corporations, or firms bidding for the contract.

Mr. PADGETT. The gentleman is mistaken about that. The Secretary has been building vessels under that same language; he built a transport and a supply ship, one at Philadelphia and one at Boston, under this identical language.

Mr. BUCHANAN of Illinois. Will the gentleman yield?

Mr. COOPER. Yes; I yield to the gentleman.

Mr. BUCHANAN of Illinois. I would like to call the attention of the gentleman from Wisconsin to the paragraph on page 66, which it seems to me governs this question.

Mr. COOPER. What line?

Mr. BUCHANAN of Illinois. The last paragraph, beginning at line 15, where it says—

No part shall be used to procure through purchase or contract any vessels, armament, articles, or materials, which the navy yards, gun factories, or other industrial plants operated by the Navy Department are equipped to supply, unless such Government plants are operated approximately at their full capacity for not less than one regular shift each working day, except when contract costs are less than costs in said Government plants, and except when said Government plants are unable to complete the work within the time required, and except in cases of emergency.

Mr. COOPER. That does not meet the point I make against the paragraph on the preceding page, the paragraph we are now considering. The particular paragraph now before us is, in my judgment, susceptible only of the construction that I put upon it. The ordinary rule of statutory construction is that the mention of one thing is the exclusion of the other; and therefore, as this paragraph expressly provides that the Secretary of the Navy may build in a navy yard if convinced that the bidders are in a combination which prevents competition among them, it follows, of course, that he can not build in a navy yard unless he is so convinced. He has first to be convinced that there is a combination among bidders, otherwise he can not build in a Government yard.

Mr. PADGETT. The gentleman is mistaken, because they have been building in the Government yards under this identical language.

Mr. COOPER. I am absolutely right, and I appeal to any lawyer on the floor. I distinctly remember that previous bills contained language different from this before they passed the House.

Mr. BUCHANAN of Illinois. Will the gentleman yield? I am intensely interested in this, and if the paragraph on page 66 does not overcome the prohibition I want it remedied.

Mr. PADGETT. Mr. Chairman, in order to clear up the matter I move to strike out the words "except where otherwise directed," in line 8, page 65. Then it will read:

The Secretary of the Navy shall build—

And so forth.

Mr. COOPER. No; that does not meet it at all.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. COOPER. Mr. Chairman, I ask for five minutes more. This is a very important matter.

The CHAIRMAN. The gentleman from Wisconsin asks that his time be extended five minutes. Is there objection?

There was no objection.

Mr. COOPER. I speak of this because in previous Congresses we have had very earnest discussions on this floor over propositions to require the Secretary of the Navy to build at least one vessel in a Government yard. Such a provision has been mandatory in some of the bills, and required him to build certain of the ships in Government yards, the argument in favor of that sort of legislation being that the Government ought at all times to have in its employ experts competent to do high-class naval construction work.

This paragraph is susceptible only of the construction I have put upon it, which is that the Secretary of the Navy must let contracts for constructing these vessels to private bidders unless it shall appear that there is a combination among them—a thing difficult for him to know. How can he determine whether there is a combination to prevent competitive building? In previous Congresses—and the gentleman from Illinois [Mr. BUCHANAN] will remember this—we have had protracted debates on this identical proposition.

Mr. ALEXANDER. What amendment does the gentleman suggest to obviate that?

Mr. COOPER. In previous laws there have been mandatory provisions requiring the Secretary of the Navy to build certain vessels in Government yards to be selected by him.

Mr. PADGETT. We can not build a battleship in a navy yard now, because the only yard that can build a battleship has two in it, and it will be two years before they will be out of the way. It is impossible to build a battleship in a Government yard at this time. We authorized one last year, 10 months in advance.

Mr. COOPER. I am not talking about the facts; I am talking about the construction of this proposed law. The chairman of the committee now gives a different reason. He seems now to acquiesce in my interpretation of this proposed law, but says they could not be built in a Government yard anyway.

Mr. PADGETT. I say as a matter of fact they can not do it. The Secretary has full authority and has been building them all along.

Mr. MAHER. Mr. Chairman, I offer the following amendment, which I send to the desk.

The Clerk read as follows:

Line 16, page 65, strike out the period and insert a colon and add: *Provided*, That the Secretary of the Navy is hereby authorized to build any of the vessels herein authorized in such navy yards as he may designate.

Mr. MAHER. Mr. Chairman, there seems to be some merit in the contention of the gentleman from Wisconsin [Mr. COOPER], and to clear up the situation I have offered this amendment. I believe the Secretary of the Navy, from his position in the past, is in favor of keeping the navy yards up to their present high efficiency, and this amendment gives him power to provide for the building of any of the vessels herein authorized in the navy yards.

I am sure, judging from the results of the past, that the Secretary of the Navy will so arrange the building program that many of the vessels will be constructed in the navy yards of the country.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from New York.

Mr. COOPER. Mr. Chairman, I would like to be heard in support of the amendment.

Mr. PADGETT. I have no objection to the amendment.

Mr. COOPER. Very well.

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I move to strike out the words "except where otherwise directed."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 65, line 8, strike out the words "except where otherwise directed."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Construction and machinery: On account of hulls and outfits of vessels and machinery of vessels heretofore and herein authorized, to be available until expended, $22,114,459.

Mr. PADGETT. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

Page 65, line 20, strike out the figures "$22,114,459" and insert in lieu thereof the figures "$20,664,459."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. FOWLER. Mr. Chairman, I move to strike out the last word. I want to ask the chairman of the committee if that amendment proposed by him is sufficient to make allowance for the two paragraphs which were stricken out above on page 65?

Mr. PADGETT. That is what it is for.

Mr. FOWLER. But $4,000,000 was stricken out there.

Mr. PADGETT. That is, the authorization, but the appropriation is carried here.

Mr. FOWLER. There were more than $4,000,000 cut out.

Mr. PADGETT. No.

Mr. FOWLER. Yes; $1,900,000 and $2,250,000.

Mr. PADGETT. One million and nine hundred thousand dollars is the limit of cost, but you do not appropriate the whole amount the first year. It takes two years to build it.

Mr. FOWLER. Then the figures "$22,114,459" do not cover the entire cost for the provisions in lines 5 and 6?

Mr. PADGETT. They do not.

Mr. FOWLER. Mr. Chairman, I withdraw the pro forma amendment.

The Clerk read as follows:

Increase of the Navy, equipment: The unexpended balance on June 30, 1915, shall be transferred to appropriation "Increase of the Navy, construction and machinery," and beginning with July 1, 1915, equip-

ment outfits shall be charged to appropriation "Increase of the Navy, construction and machinery."

Mr. FITZGERALD. Mr. Chairman, I reserve the point of order on that. What does this do?

Mr. PADGETT. In the bill of last year the Bureau of Equipment was abolished, and this is simply to distribute the money that was appropriated under the bill with that bureau in existence to the other bureaus.

Mr. FITZGERALD. Mr. Chairman, I withdraw the point of order.

The Clerk read as follows:

Increase of the Navy; armor and armament: Toward the armor and armament for vessels heretofore and herein authorized, to be available until expended, $19,048,998.

Mr. PADGETT. Mr. Chairman, I move to strike out the figures "$19,048,998," in line 9, page 66, and insert in lieu thereof the figures "$18,588,988."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Tennessee.

The question was taken, and the amendment was agreed to.

Mr. TAVENNER. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. TAVENNER:

Page 66, line 9, after the figures "$18,588,998," strike out the period and insert in lieu thereof the following: ": *Provided*, That the Secretary of the Navy shall not consider any bid for the supplying of the armor or armament herein provided for unless such bid is accompanied by a sworn list of stockholders and bondholders of the corporation, submitting such bid, such list of stockholders and bondholders to be taken from the books of said corporation as of date of July 1, 1914: *And it is further provided*, That such list of stockholders and bondholders shall be transmitted in a separate report by the Secretary of the Navy."

Mr. PADGETT. Mr. Chairman, I reserve a point of order—I will make the point of order.

The CHAIRMAN. The Chair sustains the point of order, and the Clerk will read.

The Clerk read as follows:

Total increase of the Navy heretofore and herein authorized, $45,909,801.

Mr. PADGETT. The total there has to be increased, and we got authority to change totals.

The CHAIRMAN. That has already been agreed to.

Mr. PADGETT. I simply desire to call attention to it.

The Clerk read as follows:

Of each of the sums appropriated by this act, except such amounts as may be required to meet obligations authorized in previous acts and for which contracts have been made, no part shall be used to procure through purchase or contract any vessels, armament, articles, or materials which the navy yards, gun factories, or other industrial plants operated by the Navy Department are equipped to supply, unless such Government plants are operated approximately at their full capacity for not less than one regular shift each working day, except when contract costs are less than costs in said Government plants, and except when said Government plants are unable to complete the work within the time required, and except in cases of emergency.

Mr. BUCHANAN of Illinois. Mr. Chairman, I desire to offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 66, line 24, after the word "emergency," insert:

"*Provided*, That hereafter no appropriation shall be available for the salary or pay of any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States Government while making or causing to be made with a stop watch or other time-measuring device a time study of any job of any such employee between the starting and completion thereof or of the movements of any such employee while engaged upon such work; nor shall any appropriation hereafter be available to pay any premium or bonus or cash reward to any employee in addition to his regular wages, except for suggestions resulting in improvements or economy in the operation of any Government plant; and no claim for services performed by any person while violating this proviso shall be allowed."

Mr. PADGETT. Mr. Chairman, I reserve a point of order on that. This is different from the provision we put in the Army bill.

Mr. BUCHANAN of Illinois. I do not know on what ground the gentleman from Tennessee makes the point of order, but I will agree this language is different from that on the military bill; but——

The CHAIRMAN. The Chair will call the attention of the gentleman from Illinois that this provision makes permanent law by inserting the word "hereafter."

Mr. BUCHANAN of Illinois. My reason for desiring this in this language is that it probably will prevent having this up in connection with every appropriation bill that passes the House, and for that reason I thought action at this time, when we are pretty well represented, would be desirable. I will agree that if the point of order is made it will be well taken.

Mr. PADGETT. Mr. Chairman, the point of order is on two grounds. First to the word "hereafter," which makes it permanent law, and then there is another part, which is legislation, in the last two lines, "and no claim for services performed by any person while violating this proviso shall be allowed."

Mr. BUCHANAN of Illinois. That was in the other one.

Mr. PADGETT. I know, but the point was not raised in the discussion of the other.

The CHAIRMAN. The Chair sustains the point of order as to the word "hereafter."

Mr. BUCHANAN of Illinois. Then I desire to offer the following amendment.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 66, line 24, after the word "emergency," insert:

"*Provided*, That no part of the appropriations made in this bill shall be available for the salary or pay of any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States Government while making or causing to be made with a stop watch or other time-measuring device, a time study of any job of any such employee between the starting and completion thereof, or of the movements of any such employee while engaged upon such work; nor shall any part of the appropriations made in this bill be available to pay any premium or bonus or cash reward to any employee in addition to his regular wages, except for suggestions resulting in improvements or economy in the operation of any Government plant; and no claim for services performed by any person while violating this provision shall be allowed."

Mr. MANN. Mr. Chairman, I make the point of order.

Mr. TRIBBLE. Mr. Chairman, I make the point of order.

The CHAIRMAN. The Chair sustains the point of order on the last two lines, which read:

And no claim for services performed for any person while violating this proviso shall be allowed.

The Chair thinks that is clearly subject to a point of order.

Mr. BUCHANAN of Illinois. I ask to amend the amendment by striking out that part.

The CHAIRMAN. The gentleman offers the amendment with that language stricken out.

Mr. MOORE. Is that a request for unanimous consent?

The CHAIRMAN. No; the gentleman offers it as an amendment.

Mr. MOORE. Will the gentleman yield at that point?

Mr. BUCHANAN of Illinois. Yes.

The CHAIRMAN. Does the gentleman make the point of order?

Mr. MANN. Mr. Chairman, I make the point of order. I understood the gentleman was going to offer an amendment.

The CHAIRMAN. The gentleman offers an amendment now with those words stricken out. Does the gentleman make the point of order with those words stricken out?

Mr. MOORE. I do not make the point of order on the amendment as modified if those words have been stricken out.

The CHAIRMAN. Those words have been stricken out.

Mr. MANN. Mr. Chairman, I ask unanimous consent that it be considered as reported.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FITZGERALD. I want to suggest that the word "bill" occurs in two places, and it should be changed to "act."

The CHAIRMAN. The Clerk will report the suggestion made by the gentleman from New York [Mr. FITZGERALD].

The Clerk read as follows:

Change the word "bill" wherever it occurs in the amendment to the word "act."

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. MOORE. Mr. Chairman, this is an amendment to abolish the Taylor system, so far as it applies to the Naval Service, is it not?

Mr. BUCHANAN of Illinois. That is the purpose.

Mr. MOORE. A similar provision was passed during the pendency of the Army bill, and it has had its effect on some of the arsenals already, as I am informed. I want to ask the gentleman whether or not he knows that there is quite a protest on the part of employees against stopping the bonuses that have been received for extra work?

Mr. BUCHANAN of Illinois. I will say to the gentleman, if he will yield, that my information on that is that the protest has been worked up by the officers in the Frankford Arsenal who are opposed to this legislation, just as employers always seem to be able to find some employees whom they can coerce or influence in some way to come and oppose eight-hour measures, like they did the woman's eight-hour day here and in Illinois. So far as its being the position of the majority of the employees who have courage to speak for themselves, I do not believe there is any truth in the statement that they are opposed to it.

Mr. MOORE. Has the gentleman heard of any protests from Watertown?

Mr. BUCHANAN of Illinois. I have not heard any protests from Watertown. I will read here a statement from a representative of the men who have been seeking this legislation for a number of years, and not only that, but we have a great deal of information in the hearings. We had a special committee to investigate the Taylor system, and they reported in accord with the position taken by organized labor and the labor people who have been protesting against this. It has been established and stated by employers, a large majority of them, I believe, that it is not a system that is acceptable from the employers' point of view.

Mr. MOORE. I desire to say in view of what the gentleman from Illinois said, that probably 300 employees of the Frankford Arsenal have protested against the abolition of this system on the ground that it has worked a practical reduction of their wages. I know the gentleman will doubtless have the ear of the majority on this question, and that his amendment may pass, but I desire to inform him as a friend of labor that at least 300 men and women have protested against the abolition of the system in this instance.

Mr. BUCHANAN of Illinois. Mr. Chairman, I desire to state to the gentleman from Pennsylvania and the Members of the committee that this question has been investigated by those who are interested in the welfare of the working people.

Mr. MOORE. Is it not under investiagtion now by the Industrial Relations Commission?

Mr. BUCHANAN of Illinois. I do not know a thing about that. This is the information that I have.

Mr. MOORE. I am advised that the whole question of the Taylor system is under investigation now by a commission authorized by Congress and that commission has not yet reported upon it. It was also under investigation by a committee of the House.

Mr. BUCHANAN of Illinois. If the gentleman will permit me, I will read here a statement I have from those who have investigated this, giving the actual information on which I based my statement a few minutes ago. I will read a portion of it and insert the rest in the RECORD. It is as follows:

Hon. GEORGE F. CHAMBERLAIN,
Chairman Committee on Military Affairs,
United States Senate, Washington, D. C.

DEAR SIR: The clause in this year's Army appropriation bill on page 51, beginning with line 13, is directed against certain objectionable features of the Taylor system of shop management and similar systems, sometimes miscalled by the generic term of "scientific management." The clause prohibits time study of workman and the premium system of payment, which together form the basis for the speeding-up scheme invented by Mr. Taylor. This clause does not interfere with standardizing shop tools and equipment, systematizing production methods, or cost accounting. It is directed only against the abnormal stimulus to activity of the workman made possible by the time-study and premium system.

For your information as to our objections to these systems of shop management I refer you to the marked portions of our hearing before the Committee on Labor of the House during April, 1914 (copy sent herewith). This hearing contains, on pages 16 to 38, inclusive, my testimony before the Federal Commission on Industrial Relations in relation to organized labor's objections to certain features of so-called scientific management. This testimony is considered a rather concise statement.

On pages 38 to 52 of this hearing is written defense of the Taylor system as in operation at the Watertown Arsenal by Gen. Crozier (copy of which I also send herewith). The several subjects are discussed seriatim in my reply. This accounts for the disconnected presentation of the subjects.

This reply also contains many extracts from the writings of Mr. Taylor, showing the underlying purposes and aims of the system. The very fact that any system of the shop management contemplating such drastic and inhuman methods of dealing with employees should commend itself to officials of the Ordnance Department is an indication of the treatment employees could expect if the opportunity to force this system presented itself to those having charge of the work.

The full possibilities of this system has not been taken advantage of at the Watertown Arsenal. This we attribute to the fact that the department has been on its good behavior while several public investigations have been in progress. While the conditions of labor at the Watertown Arsenal, where they are going through the motions of using the system is bad enough, the conditions are not as bad as they would be had no opposition to the system developed.

It is also significant to us that Mr. Taylor has not repudiated any of his writings which were completed before it became necessary for him to defend his schemes before the public, and that the Chief of Ordnance can see nothing wrong or harsh about the aims and methods advocated by Mr. Taylor. These methods to the average man seem abhorrent because of the unadulterated greed displayed and utter disregard for the welfare of the workman.

While the annual reports of the Chief of Ordnance show many glowing accounts of the advantages of the system both to the workmen and the Government, the employees have as yet not been imbued with these alleged advantages to such an extent that they are willing to withdraw their opposition. The employees at the Watertown Arsenal even went so far as to refuse to avail themselves of a collective bargaining agreement proposed by Mr. Thompson, attorney for the Industrial Commission, unless it was specifically stated that the plan was not for the purpose of settling by arbitration their objections to the Taylor system.

As to the advantages to the Government through reduced costs of production by means of the Taylor system it was shown in the investigation by a special committee of the House in 1912 that the alleged savings recorded on page 16 of the 1911 Report of the Chief of Ordnance was largely due to the claim that one-half of the cost of material was saved by the system. It does not seem plausible that any system can save one-half of the material used in manufacture.

The information as to savings contained in subsequent reports of the Chief of Ordnance have not been investigated by others than those who are interested in proving the advantages of the system. However, all the alleged savings due to better equipment, high-speed tools, routing of work, and many other common-sense features which have been appropriated by Mr. Taylor as a part of his system would still be preserved after the passage of the restrictive clause herein advocated. Our case, however, does not stand or fall according to whether or not the system as in operation at the Watertown Arsenal has been developed to the point of oppression as yet. Any man of sound mind can see what such measures will lead to. After our power of resistance has been worn away by the system it will be too late to raise a feeble protest. The Military Affairs Committee is well acquainted with efforts made by every nation to prevent other rival nations from gaining strategic position on the high seas, because of what they can do with the advantage gained. This opposition is shown no matter what the nation about to gain the advantage promises.

Much has been made of the presumption that this system increases wages. This is exceedingly misleading. Mr. Taylor claims that by his system he will be able to hire common laborers usually getting about $1.50 per day and by paying them, say, $2 per day can teach them to do work for which the employer has to pay a mechanic $3 per day. This advanced stage of the development of the system has not been reached at the Watertown Arsenal as yet, but it can be attempted at any time the Chief of Ordnance decides. It would not prove that the system was good even though the Chief of Ordnance should pay the men $10 per day temporarily, which might be done in order to induce some to support the system while the opposition was active. That the Ordnance Department is not given to charity ordinarily is shown by the starvation wages now being paid women employees at the Frankford Arsenal at Philadelphia. They receive $1.16 per day at present.

Just after the passage of the present bill by the House the Ordnance Department stopped the time study and the premium system at Watertown and Frankford Arsenals; and the officials went out among the employes during working hours to persuade (?) them to protest against the clause herein advocated. When the premium was taken away from the aforementioned women employees their earnings dropped from about $2 per day to $1.16, the latter being the nominal day rate. It is well known that where piecework or any task system exists a wide difference is arbitrarily made between the day rate and the task earnings in order to make the task system appear attractive. If, however, the task work were abolished everyone knows that the day rate would have to be increased. These women who are unorganized, and who probably do not understand the economic basis for wages, might readily be led to believe that this artificial low wage is to be permanent and agree to protest, for the same reason that women in Illinois protested against the eight-hour law on the ground that it would reduce wages.

During the consideration of the eight-hour law by the Senate petitions were filed by workmen against the enactment of the law on the ground that it would reduce wages. These petitions were gotten up in much the same way as in the present case, namely, by the influence of the employer circulating the petitions.

At the Watertown Arsenal, where the employees have also gone back to daywork since the passage of the bill by the House, they are still anxious to have the bill pass.

It is also a significant fact that at the Watertown Arsenal, where the premium system has been in operation for several years, that the wages earned, premium and all, is no greater on the average than the wages received by the same grade of employes at the Boston Navy Yard, which is only 7 miles away; and whose wage scale is presumed to be regulated by the same facts. The reason for this is apparent. Under premium systems employees are usually expected to increase their earnings by working harder, when otherwise an increase should be given directly.

The petty injustices involved in this system are so numerous that it forms a daily ground for discontent among the employees. Employees at the Watertown Arsenal, for instance, inform us that the same amount of effort will net them vastly different results in earnings, showing that the time study is inaccurate, and that it is impossible to make it accurate. The variables, in the machinists' business especially, are so great that no exact standards can be set, and where arbitrary standards are set they result only in injustice to employees.

The last four conventions of the American Federation of Labor have gone on record against the Taylor system. In 1911 the present Secretary of Labor, William B. Wilson, was secretary of the committee of the convention that recommended against the system (see pp. 77, 287, and 296 of proceedings of the convention). The American Federation of Labor convention of 1913 also has in its proceedings as severe an indictment against the Taylor system as was ever written (see p. 299 of proceedings).

The Ordnance Department insists that we should wait for the report of the Federal Industrial Commission relative to the system in operation at the Watertown Arsenal. The department had up to date paid no heed to adverse reports made by four committees of Congress, and there is no reason to suppose they will cease their attempt to force the system on the employees unless compelled to by law. However, having had much to do with members and officers of the commission, I feel safe in saying that the commission will not make any investigation of the system at the Watertown Arsenal, and therefore no special report will be forthcoming, and their general report on "scientific management" is not likely to be made until after Congress extends the time for the existence of the commission, due to their lack of time to complete the scope of the work started. There has been enough said by the commission to indicate that they do not think these systems safe from the employees' point of view unless accompanied by collective bargaining in which the workmen shall have an equal voice with the management. This the War Department has indicated its unwillingness to agree to.

Our fear that the Ordnance Department will eventually displace the skilled, well-paid mechanic with cheap labor and by men of lower caliber is amply substantiated by a statement on page 15 of the last annual report of the Chief of Ordnance.

For your information I send herewith the documents herein referred to for verification, and also the reports from committees of both House and Senate on bills which aim to cover the same field as the proposed clause in this Army bill.

In order to obviate the necessity of attaching this clause to every appropriation bill passed by Congress, and thus needlessly take up much valuable time, it is respectfully requested that the word "hereinafter" and the words "or any other appropriation" be inserted in the places indicated in the paragraph before your committee.

As a representative of the employees concerned, I shall be glad to make any further explanation that I can, either in writing or orally.

We believe the workmen of the United States have a right to say how fast they want to work and the degree of temptation and stimulus they are willing to submit to day after day. We feel that we have a right to preserve the race from deteriorating influences.

Trusting this will receive your favorable consideration, I am,

Very respectfully, yours,

N. P. ALIFAS,
President District No. 44,
International Association of Machinists.

The CHAIRMAN. The time of the gentleman has expired. [Cries of "Vote!" "Vote!"]

Mr. TAVENNER. Mr. Chairman, I move to strike out the last word.

Answering the point raised by the gentleman from Pennsylvania as to whether the arsenal men are opposed to this——

Mr. PADGETT. Will the gentleman yield for a moment?

Mr. TAVENNER. Yes, sir.

Mr. PADGETT. I ask unanimous consent that debate on this paragraph and all amendments thereto close in five minutes.

Mr. MOORE. Will the gentleman embody in that the suggestion that we will get through quicker if the gentleman will listen to what is being said?

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that all debate on this paragraph and amendments thereto close—in what time?

Mr. PADGETT. Ten minutes.

The CHAIRMAN. Is there objection?

Mr. DONOHOE. Mr. Chairman, reserving the right to object, I would ask for three minutes.

Mr. BUCHANAN of Illinois. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by inserting a statement from the International Association.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

Mr. MOORE. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. TEMPLE. Mr. Chairman, I wish to call the attention of the House to a paragraph in the address delivered this morning by Romulo S. Naón, the Argentine ambassador, at the meeting of the United States Chamber of Commerce.

This distinguished diplomatist, who represents a friendly power with which our relations are of constantly increasing importance, has expressed a hope in which I am sure we can all join. If it could be realized, the injury done to neutral nations by the war in Europe would be diminished and at the same time the danger of controversy between neutrals and belligerents would be decreased.

Ambassador Naón said:

As you see, one of the practical measures suggested in this dispatch to relieve the needs of our exportations is bottoms enough. It seems to me that perhaps the way to meet this serious inconvenience—the getting of ships in sufficient numbers—would be to procure the complete neutralization of inter-American commerce. It is undoubtedly not an easy task at the present moment to solve as we would desire all the difficulties encountered by the neutral commerce of the world, in view of the conflicting interests of the belligerent countries; but there could be no reason which would justify opposition to the maintenance to the fullest extent and without any hindrance whatsoever of commercial interchange between the ports of our continent. I maintain that the complete neutralization of inter-American commerce ought to be recognized, and therefore I entertain the hope—or, more than that, I might say that I feel the certainty—that we would be able to have the countries at war agree with us in establishing the rule that during the present war no vessel engaged exclusively in the trade between American ports shall be subject to search, detention, or capture by a belligerent, no matter what flag she flies, so long as she is engaged exclusively in that commerce.

With such a rule, we should be able to obtain all the vessels we need for the promotion of our commerce with the United States and the other American Republics to the maximum, developing, as a consequence, our friendly relations with all of them and lessening the sorrowful conditions created by that war.

Mr. HELM. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

Mr. PAGE of North Carolina. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

Mr. HAMLIN. Mr. Chairman, I make the same request.

Mr. FARR. And I make the same request.

Mr. KETTNER. Mr. Chairman, I also ask unanimous consent to extend my remarks in the RECORD.

Mr. CURRY. And I the same, Mr. Chairman.

The CHAIRMAN. Is there objection to granting these several requests?

There was no objection.

Mr. KETTNER. Mr. Chairman, a few moments ago a distinguished Member of this House remarked to me: "Why are you in favor of two battleships and these submarines? I consider you a conservative business man and should like to have you explain your position to me." I answered by reminding him that our forefathers on the frontier always carried guns, not for the purpose of killing people, but because they recognized the dangers and the necessity for self-protection.

This is true with us on the Pacific coast, with our long coast line from Mexico, including Alaska. Just a year ago this same Member would probably have laughed had I stated that within five months nearly all of Europe would be at war. Who can say what a few years may bring forth? And, as our fathers carried weapons with which to defend themselves, I believe that it is the duty of the United States to provide for the protection of her seacoast.

For example, my home city of San Diego, within 16 miles of the Mexican border, and the first port of call in the United States north of the Panama Canal, occupies an important point in the defense of the Pacific coast. As we are holding an exposition there this year, I hope to have the pleasure of showing a great many of my friends in this House why we feel the need of protection and why we believe that important strategic points have been and are being overlooked.

The climate of San Diego is such that pleasure boats are never put up in the winter, and in the past 10 years there has been one storm where two or three yachts have broken from their moorings. Everything in the market is grown in the Imperial Valley all the year round and is sold in the San Diego markets at reasonable prices. Reports show that the coast just south is admirably suited to torpedo practice, the sand being of a peculiar spongy quality, upon which the torpedoes bounce, and we who study naval bills every year know something of what each torpedo costs and something of how many are lost in the average torpedo practice by being buried in the sand.

We know that for several years the target practice of the cruisers on the Pacific coast has been held at Magdalena Bay, off the Mexican coast.

It does not seem possible, in the light of these facts, that for 14 years a fuel wharf at San Diego was in the process of construction until last year the naval bill carried an appropriation with which to complete the building of coal bunkers and arrange for fuel-oil storage, and the importance of this station is now further recognized by an item of $40,000 in this bill with which to provide for further fuel-oil storage.

While I am not an extremist and do not believe in building up an aggressive navy, I do believe that we should have a navy sufficiently effective so that we can protect ourselves and command respect. I also believe firmly in strengthening our coast defenses, and I am sure, in the light of recent events, every right-minded person will agree that the coast cities are entitled to adequate protection. These remarks might have seemed strange a year ago, but times have changed.

This bill carries 2 battleships and 11 submarines, some of which will be built and stationed on the Pacific coast. They are urgently needed, and, after you have visited the Pacific coast this year, I believe you will agree with me, not only in regard to the harbor at San Diego but that the west coast, with its long shore line and few harbors, needs the protection of additional defenses at her harbors and additional vessels with which to guard her easily accessible and otherwise defenseless shore line.

Mr. TAVENNER. Mr. Chairman, there are 1,800 men working in the Rock Island Arsenal, and not one of these men has written to me protesting against the passage of this bill. On the other hand, I have received letters stating that the employees of that arsenal are highly elated over the fact that the House has passed a provision prohibiting the use of the Taylor system in the Government workshops.

Mr. Taylor describes his system in two different ways. One is for the general public and the other is for employers. He says in the one that the object of the system is to increase the pay of the workingman. Then he has a book of instructions to employers who are putting in this system, and in that book of instructions the statement is made that the test is made so strict that only one man out of five can keep up.

This system has been investigated by two committees of this House, and I am happy to say that two Members of this House who assisted in the investigation of that system are now members of the President's Cabinet, namely, the Secretary of Labor, Mr. Wilson, and the Secretary of Commerce, Mr. Redfield.

I want to say to Democrats here that in the campaign of 1912 the Speaker of this House spoke to those men at Rock Island and assured them that if the Democratic Party were placed in power, the Taylor system of scientific shop management would be taken out of the arsenals and navy yards, and I think it is up to this side of the House especially to redeem the promise that was made by our party leader.

Mr. MOORE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Illinois yield to the gentleman from Pennsylvania?

Mr. TAVENNER. Yes.

Mr. MOORE. The gentleman says he has received no protests from the working people at Rock Island against the enactment of this legislation. If the gentleman had received protests from people who had had their wages reduced by the withdrawal of that system he would present them here, would he not?

Mr. TAVENNER. Does the gentleman say his constituents are opposed to the bill eliminating the system?

Mr. MOORE. I am asking the gentleman the question, If he had received such protests, would he present them, as I have done?

Mr. TAVENNER. If I believed that the majority of the workmen were in favor of the system I would not be here speaking against it, but I know that the majority of the men are strongly against it.

Mr. MANN. Mr. Chairman, I do not know whether the Taylor efficiency system is in operation in any of the navy yards. I have never heard it discussed in connection with the navy yards. Does the gentleman from Tennessee [Mr. PADGETT] know?

Mr. PADGETT. I understand it is not in force in the navy yards.

Mr. CURRY. It is in force in a number of shops in some of the navy yards. It is in force in some of the shops at the Mare Island yard.

Mr. PADGETT. I understand the Taylor or stop-watch system is in force in some of the shops.

Mr. MANN. Two years ago the House, by resolution, provided for a commission to investigate the Taylor system. That commission was composed of Mr. Redfield, then a Member of the House and now the Secretary of Commerce; Mr. Wilson, of Pennsylvania, then a Member of the House and now the Secretary of Labor; and Mr. Tilson, of Connecticut, who was then a Member of the House and who will be a Member of the next House. That commission made an exhaustive study of the subject, but did not report advising that the Taylor efficiency system should be abolished.

Mr. TAVENNER. Mr. Chairman, will the gentleman yield?

Mr. MANN. For what?

Mr. TAVENNER. For a question.

Mr. MANN. Yes.

Mr. TAVENNER. I would like to ask the gentleman if he is aware of the fact that the chairman of that special committee, shortly after he made that report, did bring in a bill to this House providing for the abolition of the Taylor system in the arsenals?

Mr. MANN. I do not know that he did. If he did, it lay in a condition of "innocuous desuetude."

Mr. TAVENNER. The fact is as I have stated.

Mr. MANN. I do not yield to the gentleman for a statement. I do not know whether the Taylor efficiency system ought to be abolished, or whether it ought to be made use of; but here are two Cabinet officers in the President's Cabinet who investigated this subject, and who certainly know more about it than most of the Members of this House. It is within the power of the Secretary of the Navy at any time, by a stroke of the pen, to prevent the Taylor efficiency system being made use of in any of the navy yards now; and while it is true that we adopted a provision similar to this on the Army bill, I think that was mainly for the purpose of making a little further experiment in those arsenals where the Taylor efficiency system has been put in operation, much over the objection of many of the employees as applied there. It seems to me the part of wisdom for the House to leave it to the executive departments of the Government, as this would only apply for the next fiscal year. Doubtless the Secretary of the Navy, advised as he would be by the Secretaries of Commerce and Labor, who made this investigation and report before, is better qualified to determine how far the efficiency system should be enforced in the navy yards than are the membership of the House.

The CHAIRMAN. The time of the gentleman has expired.

Mr. DONOHOE. Mr. Chairman, the Taylor system of shop management is not in force in its entirety in the Frankford Arsenal, although I understand that some of its less objectionable features have been adopted there. A few days ago considerable excitement was caused among some of the employees of the Frankford Arsenal by reason of an order that was issued by the Chief of Ordnance abolishing a premium system that had been in force since 1910 at the arsenal. I know that the majority of the employees in the arsenal are opposed to anything like the stop-watch system, but those employees who are receiving very small wages and who have had a task system established for them feel that it is unfair and quite a loss to them to have this order enforced before the proposition in the Army bill abolishing bonuses becomes a law. They feel that it would be more reasonable to let things continue as they were until the 1st of July or until some more equitable wage scale is established.

The bonus system at the Frankford Arsenal was in force mostly in those departments where females are employed. It worked in this way: The wage rate for the women is $1.16 per day, but for the purpose of increasing the output the management of the arsenal said, "We will fix a task for you, and if you come up to it you shall receive $1.40 per day, and for all in excess of that task you shall receive half the rate that you get for producing the rest." The bonus for excess work brought the wages of the more efficient workers up to, I understand, $1.75 or more per day. Now, these women do not like the idea of going back to $1.16 per day, especially since the foremen have served notice on them that for $1.16 per day they will be expected to come up to their former tasks, for which they got at least $1.40 per day.

I believe, Mr. Chairman, that we have been pursuing an unwise policy in the matter of rates of wages. Instead of establishing a uniform wage scale for a particular class of work in the various shops of the Government throughout the country, we have obliged the commanding officers of those establishments to fix wages in accordance with the rates prevailing in the industrial establishments around them, and we know that it is——

Mr. BUCHANAN of Illinois. Will the gentleman yield?

Mr. DONOHOE. Yes.

Mr. BUCHANAN of Illinois. Does the gentleman know that the very system that he has explained there is the speed-up system?

Mr. DONOHOE. I do.

Mr. BUCHANAN of Illinois. And that makes inroads on the physical and mental resources of the working people, because it compels them to work under a strain.

Mr. DONOHOE. I have no desire to defend the Taylor system, because I regard it as a most inhuman one. [Applause.]

Mr. BUCHANAN of Illinois. And if they are fair to their employees and expect them to do as much as they did before, ought they not to pay them as much money as they did before?

Mr. DONOHOE. Absolutely so; but I contend that here is the place where we should fix the whole matter by providing for the establishing of uniform rates for the various Government shops in the country rather than by compelling the commanding officers, as we now do, to fix rates in accordance with the prevailing wage rates in their respective localities. The officers inquire of the establishments around them, and it is not reasonable to suppose that the management of these local establishments have any desire to cause the Government to fix rates that are too high for the locality. I feel, therefore, that Congress should correct this absurdity by the enactment of a law providing that the same wage rates shall prevail in all the various workshops of the Government. This would put an end to much of the trouble and would tend to establish rates of wages that would be more equitable than those now prevailing. In the meantime, Mr. Chairman, I should be glad to see the arsenal employees, who receive low wages, especially the females, continued on the bonus system until July next, when, I hope, more liberal rates of wages will have been established. It would be manifestly unfair and unreasonable to expect the employees to do as much work for $1.16 as they did when they were receiving $1.40 per day. The cost of living has steadily increased of late years, and wages must be increased if our present standard of living is to be maintained. [Applause.]

The CHAIRMAN. The question is on the amendment.

The question was taken; and on a division (demanded by Mr. MANN) there were 82 ayes and 21 noes.

So the amendment was agreed to.

MESSAGE FROM THE SENATE.

The committee informally rose; and Mr. DECKER having taken the chair as Speaker pro tempore, a message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had insisted upon its amendments to bills of the following titles, disagreed to by the House of Representatives, had agreed to the conference asked by the House on the disagreeing votes of the two Houses thereon, and had appointed Mr. SHIVELY, Mr. JOHNSON, and Mr. MCCUMBER as the conferees on the part of the Senate:

H. R. 19545. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War, and certain widows and dependent children of soldiers and sailors of said war; and

H. R. 20562. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War, and certain widows and dependent children of soldiers and sailors of said war.

NAVAL APPROPRIATION BILL.

The committee resumed its session.

The Clerk read as follows:

That no part of any sum herein appropriated shall be expended for the purchase of structural steel, ship plates, armor, armament, or machinery from any persons, firms, or corporations who have combined or conspired to monopolize the interstate or foreign commerce or trade of the United States, or the commerce or trade between the States and any Territory or the District of Columbia, in any of the articles aforesaid, and no purchase of structural steel, ship plates, or machinery shall be made at a price in excess of a reasonable profit above the actual cost of manufacture. But this limitation shall in no case apply to any existing contract.

Mr. MANN. Mr. Chairman, I make the point of order against the paragraph.

The CHAIRMAN. The Chair sustains the point of order.

Mr. MOORE. Mr. Chairman, I offer the following as a new paragraph.

The Clerk read as follows:

Page 67, before line 12, insert the following as a new paragraph:
"That no part of any sum appropriated by this act for the construction or equipment of vessels of the Navy shall be expended for materials purchased in a foreign country except like materials for construction or equipment can not be obtained in the United States."

Mr. PADGETT. Mr. Chairman, to that I make a point of order.

Mr. MOORE. Such an amendment was offered to the bill last year and a point of order was made, and the point of order was overruled. It is a germane amendment.

The CHAIRMAN. The Chair will hear the gentleman from Tennessee.

Mr. PADGETT. I do not care to say anything on the point of order.

The CHAIRMAN. The point of order is overruled.

Mr. MOORE. Mr. Chairman, this amendment proposes to limit the purchase of materials that enter into the construction of battleships and to protect the labor in the United States that creates those materials where such materials can be provided by our own labor. The rulings of the Treasury Department, based on the Panama Canal act, gives certain discretion to the departments, and particularly to the Department of the Navy, in the purchase of materials for the equipment of ships. That discretion pertains to the textile industry, for carpets and hangings must go on the ship; it enters into the glass industry, because glassware must go on the ships; it enters into the iron and steel industry, because those two commodities enter into the construction of the ships, and in fact it enters into very many elements of labor in this country that ought to be protected against unfair foreign competition.

The purpose of the amendment is plain—it restricts the power of the department to the purchase of commodities going into American ships to American-made goods unless those commodities can not be obtained within the United States.

Mr. BATHRICK. Mr. Chairman, I do not doubt but that the Members of the House understand the amendment just offered. If it prevails, it will put us back to where we once were when the only weapon we had against the Armor-Plate Trust was to threaten them with competition from Europe.

Mr. MANN. Mr. Chairman, there is quite a movement in the country in favor of "made in America." I believe there is a society or league advocating such a proposition, and I noticed the other day that various people connected with the Cabinet were advertised as having joined the movement in favor of goods "made in America." If the Cabinet under this administration can join such a movement, it seems to me that the Nation itself might join such a movement, and considering the thousands of men out of employment in the country, with the general feeling on the part of the people of the country that we ought to patronize as far as practicable things made by Americans in America, I believe it would be wise and patriotic for this House to say that it will not authorize the purchase of foreign-made goods on even terms with American-made goods. [Applause on the Republican side.] If we build up the Navy and spend the millions of dollars which it is proposed to spend here, that money should be paid to American labor in favor of Americans as against the foreigner. The Navy is for the defense of this country against a foreign attack. Let us also make it a weapon to aid American labor in these days of dire distress. [Applause on the Republican side.]

Mr. PADGETT. Mr. Chairman, I ask unanimous consent that debate on this amendment be now closed.

The CHAIRMAN. The gentleman asks unanimous consent that debate on this amendment and all amendments thereto be now closed. Is there objection?

Mr. FOWLER. Mr. Chairman, I object.

Mr. PADGETT. Mr. Chairman, I move that all debate on this amendment and all amendments thereto do now close.

The question was taken, and the motion was agreed to.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Pennsylvania.

The question was taken; and on a division (demanded by Mr. MOORE) there were—ayes 64, noes 107.

So the amendment was rejected.

The Clerk read as follows:

That no part of any sum herein appropriated under "Increase of the Navy" shall be used for the payment of any clerical, drafting, inspection, or messenger service, or for the pay of any of the other classified force under the various bureaus of the Navy Department, Washington, D. C.

Mr. MANN. Mr. Chairman, I move to strike out the last word. This is another limitation which is in order, and I doubt not will receive the support of the majority of the House. On the vote just taken in behalf of American labor I notice that the Republican side of the House voted for it, while the Democratic side of the House voted unanimously against it.

Mr. FITZGERALD. Mr. Chairman, opposing the amendment offered by the gentleman from Illinois, I desire to say that on the vote taken on the last proposition, which would again put the trusts of America in the position in which they have been under Republican administration, enabling them to loot the Treasury at the expense of the American people, it is quite noticeable that the Republicans all voted in favor of the trusts and the Democrats in favor of the people of the country and of the Treasury of the country. [Applause on Democratic side.]

Mr. FOWLER. Mr. Chairman, I move to strike out the paragraph.

Mr. PADGETT. Mr. Chairman, I move that all debate on this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. The question is on the motion of the gentleman from Tennessee that all debate on the paragraph and all amendments thereto close in five minutes.

The question was taken, and the motion was agreed to.

Mr. FOWLER. Mr. Chairman, a point of order. The gentleman has no right to make that motion until there has been debate on the paragraph.

The CHAIRMAN. The Chair overrules the point of order and the gentleman from Illinois is recognized for five minutes.

Mr. FOWLER. Mr. Chairman, the point of order which was sustained at the instance of the gentleman from Illinois [Mr. MANN] struck out practically all of the defense that the American people have against combinations of persons, companies, and corporations. That paragraph provided that no part of the appropriations in this bill could be used to purchase structural materials, armor, or armament from persons, firms, or corporations who have conspired or combined to monopolize interstate or foreign commerce or the trade of the United States, and that no contracts for the purchase of shipbuilding materials could be made at a price in excess of a reasonable profit. This was the only provision in the bill which stood between the people and the ravages of the trusts. But when the gentleman from Illinois [Mr. MANN] interposed his point of order against this paragraph and the Chair sustained it, then all of the protection that we have had and all of the progress which we have made for the last 20 years against the combination of trusts for the control of trade was stricken out of the Navy appropriation bill. [Applause on the Democratic side.] The amendment which the gentleman from Pennsylvania [Mr. MOORE] undertook to insert in lieu of that paragraph practically gave back to the trusts all of the great advantages which they had gained heretofore over the American people in controlling trade. [Applause on the Democratic side.]

Mr. Chairman, I withdraw my amendment.

The Clerk read as follows:

That no part of any sum appropriated by this act shall be used for any expense of the Navy Department at Washington, D. C., unless specific authority is given by law for such expenditure.

Mr. HOBSON. Mr. Chairman, I offer the following amendment, which I send to the desk. It is the bill to establish the council of national defense. I realize that a point of order will be made against it, and that the point of order will be sustained; and I ask unanimous consent, in order that I may not take up the time of the committee in reading it, that it may be inserted in the RECORD.

Mr. PADGETT. Mr. Chairman, I make the point of order against the proposed amendment.

The CHAIRMAN. The Chair sustains the point of order. The gentleman from Alabama asks unanimous consent that it may be inserted. Is there objection?

There was no objection.

The amendment referred to is as follows:

On page 67, at the end of line 21, add the following as separate paragraphs:

"There is hereby established a council of national defense, consisting of the President of the United States, who shall be ex officio president of the council; the Secretary of State, who shall preside in the absence of the President; the Secretary of War, the Secretary of the Navy, the chairman of the Committee on Appropriations of the Senate, the chairman of the Committee on Foreign Relations of the Senate, the chairman of the Committee on Military Affairs of the Senate, the chairman of the Committee on Naval Affairs of the Senate, the chairman of the Committee on Appropriations of the House of Representatives, the chairman of the Committee on Foreign Affairs of the House of Representatives, the chairman of the Committee on Military Affairs of the House of Representatives, the chairman of the Committee on Naval Affairs of the House of Representatives, the Chief of the General Staff of the Army, an officer of the Navy not below the rank of captain to be designated by the Secretary of the Navy, the president of the Army War College, and the president of the Navy War College.

"The chairmen of the several committees of the Senate and House of Representatives herein named shall act as members of the council until their successors have been selected.

"Said council shall report to the President, for transmission to Congress, a general policy of national defense and such recommendation of measures relating thereto as it shall deem necessary and expedient.

"Said council shall meet at least once in each calendar year on such date or dates as it shall fix: *Provided*, That in time of war said council shall meet only upon the call of the President of the United States: *Provided further*, That special meetings may be called by the president of the council: *And provided further*, That the council may summon for consultation at any of its meetings any citizen of the United States, and upon request by the council the Secretary of War and the Secretary of the Navy shall order any officer of the Army, Navy, or Marine Corps to appear before the council for consultation.

"For carrying out the purposes of this act there is hereby appropriated, out of any funds in the Treasury not otherwise appropriated, the sum of $20,000, to be available until expended, and to be expended upon vouchers signed by the president of the council: *Provided*, That all necessary expenses of the chairmen of committees of the Senate and of the House of Representatives, when called to attend meetings of said council when Congress is not in session, and the necessary expenses of all persons summoned shall be paid from this appropriation, upon approval by the president of the council."

Mr. PADGETT. Mr. Chairman, I move that the committee do now rise and report the bill with the various amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 20975, the naval appropriation bill, and had directed him to report the same back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. PADGETT. Mr. Speaker, I move the previous question upon the bill and all amendments to final passage.

The question was taken, and the previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment?

Mr. WITHERSPOON. Mr. Speaker, I ask for a separate vote on the amendment which strikes out the words beginning with the word "*Provided*," in line 23, on page 28, and ending with the word "service," in line 4, on page 29. I also ask a separate vote on the amendment striking out the words, beginning on page 29, line 12, "in all cases where he had not before retirement passed such examination." The two amendments have reference to the plucking board and restoration of naval officers.

Mr. ROBERTS of Massachusetts. Mr. Speaker, I ask a separate vote on the amendment striking out line 7, on page 65.

Mr. CURRY. Mr. Speaker, I ask for a separate vote on the amendment striking out the 16 submarines and reducing the number to 11.

Mr. MANN. Mr. Speaker——

The SPEAKER. Is a separate vote demanded on any other amendment?

Mr. MANN. I ask a separate vote on the amendment on page 16, the Hobson amendment.

The SPEAKER. Is a separate vote demanded on any other amendment.

Mr. CURRY. Mr. Speaker, I withdraw my request.

Mr. GARDNER. Mr. Speaker, I renew it.

Mr. MANN. What is it?

Mr. GARDNER. The reduction in the number of submarines.

The SPEAKER. If there is no other demand for a separate vote, the Chair will put them in gross.

The question was taken, and the other amendments were agreed to.

The SPEAKER. The Clerk will report the first amendment.

The Clerk read as follows:

Page 16, after the figures in line 17, insert:

"*Provided*, That no part of this appropriation shall be expended for the purchase of armor-piercing shells of 12-inch caliber or larger unless such shells are found by tests to be able to penetrate 10-inch Kruppized plate without breaking up when fired with a standard service powder charge at an actual range of 12,000 yards."

The question was taken, and the Speaker announced the noes seemed to have it.

Mr. HOBSON. Division, Mr. Speaker.

The House divided; and there were—ayes 108, noes 79.

Mr. MANN. Mr. Speaker, I ask for tellers.

The SPEAKER. Those in favor of ordering tellers will rise and stand until counted. [After counting.] Twenty-four gentlemen have risen, not a sufficient number.

So the amendment was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Pages 28 and 29. Line 23, page 28, after the word "board" strike out "*Provided*, That the action in these cases has been examined by the Naval Committee of the Sixty-third Congress of the House or of the Senate and either or both of said committees have reported or ordered to be reported favorably to the House or the Senate a bill to transfer such officer to the active list of the service."

The question was taken, and the Speaker announced the ayes seemed to have it.

Mr. WITHERSPOON. Division, Mr. Speaker.

The House divided; and there were—ayes 121, noes 57.

Mr. WITHERSPOON. Mr. Speaker, I ask for tellers.

The SPEAKER. Those in favor of taking this vote by tellers will rise and stand until they are counted. [After counting.] Forty-two gentlemen have risen, not a sufficient number.

Mr. HARRISON. The other side.

The SPEAKER. There is no other side to it.

So the amendment was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Page 29, line 12, strike out the following language:

"In all cases where he had not before retirement passed such examination."

The question was taken, and the Speaker announced the noes seemed to have it.

Mr. STAFFORD and Mr. MANN. I ask for a division.

The SPEAKER. Both the gentleman from Wisconsin and the gentleman from Illinois demand a division.

The House divided; and there were—ayes 79, noes 75.

Mr. MANN. Mr. Speaker, I ask for tellers.

The SPEAKER. Those in favor of taking this vote by tellers will rise and stand until they are counted. [After counting.] Sixty-three gentlemen have risen, a sufficient number.

Mr. CARLIN. Mr. Speaker, I ask unanimous consent that the amendment be again reported; we do not understand it.

The SPEAKER. Without objection, the amendment will be again reported.

There was no objection.

The amendment was again reported.

The House again divided; and the tellers (Mr. WITHERSPOON and Mr. PADGETT) reported—ayes 105, noes 91.

So the amendment was agreed to.

The SPEAKER. The Clerk will report the next amendment.

Mr. GARDNER. Mr. Speaker, I withdraw my demand for a separate vote on the submarine amendment.

Mr. MANN. There is no way of withdrawing it now.

The SPEAKER. It can be voted upon now. You will have to vote on it, because it was not included in the other. The Clerk will report the amendment.

The Clerk read as follows:

Page 64, line 15, strike out the word "sixteen" and insert "eleven."

The SPEAKER. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

The SPEAKER. The Clerk will report the next amendment.

The Clerk read as follows:

Page 65, line 7, strike out the line which reads as follows:

"One hospital ship, to cost not to exceed $2,250,000."

The SPEAKER. The question is on agreeing to the amendment.

The question was taken, and the Speaker announced that the ayes seemed to have it.

Mr. ROBERTS of Massachusetts. Division, Mr. Speaker.

The House divided; and there were—ayes 143, noes 78.

Mr. ROBERTS of Massachusetts. Mr. Speaker, I ask for the yeas and nays.

The yeas and nays were refused.

So the amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read a third time.

Mr. WITHERSPOON. Mr. Speaker——

The SPEAKER. Is the gentleman from Mississippi opposed to this bill?

Mr. WITHERSPOON. I certainly am.

The SPEAKER. For what purpose does the gentleman rise?

Mr. WITHERSPOON. I rise to make a motion to recommit the bill.

The SPEAKER. The gentleman will send the motion to the desk, and the Clerk will report it.

The Clerk read as follows:

Mr. WITHERSPOON moves to recommit H. R. 20975 to the Committee on Naval Affairs with instructions to forthwith report the bill back to the House with an amendment striking out the word "two," where it occurs in line 4, page 64, and insert the word "one" in place thereof.

Mr. WITHERSPOON. Mr. Speaker, I move the previous question on the motion to recommit with instructions.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The question was taken, and the Speaker announced that the ayes seemed to have it.

Mr. CULLOP. The yeas and nays, Mr. Speaker.

The yeas and nays were ordered.

Mr. MANN. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MANN. Does anyone want a roll call on the passage of the bill?

The SPEAKER. That is hardly a parliamentary inquiry.

The Clerk will call the roll.

The question was taken; and there were—yeas 149, nays 165, answered "present" 1, not voting 108, as follows:

[Roll No. 57.]

YEAS—149.

So the motion to recommit was rejected.

The Clerk announced the following pairs:

On the vote:

Mr. SABATH (for one battleship) with Mr. GILLETT (for two battleships).

Mr. BARNHART (for one battleship) with Mr. LINTHICUM (for two battleships).

Mr. EVANS (for one battleship) with Mr. LAFFERTY (for two battleships).

Mr. FAISON (for one battleship) with Mr. WHALEY (for two battleships).

Mr. SLAYDEN (for one battleship) with Mr. SLEMP (for two battleships).

Mr. MONDELL (for one battleship) with Mr. KENNEDY of Rhode Island (for two battleships).

Mr. THOMPSON of Oklahoma (for one battleship) with Mr. GALLIVAN (for two battleships).

Until further notice:

Mr. EDWARDS with Mr. AINEY.

Mr. BROWN of West Virginia with Mr. ANTHONY.

Mr. CAREW with Mr. AVIS.

Mr. CLARK of Florida with Mr. BARTHOLDT.

Mr. DALE with Mr. BURKE of Pennsylvania.

Mr. GEORGE with Mr. CARY.

Mr. GORMAN with Mr. COPLEY.

Mr. HARDY with Mr. DUNN.

Mr. HART with Mr. FESS.

Mr. HAY with Mr. FORDNEY.

Mr. HELVERING with Mr. GRAHAM of Pennsylvania.

Mr. KEY of Ohio with Mr. GRIEST.

Mr. MCGILLICUDDY with Mr. HAUGEN.

Mr. MORGAN of Louisiana with Mr. HUGHES of West Virginia.

Mr. METZ with Mr. HELGESEN.

Mr. MORRISON with Mr. HULINGS.

Mr. NEELEY of Kansas with Mr. JOHNSON of Utah.

Mr. OGLESBY with Mr. KREIDER.

Mr. O'SHAUNESSY with Mr. LANGHAM.

Mr. PALMER with Mr. LEWIS of Pennsylvania.

Mr. PRICE with Mr. LINDQUIST.

Mr. WALSH with Mr. MCGUIRE of Oklahoma.

Mr. RAUCH with Mr. MADDEN.

Mr. REED with Mr. MARTIN.

Mr. ROTHERMEL with Mr. MORIN.

Mr. STOUT with Mr. NORTON.

Mr. TAGGART with Mr. PORTER.

Mr. TAYLOR of Colorado with Mr. ROBERTS of Nevada.

Mr. VINSON with Mr. SAMUEL W. SMITH.

Mr. WATSON with Mr. SUTHERLAND.

Mr. WHITE with Mr. VARE.

Mr. WILSON of Florida with Mr. WALLIN.

The result of the vote was announced as above recorded.

The SPEAKER. The question is on the passage of the bill.

The question was taken, and the bill was passed.

On motion of Mr. PADGETT, a motion to reconsider the vote whereby the bill was passed was laid on the table.

ENROLLED BILLS SIGNED.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the following titles, when the Speaker signed the same:

H. R. 20818. An act to authorize the Brunot Island Bridge Co. to construct, maintain, and operate a bridge across the back channel of the Ohio River; and

H. R. 20933. An act extending the time for completion of the bridge across the Mississippi River at Memphis, Tenn., authorized by an act entitled "An act to authorize the Arkansas & Memphis Railway Bridge & Terminal Co. to construct, maintain, and operate a bridge across the Mississippi River at Memphis, Tenn.," approved August 23, 1912.

ADJOURNMENT.

Mr. PADGETT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 7 o'clock and 52 minutes p. m.) the House, under the order previously made, adjourned until to-morrow, Saturday, February 6, 1915, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. Letter from the Secretary of the Treasury, submitting an estimate of appropriation of $50,000 for the continuation of the building of the United States post office at Portland, Oreg. (H. Doc. No. 1558); to the Committee on Appropriations and ordered to be printed.

2. Letter from the Secretary of the Treasury, submitting an estimate of appropriation in the sum of $18,000 for the completion of post-office building at Portland, Ind., and the sum of $150,000 for the continuation of the building at New Haven, Conn. (H. Doc. No. 1559); to the Committee on Appropriations and ordered to be printed.

3. Letter from the Public Utilities Commission, District of Columbia, transmitting balance sheets for the year ended December 31, 1914, and other information required by the Public Utilities Commission of the various utilities under its jurisdiction; to the Committee on the District of Columbia.

4. Letter from the Secretary of the Treasury, transmitting copy of a communication of the Secretary of the Interior submitting an estimate of appropriation to cover cost of transcripts of evidence before the Quebec Bridge Commission and a set of drawings in connection therewith (H. Doc. No. 1569); to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. LOGUE, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 18645) for the acquisition of additional site and improvements on Federal post office at Carlisle, Pa., reported the same with amendment, accompanied by a report (No. 1371), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. CLARK of Florida, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 21239) to increase the limit of cost of the site of a Federal building at Oakland, Cal., reported the same with amendment, accompanied by a report (No. 1372), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. BEALL of Texas, from the Committee on the Judiciary, to which was referred the bill (H. H. 15767) to provide for the appointment of an additional judge in the fifth judicial circuit of the United States, reported the same without amendment, accompanied by a report (No. 1374), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. DILLON, from the Committee on Claims, to which was referred the bill (H. R. 17964) for the relief of Austin G. Tainter, reported the same with amendment, accompanied by a report (No. 1370), which said bill and report were referred to the Private Calendar.

Mr. JOHNSON of Kentucky, from the Committee on the District of Columbia, to which was referred the bill (H. R. 20702) authorizing the health officer of the District of Columbia to issue a permit for the removal of the remains of the late Robert A. Culbertson from Woodlawn Cemetery, District of Columbia, to Rocky Spring Cemetery, Chambersburg, Pa., reported the same with amendment, accompanied by a report (No. 1373), which said bill and report were referred to the Private Calendar.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Claims was discharged from the consideration of the bill (H. R. 21327) for the relief of Rittenhouse Moore, receiver of the Mobile Marine Dock Co., and the same was referred to the Committee on War Claims.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. HAY: A bill (H. R. 21328) making appropriations for the support of the Military Academy for the fiscal year ending June 30, 1916, and for other purposes; to the Committee of the Whole House on the state of the Union.

By Mr. ROBERTS of Massachusetts: A bill (H. R. 21329) to increase the efficiency of the personnel of the Marine Corps; to the Committee on Naval Affairs.

By Mr. EDMONDS: A bill (H. R. 21330) to provide for the appointment of a shipping board, and to prescribe the duties thereof; to the Committee on the Merchant Marine and Fisheries.

By Mr. FOWLER: A bill (H. R. 21331) to amend an act entitled "An act to create a Department of Labor," by providing for a bureau of the unemployed; to the Committee on Labor.

By Mr. LOFT: A bill (H. R. 21332) to provide for the unemployed, strengthen the national defense, and for other purposes; to the Committee on Labor.

By Mr. BRYAN: A bill (H. R. 21333) prohibiting the sale, disposal, or having for sale, of intoxicating liquors on railway trains or on vessels or in certain other places used in connection with interstate commerce; to the Committee on the Judiciary.

By Mr. OLDFIELD: A bill (H. R. 21334) for the relief of drought and famine sufferers in the United States; to the Committee on Appropriations.

By Mr. MURDOCK: A bill (H. R. 21335) to establish an entomological station at Wellington, Sumner County, Kans.; to the Committee on Agriculture.

By Mr. CANDLER of Mississippi: A bill (H. R. 21336) for prohibition of the liquor traffic in the District of Columbia; to the Committee on the District of Columbia.

Also, joint resolution (H. J. Res. 416) to authorize the Committees on Agriculture of the Senate and House to investigate a system of rural personal credit; to the Committee on Rules.

By Mr. DOOLITTLE: Joint resolution (H. J. Res. 417) to authorize the Committees on Agriculture of the Senate and House to investigate a system of rural personal credit; to the Committee on Rules.

By Mr. TAVENNER: Resolution (H. Res. 724) relative to pay of clerks of deceased Members; to the Committee on Accounts.

By Mr. STEENERSON: Memorial of the Legislature of the State of Minnesota, relating to the placing of an embargo on the exportation of agricultural products; to the Committee on Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADAIR: A bill (H. R. 21337) granting a pension to Anna H. Parker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 21338) granting an increase of pension to Lilborn R. B. Gray; to the Committee on Invalid Pensions.

By Mr. CARR: A bill (H. R. 21339) granting a pension to Walter S. Semans; to the Committee on Pensions.

By Mr. FLOYD of Arkansas: A bill (H. R. 21340) granting a pension to Melissa A. Coop; to the Committee on Invalid Pensions.

By Mr. PAIGE of Massachusetts: A bill (H. R. 21341) granting a pension to Abbie J. Brigham; to the Committee on Invalid Pensions.

Also, a bill (H. R. 21342) to correct the military record of Simon W. Tucker; to the Committee on Military Affairs.

By Mr. RUPLEY: A bill (H. R. 21343) for the relief of Catharine Jefferson Dunn; to the Committee on War Claims.

By Mr. SUTHERLAND: A bill (H. R. 21344) to amend the military records in relation to William M. Cheuvront; to the Committee on Military Affairs.

By Mr. VOLLMER: A bill (H. R. 21345) granting an increase of pension to Hannah Kelly; to the Committee on Pensions.

By Mr. HINDS: A bill (H. R. 21346) to amend and correct the military record of William Johnson; to the Committee on Military Affairs.

By Mr. McANDREWS: A bill (H. R. 21347) granting an increase of pension to Edward A. Davenport; to the Committee on Invalid Pensions.

By Mr. BYRNS of Tennessee: A bill (H. R. 21348) for the relief of the estate of Mrs. M. A. Morrison; to the Committee on War Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ASHBROOK: Petition of Coshocton, Ohio, Local Union, No. 379, United Mine Workers of America, favoring Kern-Foster bill to extend work of the Bureau of Mines; to the Committee on Mines and Mining.

By Mr. BROWNE of Wisconsin: Petition signed by H. R. Schlytter, George L. Gates, and other residents of Wittenberg, Wis., asking that the Burnett immigration bill become a law, and protesting against House bill 20644, known as the Fitzgerald bill; to the Committee on the Post Office and Post Roads.

By Mr. BURKE of South Dakota: Petition of sundry citizens of Highmore, S. Dak., in favor of House joint resolution 377; to the Committee on Foreign Affairs.

Also, protests of sundry citizens of Avon, Bellefourche, Lead, Okobojo, and Tripp, all in the State of South Dakota, against House bill 20644, to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. BUTLER: Memorial of Chester monthly meeting of Friends, Providence, R. I., protesting against additional preparations for war, etc., by our Government; to the Committee on Military Affairs.

By Mr. CRAMTON: Petitions of George J. Mossner, of Gera; John Lange and 69 others, of Sebewaing; Ludwig Poppeck and 2 others, of Port Hope; Henry Stark, of New Haven; Rev. F. W. Bublitz and 40 others, of Lapeer; A. H. Sauer and 36 others, of Pigeon; Charles Miller and 51 others, of Sandusky; Rev. August Deichmann and 23 others of St. Paul's Evangelical Lutheran Church, Linkville and vicinity, all in the State of Michigan, in support of House joint resolution 377, proposing to prohibit exportation of arms, etc.; to the Committee on Foreign Affairs.

By Mr. DALE: Petitions of Louisiana State Federation of Labor; White Rats; Actors Union of New York; and sundry citizens of New York, favoring passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also, petition of Brooklyn Diocesan Union of the Holy Name Society, protesting against publication against Catholics being sent through the mails; to the Committee on the Post Office and Post Roads.

Also, petition of Electrical Contractors' Association of New York, protesting against present postal rates; to the Committee on the Post Office and Post Roads.

By Mr. DANFORTH: Petition of G. Gaylord Norton and 34 others, of Elba, N. Y., protesting against the passage of House bill 20644, Fitzgerald amendment to the Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

Also, petitions of G. A. Scharlan and 24 others, of Medina; Rev. Richard Stave and German-American Alliance, of Rochester, N. Y., favoring passage of resolution to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. DRUKKER: Petition of citizens of Passaic, N. J., against Fitzgerald bill, giving Postmaster General censorship over publications; to the Committee on the Post Office and Post Roads.

By Mr. ESCH: Petitions of 33 citizens of New Lisbon and F. J. Narosky and 80 other citizens of Onalaska, Wis., protesting against the Fitzgerald amendment to the Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

Also, petition of Concordia Aid Society, composed of 169 citizens; Frohsinn Singing Society, composed of 105 citizens; and Eighth Ward Aid Society, composed of 410 citizens, all of La Crosse, Wis., favoring bill prohibiting export of war materials; to the Committee on Foreign Affairs.

By Mr. FINLEY: Petition of Robert T. Allison, Yorkville, S. C., relative to national defense; to the Committee on Military Affairs.

By Mr. FLOYD of Arkansas: Petition of sundry citizens of the State of Arkansas, favoring appropriation to complete locks and dams on White River; to the Committee on Rivers and Harbors.

Also, papers to accompany House bill 21340, granting a pension to Melissa A. Coop; to the Committee on Invalid Pensions.

By Mr. FOWLER: Petition of citizens of Goreville and Johnson County, Ill., against any curtailment of freedom of the press; to the Committee on the Post Office and Post roads.

By Mr. GARDNER: Memorial of East India Marine Society and Salem (Mass.) Marine Society, protesting against the passage of the ship-purchase bill; to the Committee on the Merchant Marine and Fisheries.

Also, memorial of city council of Salem, Mass., favoring passage of the Hamill bill (H. R. 5139); to the Committee on Reform in the Civil Service.

By Mr. GOOD: Petition of monthly meeting of Friends, Bangor, Iowa, favoring bills designed to protect denominational names from use in articles of trade; to the Committee on the Judiciary.

By Mr. GRAHAM of Pennsylvania: Petitions of Massachusetts State Branch, American Federation of Labor, and other organizations of workers in the United States, favoring passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

Also, petition of Otto Benkmann, of Philadelphia, Pa., favoring resolution to prohibit export of war material; to the Committee on Foreign Affairs.

Also, petition of the Polish-American Citizens' League of Pennsylvania and Friends of Russian Freedom, protesting against the passage of the immigration bill; to the Committee on Immigration and Naturalization.

By Mr. KENNEDY of Rhode Island: Petition of Carl J. Franz, of Ashton, R. I., favoring House joint resolution 377, forbidding export of arms; to the Committee on Foreign Affairs.

Also, petition of Providence (R. I.) Branch of National Association for Advancement of Colored People, against "jim-crow" street car bill for District of Columbia; to the Committee on the District of Columbia.

By Mr. KETTNER. Petition of citizens of Olive, Orange, Anaheim, Riverside, Santa Ana, San Diego, Bishop, Laws, Big Pine, Chula Vista, and Coronado, all in the State of California, in behalf of House joint resolution 377; to the Committee on Foreign Affairs.

Also, resolutions of citizens of Fallbrook, De Luz, and Indio, Cal.; also from Chambers of Commerce of Los Angeles and San Diego, Cal., in favor of House joint resolution 344; to the Committee on Agriculture.

By Mr. LEWIS of Pennsylvania: Petition of citizens of Macungie, Pa., protesting against passage of House bill 20644, Fitzgerald amendment to the Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

By Mr. MADDEN: Petitions of 18,000 citizens of Chicago, Ill., protesting against prohibition in the District of Columbia; to the Committee on the District of Columbia.

By Mr. MOSS of West Virginia: Papers to accompany a bill to change military record, so as to include the name of William M. Cheuvront; to the Committee on Military Affairs.

By Mr. J. I. NOLAN: Petitions of sundry citizens of San Francisco, Cal., favoring passage of bills to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. OLDFIELD: Petitions of citizens of the second congressional district of Arkansas, for construction of lock and dams on Upper White River in interest of navigation; to the Committee on Rivers and Harbors.

By Mr. O'SHAUNESSY: Petition of Arthur Chagnon, Arctic, R. I., favoring embargo on wheat; to the Committee on Foreign Affairs.

Also, petition of Providence (R. I.) Branch National Association for Advancement of Colored People, against the "Jim Crow" law for District of Columbia; to the Committee on the District of Columbia.

Also, petition of Rev. Charles A. Tukes, Providence, R. I., favoring Hamill civil-service retirement bill; to the Committee on Reform in the Civil Service.

Also, petition of executve committee of the Rhode Island Bar Association relative to a bill to authorize the Supreme Court to prescribe forms and rules and generally to regulate pleading, procedure, and practice on the common-law side of the Federal courts; to the Committee on the Judiciary.

Also, petition of I. W. Waterman, of Providence, R. I., against bill to discontinue issuing of stamped envelopes by the Government; to the Committee on the Post Office and Post Roads.

Also, petition of Providence (R. I.) Central Federated Union, relative to increased cost of flour; to the Committee on Agriculture.

By Mr. PAIGE of Massachusetts: Petition of citizens of Clinton, Mass., favoring House joint resolution 377, forbidding export of arms; to the Committee on Foreign Affairs.

By Mr. RAKER: Petition of William H. Joyce, of Los Angeles, Cal., favoring House joint resolution 344; to the Committee on Agriculture.

Also, petition of O. F. Dorn, of Chicago Park, Cal., favoring House joint resolution 377, to forbid export of arms; to the Committee on Foreign Affairs.

By Mr. ROBERTS of Massachusetts: Evidence in support of House bill 18925; to the Committee on Invalid Pensions.

By Mr. SCOTT: Memorial of numerous citizens of the eleventh district of Iowa, relative to House joint resolution 377 and similar measures; to the Committee on Foreign Affairs.

Also, petition of citizens of Mapleton, Iowa, urging Congress to invite all nations to join us in a world federation for adjustment of international disputes; to the Committee on Foreign Affairs.

Also, petitions of citizens of the State of Iowa, favoring passage of bill to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. SPARKMAN: Petition of Board of Trade of Miami, Fla., relative to a drainage-aid act; to the Committee on Appropriations.

By Mr. VOLLMER: Petitions of the Hinsdale (Ill.) Liederkranz and 73 American citizens, protesting against the export of war material; to the Committee on Foreign Affairs.

HOUSE OF REPRESENTATIVES.

SATURDAY, *February 6, 1915.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Help us, O God our Father, as the days come and go, to distinguish with more clearness the true and the false, the transient and the eternal, proving all things, holding fast that which is good, and build for ourselves a character which shall stand the test of time and eternity, that we may be worthy of the dignity Thou didst bestow upon us in creating us after Thine own image. And blessing and honor and praise be Thine forever. Amen.

The Journal of the proceedings of yesterday was read and approved.

MUNICIPAL BRIDGE, ST. LOUIS, MO.

Mr. IGOE. Mr. Speaker, I ask to have the bill H. R. 19424, an act to extend the time for the completion of the municipal bridge at St. Louis, Mo., with Senate amendments, taken from the Speaker's table and laid before the House.

The SPEAKER laid the bill before the House, and the Clerk read the title to the bill, also the Senate amendments.

Mr. IGOE. Mr. Speaker, I move that the House concur in the Senate amendments.

The motion was agreed to.

LINCOLN'S BIRTHDAY.

Mr. GOULDEN. Mr. Speaker, I ask unanimous consent that I may address the House for 10 minutes on Friday next, February 12, 1915, on Lincoln's birthday, immediately after the approval of the Journal on the day celebrated.

Mr. UNDERWOOD. Mr. Speaker, reserving the right to object, I stated that I would not agree to any general debate that was not on a bill, but the gentleman from New York, my distinguished and honored colleague, was at the Battle of Gettysburg, and I think we can make an exception to the rule without establishing a precedent.

Mr. GOULDEN. I thank the gentleman for his kindness and consideration.

The SPEAKER. The gentleman from New York asks unanimous consent that he may address the House for 10 minutes on Lincoln's birthday, February 12, 1915, immediately after the reading of the Journal. Is there objection?

There was no objection.

PERSONAL EXPLANATION.

Mr. RAKER. Mr. Speaker, I want to ask unanimous consent to make a statement for a minute. I was here yesterday afternoon, but on account of sickness in my family I was called out and could not get back in time to vote on the motion to recommit the naval appropriation bill. I returned, but too late to have my vote recorded. If I had been here I would have voted against the motion to recommit.

Mr. MANN. That statement is wholly improper.

The SPEAKER. The statement is out of order.

CONTRABAND OF WAR.

Mr. HARRISON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by publishing an article which appeared in the Washington Post of yesterday, written by John Bassett Moore, on "Contraband of war."

The SPEAKER. The gentleman from Mississippi asks unanimous consent to extend his remarks in the RECORD by publishing an article written by John Bassett Moore. Is there objection?

There was no objection.

COLUMBIAN INSTITUTION FOR THE DEAF.

The Speaker laid before the House the following communication:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON PUBLIC LANDS,
Washington, February 5, 1915.

Hon. CHAMP CLARK,
Speaker of the House of Representatives, Washington, D. C.

MY DEAR MR. SPEAKER: I hereby tender my resignation as a director of the Columbian Institution for the Deaf of the District of Columbia, Washington, D. C., said resignation to take effect immediately.

Cordially, yours,

T. W. SIMS.

The resignation was accepted, and the Speaker appointed Mr. RAKER, of California, to fill the vacancy.

SUNDRY CIVIL APPROPRIATION BILL.

Mr. FITZGERALD. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 21318, the sundry civil appropriation bill; and pending that motion I desire to ask the gentleman from Massachusetts if we can agree upon a time for general debate.

Mr. GILLETT. I will say to the gentleman that I have had requests on this side for 3 hours and 45 minutes, which I would like to grant.

Mr. FITZGERALD. What does the gentleman say to two hours on a side?

Mr. GILLETT. I do not think that would be a reasonable time; that would not take care of the requests of members of the committee.

Mr. FITZGERALD. Would the gentleman be willing to agree to three hours on a side?

Mr. GILLETT. We will try to get along with that.

Mr. FITZGERALD. Then, Mr. Speaker, I ask unanimous consent that there be six hours of general debate, three hours to be controlled by the gentleman from Massachusetts [Mr. GILLETT] and three hours by myself.

The SPEAKER. Pending the motion, the gentleman from New York asks unanimous consent that general debate on this bill be limited to six hours, one half to be controlled by himself and the other half by the gentleman from Massachusetts [Mr. GILLETT]. Is there objection?

There was no objection.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union, with Mr. CRISP in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the consideration of the bill of which the Clerk will read the title.

The Clerk read as follows:

A bill (H. R. 21318) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1916, and for other purposes.

Mr. FITZGERALD. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from New York asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

There was no objection.

The CHAIRMAN. Under the order of the House general debate is limited to six hours, one-half to be controlled by the gentleman from New York and one-half by the gentleman from Massachusetts. The gentleman from New York is recognized.

Mr. FITZGERALD. Mr. Chairman, the variety of subjects treated in the sundry civil bill makes it very difficult in a general statement to discuss them within a reasonable time and in an intelligent manner. At this time my remarks will be confined to some general observations, in the hope that the committee will defer until we reach the various items in the bill interrogations regarding them.

The estimates upon which the bill is based aggregate $137,616,472.89. The appropriations made for similar purposes for the current year aggregate $130,728,037.39. The bill carries recommendations amounting to $125,927,538.29. So that the bill as reported is $11,688,934.60 less than the estimates submitted by the executive and $4,800,499.10 less than the appropriations for similar purposes for the current year.

Mr. Chairman, this is the fourth time that I have reported the sundry civil appropriation bill as chairman of the Committee on Appropriations. In fact, it is the fifth time, but in one session the bill failed to become a law and was passed in the next session, so in effect the statement that this is the fourth time is accurate.

I wish to submit to the House a statement of what has been done in the consideration of the estimates submitted by the executive for consideration on this bill by the Committee on Appropriations during the four years that I have been at the head of that committee.

For the fiscal years 1913, 1914, 1915, 1916 the estimates submitted for the consideration of the committee aggregated $553,879,863.79. The bills as reported to the House carried $456,473,806.63, or $97,406,057.16 less than the estimates submitted for the consideration of the committee. In other words, during the past four years the Committee on Appropriations have made recommendations in accord with the estimates submitted for consideration in connection with the sundry civil bill of $97,406,057.16 less than was recommended by the executive.

The following table gives the details for each year:

Sundry civil appropriation bills for the fiscal years 1913, 1914, 1915, and 1916.

[Comparison of the amounts of each as reported to the House, with the total estimates and with the law for the preceding fiscal year.]

Years.	Estimates.	Preceding law.	Reported to House.	Reduction under estimates.	Reduction under law.
1913.....	$151,991,106.87	$142,638,044.14	$109,577,414.40	$42,413,692.47	$33,060,629.74
1914.....	138,790,634.98	118,126,982.96	113,271,614.66	25,519,020.32	4,855,368.30
1915.....	125,481,649.05	124,689,948.87	107,696,759.28	17,784,889.77	16,993,189.59
1916.....	137,616,472.89	130,728,037.39	125,928,018.29	11,688,454.60	4,800,019.10
Total.	553,879,863.79	516,183,013.36	456,473,806.63	97,406,057.16	59,709,206.73

The bills as finally enacted into law, after consideration in the Senate and the final adjustment of differences, were $59,709,000 less than the estimates submitted to Congress. So that if the appropriations had been based upon the recommendations of the executive departments, as expressed in their estimates in the sundry civil appropriation bill, the bills would have carried, on an average, $15,000,000 additional during each of the four years to which I have referred.

I make that statement at this time, Mr. Chairman, because I have seen some statements in the press from men formerly and at present connected with the administrative departments of the Government openly criticizing Congress for not acceding to every demand for money made upon it by the executive departments. There is a school of political thought in this country which seems to profess that whatever the recommendations of the executive departments, whatever of demands made upon the public purse or otherwise, that the sole function of Congress is to acquiesce in the requests, regardless of the obligation of the Members of Congress under the Constitution to safeguard the Treasury from the rapacity of those administering the public service. Based upon an experience of 16 years in this House, all of which time has been devoted to the assiduous work of studying Governmental finances, 10 years of which have been spent upon the Committee on Appropriations, I undertake to say that in any administration, if the requests of the executive officials upon the public purse were acceded to without a strong, vigorous, and alert opposition on the part of the representatives of the people, the United States, great and prosperous as it is, with its enormous resources and unlimited wealth, would speedily become first among the bankrupt nations of the civilized world. No more patriotic duty devolves upon those serving in this House than to examine with the utmost care the recommendations for money of the various administrative departments of the Government and the exercise of sound and reasonable judgment in passing upon such requests. That Congress has acted in a sound, wise, and reasonable manner is evident from the fact that although $59,000,000 recommended for the various services provided in such bills within a period of four years have been denied to the executive departments, not a single legitimate interest of the public service, not a single legitimate material interest of the people of the United States has been in the slightest degree affected by the failure to expend the money thus requested by the departments.

Mr. Chairman, the sum of $137,616,472.89, the estimates considered in the committee in the preparation of the bill, consists of $111,108,822.96 submitted in the regular Book of Estimates at the beginning of Congress, as required by law, and $21,631,649.93 subsequently presented to the House in the form of supplemental estimates.

For the first time this bill carries provision for the Reclamation Service. The appropriations recommended are payable wholly out of the reclamation fund. The estimates submitted aggregated $14,776,000. The committee recommends appropriations aggregating $13,430,000, a reduction of $1,346,000. In reaching the conclusions as to the amounts to be recommended for the Reclamation Service the object of the committee was to provide such funds for the various projects under consideration as would enable the Reclamation Service to carry on during the next fiscal year the essential work contemplated. While there has been a reduction of $1,346,000 in the amounts recommended, every member of the committee who has examined the subject is convinced that ample provision has been made, so that there will not be any embarrassment to the service. Omitting from our calculations all reference to the Reclamation Service, the bill is $9,067,000 less than the estimates and $1,920,000 less than the appropriations for the current year.

Mr. Chairman, at this session of Congress the appropriation bills, from the standpoint of this House, are in a condition of progress toward enactment more favorable perhaps than at any time in many years. This bill has been reported earlier than any bill of similar character during any of the short sessions since 1903. In 1903 the bill was reported a day or two earlier than the bill now under consideration. The consideration of the bill was commenced several weeks earlier by the committee than it had been possible to consider it heretofore, due entirely to the fact that the estimates were obtainable for consideration at an earlier period this year than heretofore. I have a statement which shows the dates upon which the various appropriation bills were reported during the short sessions of the Fifty-eighth, the Fifty-ninth, the Sixtieth, the Sixty-first, the Sixty-second, and the Sixty-third Congresses, which I shall insert in the RECORD for the information of the House.

Date of reporting to the House the regular appropriation bills at the short sessions of the Fifty-eighth, Fifty-ninth, Sixtieth, Sixty-first, Sixty-second, and Sixty-third Congresses.

	Fifty-eighth Congress.	Fifty-ninth. Congress.	Sixtieth Congress.	Sixty-first Congress.	Sixty-second Congress.	Sixty-third Congress.

Mr. MANN. Mr. Chairman, will the gentleman yield for a question?

Mr. FITZGERALD. Yes.

Mr. MANN. Just what did the gentleman mean by the estimates being ready earlier than usual? I understood the gentleman to say that the consideration of this bill in committee was commenced earlier solely by reason of the fact that the estimates were submitted earlier. I do not understand that.

Mr. FITZGERALD. They were available earlier. The law requires the estimates to be transmitted to Congress at the opening of each regular session. That has not always been done.

Mr. MANN. When was the Book of Estimates printed this year—any earlier than usual?

Mr. FITZGERALD. No; it was not printed any earlier; but the committee obtains in advance copies of the estimates for the purpose of its work. My recollection is that, in my experience, this is the first time it has been possible to get the estimates so as to print them and put them in shape for the sundry civil appropriation bill prior to the Christmas holidays.

Mr. MANN. The estimates were printed in book form long before that, were they not?

Mr. FITZGERALD. They may have been printed in book form; yes.

Mr. MANN. I had a copy of them long before that, in any event, though I guess the committee did not know it.

Mr. FITZGERALD. After the estimates are printed in book form it takes some time to arrange them so as to make them available for use in the committee. The Agricultural bill was reported on the 30th of December, the Army bill on the 29th of December, the Diplomatic bill on the 26th of January, the District of Columbia bill on the 7th of December, the Indian bill on the 18th of December, the legislative bill on the 14th of December, the Military Academy bill on the 5th of February, the naval bill on the 16th of January, the pension bill on the 25th of January, the Post Office bill on the 14th of December, the river and harbor bill on the 19th of December, the sundry civil bill on the 4th of February. Seven of the appropriation bills were reported in the month of December. Including the urgent deficiency, three appropriation bills passed the House before Christmas and one other before December 31. I am making this statement to emphasize an opinion expressed then which I discussed quite elaborately on the 24th day of June, 1913—the proposition to establish a committee on estimates and appropriations, the purpose of which was to determine how much each of the annual appropriation bills might carry. The proposed plan contemplated the adoption of a resolution by the House limiting the power of committees to include appropriations in the bills in excess of the amounts fixed in the resolution. I said at that time:

> Mr. Chairman, in a short session of Congress the plan can not possibly work. At the last session I had the subcommittee in charge of the legislative, executive, and judicial appropriation bill meet before Congress convened.

The same thing is true as to this session of Congress. Two of the subcommittees of the Committee on Appropriations met prior to the first Monday of December, and the Committee on Appropriations itself convened before the Congress assembled, so that when Congress met, on its opening day the committee reported the District of Columbia appropriation bill and had completed the hearings and most of the marking up on the legislative appropriation bill. If the committees had had to wait until some other committee had had to determine how much could have been incorporated in these bills, and until a resolution had been considered by the House and adopted determining the amount that could have been carried, instead of passing these bills as rapidly before the holidays as was done, the committees would have had to wait until the House had determined the amounts to which the bills should be limited before the bills could have been prepared.

In connection with the bill now under consideration, the estimates submitted in the regular Book of Estimates aggregated $111,108,822.26, and since the submission of the regular Book of Estimates other estimates that had to be considered in connection with this bill were submitted aggregating $21,631,649.93. A very considerable portion of this latter sum was submitted upon the very eve of the report of the bill to the House. Moreover, estimates were transmitted to the House yesterday of items for consideration in connection with this bill aggregating nearly $200,000.

These facts demonstrate conclusively the impossibility of any living man determining on the first day or in the first week of December with any degree of accurate approximation how much could justly be recommended to the House to be included in this bill. I undertake to say that until the work of making the detailed examination that is necessary on the part of committees is concluded it is impossible to tell with any degree of accuracy how much a bill should or should not carry.

Mr. MANN. Will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. MANN. Suppose there was a committee appointed to make a distribution of the limits of appropriations between the various appropriation committees. With the pressure that would be brought to bear, would it, in the gentleman's opinion, be almost inevitable that that committee would distribute among the various appropriation committees either the total estimated receipts of the Government for the ensuing fiscal year or an amount equal to the appropriations for the current year, and thereby make a distribution of all that would be available, without regard to subsequent estimates and without regard to Senate amendments?

Mr. FITZGERALD. It is difficult to tell just what would happen. In the speech to which I have heretofore referred I discussed that phase of the situation. I am convinced, however, that it is impossible from the standpoint of the House for any man to tell in advance what the total of any particular bill should be, excepting such a bill as the river and harbor bill, where it could first be determined to spend a certain sum for rivers and harbors and then distribute it among a number of projects; but for a bill that has to do with the current services of the Government it is impossible to do so.

Mr. MANN. I quite agree with the gentleman——

Mr. FITZGERALD. For instance, to illustrate in connection with this bill, the estimate for carrying on the work of the Alaska railroads was transmitted to the House about 10 days ago. It was an estimate of $2,000,000, and that sum is incorporated in this bill. No one could have known in December that that estimate was to be transmitted. At the time the estimates were transmitted in the regular Book of Estimates, the estimate for the construction of public buildings consisted of a request that legislation be enacted making one fund of all the appropriations which have heretofore been made for specific buildings, and appropriating in addition $3,000,000. Of course as soon as it was ascertained that that had been done, it was apparent that the Committee on Appropriations would be guilty of hara-kiri if it made such a recommendation to the House. The committee insisted that the Treasury Department submit detailed estimates for the sums desired for public buildings. The result was that supplemental estimates aggregating over $12,000,000 were transmitted to the House. My recollection is that the estimates for the continuation of the work of the physical valuation of railroads, aggregating $3,000,000, were submitted subsequent to the estimates contained in the Book of Estimates. Gentlemen can readily see that anyone who early in December attempted to determine how much should be carried in this bill for the public service would have missed his guess, no matter how intelligent or well informed he might have been, by over $15,000,000.

Mr. MANN. I quite agree with the gentleman. I think we had an illustration yesterday of what the effect would be of the proposition to distribute, to begin with, a certain amount of money between the different committees. Inevitably, if the estimated receipts were distributed in advance among the different committees, the chairman of the Naval Committee, for illustration, like any other chairman, would fight for the amount that he thought ought to be appropriated for the Naval Committee, and if that amount had been allowed, at the amount that was reported in the bill yesterday, it would be impossible to reduce it on the floor, because it would be said, "That amount is set aside for naval affairs."

Mr. FITZGERALD. And it would have been done by resolution of the House.

Mr. MANN. It would have been said, "You can not add this amount to the apportionment of any other committee, hence we will appropriate it for the Naval Committee"; and the House would be, not theoretically but practically, powerless to reduce the amount carried in the bill.

Mr. FITZGERALD. Then there is another matter that has attracted my attention. I notice that the position in which the chairmen of other committees find themselves differs materially from the situation which confronts the chairman of the Committee on Appropriations. My contests in this House are to prevent the House from increasing the appropriations carried in the bill. The troubles or labors of the chairmen of other committees have been to persuade the House not to reduce the appropriations as recommended by their committees.

Mr. UNDERWOOD. Will the gentleman yield to me a moment?

Mr. FITZGERALD. Certainly.

Mr. UNDERWOOD. I am very much interested in the discussion that the gentleman is now delivering to the House, and I want to compliment the gentleman from New York by the statement that among all the men in this House I do not think there is any one man who has endeavored as much as the gentleman from New York has to hold down public expenditures within reasonable limits. [Applause.] But I hope the gentleman from New York is not taking the position at this time that some method can not be devised by which this

House can centralize the control of appropriations and limit public expenditures. With very few exceptions, there has hardly been a case where any executive in the world has attempted to limit the expenditures of public money or to decrease the burdens of the taxation. You may find an exception here and there, but the exception only proves the rule. It is rarely the case that any body of men in a legislative capacity, except those who hold their commissions directly from the people, are willing to cut down public expenditures. On the other hand, the reckless expenditure of the public money has always been a cancer that in the end destroyed republics. Of course we are far from that place to-day, but unless this House is willing to take action by which we can centralize the control of these appropriations and limit expenditures within reasonable amounts and cut out the reckless extravagances that sometimes are found in appropriation bills I can see no place where the increased burdens of taxation on the American people are going to stop. [Applause.] And I know of no man in this House who is more capable and competent to lead the fight to establish permanent economy on a safe and sound basis than the gentleman from New York. [Applause.] I expect to leave the field here, but I hope that the gentleman from New York in the future will bring his great powers toward accomplishing this good result for the benefit of his country. [Applause.]

Mr. MADDEN. Will the gentleman yield to me?

Mr. FITZGERALD. Yes; I yield to the gentleman.

Mr. MADDEN. I think with the gentleman from Alabama that the gentleman from New York has displayed great ability and great genius in the field in which he has been legislatively engaged. I think he ought to be encouraged in that work by the Members of the House generally. Now, my notion of how you can regulate the expenditures of public money is this: Control of expenditures should be given to one committee. It may be it ought to be a joint committee of the House and the Senate, and this committee ought to be in session all the year around. It ought to have the power to go to the departments and investigate the expenditures, and the members of such a committee ought to be paid compensation commensurate with the sacrifice they would have to make; but to delegate the power to any single given committee to control the appropriations of the Congress to meet the needs of the Nation and only permit them to be employed during the sessions of Congress would make the work so onerous that no committee could do it. I would select the best men who can be found in both branches of the Congress, regardless of how long they had served in either House, men qualified to regulate the control of governmental expenditures, and then charge them with the responsibility of remaining at their work every day in the year and pay them for the service they render. When you do that you will be able to control the expenditures and keep them within reasonable bounds and save the people from the burden of overtaxation, and you can not do it in any other way. [Applause.]

Mr. FITZGERALD. Mr. Chairman, I appreciate what both gentlemen have said about myself. I do not wish to be understood as expressing a belief that it is not possible to devise some way to improve our present condition. Perhaps I was indulging in the very human failing of trying to justify a prophecy I made as to the result that would follow certain actions. I believe the expenditures of the Federal Government can be put on a proper basis, and I know they must be put on a different basis if the country is not to rise up and retire every Member of Congress to private life. So long as our revenues were not obtained by direct taxation, but came from indirect taxation, it made very little difference. Everyone believed that some one else was paying the taxes. But now the people are thinking, as they have not done in years, upon the question of taxation. They are now paying direct taxes to the Federal Government. In my State and in my city the question of taxation is to-day a burning question. A direct tax is to be levied by the State.

The city of New York must contribute, I imagine, about $15,000,000 of this direct tax to the payment of the expenses of the State. There has been under consideration by the officials of the city of New York every conceivable form of taxation in order to obtain revenue. Taxation on occupation of residences, taxation for engaging in any particular business, taxation upon the man who works and upon the man who is idle. It makes no difference in what particular condition of life he happens to find himself, some one seems to suggest a form of direct taxation to reach his peculiar condition. When the knowledge of the suggestions became public, the threatened uprising was such that consideration has been indefinitely postponed. Throughout the country the cost of government is increasing at a rate far out of proportion to the increase of population and wealth. Some one must concentrate his efforts to the task of lessening the burdens of the taxpayers. Unfortunately I appear to belong to a very old-fashioned and unpopular and out-of-date school of public finance. It is not the mode to follow the school of public finance in which I have been educated. I believe that the Government should not do those things that private enterprise can do satisfactorily. I do not believe that the Federal Government or the State government or the local government should engage in every conceivable form of activity in response to every whim of every organization or of every class or of everybody who believes it is desirable that certain things be done and appeal to the Government to do them, as it seems to be easier to obtain public funds than have sensible men devote their own resources to many things for which there is public clamor. If we restrict the activities of government to those functions that legitimately should be performed by the Government, it would eliminate a vast portion of the excessive expenditures of the Government. Until something along such lines is attempted, it is useless to think of curtailing the gross expenses of government. If we do not wish to stop our activities along any particular line, but continuously seek out and encourage the Government in entering upon new activities in order to placate or to please or to mollify some particular group or party or band or interest, then we simply keep piling up the available means to absorb the revenues. The people are coming to realize that the Treasury is not replenished by money that falls like manna from the heavens, but that every dollar that is expended by the government—Federal, State, or local—means a dollar collected from the pockets of the people.

When the burdens finally become so great as to be intolerable then the inevitable uprising will take place. One thing that is essential to accomplish in this body—and it will be done some day—is to deprive the individual Member of Congress of the right to initiate expenditures. I believe that if nothing else ever had been accomplished as a result of the war between the North and the South than one suggestion which originated in the constitution of the Confederate States which will yet bear fruit of immense value to the people of the United States, the war would not have been in vain. The Confederate constitution had a provision which prohibited the Confederate Congress from appropriating money for any purpose except by a two-thirds vote of both houses, unless estimated for by the head of a department and submitted by the President, or be asked for the payment of its own expenses or of claims against the Confederacy declared by a judicial tribunal to be just. Take away from the Members of this House the right to initiate expenditures and they will examine and scrutinize and take care that no unsound or improper estimate originating in a department is rewarded by an appropriation.

Mr. COX. Will the gentleman yield for a question?

Mr. FITZGERALD. I yield to the gentleman.

Mr. COX. What would the gentleman think of the proposition of amending the rules of the House so as to prevent any Member from increasing an appropriation over that reported by the committee?

Mr. FITZGERALD. I would not favor such a rule. I would not give to a committee of the House any power that the House itself was denied. If it were proposed to deny the committees and the House the power to appropriate in excess of an estimate from a department, it would be a different matter. But I doubt whether we would be justified in providing that a committee could determine the maximum amount to be appropriated, and that the House, which creates the committee, could not revise its action.

Mr. COX. That is the rule, I will state to the gentleman, in the House of Commons.

Mr. FITZGERALD. No; not exactly. The rule in the House of Commons prohibits a grant in excess of that requested or for a purpose not requested by the Crown. Of course, the budget is submitted by the Government, consisting largely of members of the two houses.

Mr. COX. If I am not mistaken, in reading this matter up——

Mr. FITZGERALD. I think I have the rule here.

Mr. COX (continuing). They have a rule in Parliament which prohibits any member from offering an amendment which proposes to increase the appropriation provided for by the budget; but, at the same time, it permits any member of Parliament to offer an amendment proposing to reduce an appropriation.

Mr. FITZGERALD. They can reduce it.

Mr. MONTAGUE. Mr. Chairman, I want to understand the suggestion of the gentleman from Indiana [Mr. Cox].

The CHAIRMAN. Does the gentleman from Indiana yield to the gentleman from Virginia?

Mr. COX. Yes.

Mr. MONTAGUE. What was it?

Mr. COX. My suggestion was this, although I may be in error, but I looked this question up a year or so ago—that the rules of the English Parliament prohibit a member of Parliament from offering an amendment that proposes to increase an appropriation, but does permit him to offer an amendment that tends to reduce the appropriation.

Mr. MONTAGUE. But that was not the gentleman's first suggestion.

Mr. COX. The question first was what he thought of altering the rules of the House so as to prevent a Member of the House from offering an appropriation over that submitted by the committee.

Mr. MONTAGUE. In order to be logical, why should not the gentleman suggest that when that matter is to be so disposed of no Member save those on this committee should be in the House?

Mr. COX. The gentleman from New York has well expressed it. His trouble in this House heretofore has been to persuade the House to stand by the committee. I have seen the House run over him time and time again, although I have not done so myself.

Mr. FITZGERALD. The rule of the House of Commons, dating back to 1713, is:

> This House will receive no petition for any sum relating to public service or proceed upon any motion for a grant or charge upon the public revenue * * * unless recommended by the Crown.

One way of testing whether a particular member of the Government has the confidence of the House is by voting to strike out a proposed grant in the supply bill. If it be on an important matter and the motion is carried, it is usually followed by the resignation of that member of the Government.

Mr. PARKER of New Jersey. Will the gentleman yield?

The CHAIRMAN. Does the gentleman from New York yield to the gentleman from New Jersey?

Mr. FITZGERALD. I do.

Mr. PARKER of New Jersey. Will the gentleman permit me to say that he has just indicated what I was about to suggest, that the real control in England and the British Parliament is that if the House votes against the ministry it resigns, just exactly as the committee here should say that if its estimates were substantially increased or reduced by the House they would think their functions no longer useful and they would no longer serve as such committee. That is the way they manage it in the House of Commons.

Mr. FITZGERALD. That provision evidently has a wholesome effect in the preparation of estimates, because it is very rarely now that the requests are of such a character as to compel the resignation of any member of the Government.

Mr. GARNER. If you had such a rule in this country, where a department of the Government submitted an estimate and Congress refused to grant the estimate, and they would resign, there would be some resignations submitted.

Mr. FITZGERALD. There would be chaos if there was any such rule here.

Mr. MARTIN. The gentleman has referred to a provision in the constitution of the Confederacy which, if I understood him correctly, prohibited the initiation of items of appropriations in the house and confined the power and action of the house and its membership upon the items recommended by the executive or executive departments, except by two-thirds vote. Do I understand the gentleman to speak in favor of a proposition of that kind as applied to the Government service?

Mr. FITZGERALD. I believe that it would be desirable, and I believe that the time will come when such provision must be adopted and the individual Member of Congress deprived of the right of initiative in the expenditure of public funds.

Mr. MARTIN. There are a great many of us who think the tendency to the exercise of power in the executive is too great under the present system and arrangement, and that it would be in the interest of better legislation if more responsibility were placed upon the legislative branch of the Government and less upon the executive branch, not only as to appropriation matters, but as to miscellaneous matters of legislation.

Mr. BATHRICK. Will the gentleman yield?

Mr. FITZGERALD. What I have in mind, Mr. Chairman, is that in the expending of public moneys it is rarely that any department of the Government fails to ask for less than is required to maintain the public service The experience of the Federal Government is that the recommendations of the departments for money, except in the rarest and most exceptional cases, are in excess of what is legitimately required to perform the functions devolving upon the service. So that the trouble to be faced does not come because the executive fails to ask for sufficient money, but it comes from a combination of individuals interested in particular matters insisting upon lavish appropriations.

Mr. MONTAGUE. Will the gentleman yield?

Mr. FITZGERALD. In just a moment. It comes from a combination of individuals originating schemes for expending public money, regardless of the opinion of those who are administering the public service.

Now I yield to the gentleman from Ohio [Mr. BATHRICK].

Mr. BATHRICK. If you would deprive the Members of the House of Representatives of the power of initiating appropriations—is that what I understand the gentleman to contend for?

Mr. FITZGERALD. For the conduct of the public service.

Mr. BATHRICK. Well, does the gentleman mean to say that he would deprive the Members of the power of originating appropriations on bills that they might introduce that would require money to carry them out?

Mr. FITZGERALD. Yes. I would let Congress authorize certain things. Then whatever sums the Executive believed were desirable to carry them out, let the Executive ask for them. The responsibility for the policy of asking or refusing to ask for funds would fall on the administration.

Mr. BATHRICK. Now, then, if a man were to introduce a bill to give a soldier a pension, if the Executive authority did not want him to have it or did not recommend it, he could not get it. Is that what I understand the gentleman would suggest?

Mr. FITZGERALD. I have not gone into details, but I believe that such a situation would be desirable. I should like an administration to be put in a position where it would be compelled to take the responsibility and not to distribute or to share it among over 400 Members of this body and nearly 100 in the other body. I should be glad to have some one upon whom the responsibility could be centered to say, for example, that John Jones, on his record and under all the circumstances, ought to be pensioned in spite of the fact that under the general law he is not eligible. It would quickly be ascertained under such circumstances whether any of the criticisms, just or unjust, are well founded that the pension rolls are improperly padded.

Mr. BATHRICK. Then a Member could not introduce a bill for any purpose to inaugurate the expenditure of money?

Mr. FITZGERALD. I did not take such a position. It is really afar, however, from what I intended to discuss. I said that I believed that the time would come when the power to initiate appropriations of money from the Federal Treasury for the conduct of the Federal Government must be taken from the individual. I do not expect it to be done during my service in Congress nor during the term of the gentleman from Ohio, but I believe it is inevitable some time, if the Federal Government is not to break down with the weight of expenditures.

Mr. MONTAGUE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from New York yield to the gentleman from Virginia?

Mr. FITZGERALD. Yes.

Mr. MONTAGUE. I have not been able to hear all the interesting observations of the gentleman, but I wish to ask whether or not he has commented this morning in any of his remarks on the right of a President to veto individual items in an appropriation bill?

Mr. FITZGERALD. There was a time when I thought it might be a good thing for the Federal Government. In an indirect way I became somewhat familiar with the manner in which the supply and appropriation bills were considered during a certain period in the history of the State of New York. I found that the chairman of the committee on ways and means, in the assembly, and the chairman of the committee on finance, in the senate, and the governor got together and determined among themselves how much money has to be expended, and then they determined the particular items that the man responsible in the house would block, and the items that the chairman of the committee on finance would eliminate, and the ones to be left in the bill to be vetoed by the governor, because it would be embarrassing to either of the other two men to antagonize them. In view of the history of the Anglo-Saxon people, and of what has happened in my own experience in this House, I am not certain but that the right to coerce the Executive by obtaining legislation through a refusal to grant supplies is of so tremendous value and importance to the Representatives of the people that that change should not be made in the Federal Constitution.

But I do not wish to go into that subject. I have spoken a great deal longer than I had intended. I wished to refer briefly to one particular subject, and I have been led far astray.

Mr. GARNER. Mr. Chairman, will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. GARNER. I wanted to refer to what the gentleman had in mind. I am like the gentleman from Virginia [Mr. MONTAGUE], in that I did not have the pleasure of hearing the entire remarks of the gentleman from New York; but, as I understand, he believes that the time will come, even if it is not advisable at this moment, when the Congress should not be allowed to make an appropriation except where the executive branch of the Government deems it advisable, and that the Congress would only authorize an appropriation and then leave it to the discretion of the Executive as to whether the Executive would utilize that or not?

Mr. FITZGERALD. That is true now. The administration need not now spend the money appropriated.

Mr. GARNER. I understand that; and if the executive department of the Government fails to exercise the authority conferred by Congress, and the Congress in the face of the failure of the Executive authority to exercise that power declared its opinion otherwise, should not the Executive then resign, so that the Congress might have in executive authority some agency that would obey its commands?

Mr. FITZGERALD. That would involve too many substantial changes in our organic law. The suggestions I make would not.

Mr. GARNER. I do not think the gentleman from New York would take the position that the Congress ought not to preserve the right to represent and execute the wishes of the American people, and if it were a question of want of confidence in the Executive, in whose hands authority was vested to make the appropriation, I think the Executive ought to resign.

Mr. FITZGERALD. That is treating a phase of the subject that I do not think is imperative, because, as I said—although the gentleman, perhaps, may not have heard me—that we are not troubled with the failure of the executive departments to ask for sufficient money for the conduct of the Government service. It is the rarest and most exceptional situation to find anyone not asking more than is needed.

Mr. GARNER. But under any conditions I assume the gentleman from New York would not undertake to take away from the Congress the right to speak as the representatives of the people?

Mr. FITZGERALD. I will agree with that broad statement.

Mr. GARNER. And if any member of the executive branch of the Government which was not responsive to the wishes of the people should refuse to carry out the judgment of Congress, it seems to me the rule ought to apply where he would disconnect himself from the service of the Government.

Mr. FITZGERALD. I hope the time will not come when the representatives of the people will try to force money upon an unwilling Executive. [Laughter.] I know it has been pretended that that situation has existed, but it is rarely that the administrative officials have not accommodated themselves to the situation and expended the money as graciously as possible. [Laughter.]

Mr. KAHN. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman from New York yield to the gentleman from California?

Mr. FITZGERALD. Yes; I will yield. Then I wish to conclude.

Mr. KAHN. I have listened with a great deal of interest to the remarks of the gentleman. Has the gentleman ever considered a proposition of this kind—getting the chairmen of all the great appropriating committees of the House together, and also the ranking minority members of the various appropriating committees, at the beginning of the session, with a view to going over the estimates and seeing what can be done by each committee, so that all the committees shall work in absolute harmony?

Mr. FITZGERALD. Well, I discussed at some length at the beginning something that would apply to that suggestion. I pointed out the fact that at the beginning of this session of Congress the estimates submitted for consideration in connection with this bill amounted to $111,000,000. Since that time estimates for $21,000,000 additional have been submitted, and the man never lived who could tell at the opening of the session of Congress with any degree of approximate accuracy how much this bill ought to carry; and if we should distribute the revenues at the opening of a session, and if we should be living in a time when the Treasury is in a less plethoric condition than it is at present, the result would be very unfortunate.

Mr. KAHN. But could not such a combination of chairmen of committees act, even upon the additional estimates that are sent in, so that the various committees would all discuss the matter and arrive at some common ground?

Mr. FITZGERALD. An attempt was made to do something along such line, I believe, in the last session or the session before that one. The chairmen of the various committees evinced such inability to make reductions in the proposed expenditures that the meeting broke up and was never reconvened.

Mr. MARTIN. Will the gentleman yield?

Mr. FITZGERALD. I will yield for one more question, and then I wish to finish.

Mr. MARTIN. I was very much impressed with the statement of the gentleman, now repeated, that the estimates from the departments for the last four years as to this sundry civil bill have been something like $97,000,000 in excess of what the committee has allowed or recommended.

Mr. FITZGERALD. Yes.

Mr. MARTIN. Does not that suggest to the gentleman that the relief for extravagant expenditures will probably not be found by increasing the power of initiative in the executive department of the Government, but must be found in some real economy in the legislative branch?

Mr. FITZGERALD. I have stated the reasons why I believe what I have suggested would work out desirably, that if we take from the individual the right to initiate appropriations, he will then become much more keenly interested in the particular things the departments believe they should have, and will exercise an independence and a scrutiny that otherwise, I believe, is not exercised. At any rate, the experience of mankind is that a popular body will never economize by refusing to appropriate money for the things they think are popular with the people upon whose determination their official lives depend.

Mr. BURKE of South Dakota. Before the gentleman concludes, will he permit me to make a suggestion and ask him a question?

Mr. FITZGERALD. Certainly.

Mr. BURKE of South Dakota. Mr. Chairman, I appreciate what has been said by the distinguished chairman of the Committee on Appropriations, and recognize his great ability and his long experience in dealing with appropriations; he is not excelled by anyone in the House, either in his knowledge of the subject, his ability or experience, and he is equaled only by the distinguished gentleman from Massachusetts [Mr. GILLETT]. I want to ask the gentleman if what he has said generally, with reference to reforms in appropriations, applies only to the preparation and passage of bills in the House of Representatives? The gentleman has undoubtedly guided through this House many appropriation bills that he believed were as near accurate and correct as it was possible to make them; and yet when they became laws, the amounts carried had been very materially increased over the amounts carried in the bills when they left the House, and that is usually what happens to every appropriation bill after it passes the House. Now, assuming that there be a system adopted in the House dealing with appropriations along the lines suggested by the gentleman, and others who have discussed the subject, that have given the subject thought and study, how would you obviate the difficulty that we now have in controlling the limit of appropriations?

Mr. FITZGERALD. I did not mean that such a limitation should apply to the Members of this body alone. I meant that that limitation upon the rights of Members must apply to the Members of the two bodies. I do not believe that this House should ever be circumscribed or limited while the other House is free.

Mr. MANN. Mr. Chairman, will the gentleman yield for just one observation? It will be very short.

Mr. FITZGERALD. Yes.

Mr. MANN. I understood the gentleman in a way to advocate the proposition that no appropriation should be allowed to go through the House which had not been estimated for unless it had received a two-thirds vote.

Mr. FITZGERALD. I referred to that provision in the Confederate constitution.

Mr. MANN. Of course the gentleman is correct, but that might be the outcome in the end. I should just like to suggest in that connection that that would be turning over practically not only appropriations but legislation to a minority in the House, because most legislation carries with it an appropriation, and a great deal of the most important legislation carries a slight appropriation in the legislative bill; and under that rule you would always have to go and find out from the minority whether they would allow the legislation to be enacted. Of course that would be in favor of the gentleman's party hereafter [laughter], but I am sure he does not advocate it as a partisan proposition.

Mr. FITZGERALD. Mr. Chairman, I have occupied more time than I intended to occupy.

Mr. STEPHENS of Texas. Will the gentleman yield for a question?

Mr. FITZGERALD. Yes.

Mr. STEPHENS of Texas. I see on the second page of the report you have made this statement:

Omitting from consideration all sums having to do with the Reclamation Service and irrigation of Indian lands that are involved in the estimates for 1916, appropriations for the current year, and total amount recommended in the accompanying bill the following results are shown:

The bill as a whole, exclusive of the Reclamation Service, makes a reduction in the estimates of $9,067,746.67 and a reduction under the appropriations for the current year of $1,920,999.10.

Additional to the foregoing amounts for the Reclamation Service the further sum of $1,275,187.93, submitted in House Document No. 1481, for irrigation works on certain Indian reservations, was referred to and considered by the committee without favorable action.

I desire to know from the gentleman whether that was because his committee did not consider that they had jurisdiction of this matter and that it belonged to some other committee, or was it on the merits of the appropriation?

Mr. FITZGERALD. The committee felt that the irrigation projects on Indian reservations were matters that had been considered by the Committee on Indian Affairs, and that we should not enter into those matters.

Mr. STEPHENS of Texas. That was the information I desired from the gentleman. I saw that the department had referred it to the gentleman's committee, and we desired to know the reason why it was not passed upon by that committee, so that we could govern ourselves accordingly.

Mr. FITZGERALD. They sent it to the Committee on Appropriations because the Indian bill had passed the House, but we did not feel that that was a sufficient reason to justify us in taking up those matters.

Mr. STEPHENS of Texas. That is correct.

Mr. FITZGERALD. Mr. Chairman, I have been led into a not very profound but a somewhat more or less interesting discussion of some matters not contemplated to be discussed when I rose. A very beneficial purpose will have been accomplished, however, if what has been said here to-day will stimulate the thought of Members and the interest of the people generally in the question of public expenditures. Nothing will be more pressing in the very near future than the financial problems of the United States. The sooner Members begin to think of them and what must be done, regardless of any party consideration or questions of party policy, the better it will be for the welfare and the prosperity of the American people.

Mr. GILLETT. Will the gentleman yield?

Mr. FITZGERALD. I will.

Mr. GILLETT. I respect the request of the gentleman from New York not to be interrogated about details, but I would like to ask him whether he does not think this bill could be materially reduced without seriously embarrassing the operations of the Government.

Mr. FITZGERALD. I should not like to make that admission. So that that remark may not be misinterpreted, let me say that I believe that provisions are made in the bill for some purposes that could be deferred if it were essential without particularly impairing the public service, but I do not believe that the temper of the country or of the Congress desires that those things be deferred. I do not believe that the Committee on Appropriations would be justified in withholding appropriations for such objects in view of the known sentiment of the House.

Mr. GILLETT. One other question. I know it has always been the custom of the gentleman from New York to discuss on appropriation bills—and this is the last one of the large ones from our committee—the condition of the Treasury. May I ask the gentleman why he has omitted that?

Mr. FITZGERALD. The gentleman from Massachusetts knows that I have been very busy considering and preparing the sundry civil bill. Not taking into account the time that was devoted to hearings on the Isthmus of Panama, the committee commenced the hearings of the civil-service appropriation bill on the 16th of December, and has continued them during the holidays and continually until within a day or two. I might say that I have been busily occupied in attempting to keep within reasonable limits the amount that shall be expended from the Public Treasury by authorizations in this bill. It has been difficult for me to make that searching analysis of possible accessions to the revenue which I should like to have made for such a discussion as the gentleman suggests. There is about a month left, however, and if any public emergency should arise and I should imagine that any observations by myself would be of any particular interest to anyone or of any benefit to the country, I may attempt to discuss our financial condition; and if I do, I shall do as I have always done—I shall give the House the benefit of my unbiased opinion and my best judgment. I hope my views will be in harmony with the convictions of the Members, and will be neither alarming nor distressing to them nor to the country. [Applause.] Mr. Chairman, I reserve the balance of my time.

Mr. GILLETT. Mr. Chairman, the reply of the gentleman from New York to my question asking why he had omitted his usual discussion of the condition of the Treasury was not very frank or illuminating. I had anticipated with much curiosity and interest hearing his statement on that subject, but I am not surprised that he avoids it. Even his remarkable ingenuity would be at a loss to find any explanation of existing conditions which was creditable to the administration.

This is the last of the large appropriation bills. All the others have passed the House and are pending in the Senate. At the beginning of this session, on the first appropriation bill, I called the attention of the House to the fact that in this year of stringency and depression, when all individuals were cutting down expenses a' trying to economize, this administration, seemingly unaware of financial and industrial conditions, apparently thinking that our income was not going to suffer like others, sent in estimates for the next fiscal year larger than had ever been submitted by any President and calling for an expenditure greater than the country had ever indulged in during its most prosperous years.

In the last campaign one of the main grounds of the attack upon the present administration was its extravagance, and yet in the face of that successful attack and criticism, and in the face of the unsettled conditions throughout the world, the enormous destruction of capital and the inevitable stringency resulting, this administration did not think it was prudent to do what everyone else was doing, and economize, but, blind to the signs of the times, requested Congress to appropriate money on a larger scale than ever before.

I said then that not only ought we to economize in our appropriations for 1916, but that in my opinion there was great danger that in this very fiscal year the Government would find itself confronted by a deficit. Two months have passed since then. Instead of changing for the better, it seems to me the lapse of time has but confirmed my fears. Apparently at last even the administration became alarmed, and a few days ago it was reported that Cabinet meetings were held and the leaders of the House and Senate consulted as to whether the appropriation bills which had granted the enormous sums requested by the administration could not even yet be clipped. But apparently effort in that direction was abandoned, and they are proceeding in their regular course.

The original estimates sent in asked for appropriations of $1,090,000,000. The revenues were estimated at $1,055,000,000, leaving an apparent deficit of $45,000,000; but the estimates contained $60,000,000 for the sinking fund, which it was not proposed to really spend, so that left a surplus of $15,000,000 if the revenues should equal expectation. But under this administration revenues have always fallen below expectation, while the expenditures have always exceeded the estimates, and so already the bills which have passed the House or been reported have exceeded the original estimates by $18,000,000, and that should be increased by $2,000,000 because of a reappropriation made in the naval bill. So that already the appropriations exceed the estimates by $20,000,000, and the surplus of $15,000,000 is turned into a deficit of $5,000,000, and there still remains the Senate to be reckoned with. Unless it departs from its invariable prerogative of increasing and never decreasing appropriations the bills will be still larger when they emerge from the Senate and from conference, and the deficit of $5,000,000 will doubtless be still greater.

It is but fair to state that this increase of the appropriations over the original estimates is not primarily the fault of the House, as many of the increases have been recommended by the departments in supplementary estimates. Indeed, except for the $27,000,000 increase in the Post Office bill, due mainly to the refusal to follow the recommendation of the Postmaster General and substitute the contract system for rural carriers, the House has appropriated less than the administration asked for.

The revenues this year have thus far been steadily falling off, though just how much it is impossible for me to ascertain. The customs revenue was estimated at $240,000,000—$20,000,000 more than the current fiscal year. What ground there is for expecting increased imports of dutiable goods next year it is difficult for me to comprehend. Conditions in Europe certainly do not look any more favorable, and we are quite as apt, I think, to have a loss of $20,000,000 as a gain of $20,000,000. I still think that in the present fiscal year we are likely to face a deficit, and that before the 1st of next July the administration will be selling bonds in order to pay the running expenses of

the Government and keep a balance in the Treasury. That balance has shrunk from $145,000,000 on the 1st of July to $55,000,000 on the 1st of February. That is an average loss of $13,000,000 a month, and the Treasury balance is now reduced to as low a figure as Treasury officials have generally thought safe. But there is nothing to indicate that the trend will change at all during the next four months, and at that rate by the 1st of June the Treasury would be empty. Indeed, when it reaches the $50,000,000 mark it is generally considered to need replenishing.

Of course in June the income tax flows in. That is estimated by the department at $80,000,000—$40,000,000 from corporations and $40,000,000 from individuals. Last year those taxes brought in $71,000,000. I can not see on what ground they are expected to produce more this year than last year. Last year the Secretary's estimate was $16,000,000, or 20 per cent too high. I should not be surprised if his estimate this year was equally erroneous. To be sure, last year the depressing and disturbing effect of the Democratic tariff law reduced incomes, so that the tax produced far less than was anticipated. This year, while the tariff continues its blighting effect, we have in addition the tremendous disturbance caused by the war, and there is every reason to expect a great falling off instead of an increase in incomes of both corporations and individuals which will be reflected by a reduction in the revenue from that tax.

But allow that the income tax brings $80,000,000—the full amount of the Secretary's estimate—and that other conditions remain the same—and there certainly is now no material prospect of a change—what would be the condition of the Treasury during the next fiscal year for which these appropriations are made? An excess of expenditures over receipts of $10,000,000 a month from now till then amounts to $50,000,000. We have now $55,000,000 in the Treasury.

Mr. MANN. Oh, less than $54,000,000.

Mr. GILLETT. A million does not make much difference now.

Mr. MANN. It shows how rapidly it is decreasing.

Mr. GILLETT. It does. Every time I look it is less than the last time.

Mr. MADDEN. Will the gentleman yield?

Mr. GILLETT. I will.

Mr. MADDEN. I want to call the gentleman's attention to the fact that it is likely that the income tax and the post-office revenue is going to fall off, too.

Mr. GILLETT. The income tax brings $80,000,000, making $135,000,000. Subtract from that $50,000,000 which we will lose before July 1 and it leaves $85,000,000 on hand July 1. That is only a little more than the safe working balance of $50,000,000. But they estimate that the emergency tax will bring $10,000,000 less in 1916 than this year, and there will be nothing to fill the Treasury again until the following June; so that if the present rate of revenue continues, long before the middle of the next fiscal year we will again be reduced to the issue of bonds to pay running expenses. And yet, in face of these figures, the Secretary of the Treasury issues a formal statement after the Cabinet meetings and conferences with Mr. UNDERWOOD and Mr. FITZGERALD, saying that the conclusion was reached that no reductions could be recommended in the appropriations, and no action was necessary to provide more revenue, and there was no occasion for unfavorable reports about the condition of the Treasury. I sincerely hope he is correct, but I believe he is indulging in optimistic day dreams and taking counsel of hope rather than reason. Of course some favorable change may come to increase the flow of revenue, but no sign of it can be pointed out except psychologically, and unless it comes our Treasury is sure to be emptied.

Our imports are steadily decreasing—they were $138,000,000 in October, $126,000,000 in November, $114,000,000 in December—so that our customs revenues are also shrinking. Apparently all the sources of income for the Government are slowly drying up; we are liable to have a deficit in this very fiscal year; and yet, in the face of all that, there is evidenced by the administration no recognition of these conditions, no attempt at economy, no cutting off of expenses, no attempt to save the Treasury. To be sure, the Secretary of the Treasury did say in his annual report:

> As long as the expenditures of the Government exceed its income there is always danger. A corollary of a weak treasury is impaired confidence.

But this recognition of the danger is not accompanied by any act to avert it, and apparently we are drifting on, appropriating larger sums than ever before, as if the world were at peace, conditions were normal, and we could afford to gratify all our desires. Such a policy is unsound, reckless, and improvident, and unless some sudden stroke of good fortune should overtake us we are likely to face, unprepared, those exact dangers which the Secretary of the Treasury points out. And the administration is bending its whole energies to force through a reluctant Congress a shipping bill which will involve the expenditure of $10,000,000 more and an annual deficit which can not be reckoned.

But the retort is always made by a majority to a minority, "Point out to us where you would economize." It is not a fair retort, because such economy ought to be undertaken by the executive departments when they are framing their estimates, surveying the whole field of Federal expenditure and balancing the different departments, and then it ought to be followed up in the committee room, where the close scrutiny and detailed examination is made. But the minority have already saved for the administration $30,000,000 by the filibuster against the river and harbor bill in the Senate last session.

There are several items in this very bill which I think, under present conditions, ought to be omitted. There are appropriations of about $10,000,000 for public buildings which have not yet been even commenced and for which no contracts are outstanding. They are all of them luxuries, and, in my opinion, many of them are extravagances which ought never to be indulged in, no matter how rich we are, but which certainly ought to be postponed to a time when the Treasury balance is not in danger. There would be a saving of $10,000,000—quite a tidy sum for a depleted Treasury.

Mr. AUSTIN. Mr. Chairman, will the gentleman yield?

Mr. GILLETT. Yes.

Mr. AUSTIN. Will not the $9,000,000 go out into circulation and employ many idle men?

Mr. GILLETT. We might as well say, "Issue bonds for a thousand million and employ them all, if you are going to employ any, and not exercise favoritism."

Another appropriation which I think could be well deferred is the $3,000,000 for the physical valuation of railroads. When that project was first considered it was estimated to cost from $2,000,000 to $3,000,000 and to require three or four years for completion. Then the next year the estimated cost rose to an outside cost of $5,000,000, with a limit of five years for completion. Now it is estimated that it will cost from $15,000,000 to $20,000,000, and we have no certainty that it will not cost twice that. Moreover, it will cost the railroads probably quite as much more, for we were told that it is now costing some of the older roads twice as much per mile as it costs the Government, and that, too, the people have ultimately to pay. How long it will take no one can accurately foretell or whether the information will not be so obsolete as to be practically useless. Admitting that the statistics will be valuable in various ways, they are, after all, a luxury which we can live without and which we might well postpone until the Treasury could endure the drain.

There are two large expenditures which might be lopped off and cause no suffering to the people and much relief to the Treasury.

But my main criticism is not against these special estimates and appropriations but against the indifference, the ignorance, or the procrastination which failed to carefully survey the whole field and outline economies which would have left our Treasury in a safe condition to weather any storm. I do not wish to be an alarmist or to excite undue apprehension about the Treasury, but I think the facts ought to be recognized, and with the Treasury balance reduced to $55,000,000, the lowest it has been since the Cleveland administration, and with an average excess of expenses over receipts of from $10,000,000 to $13,000,000 a month, it seems to me the Government will be reduced to issuing bonds to pay its running expenses before the 1st of June.

Mr. PAGE of North Carolina. Will the gentleman yield for a question?

Mr. GILLETT. Certainly.

Mr. PAGE of North Carolina. Personally, I agree with some of the statements the gentleman has made about the possible saving at this time which could have been effected in this appropriation bill and some others, but, knowing the gentleman's sincerity, I want to inquire how he voted yesterday on the proposition to build one battleship or two?

Mr. GILLETT. Well, unfortunately, I could not vote, but I was paired in favor of two battleships, and I expressed in some remarks I made a week ago the full reasons, and if the gentleman will read those he will find there is no inconsistency with what I am saying now and with my vote on yesterday.

Mr. PAGE of North Carolina. Mr. Chairman, I want to assure the gentleman that the purpose of my question was not to reveal any inconsistency whatever. I think the gentleman is more consistent than the average Member of the House in his

votes and statements, and I really did not know how the gentleman did vote yesterday afternoon, but I thought if he lived up to the statement he was making this morning, surely he voted with us for one.

Mr. GILLETT. Mr. Chairman, for the first time since I have been in Congress I voted for two battleships on yesterday, and I gave my reasons very fully in a speech a week ago, and if the gentleman will read that, though it may not convert him, it may perhaps satisfy him of my continued sincerity.

Mr. BARTLETT. Will the gentleman yield for an interruption?

Mr. GILLETT. Certainly.

Mr. BARTLETT. The gentleman stated the large amount appropriated for the physical valuation of railroads. Would the gentleman suggest that that work be suspended during the next fiscal year?

Mr. GILLETT. I certainly would.

Mr. BARTLETT. The Appropriations Committee had the members of the Interstate Commerce Commission before them about it. Did they reveal how much money already appropriated was expended? I was not present at that hearing.

Mr. GILLETT. I do not care to take time to go into those details now. I do not wish to be discourteous to the gentleman, but I do not care to take time for that. I simply say that could be well postponed.

Mr. BARTLETT. Does the gentleman intend to call attention to the Alaska railroad proposition?

Mr. GILLETT. I do not think I will say any more now about specific items. There are a number of items in the bill which I think should be dropped. I have not mentioned all of them. I tried in the subcommittee to reduce many, which, of course, I can not properly reveal, but I simply suggest now the two largest reductions and postponements which I think should be made out of deference to the condition of the Treasury.

Mr. BARTLETT. Does the gentleman think that the appropriations carried in this bill for the continuation of the Alaska railroad project—I do not mean discontinued permanently—could be safely deferred?

Mr. GILLETT. I do; that is another one which I think could be deferred. There are $2,000,000 more to be saved.

Mr. MARTIN. Will the gentleman yield?

Mr. GILLETT. I will.

Mr. MARTIN. The gentleman has given us approximately $85,000,000 as the possible balance in the Treasury on the 1st of July, based upon the estimates by the Treasury Department, which he says he does not believe are accurate. I would like to ask the gentleman if he will favor the committee with his opinion as to the approximate condition of the Treasury on the 1st of July coming?

Mr. GILLETT. Mr. Chairman, I do not care to give that. I do not think I can prophesy exactly. I think that the income from the income tax will fall at least $10,000,000 below what the administration estimates, and I should not be at all surprised if it were $20,000,000.

And yet the Democrats still dare to call themselves the party of economy. For last year, when they made the largest appropriations ever known in the history of the Government, they might now make the excuse that they did not foresee the European war, and that they honestly, though mistakenly, believed that their new tariff law would draw into the Treasury ample revenue so that, although the expenditures would be enormous, the receipts would be correspondingly and adequately vast. That is, of course, a fair excuse. What is extravagance in a pauper might seem parsimony for a millionaire. It is hard to prove that a person or a government is extravagant which lives within its income. During that series of years when the Democrats so unceasingly denounced us for extravagance they at least could not charge that we did not provide ample means to pay for them. But now they not only exceed in amount those appropriations which they so fondly denounced as extravagant and profligate, but they fail to provide the revenues to meet their bills, which they now call, in the words of the Secretary of the Treasury, "the lowest figure consistent with efficiency of the service and the proper conduct of the business of the Government." They, the self-satisfied monopolists of economy, outrage every principle of sound finance. They appropriate money for larger expenditures than even last year, while at the same time they know that the stream of revenue, insufficient before, is steadily dwindling and with no sure prospect of replenishment. Their reputation for economy has shrunk even more than the balance in the Treasury.

There are many items of expenditures disclosed in the hearings on this bill which suggest criticism, or at least inquiry. Most of them are small—individually may seem trivial and petty—but I shall point out a few of them, because, while each is of no great consequence in itself, yet repeated small instances indicate a trend and form a habit, and it may not be harmful for the departments to know that their items are watched and may be criticized.

A few years ago there was loud complaint here because of the number of horses and carriages maintained for officials of the departments at Government expense, and the abuse was restricted, and I remember nearly the whole of one afternoon was spent discussing whether the State Department was extravagant in spending nearly a hundred dollars a year for horseshoeing. I observe now that for the use of the Secretary of War there are kept one 4-seated carriage, closed; one 4-seated carriage, open; one 2-seated carriage, open; and one 2-seated carriage, closed; and this not being enough to convey him in proper state to his official duties, there was purchased for his use out of the fund for transportation of the Army and its supplies an automobile costing $4,850.

I do not criticize the Secretary of the Navy for visiting the different navy yards at Government expense, nor do I think it was necessarily superfluous for the Assistant Secretary to follow shortly after with a similar visit, but I do not see why the superior dignity of the Secretary required an expenditure of $687, while it cost the assistant only $489; nor do I see why the Secretary should charge the Government for an "official trip" from Washington to Lincoln, Nebr. I appreciate and admire his loyalty in visiting that shrine, but that worship has been sufficiently profitable to him already to allow him to pay his own expenses. If his visits to navy yards had resulted in some effort to abolish some of the useless ones, there would be less disposition to scrutinize them. The Government paid $1,433.71 for the official trips of the Secretary alone last year, including visits to such scenes of naval activity as Spokane, Butte, Denver, Salt Lake, Omaha, Pittsburgh, and so forth.

Mr. BUTLER. It is not pretended there are any naval stations at these places. What was the official business of the Secretary of the Navy at Lincoln, Nebr.? There is not any water there.

Mr. GILLETT. I just pointed out that I did not know.

Mr. SLOAN. Will the gentleman yield?

Mr. GILLETT. I will.

Mr. SLOAN. I trust the gentleman will not detract in any way from the naval station at Lincoln. It is located on Salt Creek.

Mr. GILLETT. The Secretary of the Treasury is also a luxurious traveler. For a month's trip with the Secretary of Agriculture and their attendants to prepare for the establishment of reserve banks the Government paid $6,663.01, over $200 a day. I suppose they thought the magnitude of their financial purpose should be reflected in their expense account.

Mr. HELM. Will the gentleman yield?

Mr. GILLETT. Certainly.

Mr. HELM. Does the gentleman recall a famous trip taken by an ex-Secretary of War, later President of the United States, Mr. Taft, with a shipload of guests and acquaintances and friends to the Philippine Islands, that exhausted the entire appropriation of about $200,000 or more for that purpose, and that they were subsequently compelled to draw on some contingent fund for $70,000 or $80,000 additional?

Mr. GILLETT. I do not know anything about the expense. There was such a trip by Congressmen to inspect the Philippines.

But to atone for any extravagance in traveling—if there was any, of which I am not certain, though the figures indicate it—the Secretary boasts in his report of one great saving which was detailed to our committee. Gold coin had always been shipped from one point to another by express. The brilliant thought occurred to the Secretary of saving these express fees and sending by parcel post. In that way he would only have to pay the Post Office Department, and really would not pay at all, as it is only a matter of bookkeeping, transferring a credit from the Treasury Department to the Post Office Department. The express companies insured the gold while the Post Office did not. Seventy-eight million dollars in gold coin have been shipped from the mint in Philadelphia to the subtreasury in New York by separating the coin in small bags so that each bag came within the parcel-post limit of 20 pounds, and in that way between 100 and 200 tons of gold were made up into small packages and sent to New York at no cost to anyone except the railroads, and the Secretary plumes himself on this business transaction.

My instinct is not to criticize any plan which saves money for the Government, for it is so uniformly imposed upon and

buncoed, its operations are conducted at such great cost compared with any other business, that I applaud any device for saving which is reasonable and decent. If at present the railroads were being overpaid for their carriage of parcel post I might think this was a shrewd device to get even. But when they are notoriously underpaid and the extra load and expense imposed upon them by the parcel post has never yet been fairly computed and provided for, to make up shipments of seventy-eight millions of gold coins into little bags and compel the railroads to carry it for nothing, requiring special trains and service, is a sort of Shylock performance unworthy the National Government, and although it saved us money, I do not think it an achievement to boast of. If it indicated a painstaking disposition to save money in the extremity of the Treasury it would be more excusable, but as a sporadic outburst of economy and a specimen of mean and unfair dealing, it is not creditable.

Mr. GOODWIN of Arkansas. How much was that saving?

Mr. GILLETT. I have forgotten the amount of the saving. I think it was about $35,000. It was a material saving, however. The express companies have to insure the gold, and the parcel post does not insure it.

Mr. PLATT. Was that gold really shipped from Philadelphia to New York without being insured in any way?

Mr. GILLETT. It was.

Mr. PLATT. And if it had been lost, the Government would have had no recourse?

Mr. GILLETT. It would have had no recourse.

Mr. PLATT. Well, I think that is pretty poor business.

Mr. GLASS. Right on this point may I interrupt the gentleman? Does the gentleman know whether or not the Treasury Department has created this condition of affairs which up to 12 months ago had prevailed for 30 years? The Government of the United States for that period——

Mr. GILLETT. I am yielding for a question. If it is not a question, I do not care to yield.

Mr. GLASS. It is a question, but not a long one.

Mr. GILLETT. I do not care to yield for a statement.

Mr. GLASS. The Government of the United States for a period of 30 years——

Mr. GILLETT. Now, Mr. Chairman, I decline to yield any further. That is a statement.

Mr. GLASS. I have to make the statement in order to ask the question.

The CHAIRMAN. The gentleman from Massachusetts declines to yield.

Mr. GILLETT. Another act of the Treasury Department which seems to me of a similar character and spirit is connected with collection of the income tax. The law imposing an income tax provides (sec. 2d, sixth proviso):

> That persons liable for the normal income tax only, on their own account or in behalf of another, shall not be required to make return of the income derived from dividends on the capital stock or from the net earnings of corporations, joint-stock companies, or associations and insurance companies taxable upon their net income, as hereinafter provided.

Persons whose annual net income is more than $3,000 and not more than $20,000 are liable for the normal income tax only.

The Treasury Department form 1040 for the return of net income during the 10 months of the year 1913 required (line 2, p. 2):

> Total amount of income derived from dividends on the stock or from the net earnings of corporations, joint-stock companies, associations, or insurance companies subject to like tax.

On February 7, 1914, the Treasury Department issued to collectors of internal revenue a circular (T. D. 1945) quoting the proviso of the income-tax law above set forth and saying:

> You are informed that returns of individuals, when such individuals are subject to the normal tax only, need not include the income derived from the dividends or net earnings referred to above. When individuals are subject to the additional tax, such income derived from said dividends or net earnings must be shown on the return.

This appeared to settle the question conclusively, and it was to be expected that a revised form would make it clear to income-tax payers exactly what requirements they were obliged to meet.

But form 1040, revised, issued for individual tax returns for 1914, contains (line 25, p. 2):

> Dividends on stock or from the net earnings of domestic corporations, joint-stock companies, associations, or insurance companies subject to like tax.

The caption of page 2 of this form reads as follows:

> This statement must show in the proper spaces the entire amount of gains, profits, and income received by or accrued to the individual from all sources during the year specified on page 1, except income derived from the obligations of the United States or any of its possessions, or of any State or political subdivision thereof, including district drainage bonds, and amounts paid by a State or any political subdivision thereof for services rendered as any officer or employee.

Paragraph 1, instructions, page 4 of this form, states:

> This return shall be made by every citizen of the United States, whether residing at home or abroad, and by every person residing in the United States, though not a citizen thereof, having a net income of $3,000 or over for the taxable year.

And the affidavit on page 4 is equally comprehensive.

There is not a line or word anywhere in the form to indicate the exemption of income from corporate stocks in the case of individuals not subject to the additional tax.

This class of income-tax payers—those having a total net income of not more than $20,000—constitute numerically an enormous majority of those affected by the tax; and few of them are familiar with the law, or so sure of the law, as to maintain their rights against the express provisions of a Treasury Department requirement. This requirement operates as an inquiry into their private affairs from which the statute expressly exempts them. Thus the Treasury Department, knowing that it has no right under the law to demand from the great majority of the persons affected information as to the stocks which they possess, after it has been called to their attention and they have ruled and admitted that they have no such right, still send out a form demanding such information, threatening a heavy penalty for failure to give it, and making no suggestion that anyone is excused from it. It is an unjustified and mean attempt either to collect from innocent citizens taxes which they are under no obligation to pay, or to spy into their affairs and acquire information about their property which they are not obliged to reveal.

I can see no excuse for it. It is an irritating assumption of illegal power, a meddlesome attempt to encroach upon the rights of citizens unworthy any officer of a great Government.

Mr. MADDEN. Mr. Chairman, will the gentleman yield for a short question?

Mr. GILLETT. Yes.

Mr. MADDEN. Has the gentleman thought of the fact that there is a recent ruling by the Secretary of the Treasury that no person will be allowed to deduct his losses from his income this year?

Mr. GILLETT. No. I was not aware of that.

The Secretary of the Treasury in his estimates suggested another great economy and reform, which I am happy to say the committee did not adopt. He recommended that for the erection of public buildings throughout the country a lump sum of $14,000,000 should be segregated, leaving it to him to determine how and when several millions of that money should be spent. This would be very useful for him. It would compel every Congressman who wished a building commenced or completed in his district to go to the Secretary and make terms with him. [Laughter.]

Mr. FITZGERALD. That provision did not originate with the present Secretary. It was originated by Secretary MacVeagh, and has been recommended several times and always refused.

Mr. GILLETT. It would have been more effective, I suspect, this time than it would have been under any other administration.

Mr. FITZGERALD. That is only on the theory that this is a more effective administration.

Mr. GILLETT. Millions of congressional pork would be absolutely in the control of the Secretary, to be doled out at such times and on such conditions as he should determine.

The influence of the Executive on Congress during this administration has been greater than at any time since the reign of Andrew Jackson. Its growth is one of the most dangerous symptoms in our politics. It makes one feel like introducing in our parliament the famous resolution which Col. Barre introduced under George III a century and a half ago—"The influence of the Crown has increased, is increasing, and ought to be diminished." But here is a shrewd proposition of the Secretary of the Treasury to increase enormously the patronage and influence of the administration. I suppose, as the offices have been largely distributed, and perhaps are giving out, some new source of power had to be invented, and here was discovered a fine method of continuing the dependence and subservience of Congressmen.

My own Massachusetts delegation offers a good illustration of that dependence in the past. In this Congress there were eight Democratic Members. Two of them have been reelected to the next Congress. Of the other six, places have been provided for one as Assistant Secretary of the Treasury, for two as postmasters of their home cities, and for one as United States marshal. Of the others, one signed a report against the administration's pet measure, the shipping bill, and so, of course, put himself without the pale; but why the other lone Member has been discriminated against and still left outside the breast-

works of patronage, I do not understand. Perhaps the plum is still kept dangling. [Laughter]. Thus the dependence of the executive and legislative branches of the Government is maintained. Thus the policies of the administration win the support of an appreciative and grateful, if not an impartial, majority in Congress.

We see by the press that the President has invited the Progressive Senators to talk with him about the shipping bill, and, about the same time, that he is considering the appointment of one or two Progressives on the Trade Commission. Remembering how he removed the only Republican member of the Civil Service Commission and filled his place, which the law did not allow to be held by a Democrat, with the nominee of a Progressive Senator, and how long and faithfully that Senator supported administration measures, I shall watch with interest these contemplated appointments. On the Trade Commission, as on the Civil Service Commission, the law compels the appointment of some members of the minority party. The Reserve Board had no such limitation, and accordingly all eight members of that board were Democrats. In many parts of the country the Progressive Party has dissolved, and in his Indianapolis speech the President made a strong appeal to them to join the Democratic Party. Under these circumstances, is it obeying the spirit of the law to appoint accommodating Progressives as representatives of the minority party? [Laughter.]

In the recent campaign I was criticized by my opponent on the stump because I had said:

He [the President] has certainly shown himself a wonderful master in the distribution of patronage. The most experienced politician has never shown greater skill in pacifying a voracious animosity by the distribution of loaves and fishes than this college professor.

I see no reason to retract or modify the statement. I spoke of Andrew Jackson, the great spoilsman, as the prototype of this administration. But I have discovered an earlier model. In the history of the Lewis and Clark expedition I find the following:

The chiefs and warriors held a council among themselves to decide on the answer to our speech, and the result was that they confided in what we had told them, and resolved to follow our advice. This resolution once made, the principal chief, Tunnachemootoolt, took a quantity of flour of the roots of cows, and going around to all the kettles and baskets in which his people were cooking thickened the soup into a kind of mush. He then began an harangue, making known the result of the deliberations among the chiefs, and after exhorting them to unanimity concluded by an invitation to all who agreed to the proceedings of the council to come and eat, while those who would not abide by the decision of the chiefs were requested to show their dissent by not partaking in the feast.

[Laughter.]

The concluding appeal of the orator effectually stopped the mouths of every malcontent, and the proceedings were ratified, and the mush devoured with the most zealous unanimity.

[Laughter and applause.]

Tunnachemootoolt lived a hundred years before his time. He should be canonized with Andrew Jackson as one of the patron saints of the Democratic Party. Does not his statecraft charmingly illustrate and anticipate the success of this administration? And if the request of the Secretary of the Treasury had been granted and he had been given full control over the expenditure of the fund for public buildings, what an eager rush there would have been toward the bowl of mush and what unanimity in voting! [Laughter.]

In glancing over the list of special attorneys employed by the Attorney General my eye happened on the two familiar names of Bryan and McAdoo, and an unsuspecting interest in the pursuit of abstract truth brought out the surprising information that these names were attached to the persons of sons of two Cabinet officers. The Attorney General obviously knew earlier than we did of the animating principle of the premier of this administration expressed so forcibly in the now famous Vick letter, and indicating that Government offices exist in order to give employment to deserving Democrats—and, of course, all members of the family should be included. The Secretary of the Treasury is to be congratulated on having a son so brilliant and precocious that when just commencing the practice of law he is worth $2,000 a year to the United States as a lawyer. The son of the Secretary of State, the premier of the administration, was, of course, worth a higher salary.

As indicating how the principles of the Democratic Party, like everything else mortal, are subject to change, I am reminded of an incident in the Forty-fourth Congress, when the House was Democratic and removed from office the Doorkeeper, Fitzhugh, the man who attained fame by the expression, "I'm a bigger man than old Grant." The report of the Committee on Rules recommending his removal contains this sentence:

The appointment of his son, a mere boy, to a $2,100 place, and when that was vacated by him then his reappointment and retention as file clerk at a salary of $1,800, shows a disregard of a principle of civil service frequently commented upon of late.

This referred, of course, to nepotism. How heretical and antiquated that sentiment would seem to this administration! [Laughter and applause on the Republican side.]

In a recent speech the President compared himself to the captain of a college football team. He did not give any details of his organization, but it does not require much imagination to fill up the membership of his first team. I venture to make a guess at it. The President, as he says, would be captain. The captain has despotic authority. No one questions his commands and the slightest disobedience is punished. So far the President's metaphor is perfect. The President would also doubtless fill the position of quarter back, the one who gives the orders on the field. The title of end men is so appropriate to those promoters of national merriment, Secretary Daniels and Secretary Bryan, that I am sure no one would contest with them those places. The stalwart form of the chairman of the Ways and Means Committee would doubtless be selected for center, whose duty it is to pass the ball up to the quarter back, having first received from him exact and explicit orders. The tackles would be those wiry athletes [laughter], the chairman of the Finance Committee of the Senate and the chairman of the Appropriations Committee of the House [laughter and applause], although after our colleague had made his speech describing the mess of the Democratic Party he might be relegated to full back, and even farther back than that, although he would certainly be brought forward again when any kicking was to be done, for no one would dispute his preeminent qualification in that line. [Laughter.] For half backs to carry the ball the captain would undoubtedly select those two dispensers of patronage, the Postmaster General and the Secretary of the Treasury, for he could be certain that no member of the team would ever lose sight of the ball as long as they carried it, but would follow them desperately and unfalteringly to the goal. It is a question whose tactics would be most successful in advancing the ball, the elusive and sinuous and artful dodging of the Secretary of the Treasury or the mad, headlong, straightforward rushes of the Postmaster General, but each could be sure of the team's enthusiastic support until the last office was distributed. There are so many candidates for the position of guards, particularly guards of the Treasury, and they are all so incompetent, that I shall not undertake to guess who would be selected. And when the line was formed for a grand, final struggle and the captain wished to call upon the team for their supermost exertion and extract from them the last frenzied ounce of strength he would doubtless shout out to them the signal, not in the usual mysterious numbers, but in four gladdening letters—P O R K—and with that incentive and inspiration the team would put forth their extremest effort. [Laughter and applause on the Republican side.] As long as the intoxication of that magic slogan lasts who could withstand their onset?

Thus I have endeavored to point out some of the defects which came to my mind during the formation of this bill. I will say frankly what I am sure you would not otherwise suspect, that I do not claim to have always spoken in a purely judicial and impartial spirit. Very likely some of the items I have called attention to were quite justifiable. But I consider that a proper function of the minority is to call attention to abuses or probable abuses or tendencies which may grow into abuses. We may not succeed in righting or even discovering a wrong, but it is always healthy for any administration to know that to commit wrong is unsafe, that it is watched, that it may be detected, and is never secure against disclosure and public criticism. [Applause.]

Mr. FITZGERALD. Mr. Chairman, how much time has been consumed on both sides?

The CHAIRMAN. The gentleman from New York used 1 hour and 12 minutes and the gentleman from Massachusetts 53 minutes.

Mr. FITZGERALD. I yield 20 minutes to the gentleman from North Carolina [Mr. PAGE].

Mr. PAGE of North Carolina. Mr. Chairman, it is not my purpose to undertake to reply to the very able speech that has been delivered by the minority leader on the Appropriations Committee [Mr. GILLETT] nor to address myself to the bill under consideration at this time. An incident that has been brought to my notice within the last few days in connection with the administration of the tax laws of the District of Columbia in the matter of assessment of taxes, relative to which a great deal has been said at one time and another by various people in the consideration of the District bill and District legislation, leads me to call the attention of the House, and incidentally those who are administering the laws of the District of Colum-

bia, to the situation that exists in connection with the levy and collection of taxes.

The contention has been made by certain gentlemen in this connection that the levy of taxes both as to assessment of real estate as well as of property that is covered under that assessment in the District of Columbia, is extremely favorable to the property owner here. On the other hand, there are those in the House, as elsewhere, who have contended with a good deal of vehemence that the property owner in the District of Columbia bears as great burden of taxation as does the average citizen of the States of the Union or other municipalities.

I am not at this time going to express an opinion as to whether or not the contention of those I have first mentioned is true or that of the latter. There is a feeling on the part of a great many Members of this House that there are certain classes of property owned in the District of Columbia that should be placed on the tax list which at present, under the law, are not. Under the present law there is an assessment levied upon the property of the District through an organization in the assessor's office, as far as real estate is concerned, of a valuation of not less than two-thirds and 1½ per cent on that valuation.

The law also provides for an assessment against tangible personal property, and the rate placed upon this is also 1½ per cent. However, the law under which this tax is levied has upon a little investigation upon my part revealed its weakness. Further than this, I am satisfied that those who are administering the law in the matter of placing an assessment, particularly on personal property in the District of Columbia, are not carrying out the law as it is written—certainly not in spirit.

Necessarily, in order to bring to the attention of the House the matter I have in mind, I am forced to be personal. So far as I remember, during my residence in the District of Columbia for 10 years I have never been asked to file an inventory with any official of the District of the personal property that I own. I find that a great many other gentlemen with whom I have conversed are in exactly the same condition.

The other morning, a few days ago, I received from the assessor's office of the District of Columbia a notice of a delinquency on my part for not having paid taxes on personal property. I presume other gentlemen may or may not have received a like notice. That notice read as follows:

Hon. ROBERT N. PAGE,
1827 Park Road.

SIR: You are hereby notified that the board of personal tax appraisers, under authority of the act of Congress approved July 1, 1902, as amended by the act of Congress approved April 28, 1904, has made an assessment of your personal property in the sum of $2,400, which includes a penalty of 20 per cent, upon which there is levied a tax of 1½ per cent upon said assessed value, a tax of $36—

And so forth.

I am entering no personal complaint about the amount of the assessment that I am called upon to pay, but I do feel that I have a grievance in that the first notice that I have received relative to my indebtedness to the District of Columbia upon my personal property carries with it a penalty of 20 per cent of the amount assessed.

Mr. GILLETT. Will the gentleman yield?

Mr. PAGE of North Carolina. Yes.

Mr. GILLETT. Did the gentleman inquire why he did not get the original notice?

Mr. PAGE of North Carolina. I am reaching that. My curiosity was aroused somewhat, and I immediately called up the assessor of the District of Columbia and asked him for an explanation as to why I was taxed with a penalty upon the very first notice I had had that there was anything due the District of Columbia from me for personal taxes. I said, "Have I filed with you any inventory of personal property?" He said, "Probably not." My next question was, "How did you arrive at the amount of the personal property, to wit, $2,400?" He answered, "Upon the best information we could obtain." I was still insistent and a little curious. I said, "How did you get the information, and from whom did you get it? You certainly did not inquire of me, nor did I give it." He hesitated to answer that question. I fired another at him, in which I wanted to know how they determined the amount of personal property of citizens in the District. I was not only amazed, but I was shocked, as many of you will be when I tell you his reply—"that his employees in the office walk the pavement in front of my dwelling and the dwellings of other people who live in the District of Columbia and guess at the amount of personal property it contains."

Mr. MONDELL. Will the gentleman yield?

Mr. PAGE of North Carolina. Yes.

Mr. MONDELL. What would they do in the case of an apartment house?

Mr. PAGE of North Carolina. I suppose he would go in and look at the number of letter boxes in the lobby and guess at the personal property of each one of the occupants. In explaining his method he mentioned 1620 Massachusetts Avenue. I do not know who lives there. He said:

My assessor or my employee from this office goes by on the sidewalk and views this house on the outside and makes an assessment on the personal property therein.

Mr. MONDELL. How does he know whether the house is abandoned or closed, and whether it is practically stripped of the furniture or full of the richest and finest furniture?

Mr. PAGE of North Carolina. Necessarily he does not know, and the gentleman from Wyoming knows he could not know. I suggested to him that even the house at 1620 Massachusetts Avenue might contain nothing more than a dining table and two chairs, and yet from the outward appearance his employee might guess that it contained $10,000 worth of personal property.

Mr. MONDELL. Is not the inevitable result of the system that those who are underassessed say nothing and all that feel themselves aggrieved protest?

Mr. PAGE of North Carolina. Of course, and that is the point I was coming to. Under any such system as is in vogue in the office of the assessor of the District of Columbia on personal property the result must necessarily be that those who are overassessed complain and those who are underassessed pay the amount they are assessed without mentioning the fact that they have more.

Mr. MONTAGUE. Mr. Chairman, will the gentleman yield?

Mr. PAGE of North Carolina. Yes.

Mr. MONTAGUE. Perhaps I could obtain the information elsewhere, but the gentleman probably has it at his finger's end. Who appoints this tax assessor?

Mr. PAGE of North Carolina. Mr. Chairman, the gentleman has asked a question I was coming to in a moment. This tax assessor is named by the Commissioners of the District of Columbia, and I wonder how many Members in this House are aware of the fact that he is named for life, upon good behavior, that there is a specific clause in the law, a provision that he can not be removed except for malfeasance in office, neglect of duty, or inefficiency. That applies not only to the assessor but to his assistants as well.

Mr. MONDELL. Mr. Chairman, will the gentleman yield?

Mr. PAGE of North Carolina. Yes.

Mr. MONDELL. Does the gentleman say that the policy to which he has referred as the one in vogue indicates good official behavior on the part of the assessor? Does the gentleman know of any other place on earth where that sort of system would be tolerated for a moment?

Mr. PAGE of North Carolina. Mr. Chairman, possibly I ought not to relate here a conversation that I had with the gentleman over the telephone, but this led me to ask this gentleman why he did not place in the hands of the owners of personal property in the District of Columbia a blank inventory upon which they might fill out under oath what they had and file it with him, so far as the personal property was concerned. I asked him if he knew of any other assessor anywhere on earth who did not undertake to place in the hands of the people whom they were taxing an opportunity at least to file an inventory of their taxable property. He freely admitted that he knew that the Treasury sent out such a notice. Whether he knows that every county in every State in this Union does the same I do not know; but the conversation went so far, I will say in answer further to the gentleman—and at that time I did not know that this man held his office for life; that he could not be removed except for cause—that I said to him that a man who had no more administrative ability and no more initiative had no business holding the office that he held.

Mr. DUPRÉ. Mr. Chairman, will the gentleman yield for a question?

Mr. PAGE of North Carolina. Yes.

Mr. DUPRÉ. Is there no requirement in the statute that compels this man to serve notice on and have the taxpayers make a return?

Mr. PAGE of North Carolina. Absolutely none to compel him to serve notice. That is a defect in the law. He is doing no more than he is compelled to do, whereas if the man had proper initiative and was really trying to carry out the law as it is written, not only in its letter but in its spirit, he would himself initiate methods, whether they were laid down in detail in the law or not, by which he could reach the property and see it was properly assessed and those taxes paid.

Mr. MONDELL. Mr. Chairman, will the gentleman yield further?

Mr. PAGE of North Carolina. Yes.

Mr. MONDELL. In the gentleman's investigation did he discover whether there was any way by which a taxpayer could pay his taxes on personal property without this penalty?

Mr. PAGE of North Carolina. I do not know that I asked exactly that question; but taking the case in point, if the gentleman will point out to me how I could have paid my taxes and have avoided this 20 per cent penalty, when this is the first intimation I ever had of what they had assessed against me—and I suppose I am treated as other property owners in the District are treated—I would be very glad to have him do so. I can conceive of no such way.

Mr. MONDELL. I will say to the gentleman that I received such a notice as he did, and I am glad that he investigated it. I thought of doing so, but neglected to do so. I do know that the tax collector does invite all of those who feel that they are overassessed to object, and ask for a reduction, by referring them to the blank space for a schedule on the back of the notice.

Mr. PAGE of North Carolina. That is done on this notice to me. In conclusion, Mr. Chairman, I desire to say that this gentleman gave as an excuse to me for not doing certain things I suggested to him that he did not have the force; that his office was not equipped so that he could do these things. I want to put into the RECORD at this place the fact that for the office of the tax assessor of the District of Columbia in the current appropriation bill there is an appropriation for the purpose of assessing real and personal property in the District of Columbia of $63,740. Salaries are carried for 41 people. The tax assessor is paid a salary of $3,500, and he has three assistants, at salaries of $3,000 each. He has two other assistants, at salaries of $2,000 each. He has four people at $1,400; four people at $1,200; seven people at $1,000 each; two at $900 each; one at $1,200; one at $900; one at $1,200; two at $1,000; two at $600; one at $1,500; two at $720; one at $1,500; and a lump sum of $500 for clerk hire, amounting in all to $47,940 in salaries appropriated to this office for the purpose of assessing real estate in the District of Columbia. In addition to that, for personal property he has two assistant assessors at $3,000; one appraiser at $1,800; one clerk at $1,400; one clerk at $1,000; three inspectors at $1,200, and clerk hire to the amount of $2,000, making a total of $15,800 for the personal-property assessment, or $63,740 in all for the assessor's office.

I want to say, and other Members of this House can bear me out, that with an equal number of people to be assessed in many of the counties represented here by various gentlemen there are as many individual taxpayers as there are in the District of Columbia. In many counties there are practically as many individual taxpayers as there are here, because this gentleman told me yesterday that there are only 16,000 people who pay taxes on personal property in the District of Columbia. In my county the assessments are made upon the property of every property holder in the county, both real and personal, and the assessor receives $2,500 a year and has one clerk at $600 a year. The taxes are collected in that county by the sheriff. He is paid a salary of about $2,500 and has one deputy at less than $1,000. The property, real and personal, of every man in that county is placed upon the tax books, and the taxes are collected, at a cost of less than $6,000, whereas we are appropriating in this bill for the purpose merely of assessing the property in the District of Columbia $63,740, and providing for the employment of more than 40 people. And yet this man says to me that he has not the force necessary to send out notices and induce the taxpayers to file an inventory of their personal taxes. Now, the gentleman in this House who supposes that the method of taxation and the assessment of these taxes and their collection in the District of Columbia is ideal has another guess coming. I venture the assertion there is not another political jurisdiction in the world that is as faulty in its administration in this respect as is within the District of Columbia, nor is there another place where there are as many people subject under the law to assessment and levy of taxes who escape altogether any taxation. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. PAGE of North Carolina. I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina? [After a pause.] The Chair hears none.

Mr. FITZGERALD. I will ask the gentleman to use some time on his side.

Mr. MONDELL. Mr. Chairman——

The CHAIRMAN. The Chair will inquire of the gentleman from Wyoming if he has charge of the time for Mr. GILLETT?

Mr. MONDELL. The gentleman from Massachusetts [Mr. GILLETT] asked me to yield 40 minutes to myself on his behalf.

The CHAIRMAN. The gentleman from Wyoming is recognized for 40 minutes.

Mr. MONDELL. Mr. Chairman, at the close of the remarks made by the gentleman from New York [Mr. FITZGERALD], the chairman of the committee, the gentleman from Massachusetts, the ranking minority Member, asked the gentleman from New York if in his opinion this bill could have been further reduced in the amounts carried in the various items without serious injury to the public service. I do not know whether the gentleman from Massachusetts intended to be facetious or not. If that was his intent, his question was certainly a most excellent joke, for I want to bear testimony to the effect that when the careful and painstaking chairman of this committee, the gentleman from New York, gets through with his trimming process on an appropriation bill in the face of a deficit in the Treasury, no one else need to undertake the job with a view to finding any fag or loose end which might properly have been eliminated. The gentleman from New York is the most scientific trimmer that I have ever had the pleasure of meeting.

Mr. FITZGERALD. I do not like that expression.

Mr. MONDELL. I mean a trimmer of appropriation bills. The gentleman from New York is never a trimmer in any other way. He is upright and downright and four square to all the winds that blow, but his fine hand in trimming an appropriation bill is a thing to admire if you are seeking economy. Yet I want to say for the gentleman from New York that a fairer man does not live, that with all of his efforts at economy, which are commendable in the state of the country's finances, that he has endeavored, and I think successfully, in the main, to make reasonable appropriations considering the circumstances and the condition of the Treasury for every governmental activity. Certainly, he has been painstaking and, I hope, successful in avoiding any cut which would actually seriously embarrass the officials of the Federal Government in carrying on the more urgent part of the Nation's business.

It is regrettable, when the Treasury of the country is in the condition in which we now find it, without regard to the causes which produce that condition, that necessitates refusing almost every request, no matter how reasonable, for enlargement and extension and betterment to the public service. It even leads to the refusal to appropriate for the reasonable upkeep of some classes of Government property. Under these conditions there is bound to be a parsimony which is not always economy in the long run; of course, there must be a denial of that growth and expansion and improvement of the public service which is desirable in a great and growing country like ours. Now, the minority has not the same sort of responsibility in regard to expenditures that the majority has; and yet the minority has a certain responsibility, and particularly the minority members of the Committee on Appropriations. While we can absolve ourselves from all responsibility for those things which we believe in the main brought about this deplorable condition of the Treasury, still we can not absolve ourselves from our responsibility as Representatives not to plunge the Nation toward bankruptcy or in the direction of bond issues for expenditures that are not absolutely essential. The unfortunate and somewhat embarrassing position which a Member of the minority finds himself in is when we come to consider just how far we may cut an item without disastrously affecting the service—just how much we can agree with the majority in leaving out items without depriving the Government service of those betterments and improvements and enlargements that are needed and in some cases almost essential. In view of the present lamentable condition of the Treasury, rapidly growing worse, heading in the direction of a bond issue, I for one am glad to join with the members of the committee, of which I am a member, in economy, so far as that can be done, without considerable and lasting injury to the public service; and therefore I shall support the committee in the main in this bill, although I regret the extent to which many items have been reduced. There are a few items in the bill which I believe ought to be increased, but in the main it is my purpose to stand by the committee in its work and in its decision; and I particularly commend the chairman of the committee for the splendid work he has done in connection with this bill, for the care he has given to the preparation of its items, and the absolute fairness at which he has arrived at in his judgments with regard to the various items.

Mr. SLOAN. Will the gentleman yield?

Mr. MONDELL. I will.

Mr. SLOAN. I noticed the gentleman's chivalrous assumption of part of the responsibility for economy. Does the gentleman assume any of the responsibility for the necessity for this economy arising——

Mr. MONDELL. I think I said a moment ago I assume no responsibility at all for the legislation and the attempt at legislation and general bad administration which, in my opinion, is

almost wholly responsible for the present lamentable condition of the Treasury.

Mr. BORLAND. Mr. Chairman, will the gentleman yield?

Mr. MONDELL. I yield.

Mr. BORLAND. The gentleman will realize, of course, in answering the question of the gentleman from Nebraska, that practically all the activities that are appropriated for in this bill are the inheritance of former administrations; that they are not created by the present Democratic administration, but that administration is taking care of the expenses contracted under a Republican administration to which the Government is obligated, and, of course, we must meet that obligation.

Mr. MONDELL. That is true, but nobody is complaining about that——

Mr. SLOAN. Will the gentleman yield?

Mr. MONDELL. In just a moment. The complaint and the criticism is that the gentlemen of the opposition in inheriting these responsibilities did not have the wisdom and judgment to provide the funds for carrying on these important works and activities.

Mr. SLOAN. And it is observed that these activities are recognized as beneficent, wise, and prudent?

Mr. MONDELL. Oh, always. While Republican legislation is anathema in its enactment so far as the opposition is concerned, it is always approved and upheld so far as its effects are concerned when it actually gets to work. Even as to those features of our legislation which they constantly continue to criticize as a matter of policy, such as our tariff views, they do not dare to criticize the results in splendid progress, development, and prosperity in the country and in keeping the Treasury constantly replenished to meet the necessary outgo in the interest and for the benefit of the people of the United States. [Applause on the Republican side.]

RECLAMATION PROJECTS.

The Committee on Appropriations in this bill appropriates for the first time for the Reclamation Service, the service that has charge of the construction of works for the irrigation and reclamation of arid lands in Western States. There was some question of jurisdiction as between this committee and the Committee on Irrigation in regard to that matter, and I felt a little, although I am a member of this committee and not a member of the other, in that regard like the fellow who when quizzed on his deathbed as to where he hoped and expected to make his home in the future, said that he had conflicting emotions, because he felt that he would find friends in both places. So far as the interests of my State in reclamation matters are concerned, I am sure they would be properly considered and cared for whichever committee had charge of the matter, and therefore, except for the fact as a member of the Committee on Appropriations I am very glad indeed to have to do with these matters, I am not much disposed to get excited on the proposition of jurisdiction. I do think that under the present rules of the House the Committee on Appropriations unquestionably has jurisdiction, and that the decision arrived at was a proper one.

Up to June 30 last there had been received from the receipts of public lands in the States and Territories where those receipts flow into the reclamation fund the sum of $81,813,772. A number of years ago, as the result of a bill I introduced, a bond issue of $20,000,000 was provided for to aid in carrying on these projects and in their development. From these two sources there was available up to June 30 last for the service $101,813,772. Of this sum $91,664,628.76 had been expended in the construction. There had been, however, repayments relating to construction in the sum of $5,206,018.61, leaving the net expenditure $86,458,610.12. Projects had been undertaken in all of the States subject to the reclamation law and under its provisions prior to the present fiscal year, with the exception of the State of Oklahoma, and this bill contains an item for a small project in that State. The total of estimates presented to the committee for the fiscal year 1916 was $14,776,000. The total recommended in this bill is $13,430,000, a reduction below the estimates of $1,346,000.

It is my purpose at this time to briefly discuss, particularly for the benefit of my friends from the States affected, the reasons as they appealed first to the subcommittee and then to the full committee for these various reductions. I shall not have time in the period allotted to me to discuss the projects generally. I shall not, unless I am requested to do so by some gentleman, refer to any of the projects except those where there has been a reduction below the estimates. The first reduction below the estimate submitted is in the case of the Yuma project, which is partly in Arizona and partly in California. Before I go to that item, however, I want to say this as to the desire and view of the committee in making these appropriations. It was the aim of the committee to provide the sums necessary for the maintenance and for the orderly development of all projects estimated for, except the one which is eliminated and to which I will refer later. Though Mr. Ryan, the comptroller of the service, under whose direction the estimates were made, stated to the committee that the estimates were liberal, no reductions were made except in those cases where it was clear to the committee beyond a reasonable doubt that the project could be developed according to the plan of the service and substantially as contemplated by them during the fiscal year for which the appropriation was made for a lesser sum than the service had asked.

Coming now to the first case—the Yuma-Arizona-California project—the estimate was $934,000.

Mr. SMITH of Texas. Will the gentleman permit a question?

The CHAIRMAN. Will the gentleman from Wyoming yield to the gentleman from Texas?

Mr. MONDELL. I will yield.

Mr. SMITH of Texas. As I understand it, these estimates in regard to the construction were based upon the reports of the engineers as to what it would take to do a given amount of work?

Mr. MONDELL. The engineers in the field.

Mr. SMITH of Texas. Yes, sir. Now, what I would like to know is how the committee arrived at the conclusion that these estimates were incorrect?

Mr. MONDELL. The committee did not exactly arrive at the conclusion that the estimates were incorrect. That is not a correct statement to make. If that were the view with regard to every reduction that is made in this and other appropriation bills, then we would have to hold that no branch of the public service submitted correct estimates, because here are thousands of reductions in this bill.

Mr. SMITH of Texas. The gentleman is correct about that. I would not contend any such thing as that, but I just wanted to know how the committee arrived at it, so that I can form an opinion of my own as to whether the committee or the Reclamation Service is correct.

Mr. MONDELL. This is a fact, that we know these estimates were made hurriedly. The service did not have very much time in which to prepare and present to the department the estimates on which this bill is based. In some instances, so they informed us, they telegraphed the district engineer to send in his estimate, and in some cases those estimates may have come in by wire. We are all of us more or less familiar with the public service, and we know that under those circumstances it is not at all likely that any project engineer would underestimate his necessities or underestimate the amount that he needs. Further than that, as I have said, Mr. Ryan, who prepared these estimates in the office of the Reclamation Service, assured the committee that the estimates were liberal, though they were in some cases, no doubt, below the estimates sent in from the field. Further than that, the hearings themselves developed the fact, both in specific cases and through the hearings as a whole, that the estimates were, as Mr. Ryan said, liberal. And yet the committee made no reduction except in those cases where we believed from the testimony, from the thirteenth annual report of the service, and from a very valuable volume which they prepared for our use, a volume of very great detail and of some 500 pages, under the title "Discussion of Projects," that the reductions were justified. We secured information from all these sources, and we only reduced where, in our opinion, it was quite clear and evident, beyond any reasonable doubt, that the development which the service contemplated, and to the extent that the service did contemplate it, could be provided and paid for for a lesser sum than the sum estimated. There is only one case in which we departed somewhat from that in our theory in regard to the reduction. That is in the case of the Sun River project in Montana, where the committee was of the opinion that certain work planned in the nature of storage on that project need not be developed as rapidly during the coming fiscal year as the service anticipated developing it, though the reduction we made would not necessarily halt that particular feature of the project if, in the opinion of the service, that feature of the project was more important than the distribution system for which provision was made.

Mr. BORLAND. I was going to ask the gentleman whether it was not a fact that the hearings developed in some cases that there were certain portions of new work estimated for that were not in immediate demand for practical purposes in connection with these projects and that they could very well wait for subsequent appropriations?

Mr. MONDELL. That was true; but the only case in which the committee made any considerable reduction on the theory that any particular work contemplated need not be carried on during the fiscal year was in the case of the Sun River and, to a certain extent, in the very project that I was proposing to

discuss, namely, the Yuma, where there is a class of work the necessity for which can be determined only by the conditions of the flow of the Colorado and the Gila Rivers as they develop.

Mr. BORLAND. Now, another question for the benefit of the gentleman from Texas [Mr. SMITH], the chairman of the Committee on Irrigation of Arid Lands: Did not the estimates of the engineers, so far as possible, tend to the completion of projects that were near enough to completion to cover their final completion to the point where they could be brought to a condition of utility to the settler? In other words, were not the estimates of the engineers based upon the theory of bringing each project that was already sufficiently near to completion up to the point of practical service?

Mr. MONDELL. That was true; and the committee made no attempt to halt the work along those lines and in that direction. Its reductions were made—if I may state it again—first and in most cases where it was so clear that there could not be any reasonable doubt that the work contemplated and proposed could be done for a lesser sum, and, in the case of the Sun River project, where it was believed that the development of the Sun River storage project as rapidly as was anticipated would not be necessary, and therefore not necessary to have so large a sum appropriated.

Now I yield to the gentleman from Texas.

Mr. SMITH of Texas. That brings the gentleman up to the point of giving the information I desired a moment ago. I understand the amount appropriated for the Rio Grande and New Mexico project was about $100,000 less than the estimates.

Mr. MONDELL. Yes; $104,000 less.

Mr. SMITH of Texas. What I wanted to get at was whether or not the committee, in reducing this appropriation, left out some particular unit of the work that the estimates provide for, or whether the general estimate as a whole was scaled down just so much?

Mr. MONDELL. If I have the time, I shall go over every project that was scaled in detail and give the reasons for the reductions in each particular project. Neither in the case of this particular project nor any, except the Sun River project, did the committee make any reduction on the theory that any of the work proposed by the service was to be curtailed or put over to a later date. In the case of the Rio Grande—and I will discuss that more in detail later if I may have the opportunity—estimates were made for 1916 for a considerable amount of work that is now being done, the major part, at least, of which will be done before the close of the fiscal year; so that, as a matter of fact, we were asked to appropriate money in 1916 for work that will be paid for before these moneys become available. That being true, this item reduced $104,000 still leaves the good, juicy sum of $1,265,000. We felt we could reduce it $104,000 without interfering at all with the orderly, progressive, satisfactory development of the work.

Mr. SMITH of Texas. The committee, then, has not cut out any of the work that was proposed to be done?

Mr. MONDELL. Let me remind my friend from Texas [Mr. SMITH] that his project was not reduced as much as the project in which I am, as a Representative, most interested. His project was not reduced one-third as much as one of the projects in Montana. I intend no reflection when I remind the gentleman in this connection of the fact that his great State, which I helped to bring under the reclamation tent, has never contributed one cent to this great fund of $81,000,000 from the sale of lands, while some of the States, like that of the gentleman from Oregon [Mr. SINNOTT], have contributed $11,000,000.

Mr. SMITH of Texas. Mr. Chairman, will the gentleman yield there?

Mr. MONDELL. Yes.

Mr. SMITH of Texas. It is not my purpose in asking these questions to antagonize the Committee on Appropriations. I was asking the questions for information. But I want to say, in reply to what the gentleman from Wyoming has said, that the State of Texas in truth has not contributed anything to the reclamation fund, and neither has the State of Wyoming.

Mr. MONDELL. The State of Wyoming has not contributed?

Mr. SMITH of Texas. No, sir. The public lands of this country belong to the Government, and upon that basis none of the States has contributed anything, and it was upon that theory that the act extending the Reclamation Service to the State of Texas was passed.

Mr. MONDELL. Oh, I will say to the gentleman, as to that, that it was just out of very broad notions of good-fellowship on the part of the people in the arid States that we extended the helping hand to the State of Texas, and I was very glad to be one of those who helped. As for the gentleman's statement that the public lands belong to the people of all the States, if we applied that rule to Texas she would now be owing the country many millions of dollars for her public lands she disposed of. She has eaten her cake and has it also. I realize that the gentleman from Texas is not criticizing and has no desire to antagonize the committee; but I want to remind him that he certainly has no ground for criticism, first, because the reduction in his case is less than the reduction in quite a number of other cases, and that reduction will not, I will assure the gentleman, in any appreciable degree delay the development contemplated by the estimates.

Mr. SINNOTT. Mr. Chairman, will the gentleman yield there?

Mr. MONDELL. I do.

Mr. SINNOTT. The gentleman from Missouri [Mr. BORLAND] referred to new work. Are we to understand that new work is contemplated under these appropriations—new work on new units? I wish the gentleman would explain that.

Mr. MONDELL. I can not say that the committee laid down any hard and fast rule or adopted any particular policy with regard to any new projects. There is one small new project, very small, in the bill.

Mr. SINNOTT. Will the gentleman explain whether or not there are any new units, as distinguished from new projects, contemplated in the bill?

Mr. MONDELL. There are no new units, in the sense of units, not long since planned and proposed.

Mr. SINNOTT. I want to make myself clear on that. Are there new units, in the sense of units, on which money has not been expended heretofore in actual work on the ground?

Mr. MONDELL. There are several new units in the sense that the carriage ditches have not been built; but there are no new units in the sense that there are new areas taken up that already have not been obligated heavily under the projects. In all cases at least storage and diversion are under way or completed.

Taking up now in detail the projects where the estimates were reduced, I first desire to submit a statement of the various projects, the amounts estimated, and the amounts approved by the committee for each, with a statement of the reductions in each case in which reductions were made. It is as follows:

Projects.	Approved.	Estimate.
Salt River, Ariz.	$500,000	$500,000
Yuma, Ariz.-Cal.	725,000	934,000
Orland, Cal.	87,000	97,000
Grand Valley, Colo.	702,000	702,000
Uncompahgre, Colo.	469,000	469,000
Boise, Idaho	1,650,000	1,699,000
Minidoka, Idaho	410,000	410,000
Jackson Lake, Idaho-Wyo.	476,000	476,000
Garden City, Kans.	2,000	2,000
Huntley, Mont.	150,000	155,000
Milk River, Mont.	1,100,000	1,101,000
Sun River, Mont.	1,100,000	1,451,000
North Platte, Nebr.-Wyo.	1,140,000	1,248,000
Lower Yellowstone, Mont.-N. Dak.	70,000	85,000
Truckee-Carson, Nev.	236,000	236,000
Carlsbad, N. Mex.	128,000	128,000
Hondo, N. Mex.	6,000	6,000
Rio Grande, N. Mex.	1,265,000	1,369,000
North Dakota, N. Dak.	25,000	25,000
Lawton, Okla.	50,000	50,000
Umatilla, Oreg.	366,000	366,000
Klamath, Oreg.-Cal.	317,000	317,000
Belle Fourche, S. Dak.	144,000	144,000
Strawberry, Utah	393,000	393,000
Okanogan, Wash.	51,000	51,000
Yakima, Wash.	1,250,000	1,283,000
Shoshone, Wyo.	478,000	478,000
Secondary projects	50,000	61,000
Total	13,430,000	14,776,000
REDUCTIONS UNDER ESTIMATES.		
Yuma	$209,000	
Orland	10,000	
Boise	49,000	
Huntley	5,000	
Milk River	1,000	
Sun River	351,000	
North Platte	108,000	
Lower Yellowstone	15,000	
Rio Grande	104,000	
Yakima	33,000	
Secondary projects	11,000	
Oregon (cooperative) omitted	450,000	
		1,346,000
Total recommended		13,430,000

For the information of gentlemen who may become confused because of the difference of the classification of projects as estimated and as reported, I want to call attention to the fact that in some cases the storage system and the carriage and distribution systems of projects were separately estimated. The committee were of the opinion that it was not logical or wise

to separate the storage of a project from its irrigated areas, and wherever this had been done the committee combined them. For instance, the Milk River project in Montana and the St. Mary storage project were combined as the Milk River project. The Rio Grande project and the Elephant Butte storage project were combined under the title "Rio Grande project." The Yakima storage project, the Yakima-Sunnyside project, and the Yakima-Tieton project were combined under the title "Yakima project."

The reductions below the estimates were as follows:

YUMA PROJECT, ARIZONA AND CALIFORNIA.

Estimate	$934,000
Appropriation	725,000

This reduction of $209,000 was made because it was believed that the total estimate of $498,500 for drainage and flood protection would not all be needed during the fiscal year of 1916, if, in fact, so large a sum is needed for those purposes at any time. Of this $498,500 for drainage and flood protection, $137,000 is for drainage and $361,000 for levees along the Colorado and Gila Rivers and for rock revetment for the levees already built. Should the reduction in this item of $209,000 be considered exclusively as a reduction of the amount to be used for flood protection there still remains, after the reduction, $152,000 for this class of work. This work, however, is only necessary in case of unusually high water, and Director Davis, of the service, informed the committee (p. 62, hearings) that the revetment would not be placed or needed except in case of high water. Gen. Marshall, in the hearing before the committee in the matter of the protection of the Imperial Valley, called attention to the fact that the change in the bed and course of the Colorado River below Yuma had reduced the high-water level of that stream in the vicinity of Yuma in the neighborhood of 7 feet. It is quite possible, therefore, that the amount needed for flood protection on this project in the future will be much less than has been anticipated. The large estimate for this work was, to a considerable extent, an insurance against possible contingencies. In view of the fact that the entire sum provided for this project could be used, if necessary, for this class of work and that 10 per cent of all of these appropriations may, in case of necessity, be used interchangeably, the committee did not believe it was wise to provide so large a sum for purposes for which it may not be needed during the fiscal year.

Mr. HAYDEN. Will the gentleman yield?

Mr. MONDELL. Yes.

Mr. HAYDEN. Do I understand, then, that the reduction of $209,000 below the estimates on this project is only for work in the nature of levee protection in that connection?

Mr. MONDELL. The reduction was made on the theory that they could not or would not use as much as they estimated in the coming fiscal year for levee protection. However, of course the gentleman knows the money is made available interchangeably for any feature of the work.

Mr. HAYDEN. But that was the reason for the reduction.

Mr. MONDELL. That was what we had in mind in the reduction in this case, that as a matter of fact a considerable portion of the estimate was largely in the nature of a very safe insurance. Assuming that the cut was entirely on that item, which is only so as a matter of theory, there still remains for that particular work $152,000, besides doing everything else that is contemplated.

ORLAND PROJECT, CALIFORNIA.

Estimate	$97,000
Submitted	87,000

One of the items in the detail of the estimate for this project was item 10—$10,000 for preliminary investigations for the Stoney Gorge project, or unit. The committee doubted the advisability of making so large an expenditure for this new and entirely independent project, for it is, as stated by Mr. Davis (bottom of p. 65, hearings), absolutely new and independent, and in any event the propriety of making such an expenditure out of an appropriation chargeable to the Orland project may well be questioned.

BOISE PROJECT, IDAHO.

Estimate	$1,699,000
Allowed	1,650,000
Reduction	49,000

Among the items in the detailed estimate of this project is item 4: Drainage and flood protection systems, $587,400 (p. 102, discussion and estimates). It is contemplated that $100,000 of this shall be used to complete the drains contemplated in the Pioneer irrigation district. This work is well along and will be largely completed before these sums are available. The remaining portion is largely for drainage in the Nampa-Meridian district, where work is not yet begun. The committee were of the opinion that even a larger reduction than that made could be made without in anywise interfering with the work contemplated on this project.

HUNTLEY PROJECT, MONTANA.

Estimate	$155,000
Allowed	150,000
Reduction	5,000

The largest single item of the estimate for this project is for "Drainage and flood protection," $103,797. This sum is estimated as sufficient for the construction of 54,500 linear feet of tile drains and the excavation of 70,000 cubic yards of material. The officers of the service stated, "There is not sufficient information at hand to furnish general plans and location of the work covered by the drainage estimates." The estimate for this drainage work was clearly very liberal, and in all probability considerably more than will be needed. It might have been safely reduced even more than the $5,000 reduction made by the committee.

MILK RIVER PROJECT, MONTANA.

Reduction	$1,000

This makes the appropriation an even $1,100,000.

SUN RIVER PROJECT, MONTANA.

Estimate	$1,451,000
Allowed	1,100,000
Reduction	351,000

Among the items making up the total for the Sun River project is one of $629,325 for storage works. With this sum it was proposed to proceed rapidly with the development of the Warm Springs Reservoir on the north fork of the Sun River with a view of securing a storage capacity of 106,000 acre-feet as a supplemental supply for lands on the north side of the Sun River. In the hearings it developed that the orderly and reasonable development of this project did not necessarily require that as rapid progress be made in the development of the Warm Springs Reservoir as was contemplated when the estimate was prepared. There is some water available from the ordinary flow of Sun River during the entire season, and Director Davis, of the Reclamation Service, stated that for a year or two, at least, and until all of the lands on the Fort Shaw unit were irrigated some water could be furnished from the Willow Creek Reservoir for the lands on the north side of the Sun River. At the rate at which it is anticipated the lands to be ultimately served by the Warm Springs Reservoir will be brought under cultivation, the two sources of supply named, to wit, the normal flow of Sun River and the available supply from Willow Creek Reservoir, will serve these lands for several years to come. In view of these facts the committee was of the opinion that the total estimate for this project might safely be cut $351,000. This will still leave a sufficient sum to carry on all other features of the work as contemplated by the service and still leave $278,325 for the development of the Warm Springs Reservoir. If, however, the service considered a larger sum necessary for this development, the necessary sums could be obtained by slightly reducing the amount proposed to be used on the carriage and distribution system. Under the conditions surrounding this project it is believed that the sum authorized by the committee is abundant for reasonable and proper development.

NORTH PLATTE PROJECT, NEBRASKA-WYOMING.

Estimate	$1,248,000
Appropriated	1,140,000
Reduction	108,000

One hundred thousand dollars of the reduction in this item is in the estimate for the carriage system of the Fort Laramie unit. It is believed that this is as large a sum as perhaps could be advantageously expended on the canals of that unit during the fiscal year. It was the opinion of the committee that the drainage and flood-protection item for the interstate unit might safely be cut $8,000.

LOWER YELLOWSTONE, MONTANA-NORTH DAKOTA.

Estimate	$85,000
Appropriated	70,000

The item "Drainage and flood protection, $37,110" for this project (discussion and estimates, p. 222) is believed to be larger than necessary, as only 100 acres of land are reported water-logged, and further water logging is more or less problematical.

RIO GRANDE PROJECT, NEW MEXICO-TEXAS.

Estimate	$1,369,000
Reduction	104,000
Appropriated	1,265,000

The work contemplated on this project under this appropriation includes the expenditure of $428,000 for storage at the Elephant Butte Dam, the remainder being for carriage and distribu-

tion systems. These are in the Mesilla and El Paso Valleys on the Rio Grande, the first being above, the second below El Paso, Tex. In the Mesilla Valley the extension of the present system, built by the Reclamation Service, is contemplated. Also the construction of an additional diversion dam and main canals. With regard to these features of the work, the following statement is made by the Reclamation Service (discussion and estimates, p. 304):

As these features are provided for in the estimate for the fiscal year 1915, and as there is a possibility of their being constructed in that period, a portion of the distribution system is planned to be built in the fiscal year 1916.

The detailed estimates contained items totaling $198,405 for work on the carriage system, which is already well under way and which will be largely disposed of before this appropriation is available. In view of these facts, and the further fact that the estimate is evidently quite liberal, and that all of the appropriation for this project and others is available, so far as needed, for any feature of the project, it is the opinion of the committee that a cut of $104,000 can be made in the estimate without in any wise interfering with the steady and reasonable development of the project as contemplated.

YAKIMA PROJECT, WASHINGTON.

Estimate	$1,283,000
Reduction	33,000
Appropriation	1,250,000

Seven hundred and twenty thousand dollars of the estimate for this project is for the storage unit. It developed in the hearings that the estimate for this feature of the work for the year was probably quite liberal. For the distribution system of the Sunnyside unit of the Yakima project the sum of $306,310 is estimated. It has been the policy on this unit to extend the distribution system, "as water-right application is made for lands to which delivery has not yet been built. On this basis it is believed the estimate for this work is quite liberal, as is also the estimate for the Outlook and Snipes Mountain pumping plants. Viewing all these matters together, it is believed that a larger reduction than that of $33,000 made by the committee might have been made without seriously interfering with the development of this project.

SECONDARY PROJECTS.

Estimate	$61,000
Appropriated	50,000

The committee is of the opinion that in the present state of the development of the projects already under way it is not necessary or wise to make very large expenditure in investigating new projects, and that the sum agreed upon is abundantly sufficient for this work.

OREGON COOPERATIVE PROJECT.

The estimate of $450,000 for proposed cooperation with the State of Oregon was the only estimate entirely omitted. The committee was asked to drop the cooperative feature of this proposal on the ground that the State of Oregon had already appropriated and spent on an irrigation enterprise the sum of $450,000, which it was originally intended should be used in cooperation with the Reclamation Service. The committee did not feel justified in approving this item, either with or without cooperation. To do so would amount to starting an entirely new project, and, what is even more objectionable, starting a project, or authorizing the Secretary of the Interior to do it, without any knowledge on the part of the committee of its size or character.

Mr. FITZGERALD. I yield 20 minutes to the gentleman from Kentucky [Mr. HELM].

Mr. HELM. Mr. Chairman, in these days of war and rumors of war the public mind is not in condition to be focused on a business proposition, but there never was a time when opportunity was knocking so loudly at the doors of this Government.

The commerce and business of a continent are within our grasp if we are keen enough to realize it and to grasp them. I think I am well within the limits of accuracy when I state that the manufacturing enterprises in Central and South America are very, very limited. Indeed, they are very, very few, and it is to this matter that I wish the attention of the country could be directed.

It is my further opinion that few if any of the Republics to the south of us have any means of transporting or delivering their products to any other country. If that is true, then while the facilities of the United States are limited, yet it is not wholly without them, and it has some means of delivering its products. Under existing conditions all the trade of Central and South America flows across the Atlantic Ocean, when that trade ought to be flowing from North America to Central and South America.

The best means—in fact, about the only means—of creating commercial and business relations is by means of banking facilities, transportation, press bureau, and mercantile agencies. It is true that under the Federal reserve act a bank with $1,000,000 capital in the United States can establish a branch bank in any of these foreign countries in Central or South America. While I do not claim to be a financier, this provision, in my opinion, does not meet the conditions. What we need is a bank of sufficient proportions and magnitude and importance and prestige to handle the business of a continent. Furthermore, an Illinois bank will not do much business in Kentucky; an Iowa bank will not do much business in Indiana. There is a local touch to the proposition that must be met and dealt with.

We own the Panama Canal Zone. There is one strip of country in the region to the south of us that is going to be stable and steady as long as this Government endures. The government of the Canal Zone is going to be just as stable and steady as the Government of the United States. Now, if we establish a bank on the Canal Zone, what is the proposition right on its face? It gives it a birthmark, so to speak. It gives it a distinctive feature. It becomes identified with its locality. The stability and credit and prestige of our Government are behind this proposition. That guarantees confidence and makes it a sure go. These Governments to the south of us will be inspired with confidence in the institution.

Mr. MOORE. Will the gentleman yield?

Mr. HELM. Yes.

Mr. MOORE. While the Panama Zone was under discussion the question was raised whether or not we might not put the zone to some commercial or agricultural use, and gentlemen on the other side said there could be no use of the zone for agriculture, and others insisted that the project was not commercial, but entirely military. I am one of those who believe we might make some commercial use of the zone, but that has been already apparently settled by the law now enacted for the government of the zone. How can we establish such a bank as the gentleman favors?

Mr. HELM. That is what I am coming to. This is no new proposition, and it is not without merit. If it came from some Member who enjoyed a reputation—for instance, a banker from the great city of Philadelphia or the city of New York, a Wall Street banker—the proposition would be, perhaps, received differently from what it will be.

As I say, this is no new proposition. Back in the eighties—in 1887 or 1889—such a proposition was contemplated, and President Harrison approved of it. Secretary of State Blaine strongly advocated just such a proposition as this. We have appropriated $100,000,000 or more for the Army. We appropriated about $150,000,000 for the Navy. Let us do a little business while we are doing so much fighting. The Governments in Europe have been selling bonds by the billions for war; let us do a little business while they are fighting.

England, France, and Germany have Central and South America absolutely in their grasp for trade, and there is no reason in the world why we should not go out right now and capture it. We can do it. Here are some Panama bonds, the sale of which has been provided for; let us sell a few millions of bonds and start a bank. Let us start with twenty-five millions; let us have a good one while we are going into it. Let the Government own the majority of the stock—thirteen millions—and let it be under the control of the Federal Reserve Board and under the inspection of the Comptroller of the Currency. Let the remainder of the stock be offered to the public, so that whosoever will may buy; and if any Republic to the south of us wants to get in, let them have an interest. We will have the controlling interest and we will elect the majority of the directors.

It can not issue notes to circulate as money, thereby eliminating any possibility of expansion or contraction. It could have no possible motive to hoard money; lending money is as essential to the life of every bank as breathing is to an individual. It could have no greater power of centralizing or controlling money or credit beyond its capital stock and deposits than any other bank of equal capital and deposits possesses. The Federal Government has fostered the banking business ever since the enactment of the national banking act.

These countries need help worse than any people on the globe. Every country on the globe to-day is needing help, and the emancipation of these countries from London, Paris, and Berlin credits must come from the United States. They are worse paralyzed financially than we are; they can not move a peg; they are now trying to get credit in New York.

Now, I want to remind you, you New Orleans gentlemen, of something. It looked to me like New Orleans ought to have had a Federal reserve bank. Let us have a branch bank of this institution at New Orleans, for New Orleans is like the cities

of Philadelphia and New York; they are seagoing people and are in touch with the business world.

What is more, we have a wireless station on the zone, and it is possible to talk right now from this building to Colon. We have a cable laid there; and if this canal is going to be what we think it is, or anywise near what we think it is, the commerce of the world is going through there. Ships from all over the world are going to pass through that great highway. Big business—stupendous business—has got to move through the canal, and we must have a big bank to handle the business. Ancon is as much in touch with the balance of the world as any other center of business. You can telegraph, cable, or send wireless messages from Ancon as quick as you can from New York City. Of course there are not so many ships now as there are at New York, but there is not going to be very much difference in the near future, in my opinion. There is going to be a ship ready to go through there every time there is an opportunity for one to get in and get out.

Now, the balance of trade has been against the United States with the southern Republics. Sterling exchange is the only exchange known to them. They do not know what a United States Treasury note is, so little do they know about or come in touch with our method of doing business that you have to identify it. We buy a cargo of hides or wool in the Argentine, and how do you make your settlement? You buy a London draft. What does that mean? You have to take United States gold and deposit it in London. That takes away good reserve money and gives London the use of our gold; that gives them the interest on it and enables London to be the clearing house of the world. New York, in the United States, has the opportunity to be the clearing house of the world if we will only act and act promptly, strike while the iron is hot, make hay while the sun shines.

We buy coffee from Brazil, and we sell a few things to Brazil, but the balance of the trade, not only with Brazil but almost every South American country, is against us. We send our money to London; it is sent by draft to Brazil, and they send the draft back again; there is about 90 days or longer consumed in the transaction, and we are out the use of that money for that length of time.

Even though that banking business is adverse to us, yet if we could handle that adverse balance of trade as a banking proposition it would be money in our pockets.

Mr. MOORE. Mr. Chairman, will the gentleman yield?

Mr. HELM. Certainly.

Mr. MOORE. Can the gentleman tell us anything about the banking facilities that Great Britain and Germany have in respect to their relations with South America?

Mr. HELM. I can not speak as one who is fully advised, but, generally speaking, I think it is true that every country in South America has an English, a German, and a French bank, one or more. They are thick there; in fact, about all the banking business done is done by those countries. I think I am absolutely correct when I say that there is but one United States bank south of Panama.

Mr. MOORE. Is it not a fact that the South American people have very little knowledge of American banking methods, and do have a great deal of knowledge and confidence in the banking methods of Great Britain and Germany?

Mr. HELM. I have just stated that they do not know a dollar when they see it. They do not know United States money when they see it. They do not recognize or honor a draft on New York. So little do they circulate there.

Before the outbreak of the European war our exports to Central and South America were decreasing, while our imports were increasing. This condition has been more marked since the outbreak of this war. Our exports in 1913 amounted to $323,775,885; in 1914 to $282,070,153; while our imports in 1913 amounted to $442,419,973, and in 1914, $469,082,667; showing a trade balance against us for 1913 of $118,644,088, and in 1914 of $187,012,514.

How to divert this flow of trade current in our direction is one of the problems of the immediate future and is a matter of much interest and concern to us.

A bill (H. R. 21160) to incorporate the Pan American Bank.

Be it enacted, etc., That this act shall be known and may be referred to as the "Pan American Bank act."

SEC. 2. That there shall be established a bank to be known as the Pan American Bank, which shall have its principal office at Ancon, in the Canal Zone, and may have branch offices elsewhere.

SEC. 3. That the United States Government, acting through the Federal Reserve Board, shall subscribe to the capital stock of the Pan American Bank hereafter organized under this act upon the terms and conditions herein mentioned.

SEC. 4. That the powers of the Pan American Bank shall be substantially those of a national bank, except as modified by this act, or in so far as the provisions regarding national banks may not be applicable to the bank organized under this act.

SEC. 5. That the capital stock of the bank hereby established shall be fixed at $25,000,000, divided into shares of the par value of $100 each.

SEC. 6. That the United States Government, through the Federal Reserve Board, shall subscribe for 130,000 shares of the capital stock of said bank at par, and for this purpose the Secretary of the Treasury, upon request of the Federal Reserve Board, shall issue and sell any of the bonds of the United States under the act of August 5, 1909, the act of February 4, 1910, and the act of March 2, 1911, relative to the issuance of bonds for the construction of the Panama Canal; the remaining 120,000 shares of the capital stock of said bank shall be offered for public subscription.

SEC. 7. That the Pan American Bank may begin business as soon as $13,000,000 of said stock has been subscribed and paid for by the United States Government, and shall have succession for a period of 20 years from its organization, with the right to extend its period of succession an equal number of years unless sooner dissolved according to the provisions of the national-bank act, or until its franchise becomes forfeited by some violation of law.

SEC. 8. That the board of directors shall consist of seven members, the majority of whom shall be appointed by the Federal Reserve Board; the minority directors shall be elected by the stockholders, except the United States Government shall not participate in their election. The board of directors shall appoint a president, vice president, cashier, and other officers, define their duties, and in its discretion require bond of them, dismiss such officers or any of them at pleasure, and appoint their successors to fill their places.

SEC. 9. That the Pan American Bank hereby incorporated shall not issue notes or obligations in any form to be used and circulated as money.

SEC. 10. That any moneys held in the general fund of the Treasury, except the 5 per cent fund for the redemption of outstanding national-bank notes and the funds provided for the redemption of Federal reserve notes, may, upon the discretion of the Secretary of the Treasury, be deposited in the Pan American Bank, which bank, when required by the Secretary of the Treasury, shall act as fiscal agent of the United States; and the revenues of the Government or any part thereof may be deposited in said bank and disbursement be made by checks drawn against such deposits.

SEC. 11. That the Pan American Bank may, under rules and regulations prescribed by the Federal Reserve Board, purchase and sell in the open market, at home or abroad, either from or to domestic or foreign banks, firms, corporations, or individuals, cable transfers and bankers' acceptances and bills of exchange of the kinds and maturities by the Federal reserve bank act made eligible for rediscount, with or without indorsement.

It shall also have power—

(A) To deal in gold coin and gold and silver bullion at home or abroad, to make loans thereon, exchange Federal reserve notes for gold, gold coin, or gold certificates, and to contract for loans of gold coin or bullion, giving therefor, when necessary, acceptable security, including the hypothecation of bonds of the United States or foreign countries, or other securities which Federal reserve banks are authorized to hold;

(B) To buy and sell, at home or abroad, bonds and notes of the United States or foreign Governments, and bills, notes, revenue bonds, and warrants issued in anticipation of the collection of taxes or in anticipation of the receipts of assured revenues of any State, county, district, political subdivision, or municipality in the continental United States or foreign Governments, including irrigation, drainage, and reclamation districts, such purchases to be made in accordance with rules and regulations prescribed by the Federal Reserve Board;

(C) To establish from time to time, subject to review and determination of the Federal Reserve Board, rates of discount to be charged by the bank for each class of paper, which shall be fixed with a view of accommodating commerce and business;

(D) To establish accounts with banks for exchange purposes and to open and maintain banking accounts in foreign countries, appoint correspondents, and establish agencies in such countries wheresoever it may deem best for the purpose of purchasing, selling, and collecting bills of exchange, and to buy and sell, through such correspondents or agencies, bills of exchange arising out of actual commercial transactions.

SEC. 12. That loans may be made by the said bank, with the consent of the Federal Reserve Board, on real estate in any foreign country in which a branch bank has been established, to the extent of 25 per cent of the capital stock set aside for the business of said branch bank, or one-third of the time deposits held by said branch bank.

SEC. 13. That branches may be established, with the consent of the Federal Reserve Board, in the United States or in any of the countries of South and Central America, including Mexico and the West Indian Islands.

SEC. 14. That before the Pan American Bank establishes in foreign countries branches which may act as fiscal agents of the United States, the place or places where such branch is proposed to be established and the amount of capital set aside for the conduct of its foreign business shall be first approved by the Comptroller of the Currency, and said branch bank shall be required at all times to furnish information concerning the condition of such branches to the Comptroller of the Currency upon demand, and he may order special examinations of the said branches at such time or times as he may deem best. Every such branch shall conduct the accounts of each branch independently of the accounts of other branches established by it and of its home office, and shall at the end of each fiscal period transfer to its general ledger the profit or loss accruing at each branch as a separate item.

SEC. 15. That it shall be the duty of the Comptroller of the Currency and the Federal Reserve Board, and they shall have the authority, to examine the Pan American Bank and its branches in the manner provided by section 21 of the Federal reserve act.

SEC. 16. That the stockholders of the Pan American Bank shall be held responsible for all contracts, debts, and engagements of such bank, each to the amount of his stock therein, at the par value thereof, in addition to the amount invested in such stock. The stockholders in said bank who shall have transferred their shares or registered the transfer thereof within 60 days next before the date of the failure of such bank to meet its obligations, or with knowledge of such impending failure, shall be liable to the same extent as if they had made no such transfer, to the extent that the subsequent transferee fails to meet such liability; but this provision shall not be construed to affect in any way any recourse which such shareholders might otherwise have against those in whose names such shares are registered at the time of such failure.

SEC. 17. That any person committing any offense under this act, the Federal reserve act, or any other act relating to the powers and duties of banks or bank officers, where the acts constituting such offense were committed wholly or in part outside of the jurisdiction of the United States, may be prosecuted and tried in the district in which he may at any time be apprehended, and the time after the commission of the offense during which he was outside of the jurisdiction of the United States shall not be included in computing the running of any statute of limitation of prosecutions or actions.

SEC. 18. That the Pan American Bank may go into liquidation in the manner prescribed by law for the liquidation of national banking associations, in so far as the provisions relating to liquidation thereof may be applicable to the bank incorporated under this act.

SEC. 19. That if for any violation of law its franchise should be subject to forfeiture, the proceedings thereunder shall be the same as in case of forfeiture of the franchise of any national banking association.

SEC. 20. That if any clause, sentence, paragraph, or any part of this act shall for any reason be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of this act, but shall be confined in its operation to the clause, sentence, paragraph, or any part of this act thereof directly affected by the controversy in which judgment shall have been rendered.

SEC. 21. That the right to annul, alter, or repeal this act is hereby expressly reserved.

The bill has been drawn with a view of attracting business and of doing business. Complete control and ample visitorial powers are vested in the Federal Reserve Board and the Comptroller of the Currency. The vast credit of the United States is behind the institution to inspire confidence, stability, and prestige, and would be an inducement to the Governments of Central and South America and the West Indian islands to promptly sanction the establishment of the branch banks provided for in the bill and to become stockholders in the institution.

It reports to Congress and is at all times subject to examination.

The principal place of business is Ancon, on the Canal Zone, which stamps it as the distinctive feature of the bank to meet the Republics to the south of us halfway. It is the outgrowth of the South American financial situation resulting from the European war. It is a movement for the Western Hemisphere to get together and stand together. The canal promises to be the converging point of all over-sea ships as well as those plying between North and South America, and is equipped with ocean cable and wireless stations, all of which put it in as close touch with the world as any other business center on the globe. The canal will be a lodestone for business of the greatest volume and magnitude and is a logical location for the bank, with a branch at New Orleans or New York.

The commercial tie-up resulting from the European war convinced everyone that foreign trade is a vital element in our domestic prosperity and that the continents of North and South America have a greater identity of interest than was ever realized before; the countries of these continents had been made to feel the importance of increasing the commercial intercourse between them which has been retarded by lack of adequate banking facilities and means of exchange.

Trade revival for the southern Republics must emanate from the United States.

The United States must convert more of its raw material into manufactured articles and go after the trade now dominated by Europe. All trade balances are made through London, hence the balance of credit is greatly against us. We are compelled to keep large gold balances in London to meet these difficulties. This not only takes gold out of the United States, but loses us interest, credit balances, and reserves. New York bills on South American banks have been penalized by almost prohibitive cost on London exchange.

The foreign bonded debt of South American Republics is about $1,632,488,580; the bulk of this is financed in London. The preponderating influence of the holder of a mortgage lien is fully understood by bankers. The banking business of South America is conducted by British institutions. This has made sterling instead of dollars credits of the South American trade. Exports and imports are shipped direct. Payments for both are made almost exclusively in sterling bills of exchange.

The bill supplies the new credit machinery for establishing a merchants' "cooperative exchange," or clearing house, for South American trade by matching credits, supplies the means of bringing together the North and South American exporters and importers, standardizes credits, affords a means of reaching an agreement as to rates of exchange between South American currency and United States dollars, furnishes the indispensable information as to seasonal variations of shipments, customs duties, means and rates of transportation, pilotage and harbor charges, fulfilling the function of a much-needed bureau of information, indispensable to the acquisition of a business footing and standing.

Recent attempts to establish direct exchange by branch banks authorized in the Federal reserve act have not been successful, because the credits available have been wholly inadequate.

Our consular agents for Central and South America should be selected from Porto Rico whenever it is possible to do so; furthermore, those Porto Ricans who are familiar with our business methods would be the most efficient representatives of North American firms doing business in those countries because of their knowledge of the languages and customs of the people with whom we are seeking to establish intimate commercial relations.

REPORT AND RECOMMENDATIONS OF LATIN-AMERICAN TRADE COMMITTEE.

[Appointed by the Hon. W. C. Redfield, Secretary of Commerce of the United States, pursuant to resolution of the informal Latin-American trade conference at Washington, Sept. 10, 1914.]

Industrial, commercial, and financial conditions throughout the world have been disorganized by the European war. The trade of the United States with Latin America has been seriously affected. The present period of confusion will, however, be succeeded by one of readjustment and reorganization. Your committee was appointed to investigate this situation, and to suggest measures to relieve the emergency and to place the trade of the United States with the sister Republics on a permanently satisfactory and mutually profitable basis.

The products of Argentina, Brazil, Chile, and Peru, exported to the United States differ each from the other, and are dissimilar in turn from those which we in this country import from Bolivia, Colombia, Ecuador, Paraguay, Uruguay, and Venezuela, from the Central American States, and Panama, from Mexico and from Cuba, the Dominican Republic, and Haiti. These products, for the purposes of this analysis, may be considered together as raw materials, just as the goods which we export to these countries may be classified as manufactures. Mutual advantage for both the United States of America and the other Republics lies in a wider interchange.

In a properly comprehensive report the trade of the United States with each of the Latin-American Republics should be separately considered. We realize that in each case the problem is different and demands an individual solution. In general, however, this trade rests solely on exchange of commodities; that it has, in its essentials, been barter, with a settlement of balances through London, and has not been built up by extensive investment of foreign capital, as has been the case with British and German trade.

The accompanying report deals with certain underlying principles applicable to our Latin-American trade as a whole. We feel that recognition of basic facts affords the only proper basis for meeting problems which, while they differ in the several countries, are nevertheless fundamentally the same.

Your committee feels that articles recently appearing in the press regarding commercial opportunities in Central and South America have unduly emphasized the promising aspects thereof, and have, in most instances, failed to state that our exporters already doing business with these regions find that their sales have been decreased rather than increased owing to the war.

Your committee recognizes the present time as one when competition is less effective than in the past and than it will be in the future, until European bankers, merchants, and manufacturers recover from the effects of the war.

Your committee, moreover, believes that an opportunity is now afforded to place the trade of the United States with other American nations upon a firm foundation, supporting a more comprehensive structure, which may be built as the situation again more nearly approaches normal.

Your committee feels, however, that there is great danger that our merchants and manufacturers unfamiliar with Latin-American conditions may be induced by recent publicity to undertake ventures in that field which not only will be unremunerative, but actually disastrous, and, in their ultimate result, make for a reaction of the very healthy and much to be desired interest in foreign trade now manifest throughout the United States, an interest which if properly directed should be of great permanent value.

SOUTH AMERICAN TRADE CONDITIONS.

The trade of the principal South American countries with England, Germany, and the United States is shown by the following table:

Imports and exports to the South American countries from and to England, Germany, and the United States for the years specified.

[Compiled by the Bureau of Foreign and Domestic Commerce, Department of Commerce, from official reports of the respective countries.]

Countries.	Year.	England.		Germany.		United States.	
		Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
Argentina	1913	$126,305,556	$116,154,937	$68,815,721	$55,888,788	$59,861,703	$22,096,385
Brazil	1912	77,509,079	43,006,473	52,945,352	51,856,965	48,043,322	141,720,216
Chile	1912	38,599,282	55,340,706	33,189,670	28,321,776	16,806,341	24,526,811
Peru	1913	7,779,616	16,561,235	5,138,902	2,970,857	8,541,934	14,761,355
Ecuador	1911	[1] 2,835,854	986,148	2,385,758	2,139,532	2,591,629	3,190,069
Uruguay	1912	[1] 12,575,508	6,508,127	[1] 7,849,094	7,860,272	[1] 5,638,402	2,655,371
Paraguay	1912	[2] 1,295,248	[3] 799	[2] 1,500,958	[2] 843,459	[2] 304,888	[2] 590
Colombia	1912	[2] 7,838,878	[2] 4,376,182	[2] 4,201,125	[2] 1,854,211	[2] 7,612,037	[2] 15,832,882
Venezuela	1913	3,994,733	767,031	2,586,986	5,563,768	6,944,136	8,470,563
Bolivia	1912	3,528,042	26,044,974	6,423,892	4,357,101	1,787,321	152,583

[1] Figures are for 1911 and are taken from the Almanach de Gotha.
[2] Figures taken from U. S. Daily Consular and Trade Reports.
[3] Figures are for 1911 and are taken from Pan American Union publication.

The above figures show that exports from Great Britain and Germany to South America considerably exceed imports from that region.

This balance in favor of Europe may, in a measure, be explained by the fact that proceeds of loans issued by the South American Governments in Europe are remitted, not in cash, but in goods.

AMERICAN EXPORTS CONCENTRATED.

Our export trade to South American countries particularly, and to a lesser degree the Central American States, is concentrated. It is estimated that 75 per cent of our principal exports to South America are the products of large organizations. Our principal exports to the River Plate may be roughly stated to consist of agricultural machinery and allied products, steel products, oil products—kerosene, gasoline, etc.—and printing paper of various kinds. Our exports to Brazil, Chile, and Peru are largely limited to steel and oil products, locomotives, and electrical machinery. Our trade in cotton cloths, shoes, stockings, wearing apparel, and miscellaneous goods has not made up an important part of the total because of our unwillingness or inability to meet British and German competition.

Even before the war our export trade to all Latin America, and notably South America, had begun to decrease on account of the prevailing financial stringency. Our imports, however, increased in value, and the trade balance adverse to the United States for the fiscal year 1913–14 greatly exceeded that of 1912–13 both for all Latin America and for South America alone.

The accompanying table shows the distribution of this trade:

	Exports.		Imports.	
	1913	1914	1913	1914
Central America, West Indian Republics, and Mexico	$177,627,892	$157,530,244	$224,685,344	$246,405,592
South America	146,147,993	124,539,909	217,734,629	222,677,075
Total	323,775,885	282,070,153	442,419,973	469,082,667

Trade balance adverse to the United States.

	1913	1914
In trade with Central America, West Indian Republics, and Mexico	$47,057,452	$88,875,348
In trade with South America	71,586,636	98,137,166
In trade with all Latin America	118,644,088	187,012,514

EFFECT OF THE WAR ON SOUTH AMERICAN COUNTRIES.

Since August 1 of this year the countries in South America whose currency is not already on a gold basis have experienced a serious depreciation of their paper money.

The export of copper, tin, nitrates, coffee, and other products has been curtailed because of loss of the normal European markets. As indicative of financial conditions, bank holidays and moratoria were declared at the outbreak of hostilities, which were extended in certain countries from 60 to 90 days. The effect has been damaging to American exporters, as, under such circumstances, drafts due in August will not be liquidated until November or December. This means a large accumulation of draft indebtedness never contemplated by the shipper. Specie payments were suspended.

Collections throughout South America, therefore, are difficult, orders are falling off, and after our exporters have completed their contracts for this year there seems less prospect for new business, unless steps are taken to relieve the situation.

DIFFICULTIES OF SETTLEMENTS FOR SOUTH AMERICAN TRADE.

Since the balance of our trade with South America is heavily against the United States, there should be exchange facilities which would enable our exporters to obtain payment from balances created in New York in settlement for goods imported into this country from South America.

Such balances, however, are not maintained in this country.

The external debt of the South American Republics (Federal, State, and municipal) amounts, approximately, to $1,632,488,580. The bulk of those funds were borrowed from Great Britain. South America therefore invariably has payments to make in London.

The greater part of South American banking business, moreover, is conducted by British-owned institutions. These facts, together with the facilities offered by the London discount market, have induced German and other European-owned banks trading in South America to maintain London agencies. Sterling credits, therefore, have been the basis of South American trade.

Our exports to and imports from Latin America are shipped direct. They are, however (almost exclusively in South American trade and largely in Central American trade), paid for in sterling bills of exchange.

United States exporters have in the past converted their dollars into sterling at the rate of the day, drawing against their South American customers at 90 days' sight, payable in 90 days' bills on London. Importers have accepted 90 days' sterling bills, which they have liquidated at the current rate of exchange. This has necessitated the conversion of dollars into sterling in the United States and a reconversion in South America from sterling into the currency of the buying country.

Thus, although the balance of the South American trade of the United States has been increasingly heavy against this country, we do not make settlement direct. We have been obliged, either by the shipment of gold or goods, to settle this adverse balance by remitting to England either gold or goods to meet interest charges on the South American debt and to pay for goods purchased in Europe by the South American countries.

Recent attempts to establish direct exchange with South America have not been successful in relieving the trade congestion incident to the dislocation of London exchange. A few New York banking institutions have been ready to extend accommodation to American exporters, but the credits available have been wholly inadequate. This fact, together with the difficulty of making collections in South America, has seriously embarrassed our exporters, while our importers, finding it practically impossible to dispose of New York bills to bankers in South America, have been penalized by the almost prohibitive cost of London credits.

PRESENT PROBLEMS.

(1) Because of the war the Latin-American countries are confronted by the necessity—

(a) Of marketing their products despite the shrinkage of world purchasing power.

(b) Of obtaining funds to move crops and to continue indispensable industrial and agricultural development normally financed by Europe.

(2) The United States is confronted—

(a) By the necessity of holding its normal export trade with Latin America.

(b) By the possibility of increasing that trade by filling Latin-American needs for merchandise hitherto purchased in Europe, which Europe can not now supply.

The solution of these problems depends upon—

(1) Production.

(2) Transportation—Shipping and insurance.

(3) Financing: (a) Of production, (b) of transportation, (c) of settlements.

Production in the United States can be maintained if there be a sufficient market at home and abroad for American goods. Production in South America may continue, but can not be further developed unless financial assistance be obtained.

At the present time steamships are available and sailing regularly from this country to the principal ports of Latin America and from those ports to the United States. Many of these vessels are unable to obtain full cargoes. Although only a limited number are under the United States flag the above will clearly indicate to exporters, importers, and manufacturers that they need not hold back from entering the field on this account.

Before trade can resume its normal course the exchange problem must be solved either by the restoration of old or by establishment of new credit facilities.

NEW CREDIT MACHINERY NEEDED.

Old methods may no longer be serviceable in the situation which will result from the readjustment following the war. It should now be possible, indeed, in the mutual interest of the Latin-American Republics and ourselves, to create new credit machinery to perform the functions of the old, and which will at the same time rid us at least partially of a dependence upon the London credits and European financial markets, which, though essential in the past, has proved to be seriously embarrassing.

Deprived of the European loans with which their resources were being developed, Latin-American countries are now undergoing a serious curtailment of industry and development. The consequences in many instances will be serious, not only to these countries themselves, but also to the countries which expected to supply the materials.

It has been increasingly the practice of European bankers to stipulate the use of European material in the projects which they financed. Latin America is now turning to the United States for funds. This country is hardly in a position to undertake considerable investments at the present time, but industries with an already considerable trade at stake may well consider the necessity of protecting that trade by obtaining for their customers some relief from the present stringency. Such investments, if judiciously made, would yield an ultimate fair return and meanwhile provide a market for American materials which can not now be sold.

The question of creating a market for Latin-American securities in the United States, therefore, is highly important. The development of our trade with those countries is largely dependent on its satisfactory solution.

ESTABLISHMENT OF COMMERCIAL CREDITS MOST IMPORTANT.

Unless the restriction of commercial credits be remedied, however, we will not only be unable to extend our trade, but we will lose a considerable portion of that which we already have.

The present effort to secure cooperation of American bankers in massing a gold fund to satisfy our obligations abroad by promising to cause London exchange again to approach normal will lessen to the American importer the expense of liquidating in London his South American indebtedness. It will nevertheless give effect to the old alienation of the selling power we should derive from purchases of South American products. Liquidation of our South American indebtedness in London will pay for British exports to Latin America at a time when American merchandise, intimidated by moratoria, remains congested on our docks. Our available money will serve Great Britain's effort to capture South American markets vacated perforce by Germany.

Whenever there is a great disturbance of the world's finances American exporters and importers in South American trade are injured because of the dependence on London. This has happened four times in 25 years.

So long as South America must meet interest settlements in London by shipment of goods to the United States, under the old three-cornered system our South American trade must to a certain degree depend upon London exchange.

But in view of the facts above mentioned it has seemed to your committee that the need for independence, emphasized by the present situation, should be recognized. We feel that an attempt should now be made to evolve some plan whereby we might take advantage of our large direct trade with Latin America to make a market for bills drawn in dollars and establish a direct exchange, not with the view to eliminating sterling credits now or later, but in order to provide an exchange channel which will supplement, offset, or compete with London and be available in an emergency when London exchange is disorganized.

The maintenance of exchange relations depends on a credit machinery and reciprocal balances. This machinery will partially be provided under the Federal reserve act, which permits American banks to open branches abroad and permits a rediscount in this country of commercial paper, based on shipments of commodities in foreign trade. These steps, however, have not yet been effected, and your committee, appreciating that the installation of this machinery may require considerable time, has considered means for temporary relief.

COOPERATIVE EXCHANGE AS EMERGENCY MEASURE.

A plan for the establishment of a merchants' "cooperative exchange" or clearing house for Latin-American trade has been proposed. This, it has been suggested, would enable importers and exporters of goods to and from Latin America to watch credits, balances to be remitted on certain definite settling dates. The chief argument for such an institution is that it would bring together exporters and importers, among whom there is now no cohesion. Both know their cash requirements each month. If the exporters require, say, $5,000,000 to pay for their

October shipments to Brazil and the importers a like amount to pay for their imports from Brazil, such an exchange might be able easily to liquidate transactions in New York.

The plan, however, is open to serious objection for the following reasons:

(1) The necessity and difficulty of securing the cooperation of a sufficient number of importers and exporters.

(2) The necessity and difficulty of standardizing credits.

(3) The difficulty of reaching an agreement as to the rate of exchange between South American currency and United States dollars.

(4) The difficulty due to the seasonal variations of shipments of South American produce and the consequent fluctuation in the demand for balances in New York or South America.

(5) The disorganized financial situation in South America, which increases the risk in securing settlements in the South American Republics.

(6) The necessity of creating and maintaining an expert and, therefore, expensive organization.

The difficulty as regards South America, however, would still remain, for it would be impossible within any reasonable time to organize in the principal cities of South America sufficiently extensive cooperative associations of importers and exporters of American products.

Standardization of South American credits, therefore, could only be secured by the guaranty of American shippers or importers, or by the guaranty of the South American Governments themselves.

Your committee, therefore, after careful consideration, feels that the suggested "cooperative exchange" would not be practical, although a powerful banking group or large banking institution willing to assist in maintaining and developing our Latin-American trade might be able to secure and render mutually beneficial the organized cooperation of exporters and importers in matching credits.

RECOMMENDATIONS.

Your committee, however, believes that the extension of credits might be facilitated and some relief afforded pending the establishment of the Federal reserve banks if, in addition to permitting national banks which have signified their intention to enter the reserve associations to accept commercial paper, action to be taken by the Federal Reserve Board to make immediately effective the rediscount provision of the new banking system, thus assuring early establishment of a discount market.

Your committee, while appreciating the necessity of conserving the banking resources of this country for the protection of our domestic situation, nevertheless believes that the cessation or curtailment of our trade with Latin America will in itself be highly injurious to American industry, just as we believe that the extension of this trade would make for the prosperity of the country at large, as well as of those directly interested. We therefore hope that American banking institutions may be induced to meet the present emergency, not by tentative and inadequate measures, but by extending accommodation sufficient at least to assure the maintenance of our already established trade.

EXTENSION OF TRADE.

The question of extending American commerce with Latin America depends primarily, as does the problem of maintaining our trade, upon the establishment of commercial credits, upon our ability to finance Latin-American enterprise, purchase the products of its soil and industries, and upon the perfection of our selling machinery.

Your committee has not attempted to formulate suggestions as to the manner in which the individual manufacturer should proceed to establish a market for his products in South America. Nor does it here dwell upon the importance of adaptation of the product to the needs of the market or proper packing. Too high praise can not be given the Government, particularly the Department of Commerce under the Hon. W. C. Redfield, for its effective propaganda on these essential points and for its efforts adequately to assist extension of our foreign trade.

The enlightened services of the Pan American Union in safeguarding good understanding among the Republics of the Western Hemisphere and in making its information and advice available to all affected by the commercial problems arising at this juncture are worthy of the warmest commendation.

CAUTION NOW ADVISABLE.

Your committee feels, however, that merchants and manufacturers now contemplating an entry into the Latin-American field should be careful to avail themselves of the easily accessible information concerning these markets. It is suggested that they should at the outset remember that the cost of maintaining individual representatives would probably be too great for any one of them to bear themselves. It is therefore suggested that associations consisting of the smaller firms or corporations engaged in kindred lines of production might be formed, and that either one or more representatives should be sent to South America to look after the interests of such associations, thereby bringing the cost of representation within a reasonable limit.

It has been suggested that American manufacturers should combine to send to South America trade exhibits showing the various articles which they have for sale. Your committee, however, is not inclined to feel that such measures would be productive of any permanent results. It is suggested instead that manufacturers and dealers desiring to place their products in Latin America, and who, for any reason, prefer not to send their own representatives there, could establish connections with export houses already doing business in those countries and maintaining large branch offices in the principal South American cities fully equipped with efficient sales organizations or who have established connections, and in certain lines of goods—foodstuffs, notions, and miscellaneous articles—join in establishing what might be called, for want of a better name, an "American store" in certain of the most important cities.

Ventures of this sort, however, require considerable capital and experienced men, and for the sake of the ultimate development of mutually beneficial commercial relations with Latin America it is believed that our merchants and manufacturers should not attempt to install their own establishments in Latin America unless they are prepared to meet initial losses and disappointments before realizing even moderate profits in what must necessarily be a developing rather than a ready-made business.

Your committee begs, therefore, to summarize the results of the investigations and to state its belief that the present disorganization of the trade of the United States with Latin America may best be remedied and placed on a permanently satisfactory basis as follows:

1. The establishment of a dollar exchange.

(a) By the ultimate creation of a discount market.

(b) Pending the establishment of a discount market, by the extension of adequate accommodations by banking institutions, and the establishment of reciprocal balances in the United States and in Latin America for financing Latin-American trade.

2. Perfection of our selling machinery.

(a) By furnishing additional support to commission houses already familiar with Latin-American business.

(b) By forming asssociations of merchants and manufacturers to be jointly represented in Latin America.

(c) By obtaining information as to the possibilities of developing retail stores in large Latin-American cities.

THE WORLD RACE FOR THE RICH SOUTH AMERICAN TRADE.

A COMPETITION FOR COMMERCIAL SUPREMACY IN WHICH THE UNITED STATES IS PITTED AGAINST GERMANY, GREAT BRITAIN, AND ITALY, AND IN WHICH WE ARE HANDICAPPED BY LACK OF BANKING FACILITIES, BY MEAGER SOURCES OF CORRECT NEWS, BY INADEQUATE KNOWLEDGE OF CONDITIONS, AND BY MISDIRECTED TRAINING OF OUR TRADE REPRESENTATIVES—THE NEED OF YOUNG MEN TO GET THE BUSINESS FOR US—A SURVEY OF THE EFFECTS OF THE PANAMA CANAL UPON SOUTH AMERICA, AND A STATEMENT OF OUR UNPREPAREDNESS FOR A GOLDEN OPPORTUNITY.

[By Charles Lyon Chandler, of the American Consular Service.]

There are many barriers against American trade expansion in South America and many handicaps which American investors to-day have to overcome. But perhaps the most important are these: We need in South America American banks, American young men, a better-informed press, and our investors there need better labor; that is, cheap, dependable labor.

There is not an American bank south of Panama. Here are two examples of what this means to American business:

Shortly after I had taken up my residence in Buenos Aires I went with a friend, a representative of one of the United States Government executive departments, to the cashier's window of a foreign bank in South America to have a Treasury draft cashed. The draft was literally thrown back in my friend's face. It took him three days to secure the money on that draft. Think of it! Uncle Sam's check so strange a thing in South America that a bank would not take it.

But that is simply the picturesque side.

I knew a young American, Herbert Leonard, who had come to Callao while I was connected with the consulate to represent an American tin-roofing manufacturer. There was a wealthy rancher at Callao, Elogio Castro, who owned a ranch about the size of the State of Delaware. The order for the tin roofing for all the sheds and shacks on that ranch was a choice morsel, and Leonard spent many days cultivating the acquaintance of the wealthy don.

Finally, in the midst of a two hours' conversation one day, the rancher let fall a dozen words which made Leonard certain that he had not spent his time in vain, and that the order was his. To make a tedious Spanish sale short in words, Leonard quoted prices for the roofing and waited for Don Elogio to send in his order. After several days of delay there came, not the order, but a courteous note, stating that Señor Castro regretted that he could not place his order with the Señor Leonard, as he most assuredly desired to do, because the Señor Leonard had quoted him prices considerably higher than those which he had quoted to several other purchasers in Callao and Lima. Señor Castro ended his letter with a list of the names of those other purchasers.

Of course, Leonard sold his goods, as do all salesmen, on a sliding scale of prices. His quotations necessarily varied according to the size of the order and the grade of material. To dealers he quoted discounts. Then, too, he had a certain margin to meet competition. His price to Don Elogio was fair if viewed in this light, but the don cared nothing for the reasons why Leonard should charge him one price and some other buyer another.

Leonard dropped in at the consulate that afternoon and showed me the letter. "It gets me," he said. "I know that he might have got one of my customers to tell him my price, or, maybe, two of them. But how he got the whole list is more than I can figure out."

He and I studied the matter for weeks. Finally we located the leak. The bank that Leonard dealt with copied every invoice, every scrap of paper, that related to his business. Don Elogio and half the other prominent men in the town were directors of the bank; consequently all of Leonard's invoices were at their disposal, and his business became public property. Moreover, there was no way for him to escape the trap, much less to retaliate. The whole banking business of the city—and the same would have been true of any South American city—was absolutely controlled by interests opposed to his own. He must either place himself in the hands of his purchasers or else in the hands of his trade rivals, for those banks that were not controlled by South Americans were in the hands of citizens of European countries competing directly with Americans.

Why, then, you may ask, have we no banks in South America? Mr. Samuel McRoberts, vice president of the National City Bank, of New York, says that all that is needed to cause American bankers to establish branches in foreign lands is for Congress to amend the law to permit American national banks to operate them. Recently the National City Co. sent Mr. William Morgan Shuster, formerly treasurer general of Persia, and two associates to South America to study the South American field with a view to the betterment of American banking connections there. Since the National City Co. operates in a wider field than a national bank, it may find a way to overcome the handicap placed against American bankers in foreign countries by our antiquated banking laws. But there will still be the imperative need for an amendment of our banking laws by Congress, so that all our banks may be free to enter this new field.

It is currently reported in South America that one chain of banking organizations sends copies of every invoice in its hands—and a good many of these invoices are from American customers—to the head office of the bank in one of the European capitals for the information generally of exporters in that country. That country is one of America's largest competitors in the world's market. Surely, any American exporter can realize what an advantage it would be to him if he knew every price quoted by every French, English, German, and Italian firm to every South American buyer. This practice can hardly be condemned if we Yankees refuse to do our own banking.

Another phase of the situation is this: The more heavily we finance our foreign commerce with our own capital the sooner we become a creditor nation. The development of new countries is dependent upon creditor nations to finance their growth—to build railroads, canals, and wagon roads, to found factories and other industrial institutions, and, above all, to take up the issues of national and local bonds. There is no part of the world of which it would be more advantageous for us to become a creditor nation than Latin America. If we do this, we will be an integral part of the growth of those countries, and, controlling the financial supplies furnished, we will secure a prior lien, as it were, on its future prosperity and on its busi-

ness generally. This is the chief argument in favor of that promotion of big business in South America which the State Department has recently taken up under the "dollar diplomacy."

The big business, the loans we are floating, and the railroads we are building in South America to-day are substantial bowlders which will hold open against the attacks of our trade rivals the door of commercial opportunity in South America for the small exporter. But England, France, Germany, and even Holland have so far anticipated us in this respect as to make it problematical to many at first sight whether an American banking institution there would stand the strain of competition with those which have been for 50 years established in the field. This doubt, however, is quickly dissipated when the volume of our commerce in South America is considered. We have the commerce, and that is the essential warrant for the existence of a bank. In one decade, from 1901 to 1911, our exports to South America increased 288 per cent. In that period the total trade of South America increased somewhat more than 150 per cent. To-day the Argentine Republic stands ninth among our customers; in 1900 she was fourteenth. Brazil stands thirteenth; 10 years ago she was sixteenth.

The bulk of our investments in South America also indicates the possible success of an American bank in this field. We have $30,000,000 in mines and other properties in Peru; $20,000,000 in packing plants in Argentina; $15,000,000 in packing plants and railroads in Uruguay; to say nothing of our capital in Colombia's banana plantations and mines and in Venezuela's asphalt fields. Ecuador's railroads are under American control. A Harvard graduate manages the electric and power plant of Rio de Janeiro.

The banks of other countries in South America show large earnings. The London & River Plate Bank not long ago paid a dividend of 20 per cent and the London & Brazilian Bank a dividend of 17 per cent. The British Bank of South America and the Anglo-South American Bank paid 15 and 10 per cent, respectively, and the "melons" of the banks of other nationalities were just about as good.

Again, good banks are needed for national "team play" in trade expansion. Bankers are the men on the coaching lines in foreign business; the directors of German, French, and English banks have their fingers in many enterprises—in home companies exporting railroad ties or agricultural machinery, in railroad loans, and in sewerage and other business operations. How can our people back home keep in touch with these opportunities for investment and for business unless they have such men on the spot to advise them?

There is one point, a bit aside from banking, that deserves mention here. Nothing is harder for the average exporter to ascertain than the standing, or credit rating, of firms in foreign countries unless he has the assistance of a good mercantile agency. The lack of such agencies has handicapped American exporters in many South American countries very seriously, and until they are established American bankers in South America could be very useful by supplying the information they usually give.

An American bank would be welcomed in those countries. Just before I left Buenos Aires for the United States the last time Dr. Jose Maria Rosa, the Argentine minister of the treasury, told me that he could hardly understand why we had no bank in Buenos Aires, a city as large as Philadelphia. "The Argentine Government will give all possible assistance toward its establishment," continued Dr. Rosa. "How can your trade with us ever grow unless you have a bank here, Señor Chandler? It is so very important. Tell your countrymen to come here and found one."

Dr. Eliodoro Lobos, the minister of agriculture, was even more emphatic. He said, "Your President and Secretary of State will make their names immortal if they will only get such a bank started. We need such a bank as well as you. Otherwise our trade with you can not grow, and nations are better friends if they see more of each other and have more dealings with each other. Your packing people are moving here to the Argentine, and they will require one more than ever."

That last point of Señor Lobos's is worth remembering. The meat-producing center of the world is rapidly shifting to the River Plate. Of all the beef consumed in London 78 per cent is shipped from the Argentine. If our supplies of live stock in the United States continue to diminish 9 per cent every 10 years, while our consumers increase 21 per cent, as our census statistics inform us, we shall have to turn elsewhere for our meat, and that "somewhere" will almost certainly be either the Argentine or Uruguay. Are we going to let all money transactions in our food supplies be controlled by our trade rivals?

American shoe manufacturers are now buying a large percentage of their hides from South America. They are competitors in the world's market against the shoe manufacturers of England, Germany, and France. Isn't it rather a serious thing that for lack of amendment of a single law this country should give into the hands of English, French, and German shoe manufacturers the knowledge of prices paid by their American competitors for their raw material? We are dependent upon South America for more things than we realize, perhaps. How many know that we depend upon the nitrate beds of Chile for all our powder, dynamite, and a great many other valuable commodities in the manufacture of which nitrate is used? We are dependent upon South America for our coffee and cocoa. The finest kid skins for ladies' gloves come from that corner of Brazil which juts out into the Atlantic Ocean.

We do not realize the price we pay foreign bankers on this immense trade between the two continents. It has been roughly estimated that the British banks alone have made more than $80,000,000 from citizens of the United States in South America, and some authorities will tell you that this is too low an estimate. The toll is constant. It is like the old French seignorial river dues that never ceased because the river never stopped flowing.

These foreign banks in those lands for more than 50 years slowly but ever so surely have reared a great fabric with branches in all the big trade centers. They now present an organization as closely knit as any army or navy, all aiding in the advancement of the interests of their home countries, from the presidents and boards of directors—most of whom are generally interested in railroads and other lucrative South American enterprises—down to the newest "clark" fresh from London. We also need such a machine as this for our trade.

THE NEED OF YOUNG AMERICANS.

For us the South American commercial field is essentially a young man's field.

The general retail trade—the selling of general lines of hardware, of paint, and of miscellaneous dry goods manufactures to the retailers of those countries—has received little development. That is the business which is to come, and I consider it more important in building sound commercial relations with other countries than the big business. Of course, the big business makes it easier for our exporters to get the little orders of the retail merchants. But many other countries, notably Germany, have already made great progress in clinching the South American retail trade. When we go in for that business we shall have to fight for it, and it is only the young men of our country who can secure it for us.

Why? Because little orders are placed with friends. For the drummer selling to Jeremiah Smith, of Kalamazoo, it is worth a good many orders to gain the good graces of Mrs. Smith, and it is a strong point for that drummer to be on such terms of easy familiarity that he can ask if Jeremiah, jr., has recovered from the measles. This is just as valuable with Señor Alvarez, of Montevideo. Indeed, it is much more valuable. You know that in our own country the element of personal relations in business getting is much stronger in the South than in the North, and if you multiply this difference many times you will have a very good idea of the importance of personal relations in business fields in South America.

One of the hardest things for an American salesman, newly come to a South American State, to understand is why he must spend so many precious days simply attempting to gain a social entrée to the dons as a preface to the privilege of placing a business proposition before them. The only reason is that it is the Latin's way, and if his business is to be gotten the American salesman must first learn and appreciate his customs.

Only the young man can do this. He has the adaptability and the years to spend at the task. He expects to spend a long time preparing himself. Germans in the foreign trade are trained from—well, I often wonder how many years a German will spend just to saturate himself with a knowledge of the country where he is to be his firm's business getter. A German does not leave his country for a business tour to drum up business. He comes to live in the South American country, and when you find him finally established he has become about the nearest facsimile of a South American incidentally engaged in representing a German house that you can imagine. And this is why the Germans are getting the general trade of these countries.

I remember one day when, as I sat in the office of the consulate at Montevideo, a type of the older, seasoned American salesman entered. He practically admitted to me later that the only reason he had come to the consulate at all was that some one had told him that it was the right way to begin, and that the only thing he had in mind to ask me for was a list of customers, with their ratings, so that he could get out that afternoon and hustle for business. He had one of the best lines of hardware, he told me, ever sold out of Chicago. For 10 years he had represented his company in various places through the Northwest, and he had recently come from Michigan, where he had made such a success that when the directors of his firm decided to branch out into foreign lands they had chosen him as the logical man to get the business.

He knew his line. If I had just then been in the market for an automobile I believe he could have convinced me that it was one of his magnetic tack hammers I really wanted. I asked him if he was as steady on his feet with Spanish as he was with English. He said he had been at it for six months before he left "the States," and that, although he did not profess to be able to colloquialize in the lingo, he guessed he could brush along in it well enough to sell his goods. I fired a fair amount of Spanish vocabulary at him. It submerged him completely. I suggested that perhaps he would find it difficult to sell his goods to merchants who would counter to his arguments with an even more formidable shower of Spanish than that to which I had treated him. For about 15 minutes we argued the point. I suggested also that he familiarize himself with the way of doing business in Montevideo, with the banking facilities, and with the Spanish idea of credit. Although I do not clearly remember all the details of our talk, I distinctly recollect his closing remark.

"Well," he said, squaring himself, "I sold this line in Kalamazoo; I guess I can sell it in Montevideo."

Having written that line out, it appears to me almost too absurd a speech for a man of his experience to have made, yet I have heard others express about the same idea. To do this particular salesman justice, he proved a sticker. He gave up in the long run, but he clung to his forlorn task longer than I had ever supposed he would. I accompanied him on his first few tours. It was pitiable to see him grope for the few familiar words in the sonorous Spanish of the merchants and to try to catch just enough to get the sense of their conversation. Even more lamentable were his vain efforts to phrase some incontrovertible argument about the value of his wares in his one-syllable Spanish. As much as I could I acted as translator for him. A Spanish merchant would raise a question. The drummer would instantly take from his resourceful mind some smashing argument which he had used a thousand times at home—prepared to obliterate every objection of the doubting don—and then he would wind up with a two-line statement that was lame, halt, and blind, and that must have sounded to the don like an extract from a primer. When he was asked to give six months' or more credit he seemed to think that I had purposely guided him to every dead beat in Montevideo.

One of the first questions he put to me was, "How could he start an advertising campaign?" I suggested a couple of the best weeklies—a curious combination they are of our own Saturday Evening Post, Life, and Police Gazette. No. What he wanted to do was to circularize his trade individually. That practice was then new in Montevideo. I happened to remember a printer who, on opening his establishment, had sent out a circular to his friends, so I secured a copy of the circular to show the American salesman how circularizing was done in Montevideo. For he had, even in that short time, come to see that he would have to follow custom to get business.

After laboriously reading the circular he remarked to me that he could not tell from it whether the printer had invited his prospective customer to visit him for a month or was proposing for his daughter's hand. Well, that is the way they do such things in Montevideo. One sends out a business circular. In itself that is an innovation, but Heaven forbid that one should rudely quote prices in that circular. One simply calls to the attention of the highly esteemed Señor Gomez the exquisite pleasure which it would afford the proprietor of the printing establishment if he, the highly esteemed señor, would, when having under consideration such work of that character as his great and wonderful business must constantly demand, only bear in mind the fact that there was in Montevideo such a printing establishment, which, although it was not quite good enough to do such work as was due the illustrious señor, had nevertheless a proprietor who would consider it the highest honor of his life to be given the slightest intimation that he was worthy to be thought of in connection with the esteemed Señor Gomez's orders.

The Yankee salesman declared that if he had to begin with that soft pedal and work his way up with a series of circulars until he had gotten sufficiently into the merchant's graces to be granted the privi-

lege of putting a business proposition before him, he guessed the business wasn't worth the time of any man over 18 years of age.

After this salesman had returned to the United States, his firm, probably at his advice, sent to Montevideo a bright young man who had had about two years of sales experience, but who had, on the other hand, a very sound, if somewhat stilted, command of Spanish to back him and who was willing to bide his time, as, indeed, at his age he could afford to do. When I left Montevideo this young man had worked up at least enough business to justify his existence, and had acquired a circle of friends and a familiarity with the ways of the people which I knew would in the long run bring him business beyond his dreams. Perhaps you will think this is an exaggerated case, but it is not.

THE NEED FOR BETTER NEWS SERVICE.

Another of the greatest handicaps against the American in South America is, I think, the lack of good news service between the two continents and of sound knowledge of South American history and economic conditions. A great quantity of distorted and injurious "news" is circulated about us in South America, and, as a consequence a prejudice against us is created which is perhaps our greatest handicap in making friends. I read some time ago that Secretary Knox, in a speech quoted an article from some South American journal printed as a dispatch from Washington, stating that the American Government was this year showing a deficit in governmental expenditures for the first time since the Civil War, and that as a measure of economy it was intended to abolish the office of Vice President and to reform our national lottery. I have frequently read statements in South American papers that described our international policy in language even more absurd than this.

This need of better knowledge, of correct daily news, is as great with us as with South America. By reading any one of our metropolitan dailies we can follow the course of the home rule bill through the British Parliament. Yet what have our papers said of the sweeping electoral reforms which the Argentine Government has recently adopted? Perhaps it is fortunate that we have had so little to read, for what I have seen printed in American papers is mostly untrue, and so, when the exchange of news is bettered, we shall not have so much that is wrong to unlearn. And how many Americans speak Portuguese? How many know that as much Portuguese as Spanish is spoken in South America? How many know that the label on the can of tooth powder shipped to Pernambuco must be printed in Portuguese and on that shipped to Bocas del Toro or Bahia Blanca must be in Spanish? No; we are still asking the man from Buenos Aires if he has any hotels in his city. We wish to know if the Argentine has any roads that an automobile can run over, though I had an office in the same building in Buenos Aires with an Italian automobile salesman who sold two or three $5,000 motor cars every month.

Our schools should pay more attention to this need, and, above all, our colleges and universities should not merely lay much more emphasis on teaching Spanish and Portuguese, but should insist that instruction be given in at least the rudiments of South American history and economic condition. For a Nation of 94,000,000 people we are absurdly inadequate in our training of young men for as useful and old a profession as exists—international trade. Our whole system of modern-language instruction needs revision, with teachers who can teach the Spanish of Madrid rather than the Spanish of East Boston. How many institutions are there such as the Boston High School of Commerce and the Philadelphia Commercial Museum? At how many colleges can one learn a word of Portuguese? We have more than $150,000,000 worth of trade with Portuguese-speaking countries. Do you think that one high-school boy in a thousand can tell you that Buenos Aires is larger than Philadelphia or that the highest railroad in the world is in Peru?

There is nothing more humiliating for an American than to visit one of the large South American universities and find the eager young men there studying Kent and Story in law, James in philosophy, Trent in American literature; or to hear the correct answers given to such questions as: "How long was the term of the President of the Confederacy?" or "Who was Edward Everett?" and to imagine the answers the students in our universities might give to similar questions about Rivadavia or Unánue or Garcia Moreno.

When the ships of the Atlantic and Pacific brim Culebra Cut there will set in a tide such as once flowed in our own country from east to west that will call out from our universities, from offices, and from shops the youth that has most ambition, most daring, most resourcefulness, and most adaptability. Col. Goethals tells us that he is going to put the first ships through the canal next August; so it does not seem too soon to get ready for the change to-day. Certainly, none of the great exporting nations of Europe are letting the grass grow under their feet, and we can not afford to let this South American business escape for lack of preparation of our young men.

SOUTH AMERICA'S NEED OF IMMIGRATION.

The Panama Canal is viewed by Americans almost wholly as a channel of commerce for wares. But vessels carry more than wares. In their steerage are future nations. The Panama Canal is certain to prove one of the greatest channels of immigration in the world. It is just here that so many people make a mistake in prognosticating the influences of this canal. They compare it at once with the Suez Canal; they modify the effect of that waterway to suit the commercial conditions prevailing in North and South America and present to you a complete table of alterations in the world's trade which the canal is to bring us. But any comparison between the Suez and the Panama Canals is impossible, because the Suez Canal connected 400,000,000 East Indians with 200,000,000 Europeans. At one stroke the two most populous continents of the earth were given the cheapest and quickest transportation route.

Now, South America is still a country for settlement as well as for development. Only after a person has roamed over that vast territory from Panama to southern Argentina does he realize the sparseness of its settlement and the immense possibilities of its future. Even by touching at its ports he gets a false impression of the continent's population. He sees Buenos Aires with its skycrapers, its big hotels, and its busy thoroughfares, and he can scarcely realize that it is at the threshold of a still unsettled country, a country of immense cattle ranches like those in our own West 20 or 30 years ago. In Uruguay one-seventh of the people live in Montevideo. The land is held in enormous tracts by wealthy "estancieros" (ranchmen) and the Government is just now trying, by adopting the European scheme of furnishing money at cheap rates to small farmers, to build up a substantial agricultural class. If we touch at the coast cities of Brazil, or even traverse the southern provinces, we get no idea of the astonishingly vast unsettled regions in the basin of the Amazon or in the table-lands of the interior.

Therefore, the greatest effect of the canal is to be in the people it will bring. They will compromise with the present inhabitants of the country to build a greatly altered, perhaps a new, South America, industrially and politically. This change has begun in one country already. Argentina has become a melting pot, and her institutions have felt the change, her commerce has grown beneath its influence, until to-day that country has the second largest foreign trade in the Western Hemisphere. Argentina has received most of the immigration because of the steamship lines from her ports to Europe. The remainder of it has gone only to Brazil and Chile. Now the Panama Canal will bring the steamship lines to the west coast.

Let us consider what this immigration will mean to the west coast of South America. (Peru holds the oldest Caucasian civilization of the western world. I studied there in the oldest seat of learning in the Western Hemisphere, an institution many years older than my own Harvard.) The Spaniards enslaved the natives but, in time, as so often happens, the conquered in arms became almost dominant in blood. Since that first settlement Peru has received little new immigration. The benefit of the Spanish influx is dying out. This is true as well of the other countries of northern South America—of Ecuador, of Colombia, and of Venezuela. Bolivia is still almost an Indian country. The immigration which the canal will bring is certain to revolutionize these countries industrially and probably politically.

The new immigration will give to Peru, for example, new laboring classes. In time it will fill the great void felt to-day—the utter lack of a solid middle class. It will give hands with which to cultivate the soil and energetic merchants to sell the soil's products. One of the most commercial activities of South America is fruit growing. Let us apply the benefits of immigration to the fruit industry of Peru. Wine of very good quality is produced in the Ica Valley. The industry has been carried on for three centuries, since it was first introduced by the Spanish, but, as no people followed them, for lack of labor it has never received any real development. Give this valley new immigration from Spain, Italy, and the islands of the Mediterranean, and you have at once the possibility of a thriving industry.

The banana industry exists to-day successfully in northern Peru, Ecuador, and Colombia, although it is very little developed. The truth is that there is no market for the product at present, except in Chile. The canal will give to these countries a market for their bananas, and new immigration will develop the industry.

I have bought pineapples at two for a cent in Lambayeque, Peru. That town is now being connected by railroad with the seacoast. The canal will give the pineapple growers a market in the United States for their fruit, but Peru will need new blood and virile wage earners if she is to develop these resources. On the west coast of Colombia they are now building a road from Buenaventura to Cali which will place within three or four days of the Isthmus one of the greatest tropical fruit-growing districts in the world. It may not be many years before the Peruvian "palta" will be on sale in the fruit stores of New York City.

There are also opportunities for the development of new industries. Peruvian coffee—and I have never tasted better coffee than is grown on the plantations of northern Peru—is produced now only as a garden product for the use of the owners of these plantations, who live in Lima. Italian immigration gave the first impulse to the enormous development of the coffee industry in Brazil. Why shouldn't it do as much for Peru?

Directly, then, immigration into South America will mean cheap, good labor, and, indirectly, it will mean a steadying influence politically upon the Governments and a quickening influence upon the industrial life of the nations. The American investor, the American exporter, can both count these changes to their benefit. All these changes have been seen in the Argentine Republic. Half of the people of that country either came there since 1857 or are descended from people who arrived there since that year. Therefore, Argentina is no longer strictly Latin-American in the sense that the northwestern countries are. It is cosmopolitan. The peoples of both southern and northern Europe have placed an indelible stamp upon the nation's institutions. Therefore, the country's commerce has grown, and the investment of foreign capital in the Argentine Republic has increased. It is no longer a country of politics but a country of industry.

[House of Representatives, Rept. No. 3054, 54th Cong., 2d sess.]

Mr. BROSIUS, from the Committee on Banking and Currency, submitted the following report:

The Committee on Banking and Currency, to whom was referred the bill (H. R. 875) to provide for the incorporation of an international American bank, respectfully report the same with the recommendation that it do pass with certain amendments, indicated in the bill hereto attached.

The purpose of this bill is to carry into effect the recommendations of the International American Conference of 1889 by the incorporation of an international American bank. That body of eminent statesmen from all the American Republics, after an exhaustive discussion, embodied their recommendations in the following resolution:

"*Resolved*, That the conference recommends to the Governments here represented the granting of liberal concessions to facilitate inter-American banking, and especially such as may be necessary for the establishment of an international American bank, with branches or agencies in the several countries represented in this conference."

The bill has been drawn with great care, and it vests no powers in the proposed bank not necessary to enable it to execute its purpose effectively. The exercise of its powers is amply safeguarded, with a view to the protection of its shareholders, depositors, and those doing business with it. Complete visitorial power and control are vested in the Comptroller of the Currency. The Government is in no sense a party to the corporation, assumes no liability on its account, and is in no event responsible for its engagements. The only purpose in chartering the bank by act of Congress is to have an institution with a corporate franchise conferred by the Federal Government to inspire public confidence and secure safety through Government supervision and control. Foreign countries, taking note that the bank was projected by act of the Federal Government, a source of authority they are accustomed to recognize, would at once see the propriety of granting such concessions to their own people as would be necessary for the establishment of the branches contemplated by the bill.

The most effective provisions of the national banking act relating to periodical reports to the Treasury Department of the state of the bank's business and general publicity of its affairs, through newspaper publication, with full power vested in the Comptroller at all times to examine into its management and compel any impairment of its capital

stock to be made good, have been incorporated. The bill, in short, is thoroughly guarded and wisely adapted to the purpose intended.

The people of the United States, in common with those of the Central and South American Republics, feel the importance of increasing commercial intercourse between the different portions of the American Continent, and they believe that the development of such intercourse has been retarded by the lack of adequate facilities for exchange between the several countries, and their hope for a revival in trade is based upon the establishment of improved banking facilities which will emancipate these growing countries from their age-long servitude to the bankers of London and the Continent of Europe.

No one has expressed the situation more tersely or more forcibly than Mr. Theodore C. Search, president of the National Association of Manufacturers, after a tour of observation through South America. He says:

"As in our ocean commerce, so also in our financial relations with other countries, we are dependent largely upon the services rendered by foreign interests. Particularly in our dealings with the nations to the south of us, we are in urgent need of direct international banking facilities. We do $150,000,000 worth of business with South America in a year, and yet all our balances have to be settled through English or European banking houses. In the great trade centers of South America the English, the German, the French, and the Italian have their banks, but I think that I am right in saying that there is not an American bank in all South America. Manifestly this is a serious hindrance to our trade."

The conditions of international trade which have given European countries, notably Great Britain, the lion's share of commercial intercourse with South America are brought into distinct view by the report of Gen. I. W. Avery, the commissioner to South America from the Cotton States and International Exposition, who visited that continent in the interest of the exposition. He informs us that of the $911,000,000 foreign trade that South America does each year only $130,000,000, or one-seventh, is done with the United States. Of the latter sum our country sells South America but $32,000,000, or one-fourth, and buys $91,000,000, leaving a balance of $59,000,000 against us.

Embracing in our view all the Republics south of us, the figures are still more significant. The total foreign commerce of Mexico, Central and South America is about as follows:

Imports	$557,504,462
Exports	722,364,251
Total	1,279,868,713

Of the total imports the United States supplies $99,814,538, or a little over one-fifth, while of the total exports they receive $207,384,623, or nearly one-third, leaving a balance against them of $107,570,085.

The financial part of all this business, he informs us, is carried on through Europe. European vessels carry the goods, Europe receives the commissions and freights, and sells most of the goods consumed in South America, while the United States is the largest purchaser. This condition of the trade, he says, is due to five facts, namely:

First. We have no banks in South America; Europe has them everywhere.

Second. We run few steamships to South America; Europe runs them to all her ports.

Third. We have no United States stores in South America; Europe has her stores in all parts of that continent.

Fourth. We sell for cash; Europe gives credit.

Fifth. Europe makes goods and packs them to suit the South American trade; we do not.

Without underestimating the importance of the other facts named, it is quite obvious that the first one is at this time pressing with great urgency upon the attention of the American people in connection with the universal desire to increase our commerce with our southern neighbors.

A comparison of our lack with the great abundance of facilities enjoyed by European countries for the South American trade brings into view as a conspicuous agency in European commerce suitable and convenient means of exchange. Every leading European nation has established banks in the South American countries to facilitate exchanges. It was stated recently that France is about establishing a bank in Brazil with a capital of $2,000,000 for the purpose of opening more direct financial relations with that country. French traders are not satisfied with existing facilities, which compel them to operate through English banks.

United States Consul Johnstone, at Pernambuco, Brazil, said recently that English and German banking houses were scattered throughout the entire eastern and western coasts of South America. These banks, while doing a general exchange business, are established especially for the benefit of the trade of their own countries. It is said that there are 60 incorporated banks in London with a capital of $294,000,000 exclusively devoted to international banking.

In the report of the commission referred to, it is said, speaking of Argentina:

"Four-fifths of the present banks of Argentina are branches of foreign banking houses, all of which are European. The United States is the only country attempting to do business without a banking representative, and it is the opinion of those well informed on the subject that any large increase in our business with Argentina will necessitate the establishment of direct banking connections. Minister Buchanan, after a careful investigation of the conditions, says: 'This city (Buenos Aires) offers a splendid field for American banking capital, and I am satisfied that an American bank, conducted as our banks are, would command great favor here and find many advantages and facilities extended to it. I am equally certain that it would be the means of extending and enlarging our commerce with this country.'"

It can not be doubted that trade might be increased between our own and the countries south of us by improved facilities for transportation and by catering to the tastes of the people and adapting our goods to their markets, but over and above all possible gain from these sources there is a large benefit to be derived from a coincident extension of the means of exchange. The mechanism of exchange is only second in importance to that of transportation. Improvements on both lines might well progress concurrently.

It is not easy to see how the currents of trade that have been flowing so long across the Atlantic from Central and South America can be changed and made to flow north and south without the aid of an international mechanism of exchange which will afford facilities at least equal to those existing between this continent and Europe.

The indirect exchange, which has been our chief recourse in the past, entails great loss upon the United States and affords ample gains to European bankers, which American bankers ought to enjoy. This is obvious enough to all who understand the course of our foreign trade. Our imports from the south of us greatly exceed our exports, creating a balance against us on our trade ledger, while Great Britain exports to those countries largely in excess of her imports from them, leaving a balance against the latter countries. We pay our balance to South America indirectly with the British goods shipped to her in excess of what Great Britain imports from her. In other words, there is a triangular trade between the United States, Great Britain, and South America. British ships sail with goods from British ports to South America, thence to the United States with sugar, coffee, teas, and spices, and finally return to Great Britain with American cotton and food products. Not only do British interests enjoy the benefits of this trade, but British ships pocket the freights and British banks the commissions on the exchange required in the financial settlements.

To see how British banks secure these advantages we have only to look into the mode of conducting our commercial intercourse with our southern neighbors.

Take, for instance, a purchase of wool, which we will say costs in Argentina £1,000 or about $5,000. An importer here when he orders the wool from a merchant there (Argentina) furnishes a letter of credit of a London banker, which is taken out for his account in favor of the shipper. The shipper draws under this letter of credit at whatever usance is named, usually in South America at 90 days' sight, accompanying his draft with shipping documents, which are to be given up to the drawee in London on his acceptance. Duplicate documents are forwarded to the correspondent of the London banker in New York, so that the goods may be taken charge of on arrival of the ship here. The drafts on London are accepted at, say, 90 days' sight and charged to the American importer in that way. Upon arrival of the goods here the importer applies to the banker's agent or representative, and if the importer is of good standing he usually receives the documents in exchange for an engagement to hold the goods (with liberty to sell) or the proceeds in trust for the bankers until the acceptance in London is covered.

In this way an importer from South America would receive his goods about the time the shipper's drafts would reach London, and he would thus have about 90 days' credit, say sufficient time to sell the goods, and out of the proceeds to protect the drafts drawn. To cover the London banker he would, of course, buy a draft on London at whatever the rate on London would happen to be.

A settlement in a case like the foregoing could not be effected advantageously by direct exchange with Argentina under existing conditions, and such exchange with any South American country is scarcely known. A New York house, which has been doing business with South America for 27 years, states that nearly all their transactions were carried on through credits on London. The reason is obvious. No matter how good the customer is in South America, it is not possible to negotiate a draft on him at any reasonable rate of exchange, as there is no means of ascertaining his standing and credit, and hence a draft on him must go a begging in the United States.

It is easily seen that American bankers, excepting the few houses doing an exchange business, have no agency to speak of in these transactions and enjoy none of the benefits of them excepting so far as they may be the agents of British bankers and operating in their interests.

Can we conceive of a situation more humiliating than this to a patriotic American? Seventy millions of the most enterprising people on earth, the greatest Republic on which the sun shines, the richest nation in material resources and productive capacity obliged to obtain a letter of credit from a European bank before it can buy a bill of goods from a neighboring country on our own continent; compelled to conduct a rivalry in international commerce with European nations for South American trade with the fiscal agencies employed in effecting exchange practically in the hands of our most formidable competitor.

Not only that, but for the carriage of our goods, our mails, and ourselves to South America we are dependent upon steamers built and owned in England and operated under British management. Every American cheek should tingle with shame at the thought of the recourse to which a commission of manufacturers from the United States was subjected this year. C. D. Mitchell, of Chattanooga, Tenn., one of the vice presidents at large of the National Association of Manufacturers, expressed the situation in this indignant phrase. He said:

"It was a national disgrace when sending a business commission to Argentina and Brazil this year to acquaint us with trade prospects that they were compelled to cross the Atlantic twice each way in foreign-owned and foreign-made steamers. In a 3 months' absence they had only 25 days to "spy out the land," whereas could they have gone direct they would have had 60 days in which to do their allotted work. Thus the disgrace is overshadowed by the injury and loss."

Direct exchange between the countries concerned was the consummation which the delegates from all the countries represented in the International American Conference hoped to achieve. A discussion of which precedes the other in the order of development, commerce, or banking is of too academic a character to be useful. It is entirely obvious that where commerce between two or more countries has arrived at a given state of development under inferior facilities for exchange an additional impetus to trade will come from an extension of the means of settling accounts. This is attested by all observation and experience. The greater the facilities for direct clearance on account of goods exported against goods imported the greater will be the volume of commodities exchanged.

When we consider that the countries south of us are not manufacturing countries, but produce largely raw material which it would be materially advantageous to exchange for our manufactured goods, the desirability of the object had in view is distinctly emphasized. The delegates from the South American Republics pointed out this consideration in their arguments in support of the resolution quoted. They looked north and saw a great manufacturing nation in need of raw material, and they fully realized that their people needed the manufactured goods we produce, and which are now supplied by England and other nations.

This condition of commerce is injurious both to the United States and the southern Republics. Over and above the loss of the reciprocal advantages which trade affords, we are paying a large bounty to European bankers for effecting our exchanges for us, because we have not the means of making them ourselves. With suitable machinery for exchange established between the countries of the American Continent we would save a large amount of commissions paid to English and continental bankers and direct large streams of profit to American financial centers which now flow to European markets. Under existing conditions we are compelled to suffer this loss in addition to the indirect injury we sustain, for the president of the National Association of Manufacturers in his recent report well says:

"There are abundant reasons for the belief that the commercial interests of the United States in South America would be greatly benefited if they were independent of England in their financial transactions."

In the report of the committee appointed by the International American Conference to consider and report upon this question, it was declared that there was not in the countries represented in the conference any organized system of bankers' exchanges, or credits; for instance, they said drafts upon the United States were not obtainable at all in many of the markets of South America, and in most of them are only salable at a discount below the sterling equivalent. In like manner, drafts upon South and Central America are practically unknown in the money markets of New York, Philadelphia, Baltimore, New Orleans, Chicago, and Boston. Necessarily, therefore, the merchants who import goods from these southern countries make their exchanges through English bankers' credits. We pay for the goods we buy by remittances to London or the Continent to cover drafts drawn in the exporting markets against European letters of credit, and we pay 1 per cent for the privilege of doing so, which might be saved, as well as interest and commissions, if we had an international banking system so developed as to afford a market for drafts drawn against letters of credit issued in America, such as now exists for drafts drawn against European letters of credit.

One of the delegates from South America said if a merchant from Argentina wished to send goods to the United States he must ask the one to whom he sends the goods (consignee) to authorize him to draw upon some bank. The consignee has to send him a letter of credit on London, because there is no bank there that can issue a draft, nor would the merchant know what to do with a draft if he received it, as there are no banking institutions to which he could sell such a bill of exchange. The consequence is that the banker in London must be paid a commission of 1 per cent upon the amount simply for placing his name upon the paper.

Another delegate, observing the necessity for branches in the South American countries, argued very cogently that the banks in those countries have no relations with each other, nor have they any knowledge of the operations of each other. There is, for instance, no way of knowing in Argentina whether a draft drawn by the Bank of Costa Rica is valid or not. Likewise a draft on the Bank of Mexico might have some difficulty in being accepted in any of the South American Republics, because its solvency would not be known in those countries. But with branches established in every section the international American bank could draw on its branches anywhere with perfect knowledge and implicit confidence. The obvious result would be the dissemination of knowledge of the standing of merchants and business men in the commercial centers of the several countries and the promotion of that confidence indispensable to that commercial association and intercourse which carries on its wings blessings to all concerned.

As money is the great instrument of association among men, States, and nations, so any extension of the facilities for making money available and supplying media of exchange, such as banking operations afford, always quickens the currents of trade and stimulates intercourse among merchants in the same and likewise in different States and nations. Putting capital into banks, at least to the extent of meeting all reasonable demands, has ever been and always will be a distinct benefit to business.

The committee of the international conference referred to say in their report:

"Your committee believes that the best means for facilitating the development of banking business, and generally of financial relations between the markets of North, South, and Central America, as well as for improving the mechanism of exchange without calling on any Government whatever to exceed its functions, would be the passage of a law by the United States incorporating an international American bank, with ample capital, with the privilege on the part of the citizens of the several countries in the conference to take shares in such bank pro rata to their foreign commerce; which bank should have no power to emit circulating notes, but which should have all other powers now enjoyed by the national banks of the United States as to deposits and discount, as well as all such powers as are now possessed by firms or private bankers in the matter of issuing letters of credit and making loans upon all classes of commodity, buying and selling bills of exchange, coin, bullion; and with power to indorse or guarantee against proper security, and generally to do whatever can be done by the great banking firms who are carrying on their business without the aid of corporate charters under the laws of a general partnership."

With such an international bank established, with branches in all the Republics on the continent, there would be a stimulation of intercourse, commercial and financial, such as would surprise those who are content to transact American business through European bankers and are satisfied that Europe should buy from us and reship the same goods to South America at a profit which we are too slow or stupid to secure for ourselves.

THE CONSTITUTIONAL OBJECTION.

The objection made by some to this measure based upon a supposed constitutional limitation of the power of Congress in the premises is not, in our opinion, at all tenable. It is provided inter alia in article 1, section 8, paragraph 3, of the Constitution, as follows:

"The Congress shall have power * * * to regulate commerce with foreign nations."

The constitutional meaning of the words "to regulate commerce" has been so frequently and so fully considered by the courts with such force of reason and amplitude of learning that it is unnecessary to enlarge upon the subject in this connection. Remembering that the Constitution is an instrument of enumeration rather than of definition, it is obvious enough that the extent of the power is limited by the meaning of the words in which it is granted. Story, in his Commentaries, says:

"The subject to be regulated is commerce. Commerce is something more than traffic; it is intercourse. It describes commercial intercourse between nations in all its branches and is regulated by prescribing rules for carrying on that intercourse. To construe the power so as to impair its efficacy would defeat the very object for which it was introduced into the Constitution."

The late Justice Miller, in his work on the Constitution, says:

"Traffic and trade are comprised of a great many elements, so far as the means are concerned by which and the persons by and between whom they are carried on."

Still more explicit is the language of the Supreme Court in McCall *v.* California (136 U. S., 104):

"Commerce includes the fact of intercourse and of traffic and the subject matter of intercourse and traffic. The fact of intercourse and traffic again embraces all the means, instruments, and places by and in which intercourse and traffic are carried on at those places and by and with these means."

To exclude from the power the regulation of the means of exchange and the use of credit in carrying on foreign commerce would imply that foreign commerce in the constitutional sense is limited to barter or exchange without the use of the great modern agency of credit. The admission that a suitable mechanism of exchange between countries facilitates foreign commerce, and no one denies that, is a concession of the entire ground of contention, for the purpose of the power to regulate is to facilitate, and any means that facilitates must therefore be included in the power to regulate.

Whether an international bank is a suitable means of facilitating foreign commerce is not a judicial but a legislative question. The decision of Congress on that question can not be reviewed by the courts. Congress may choose any means suitable to carry out a granted power. All means appropriate and not prohibited, if the end be within the constitutional mandate, are constitutional. This principle is nowhere more elaborately considered than in McCulloch *v.* Maryland. From that magazine of judicial learning we deduce some observations which carry the substance if not the words of that justly celebrated decision, and which apply as well to an international as to a national bank.

If any one proposition could command the universal assent of mankind, we might expect it would be this, that the Government of the Union, though limited in its powers, is supreme within its sphere of action. This would seem to result necessarily from its nature. It is the Government of all; its powers are delegated by all; it represents all and acts for all.

The nature of the Constitution requires that only its great outlines should be marked, its important objects designated, and the minor ingredients which compose those objects be deduced from the nature of the objects themselves.

Is it denied that Government has its choice of means or that it may employ the most convenient means, if to employ them it be necessary to erect a corporation? The power to create a corporation appertains to sovereignty and is not expressly conferred on Congress. The Government can not be restrained from creating a corporation as a means for performing its functions, for the reason that such an act is an exercise of sovereignty.

The power of creating a corporation is not an end for which other powers are exercised, but a means by which other objects are accomplished. In California *v.* Pacific Railroad Co. (127 U. S., 1) it was declared that Congress has the power to construct, or to authorize individuals or corporations to construct, railroads or national highways from State to State, and that that authority is essential to the complete control and regulation of interstate commerce.

Congress is empowered to make such laws as may be necessary and proper for carrying into effect the powers conferred on the Government. The word "necessary" does not exclude the choice of means which are appropriate. Necessary means are any means reasonably calculated to produce the end.

The Constitution does not prescribe the means by which Government shall execute its powers. Future exigencies could not have been foreseen and must be provided for as they occur. The Constitution does not restrain Congress or impair its right to exercise its best judgment in the selection of measures to carry into execution the constitutional powers of the Government.

Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consistent with the letter and spirit of the Constitution, are constitutional. (McCulloch *v.* Maryland, 4 Wheaton.)

Keeping these principles in mind and remembering that the international bank authorized by this bill has no other purpose than to facilitate our foreign commerce by affording improved means of exchange between our own and other countries, one can hardly fail to see that the measure is entirely within the warrant of the Constitution. If, however, there still lingers in any mind a doubt of the soundness of the views suggested, it will certainly be removed by an examination of a few of the leading cases in which the question has received judicial consideration, notably the cases of Gibbons *v.* Ogden (9 Wheat., 196), United States *v.* Holliday (3 Wall., 417), People *v.* Brooks (4 Denio, 469), Brown *v.* Maryland (12 Wheat., 445), McCulloch *v.* Maryland (4 Wheat., 316), Legal Tender Cases (12 Wall., 457), Juilliard *v.* Greenman (110 U. S., 421), Veazie Bank *v.* Fenno (8 Wall., 533), and National Bank *v.* United States (101 U. S., 1).

Appended for information are the communications of President Harrison and Secretary Blaine, the report of the committee on banking of the International American conference, and a copy of the bill:

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES TRANSMITTING A LETTER FROM THE SECRETARY OF STATE RELATIVE TO THE REPORT OF THE INTERNATIONAL AMERICAN CONFERENCE IN FAVOR OF AN INTERNATIONAL AMERICAN BANK.

To the Senate and House of Representatives:

I transmit herewith a letter from the Secretary of State, inclosing a report adopted by the International American Conference recently in session at this Capital, recommending the establishment of an international American bank, with its principal offices in the city of New York and branches in the commercial centers of the several other American Republics.

The advantages of such an institution to the merchants of the United States engaged in trade with Central and South America and the purposes intended to be accomplished are fully set forth in the letter of the Secretary of State and the accompanying report. It is not proposed to involve the United States in any financial responsibility, but only to give to the proposed bank a corporate franchise and to promote public confidence by requiring that its condition and transactions shall be submitted to a scrutiny similar to that which is now exercised over our domestic banking system.

The subject is submitted for the consideration of Congress in the belief that it will be found possible to promote the end desired by legislation so guarded as to avoid all just criticism.

BENJ. HARRISON.

EXECUTIVE MANSION, *May 27, 1890.*

DEPARTMENT OF STATE,
Washington, May 27, 1890.

The PRESIDENT:

I have the honor to submit herewith the report of the committee on banking as unanimously adopted by the International American Conference recently in session in this city. It was the wish of the conference that this proposition, of such great interest to every American Republic, should, as promptly as possible, secure the earnest attention of the Congress of the United States.

The foreign commerce of the nations south of the Gulf of Mexico and the Rio Grande amounts annually to more than $1,100,000,000. At

present the people of the United States enjoy only a meager share of this market, but the action of the recent conference will result, I believe, in the removal of certain obstacles which now tend to obstruct the expansion of our trade.

One of the most serious of these obstacles is the absence of a system of direct exchanges and credits, by reason of which the exporting and importing merchants of the United States engaged in commerce with Central and South America have been compelled to pay the bankers of London a tax upon every transaction. Last year our commerce with the countries south of us amounted to $282,005,057, of which the imports of merchandise were valued at $181,058,966, and the imports of specie and bullion were $21,236,791, while our exports consisted of merchandise valued at $71,938,181 and $8,668,470 in specie and bullion. Of the merchandise imported into the United States, the greater part was paid for by remittances to London and the cities of the Continent to cover drafts against European letters of credit. For use of these credits a commission of three-quarters of 1 per cent is customarily paid, so that the European banks enjoyed a large profit upon our business with a minimum of risk. This system steadily results in losses to our merchants in interest and differences in exchange as well as in commissions. These losses would be largely reduced by the establishment of an international system of banking between the American Republics.

The merchants of this country are as dependent upon the bankers of Europe in their financial transactions with their American neighbors as they are upon the shipowners of Great Britain for transportation facilities, and will continue to labor under these embarrassments until direct banking systems are established.

The report of the committee, hereto attached, presents a simple and easy method of relief, and the enactment of the measure recommended will, in the judgment of the conference, result in the establishment of proper facilities for inter-American banking.

Respectfully submitted.

JAMES G. BLAINE.

REPORT OF THE COMMITTEE ON BANKING.

[As adopted by the International American Conference, April 14, 1890.]

Pursuant to resolutions passed at the meeting of the conference on December 7, 1889, your committee was appointed to consider and report upon the methods of improving and extending the banking and credit systems between the several countries represented in this conference, and now has the honor to submit, as the result of its deliberations, the following report:

Your committee believes that there is no field of inquiry falling within the province of this conference for the extension of the inter-American commerce more fundamentally important than that of international American banking, and that, in fact, the future of the commercial relations between North, South, and Central America will depend as largely upon the complete and prompt development of international banking facilities as upon any other single condition whatever.

In the opinion of your committee the question of the mechanism of exchange is secondary, if at all, only to the question of the mechanism of transportation. Even after better means of transportation than those which exist shall have been established, it will be impossible for the commerce between American nations to be greatly enlarged unless there be supplied to their merchants means for conducting the banking business which shall in some measure liberate them from the practical monopoly of credit which is now held by the bankers of London and the European Continent.

If there be an enlargement of the means of transportation, unaccompanied with an equal extension of financial facilities, only partial benefits will be derived from the former as compared with the benefits which might be derived were the two improvements to progress together.

Your committee is of the opinion that the commerce between the American countries might be greatly extended if proper means could be found for facilitating direct exchanges between the money markets of the several countries represented in this conference, even if there were no improvements in transportation.

The first effect would be to afford a more direct "clearance in account" of goods exported against goods imported.

The large amount of commissions now paid to the European bankers could not only be decreased, but such commissions would be paid to American bankers or merchants themselves, and in this way a share of the profits which now go almost solidly to the European money markets could be kept in the financial centers of this continent.

There does not exist to-day among the countries represented in this conference any organized system of bankers' exchanges or credits. For instance, drafts upon the United States are not attainable at all in many of the markets of South America, and in most of them are only salable at a discount below the sterling equivalent. In like manner drafts upon South and Central America are practically unknown in the money markets of New York, Philadelphia, Baltimore, New Orleans, Chicago, and Boston.

The point has been made that to extend business between our States long credits must be given. How is it possible for manufacturers and merchants at distant points to form relations of such a character as to justify the granting of long credits? At present such relations are chiefly formed through the intervention of European banks and bankers, which are not interested in the extension of trade between the different countries represented in this conference except in a secondary and subordinate sense. The extension of trade between Europe and the Americas, not between the Americas themselves, is their first care. By the establishment of a well-organized system of international American banking our merchants and manufacturers would be able to establish improved credit relations, and those administering the system in the several money markets of the Americas would immediately become interested in fostering such relations and facilitating such business to the utmost extent.

The merchants of the United States now importing goods from the countries of South and Central America make such importations, as the investigations of your committee show, almost without exception, through the use of English bankers' credits.

The total foreign commerce of the West Indies, Mexico, and South and Central America amounted last year to about $1,200,000,000 United States gold. The committee have not been able to ascertain the amount of the commerce among the Latin-American States. The total exchange of commodities between the United States and countries to the south during the year ending June 30, 1888, aggregated $282,902,408, of which the imports into the United States amounted to $181,058,966 of merchandise and $21,236,791 of specie and bullion, and exports from the United States to $71,938,181 of merchandise and $8,668,470 of specie and bullion. Of the $181,000,000 of merchandise brought into the markets of the United States the greater part was paid for by remittance to London or the Continent, to cover drafts drawn in the exporting markets against European letters of credit.

For the use of these credits on Europe a commission of three-quarters of 1 per cent is customarily paid, and the foreign banks reap this great profit at a minimum risk, inasmuch as the drafts drawn against these credits are secured not only by the goods represented by the shipping documents against which the bills of exchange are drawn, but also by the responsibility of the party (generally the consignee) for whose account the letters of credit are issued, and without any outlay of cash, as the American merchant places the cash with the European bankers to meet such drafts at or before maturity.

This system results in the loss to America of interest and differences in exchange as well as of commissions, all of which could be saved to our countries if international American banking were so developed and systematized as to afford a market for drafts drawn against letters of credit issued in America, such as now exists for drafts drawn against European letters of credit.

At present, therefore, the situation is such that the merchants of this continent are virtually dependent upon European bankers so far as financial exchanges are concerned, notwithstanding the fact that there are ample capital and responsibility in the countries here represented, and it is the opinion of competent persons that such capital would be ready to avail itself of the opportunity of transacting this business directly between the financial centers of our respective countries without the intervention of London if the laws were such as to permit the conduct of the business of international banking under as favorable provisions as are now enjoyed by the European bankers. The prime difference would be that these transactions would be carried on by American instead of European capital, and that the profit would remain here instead of going abroad. This, however, is impossible of realization at present, in view of the fact that the banking houses of the United States doing foreign business are usually controlled by London principals, and that it is impossible, without some change in the legislation of the United States to secure a sufficient aggregation of capital in corporate form, and so free from the burdensome restraints and taxes now imposed upon moneyed corporations, as to permit competition on equal terms with the European bankers.

Many different plans have been discussed concerning the best means of facilitating direct banking business between our countries. Your committee has considered and dismissed a number of propositions relative to the establishment of banks by means of which the national governments themselves should afford financial facilities for inter-American banking. Such action, in your committee's judgment, does not fall within the proper sphere of government. There is no reason, however, why the Governments represented in this conference should not severally charter banking corporations to carry on business of the class which is now generally done by the great banking corporations of London; that is, not in the issuing of circulating bank notes, but for the purchase and sale of bills of exchange, coin, bullion, advancing on commodities generally, and for the issuing of bankers' letters of credit to aid merchants in the transaction of their business.

In the United States, where capital exists in particularly large volume and would lend itself most readily to business of this class, and consequently to the facilitating of international commerce, the laws are not such as to encourage the aggregation of capital for such purposes. So far as your committee has been able to discover after careful investigation there is no general statute of the United States nor of any of the States of the United States under which a banking company can be organized with ample capital which would have the power of issuing such letters of credit and transacting such business as is done by the leading banking companies of London, which virtually occupy the field. In the United States it will be necessary, in order to secure the proper facilities and the proper corporate existence, that there should be legislation granting a charter, and in most of the States such legislation is expressly prohibited by the terms of their constitution. Furthermore, the laws of the several States are such as to impose the severest restrictions upon moneyed corporations and to subject them to taxation so heavy that it would render it impossible to carry on the business of international banking in successful competition with the English, French, and German bankers.

Your committee believes that the best means of facilitating the development of banking business, and generally of financial relations between the markets of North, South, and Central America, as well as for improving the mechanism of exchange without calling on any Government whatever to exceed its proper functions, would be the passage of a law by the United States incorporating an international American bank with ample capital, with the privilege on the part of the citizens of the several countries in the conference to take shares in such bank pro rata to their foreign commerce, which bank should have no power to emit circulating bank notes, but which should have all other powers now enjoyed by the national banks of the United States as to deposit and discount, as well as all such powers as are now possessed by firms of private bankers in the matter of issuing letters of credit and making loans upon all classes of commodity, buying and selling bills of exchange, coin, bullion, and with power to indorse or guarantee against proper security, and generally to do whatever can be done by the great banking firms who are carrying on their business without the aid of corporate charters under the laws of a general partnership. Your committee believes, upon well-founded information, that the capital to such a bank would be promptly subscribed.

The United States Government might and should reserve the largest visitorial powers. The business of such bank should be conducted with perfect safety and with profit to its shareholders, and the greatest benefit to our international commerce. Branches or agencies of such a bank could be established in all of the principal financial centers of America, with the formal recognition of the governments of the several States in which such agencies are established, or arrangements might be entered into with existing banking institutions of the other countries for transacting the business, thus at once affording markets throughout the two continents for the purchase and sale of bills of exchange, facilitating and improving credit conditions generally, and at once affecting a complete mechanism of exchange such as already exists between our respective countries and the European money markets, but which has as yet no existence between the money markets of North, South, and Central America for the reason already stated.

One of the direct benefits to be derived by all of the Governments represented in the International Conference from the establishment of such a bank would be that the investors in the several countries in different classes of American securities would have better means than any which now exist for making such investments. For example, a South or Central American State about to float a foreign loan would feel itself less dependent upon a single combination or syndicate of European bankers than at present. There would be open to such borrowing State two markets to which to apply for national loans as

against a single market, to the mercy of which said borrowing Government is now virtually exposed. The same holds good as to all classes of State and municipal securities whatever. Latin-American investors would find means more readily at command for the investment in and investigation of all classes of North American securities, and the investors of the United States would also find means for the investigation of and in all classes of securities issued by the States, municipalities, or corporations of Latin America.

Your committee recognizes the fact that London has for many years derived the largest possible benefits through its banking facilities with our several States in taking all classes of American loans, which have generally proved themselves to be of most stable and desirable character, but, nevertheless, upon terms which have yielded the London bankers abnormally large profits simply because the element of competition does not exist by reason of the absence of proper banking relations between the several American countries. The institution of such a bank as proposed would at once afford relief against this state of affairs, and would be of benefit not only to the merchants in the manner described, but to all classes of investors generally and without distinction.

In recommending the organization of an international American bank, the recommendation is based upon the present condition of trade. The establishment of better means of transportation and the promotion of trade in other ways will enlarge the demand for the class of facilities of a banking character which has already been referred to. The rapidly increasing wealth of North and South America also enhances the need for a complete system of inter-American exchange, and insures the subscriptions for an adequate capitalization to an international American bank to meet such needs. As an evidence of this increase the valuation of the property of the United States in 1870 was estimated at $30,000,000,000; in 1880, at $43,600,000,000, being somewhat larger than the estimated value of the property of Great Britain at that time. The capital and the business of the Americas is now much larger than when European facilities for banking between Europe and the Americas were established.

Banks of the character described, having agencies in the financial centers of the countries here represented, would materially promote the establishment and immediate use of a common standard for calculating values whenever such a standard shall be determined upon by the countries in interest.

While the sentiments of the independent nations of this continent are favorable to the settlement of all disputes by arbitration as expressed by resolutions introduced in this conference, thus rendering war highly improbable if not impossible among them, there exists no such guaranty that war may not take place in Europe. In such event, as long as we remain solely dependent for our financial facilities upon European money centers, a complete demoralization of our credit facilities and our money markets would necessarily follow and cause financial disaster and distress, which would be considerably lessened, if not altogether avoided, were there a well-organized system of inter-American exchange.

It may be asked, Why can not the object sought for in this memorial be attained through the agency of a private bank? The answer is, that in the extension of inter-American trade it would be difficult, we might well say impossible, to impart either prestige or credit to a private bank. The establishment of an international bank by authority of Congress would promptly command from the other American Governments concurrent legislation which could provide the amplest and most trustworthy form of international cooperation. As neither the bank in the United States nor the branches that may be established elsewhere can have the power to issue circulating notes, the most complete evidence is afforded in that fact that the bank is to be devoted solely to the commercial interests of the two continents, and must rely for its profits upon the increase of the volume of business from which alone it can secure its profits.

After careful consideration your committee advises the adoption of the following resolution:

"*Resolved*, That the conference recommends to the Governments here represented the granting of liberal concessions to facilitate inter-American banking, and especially such as may be necessary for the establishment of an international American bank, with branches or agencies in the several countries represented in this conference."

[From the Washington Post, Wednesday, February 3, 1915.]

PAN AMERICANISM THE OBVIOUS OUTCOME OF THE WAR IN EUROPE.

The war in Europe has drawn a sharper line between the Old and New Worlds than could have been drawn by any other human agency. The Republics of this hemisphere are seen to be in a common family, not merely by propinquity, but by ideals which separate them immeasurably from Europe.

Democracy rules the New World, autocracy the Old. Peace and the prosperity of the common people are the New World's aims; selfish ascendancy by means of war is the Old World's aim. In the New World the worker has a chance. In the Old World he is food for powder.

The United States, towering above the other nations of this hemisphere, and sponsor for the democracy that stands like a stone wall between the individual and the despotism of government, has before it the duty of considering its relations with Europe and the Republics of the New World. Are these relations satisfactory? Are they on a basis that will endure? Are the best interests of democracy served by present ties?

The first fact that strikes the United States in considering its relations with Europe is that there is no sympathetic bond between them. Europe is coldly formal with this country when it is not openly hostile. American rights are respected when it is to Europe's interest to respect them, or when respect is exacted by financial, commercial, or physical force. Taking their cue from the throne itself, the political and social leaders of Europe look with secret antipathy upon America. They see in democracy the enemy of all they cherish—pride of place, unearned wealth, concentrated power, mastery of the masses. They would rejoice over the downfall of democracy in the New World. The establishment of kingdoms and empires in this hemisphere would not be delayed a moment if the spirit of Europe dared to make the venture.

On this side of the ocean the United States sees sister Republics in varying degrees of advancement. Some are feeble, others are backward, and a few are strong and progressive. In all of them is the divine spark of liberty and independence. All are at heart determined to survive, and to emulate the United States in spreading education and building up a citizenship that will appreciate self-government and maintain it against any assault.

The proper policy that should be pursued by the United States, in the light of the war in Europe, is very obvious. Already this Nation has guaranteed perpetuity of republican institutions in this hemisphere. Now, let it bring the Republics together in a common bond of defense, cooperation, and development. Let the Monroe doctrine become the doctrine of the Western Hemisphere, and not merely the fiat of the United States.

While Europe welters in blood, staggering under the burden of autocracies, aristocracies, and favored classes, the New World can be working out a common destiny of fraternity, commerce, and prosperity. There are leaders of thought in South America; there are strong, honest men in Central America; even in Mexico there are patriotic men who would lay down their lives for the sake of peace. Why can not they all meet in equality and friendship, charged by their respective peoples with the duty of evolving a Pan American policy—a policy that will serve as the charter of all future dealings between the democracy of the New World and the autocracy of the Old?

Under the congenial influence of a common bond of democracy, having liberty and independence for its object, the nations of the New World would soon turn a helping hand to one another. Commerce would flow freely among them, as a matter of course. The rich would help the poor, the peaceful would help the turbulent to recover its poise. With all American nations joining hands such a fester as the Mexican situation would be impossible. The nations would put a stop to it, both for Mexico's sake and for their own; and, above all, the way would be cleared for concerted intervention without incurring antagonism, or even criticism.

Already the first steps toward Pan Americanism have been taken by the action of certain South American nations in protesting against violations of neutrality by the belligerent nations of Europe. Further steps are being taken by the United States, in upholding the rights of neutrals at sea against the tyrannous and arbitrary naval power of Great Britain. The United States is making this fight for all the hemisphere. Thus it is bringing nearer, although perhaps unconsciously, the day when Europe will be confronted with the united spirit and force of the New World, speaking for democracy—for the individual rights of man, against the system which would keep him a machine.

[From the World's Work, December, 1914.]

AN AMERICAN BANK IN ARGENTINA AND BRAZIL—WHAT THE NATIONAL CITY BANK OF NEW YORK IS TRYING TO DO.

[By James H. Perkins, vice president National City Bank.]

The National City Bank has for a long time been considering in what way it could best relate itself to the movement for promoting our foreign trade. Thought on this subject took definite crystallization this last spring, when plans were made for a foreign banking and commercial service. If there had been any doubt regarding the interest throughout the country of such a movement, it would have been dispelled by the answers received from a thousand letters mailed in May to the leading manufacturers and exporters of the country. This letter was preliminary to the final steps the bank planned to take in connection with the establishment of foreign service. In addition to the serious consideration which had been given to the matter here, actual research work had been done by special representatives sent to South America to make a study of the situation and the necessities of our commerce there.

For commercial expansion in the South American field there is a distinct need for our own banking facilities, but under our previous laws it would have been necessary to form an independent organization with large capital to be on anywhere near equal terms with the banks already established there by other countries. American capital has been in such demand for the development of our own country that it was generally considered inadvisable to divert to South America the large amount necessary for such a project. The Federal reserve act, which was recently passed, has made it possible, however, to establish in a foreign country a branch of a United States institution, placing behind the branch the resources and prestige of the parent institution. It was therefore decided, in response to the active interest evinced by American business men, to take advantage of this provision in the Federal reserve act and establish branches in South America. The directors of the bank, on June 30, 1914, authorized an application to the Federal Reserve Board for the privilege of establishing a branch at Buenos Aires, Argentine Republic, and one at Rio de Janeiro, Brazil. Owing to the fact that the Federal Reserve Board did not organize until August 10, 1914, action was not taken on the application until September 2, when the privilege sought was granted.

Toward the end of June, Mr. Robert O. Bailey, who formerly was Assistant Secretary of the Treasury, and Mr. J. C. Martine, formerly manager of the Bank of Cuba, left for Buenos Aires to attend to the preliminaries coincident with the organization of the branch in that city. Their arrival in Buenos Aires was simultaneous with the outbreak of the war. Although confronted by many difficulties, all the details in connection with the establishment of a branch there have been completed. The legal technicalities necessary to comply with the Argentine laws have been arranged, banking rooms have been selected, and it is expected that the branch will be in operation by the time this is printed. In the meantime the organization of the staff has been proceeding, with Mr. John H. Allen, formerly manager of the Bank of Haiti, as manager. He sailed for Buenos Aires with a number of assistants on September 26.

The service that it is hoped to render will be of somewhat varied character. The letter of inquiry, to which reference has been made, sounded the needs of the exporter, importer, and manufacturer for reliable credit information in reference to foreign markets. The universally valuable credit information available in this country has accustomed our business men to the use of such information as an absolutely necessary part of the machinery for transacting business, and immediately foreign fields are entered where little if any such information is available, they find that the lack of well-constructed and tabulated facts regarding the business houses with which they expect to transact business proves a barrier to merchandising. Therefore, the inquiry made by the National City Bank met with an immediate response in which the need for such information was emphasized. Based upon this specific necessity and general suggestions made in replies to many other letters which have been sent out inviting counsel and cooperation, a commercial service has been outlined which, it is hoped, will develop to be of material aid in the upbuilding of our South American trade.

In order to answer the requests for statistical data and general information and to centralize the general work, it was found necessary to organize within the bank what is, in effect, a foreign trade department under the direction of Mr. W. S. Kies. A library of trade statistics of South American countries is being collected; the various governmental publications concerning statistics are examined and the facts of immediate interest collated; reports from the Department of Commerce, the excellent Consular Service, the Pan American Union, customs and general business information are being analyzed and arranged in such a way that they will be available for the information of business men who are contemplating taking up South American business or going into it on a more elaborate scale. The statistical work is in charge of Mr. O. P. Austin, former chief statistician of the United States. There is also kept on file in the library records from which information can be given on customs duties, port charges, trade regulations, shipping facilities, insurance costs, etc. The foreign trade department will further serve as a clearing house for the information received from the commercial representatives attached to the various branches and will serve as the medium by which exporters and importers can be kept in close touch with the activities of the branches.

The facilities to be offered by the branches themselves come under three heads:

1. The bank will furnish the facilities which are generally supplied by branch banks everywhere; that is, they will accept deposits, issue letters of credit, handle collections, and deal in exchange. The operation of the branches will create a market for the American dollar, with the result that gradually direct exchange will become a fact between South America and the United States. Under the Federal reserve act national banks may make acceptance of long-time bills growing out of foreign commercial transactions. This provision creates an opportunity for an American bill to be developed similar to the best known financial instrument, the London bill, which is now the chief medium in the world's commerce. The "bill" is now a "sterling" instrument. It will be possible under the new order to draw an increasing number of such bills in dollars instead of pounds, and the world market for the dollar should be enlarged to a point where it will take a prominent place in international exchange. Direct transfers by cable of funds from the branch to the parent bank, or from the parent bank to any bank in the United States, and vice versa, will become possible with the minimum of expense. Gradually a broad discount market for American bills will be developed and will undoubtedly go a long way toward encouraging the use of the draft on New York instead of on London in settlement of international transactions.

(2) The gathering of credit information will be one of the most important functions of the branch. As rapidly as possible the branches will collect reliable credit information concerning South American business and will at the same time be in a position to give the South American business people correct credit information about the people with whom they have transactions in the United States. The development of credit files will, of course, be a matter of evolution and take a number of years. One of the best credit men in the National City Bank has been sent to South America to develop the credit departments of the branches. Duplicate files will be kept in New York, so that the furnishing of this information may be as full and expeditious as possible.

(3) There will be attached to each branch one or more commercial representatives, who in a broad sense may be said to be the personal representatives of American business interests. These men will study trade conditions in the country to which they are assigned and will form cooperative relations with the foreign business men who are interested in the commerce of this country. They will thus be in a position to act as intermediaries and be able to assist the representatives of American business interests who visit South America. They will look for trade opportunities, and when such opportunities arise will communicate with the foreign trade department of the bank, which will be in a position to indicate these opportunities to the interested business organizations here. They will, furthermore, be in a position to make investigations of the possibilities for particular articles in the market, and, when an exhaustive investigation along some technical line is required, to employ a technical representative who will be competent and reliable. Many firms have already asked that preliminary investigations of this kind be made, and in numerous instances requests have been made that the representative purchase various articles in the original package to be sent to the American manufacturer, so that he may not only ascertain the character and quality of the article but the way the article is prepared for market, packed, labeled, etc. The commercial representative will also be able to give information regarding refused shipments, customhouse delays, etc., and in other ways will be of assistance in smoothing out difficulties that are encountered by the exporter.

In order that the information of a general nature collected by the commercial representative may be promptly disseminated, the National City Bank is issuing a publication called The Americas, devoted to the upbuilding of trade between the two continents. Whenever important information is received bearing particularly upon certain trades, special letters or bulletins will be issued to notify those who are likely to be interested. In order to provide some means of doing business with Argentina during the serious breaking down of the exchange markets, the National City Bank made an arrangement, pending the establishment of the branch at Buenos Aires, for an exchange of credits with the Banca de la Nacional, the national bank of Argentina. As a result a large amount of export and import business has been made possible which otherwise would have been greatly retarded by the war conditions.

As soon as possible the branch in Rio de Janeiro will be established, and probably there will not be much delay in doing this.

It is planned to develop the service gradually and in full cooperation with the Governments and institutions of the sister Republics of the south. The undertaking means large expenditures, and any ultimate profit which may come to the bank as a result of this work will be determined by the success made in broadening the markets for the American producer.

—

[From the Iron Age.]

UNITED STATES BANKS IN SOUTH AMERICA—DEFINITE DATA ON THE HANDLING OF CREDITS BROUGHT OUT IN DISCUSSION AT THE MACHINE-TOOL CONVENTION.

The paper of Vice President H. R. Eldridge, of the National City Bank of New York, on "The establishment of American banking facilities in South America," as read before the Machine-Tool Builders' Association in New York October 22 brought forth a most interesting discussion, which was chiefly a prolongation of Mr. Eldridge's remarks, but on lines in part suggested by questions from his audience. Thus there were brought out just the facts manufacturers want most to know about the credit and banking side of business with South American countries.

In his address Mr. Eldridge said, in part: "That we could sell goods in South America in liberal quantities at this time is more than probable in view of the disrupted relations necessarily caused by the war, but that we would be justified in granting the long terms of credit to which they are accustomed is not so clear. These long terms of credit are directly the result of keen competition and are likewise responsible in no little degree for the financial conditions there prevailing.

DANGERS OF LONG CREDITS.

"All leniency should be shown in granting credit to responsible concerns, but when those terms go beyond the bounds of reason the road is paved toward the slough of speculation. If a merchant buys on six months' time an article which will be sold and realized upon within 90 days, he holds in his hands the proceeds 90 days longer than he should, and the temptation is constantly before him to either buy more goods, often beyond his needs, or to employ the funds in some line of speculation, both leading to undue expansion and often to financial failure. It would be well, therefore, not to be too liberal in terms of credit, even though the development of trade be retarded thereby, yet not unreasonably chary of granting terms of a favorable nature when conditions justify.

"The National City Bank of New York will open at Buenos Aires, Argentina, a branch, and as soon as practicable another at Rio de Janeiro, Brazil. The bank desires to do all it can to promote the increase of trade relations, and through its banking department offer a cheap and effective method of handling the exchanges between buyers and sellers. It is fully alive to the inconvenience probable exporters and importers suffer by the lack of dependable information of trade conditions, demands for certain lines of goods, shipping requirements, customhouse regulations and dues, a knowledge of the products of the various countries which could be imported into the United States to advantage, their character and the avenues through which they could best be had, and the numerous other branches of information so requisite for the proper handling of business obtainable. To permit of the dissemination of such information among American exporters and importers it is the bank's intention to maintain a corps of trade experts at each branch whose duty it will be to gather all the data possible that can be of benefit and to make it available in an intelligent manner through the columns of The Americas, which will be issued from time to time, and special bulletins when deemed advisable. Information of this character will, no doubt, be found quite valuable and may possibly prove the source of no little saving of expense to houses operating in South America. The service of this corps will be available to American merchants and special reports can be arranged for where desired. The bank will establish in each branch a credit department, and hopes within a reasonable time to be able to furnish exporters and importers valuable information as to the standing of South American dealers."

THE DISCUSSION.

S. H. Reck, Greaves-Klusman Tool Co., Cincinnati, started an important discussion when he said: "I think that the question every one of us would like to ask of Mr. Eldridge is, How we are going to have our sales in South American countries handled? We understand that German and English bankers have afforded exceptional facilities to German and English manufacturers and merchants for disposing of their goods in these markets, which are so far away that the individual manufacturer in most cases would find it extremely difficult, almost, you might say, impossible—except in the case of such great concerns as the General Electric, the Westinghouse, or the International Harvester—to satisfy themselves as to whether credits should be justly extended. It would seem, therefore, that that function of the American bank that would best serve us would be to pass upon the credits themselves. If the branch banks in those countries were to be merely offices through which discounts can be handled holding the American shipper primarily responsible, the offices of the bank will not be very helpful to us, and the American trade with those countries will not be greatly stimulated thereby. But if that bank is to perform the real function of a bank, to be an institution to which the purchaser in those markets who is worthy of credit can go and obtain funds with which to make purchases in this country, paying for the goods or obtaining an extension of the time necessary to pay for them from the American bank, then the American manufacturer and merchant will be aided in exactly the manner that the English and the German manufacturer have been helped in past years by German and by English banking institutions. If Mr. Eldridge can give us the results of the investigations he has been making as to how credits and discounts will be handled—if, for instance, one of us were to sell a bill of $10,000 worth of machine tools to a house in Buenos Aires or Sao Paulo, whether we will be held responsible for the time we give or whether the bank will establish the credit basis and finance the transaction—that is what we would all like to hear very much."

DETAILS OF THE BANKING PRACTICE.

"Mr. ELDRIDGE. If you are entirely satisfied with the responsibility of the party to whom you are shipping you will be willing to sell him on ordinary terms of a draft payable in 60 or 90 days upon the firm itself. In that case, of course, you are not interested, providing you can get a market for that bill. But if you want to sell to some house that you are not very well acquainted with, be it in South America or in Europe, what you are going to require of that man is a reimbursement. He must go to some bank and arrange for that credit, and you in turn must accept that bank, providing the bank is satisfactory to you. But even in an instance like that you still, as the maker of the drafe, remain the sponsor of the credit. You are responsible for your faith in that purchaser, and that is the custom the world over.

COMES BACK TO HOME PRACTICE.

"But of course the liability that you are assuming is very remote. That is the very reason that a prime bank's bill commands such a fine discount over a bill on a firm in England or Germany. No matter how well that firm stands, the bank's credit is regarded as better, and given firms are credited according to the risk involved. And that is exactly the arrangement that you have got to make in all your transactions in South America or in any other foreign country; and that is why so much stress has been laid upon the subject of domestic acceptances, because our country is so vast that its business could not be handled except upon some basis that permits you to sell to a house in Washington that you never heard of by drawing a bill against a bank there, if the bank will furnish the credit. That is the way it has to be done.

"Now there are undoubtedly houses in Buenos Aires, Sao Paulo, or Rio de Janeiro that the National City Bank of New York will be perfectly willing to purchase bills on. Where you are not satisfied with

the credit, certainly you have only one thing to do: If they want your goods, let them pay for them or arrange down there through their own bank. They can, if need be, make a deposit there and cable to you that such an arrangement has been made. There is no difference in methods of doing business with houses in South America in that respect and elsewhere, except that there is a certain amount of inconvenience in getting the necessary information on which to base your credits. We are endeavoring to get up our credit files, as we want to know something about the character of the bills that we have to buy. We are perfectly willing to purchase bills on the more responsible houses in South America as well as on the more responsible banks. For instance, if you want to make a shipment of machine tools to a house in Buenos Aires and they give you a credit against a well-known bank there we would buy it as readily as one against you or against any of the other banks there whose standing we are familiar with as first class. We would be perfectly willing to buy those bills, if your customer finds it more convenient to give them to you.

"Mr. RECK. The manufacturer here, then, will be just as able to rely on the credits recommended by the National City Bank of New York in those various centers as he would be on the recommendations of any of the banks in this country on which he is accustomed to rely?

BUILDING UP CREDIT FILES.

"Mr. ELDRIDGE. Exactly. Wherever you sell a bill of goods to a party that you don't know thoroughly or it involves a large amount, you are very careful to revise your credit-information data. It is the intention of the National City Bank of New York City to build up its credit files so that they will be as nearly accurate for that region as it is possible to make them, and we shall endeavor to give not only every customer but any American merchant inquiring the benefit of them. We do not insist that you do business with us to get this information. All you have to do is to ask us for it; we are willing to give it to you. We shall endeavor to be prepared to give as close information as is possible to obtain; but in a country where Dun and Bradstreet have found that only 18 per cent of the merchants are willing to give a financial statement, you can imagine what a difficult problem it is going to be. We have to rely a great deal upon reputation, but are going to get as good experts as we possibly can and dig down deep as we possibly can without having them throw us out of doors. We want to secure such information as will render it fairly safe to do business, and we propose to back up our faith; that is, where we honestly believe the merchant is first class and will pay his bills, we will accept bills for them.

"Mr. RECK. Mr. Eldridge, every member of this association is heartily in accord with your action. The establishment of workable bases of credit is one of the necessary moves that must be made; it is pioneer work which, together with means of transportation, must precede any successful effort to get that trade.

LITTLE PROFIT IN PIONEERING.

"Mr. ELDRIDGE. I may say to you in passing that the National City Bank is not expecting to make very much money out of this proposition for a good many years to come. On the contrary, we look forward to giving up rather liberally in the way of our preliminary expense. We further realize that as soon as we blaze the way, if the thing is a big success, doubtless a great many other banks in this country will find it to their interest to establish branches there, and we will heartily welcome them, because the bigger the field the better for our country and for all of us.

"One of the great advantages of a foreign trade is readily understood when you take into consideration that every dollar of merchandise that leaves your shores for a foreign country gives you a call upon that country for $1 of gold, and that gold is the standard of value and the basis of all credit. The more we can protect the gold reserve of this country the more do we protect our merchants, our industries, and the cheapness with which credit may be obtained. Active foreign trade is one of the most desirable things that any country can possess, because it creates a tremendous call upon the gold of the world and forces the other countries who are our buyers to either give of their products in return or of their gold.

WEALTH FROM FOREIGN TRADE.

"Naturally any country that can develop a great foreign trade will develop a good import trade in the products of the country to whom our exports go. That country must in turn ship to us its products in order to reduce the balance of trade against it. The reason that London was able to hold its tremendous position in the business world lies in the fact that it is the clearing house of the world, where all international credits are settled. A draft on London is always given preference over a draft on Paris or on Berlin, because everybody can use it. On exactly the same principle a merchant down in, let us say, Memphis, Tenn., finds that he can not use St. Louis exchange as conveniently as he can New York exchange, because he has a greater call for New York exchange.

"That is the reason that London retains its tight grip upon all the countries of the world. It is this which enables London on a little old $250,000,000 of gold in normal times actually to control the commerce of the world. It finances the commerce of the world on a stock of gold not one-sixth of what we have in this country; and the reason that we in this country are not taking advantage of the great gold stock we have, which is double that of any nation in the world, is because we have never had the good sense to provide for its mobilization.

"We do not need gold certificates to circulate among our people. What man feels safer because he has a gold certificate in his pocket than if he had a national bank note? One is just as good as the other. Through our Federal reserve act we have taken a long step forward toward perfecting our financial system and improving financial conditions. You are going to see in the course of the next five years a great change in the way of doing business. We are gradually approaching scientific methods. We have been blundering in the dark in the past.

THE OUTLOOK FOR BETTER BUSINESS.

"I think we can all look forward to better business conditions when this great war is settled. We are going to be a long time recovering from the effects of the war. Our foreign trade is temporarily going to be larger than it has been in the past. The nations that are at war will be compelled to buy from us, because we are the only great nation capable of supplying them foodstuffs and articles of war that they must have. Logically, as long as the war continues, so long must we continue to make large exports, because they have got to have what we can sell them. That is going to help us; it is going to permit us, in a way, to protect ourselves, by the credits that must necessarily be established to purchase those things, against the load of securities that they may dump upon us.

"Personally I do not think that they are going to dump those securities upon us in the amounts that some have anticipated, for the simple reason that a man is going to want to sell, as a general thing, that which he thinks the least of and keep that which he most values. American securities to-day of a standard kind are the best available securities in the world, because this Nation is at peace and there is no reason why our securities should not continue paying dividends as they fall due. Therefore they are reliable, and the man who is not used to work, the man who is living on an income and could not make a living in any other way than clipping coupons, is going to give that very great consideration. Therefore I think that when this war is over, if it lasts one or two years, as a great many think it will, we will be in pretty good shape. But let us not delude ourselves with the idea that we are about to enter upon a great era of prosperity, because capital can not be impaired, permanent improvements can not be destroyed, human life can not be destroyed as it is being destroyed in Europe to-day without affecting the whole world. We are bound to feel the results, but we will feel them less than any great nation in the world.

"When this great struggle is over and the balance of trade is struck on the books you are going to find that your Uncle Samuel stands mighty well through having kept out of war, and will be able to show a better trial balance sheet than any nation on earth, and be able to go ahead and do business better than any of them. Then will come the time when we will realize the great value of mobilizing our gold reserve. We will by that time have still further added to it, because it will be hard to take it away from us when once we get on our feet, and then is the time when we can talk about financing other countries.

"Mr. C. WOOD WALTER (Cincinnati Milling Machine Co., Cincinnati). You have described the function of those American banks as regards credit. Does the German or the English bank do any more than just that for the trade of those countries down there?

THE REASON FOR LONG CREDITS.

"Mr. ELDRIDGE. They finance bills, and they have been, as I understand it, quite liberal in their financing. That is, they would accept for various houses there—assume the credit responsibility themselves to a considerable extent where it was a very desirable customer. You understand that England and Germany have been right at one another's throats for business. Deep down in their hearts that is what has been the matter between England and Germany for a good while. England, for instance, had the South American trade pretty well in hand when Germany stepped in; England was selling its goods practically upon a 60-day basis. Germany came and, finding it hard to get the business, and realizing that most people are very much tempted by being able to get good credit, said to them: 'England makes you pay in 60 days; we are not hogs like them, we will make it 90' [laughter], and immediately a great deal of the English trade began drifting to the Germans. England comes up to the scratch and says: 'Germany is not as lenient as you think she is; we will make it 4 months.' And so it went on until they got it up to 6 months for goods that had always before been sold on 60 days' time.

"That was a very nice thing for the Argentine merchants; at least they thought so. As a matter of fact, it was one of the worst things that could have happened to any country, because when you sell goods on terms longer than you should and the purchaser realizes on them and gets the money in his jeans it always burns him. He can not resist the feeling that here is an excellent opportunity to buy a piece of property or make some less safe investment in a booming country, where land values fluctuate rapidly, and by the time the account really falls due his money is tied up or he has failed to make a profit on the investment. He may have gone into a losing speculation. I think that situation has developed disadvantageously in South American countries, especially Argentina.

CREDITS SHOULD BE SHORTENED.

"If therefore, trade is pushed with Argentina, it should be established on a solid business basis. Any of you can see the justice of that for yourselves and will recognize the truth of these observations. If a man does not have to pay anything for a good while, he begins to think he may never have to pay it. I know, as a banker, that I have met a great many people who never think of paying even when you suggest it to them. I have known merchants that go along year after year and never pay up. As long as they keep themselves in a solvent condition you are perfectly willing to loan them money; it is a safe risk. But you let a fellow get the idea that he can get credit as much as he wants and that he can extend whenever he wants to and there is no need of ever paying up on time—that man is in a precarious condition. His business is not being run in good shape, and his head may go under at any time that a stringency develops in the money market. But the man that keeps his business in good shape and has always ready assets sufficient to pay his bills as they fall due is a far more desirable customer. He is a good risk, and can always get money, no matter what sort of financial weather prevails."

[From the Bankers' Magazine, vol. 82, pp. 518–519, April, 1911.]

LATIN AMERICA—AN INTERNATIONAL AMERICAN BANK.

[By Elmer H. Youngman, editor of the Bankers' Magazine—Address before the Pan American Commercial Conference, Washington, D. C., February 17, 1911.]

Before entering on the discussion of a proposal to establish an American bank in Latin America or other foreign countries, it might be well to inquire, first, whether or not such a bank is needed; and, second, if found to be needed, what sort of bank it ought to be. These are very simple questions, perhaps, but to my mind they are of great importance.

First, as to the need of an American bank, or banks, in Latin America, opinion is far from being unanimous. We are told by some that the existing banks stand ready to supply all facilities necessary to carry on trade between the United States and Latin America, and that no necessity exists for establishing American banking institutions for further developing our commerce. That view, I think, is not entertained by those who have a practical first-hand knowledge of the subject.

Banking is not an entirely passive and impartial instrument of commerce. The railway or the ship may, possibly, be as ready to carry the goods of one nation or of one merchant as of another. Not so with banking. Each bank has its clients, as the lawyers have theirs. A bank selects its dealers, and deals only with whom it chooses. Sometimes the selection may be made from the standpoint of location, of particular lines of business, even of nationality. Banking may be cosmopolitan in many of its aspects, but the considerations named—and others that might be cited—have an important bearing on the business of those who deal with banks.

Besides, in many portions of Latin America, as in all partially developed countries, a bank is other than a mere institution of deposit

and discount. It assumes not infrequently the duties of a financial and commercial agent, with functions much wider than those pertaining to banking as generally understood.

If anyone from the United States should be in any country of Latin America with a view to carrying on some particular enterprise that required banking assistance, to whom could he turn most confidently, to an American bank, to a native local institution, or to a French, German, or English bank that might possibly be interested in defeating his efforts in favor of some rival? To ask this question is to answer it. And yet this is but one phase—and perhaps a relatively unimportant one—of this problem.

Certainly few would be so rash as to claim that the banks in this country have a thorough knowledge of Latin-American credits, or that they are prepared to grant credit on the terms necessary to place us in a position to compete on terms of equality with the European manufacturer or merchant in securing Latin-American trade.

Nearly every activity of production and trade comes into contact somewhere with the business of banking. The perfection of a country's commercial machinery—its smooth and effective working—depends very largely upon the character of its banks. Trade between nations arises, of course, from the demand existing in one country and the ability of another country to supply that demand at the right price. But this ability to furnish goods at a salable price will, to no small extent, be governed by the efficiency of the banking machinery. We need not stop to inquire whether banks create commerce or not. It is enough to know that they greatly facilitate it.

There is no doubt whatever in my mind that an American bank, properly organized and wisely managed, would be a powerful agent in extending our enterprise throughout Latin America and in developing our commercial relations with our southern neighbors, to the great advantage of all concerned.

Primarily this question in its narrower commercial aspect resolves itself into a matter of profit. If our banking capital can earn good profits in Latin America or elsewhere, why should we debar it from going there, and under the conditions most favorable to success? For example, can any good reason be given why our national banks, of large enough capital, should not be given the privilege of establishing branches in Mexico and Cuba, now exercised by the great chartered banks of Canada?

Second, if it be conceded that our banking relations with Latin America are capable of improvement, and that our banking capital should enter that field, it next becomes necessary to consider what kind of bank would be the best. The national bank act prohibits, and, as I believe, wisely prohibits, a national bank from having branches. I can seen no good reason, however, why our national banks of very large capital might not be permitted, under proper regulation, to have branches in the chief cities of Latin America and in other foreign countries.

But I do not believe this to be the best solution of the problem. The European nations, as well as Japan and Mexico, have learned the value of specialization in banking—the desirability of organizing banks adequately equipped with the powers for doing the work in hand. Some time we shall adopt that principle here. Let us adopt it now if we are to enter the foreign banking field with any hope of success. We must not venture into that field in our weakness, but in our might. I think we have had enough already of weak attempts to establish American banks in certain foreign countries with a result that might have been foreseen.

If we are to have a foreign bank worth anything, its capital must from the outset be large enough to command respect, and its management must rigidly conform to the soundest requirements of banking. An institution that would not only promote enterprise and develop trade, but that would add to our prestige and increase the respect of others for our business methods.

While it is very natural and proper that a bank of the character mentioned should find its first sphere of operations among our neighbors of Central and South America, I am of the opinion that its sphere should not be limited to those countries. I believe the time to be ripe for the formation of an international American bank, with a capital of not less than $100,000,000, having its head office in New York, with branches in Chicago, St. Louis, New Orleans, San Francisco, and in the great commercial centers of the world. It would, of course, be one of the first duties of such a bank to do everything essential to the mutual development of trade and enterprise between Latin America and the United States.

It is beyond my purpose at the present time to elaborate a plan for the organization of this bank. That is a detail for future consideration. Whether or not the sanction of Congress could be had for such an institution I do not know. The prestige afforded by a Federal charter would be helpful, but may not be indispensable. It might be advisable to organize first under State laws a pan-American bank, and the capital might be partly furnished here and partly in the countries where the banks are to be located. It may be remarked in passing that the trust company is something practically unknown in Latin America. There are legal difficulties in the way of establishing such institutions there, though these may be overcome. Judging from the experience of the trust company in the United States, Latin America ought to furnish an inviting field for the establishment of such institutions. In fact, a movement is now under way to organize a trust company in one of the principal Latin-American nations. The particulars of this movement I am not at liberty to disclose.

One thing we must remember—there should be international reciprocity in banking as well as in trade. If we expect to invade Mexico, Central and South America with our banks, we must expect the banks of those countries to come here. And if we restrict the operations of their banks here, we may expect them to throw like restrictions around our banks there. Already many foreign banks have agencies in New York and other American cities, but the State laws generally prohibit these agencies from doing a banking business; that is, they may not receive deposits, and thus their ability to make loans is largely curtailed. Can we reasonably expect that Latin America will allow privileges to our banks which we deny to theirs?

As the importance of the United States as an exporter of manufactured products grows each year and competition becomes keener the need of an institution like that herein suggested will become more and more apparent. It is wise to discuss this question now. It would be wiser perhaps to stop discussion and begin to take action.

One thing should be borne in mind—that the interests of those whom we are seeking to make our customers should be most carefully regarded. A Latin-American bank whose operations might in any way serve to provoke the antagonism of the banks already existing or that would meddle in political affairs might do much more harm than good. But a Pan American bank, or one of the broader scope indicated, properly organized and rightly managed, would be a powerful instrumentality in developing enterprise and trade, to the mutual benefit of ourselves and of the other countries concerned.

[From the Banking Law Journal, vol. 27, pp. 305–309, April, 1910.]

AN INTERNATIONAL AMERICAN BANK.

[By Maurice L. Muhleman, author of "Banking Systems of the World," etc.]

Considerable discussion has recently been caused by a proposition to establish an international bank under the auspices of the United States to be devoted to facilitating commercial and financial transactions between the several countries of the western continent.

This proposition is a reminder of the strange indifference shown by our Federal legislators to some of the most important enterprises in which the capital of the country could be profitably employed, at the same time furnishing us with a most powerful instrument to increase our business with the rest of the continent lying practically at our doors. Had we spent one-half as much in the way of developing the friendly commercial relations with South and Central America as has been spent to wrest trade from nations in the Orient we should have had results that would have warranted the outlays many times over.

Efforts are now being made to induce Congress to enact a reasonable law providing for subsidies to ships plying between our ports and those of South America. If properly adjusted and then properly carried out, the investment of several millions of dollars in a series of years in this way by the Government would unquestionably prove profitable to our business interests. The conditions for the development of our trade in that direction are particularly favorable at this time, and the President is justified in bringing his influence to bear upon Congress to accomplish the desired result. It is to be hoped that the elements that defeated similar projects in the past will not be permitted to dominate in Washington this year and defeat the enactment of the necessary legislation.

But we do not only require ships of our own to promote our commercial interests in South America; we need also that which every other nation of importance possesses—a bank that shall act as the handmaid to the commerce. Although there has been a little improvement in the conditions bearing upon our exchanges with countries to south of us, it is, upon the whole, still as true as it was 20 years ago that the bulk of that commerce pays a heavy banking toll to European countries, a toll that necessarily constitutes a tax upon our trade and prevents its development in the degree that the South American trade of other nations exhibits. We are the largest buyers of the products of these States, but we are far behind several countries of Europe in selling goods to the Latin Americans.

The project to establish a Pan American bank took definite shape in 1890, when a special committee appointed by the International American Congress—which had been convened in Washington by our then Secretary of State Blaine—recommended that the United States take the initiative in providing a banking institution to lessen the cost of exchange and promote the commercial relations between the countries. A bill to establish such a bank was then prepared, but failed to receive the approval of Congress. Another vigorous attempt was made in 1897, but again there was a lack of sufficient interest and business intelligence, and the bill was permitted to die. It is doubtful if even now there is a fair chance for such legislation, although considerable activity is being displayed by friends of the measure.

It is proper to say at the outset that the Government is not asked to contribute one dollar to the capital of the proposed bank or to assume any responsibility for its obligations. All that is asked is that it shall give it a charter, because no State charter would suffice for the purpose, and in many of the States such a charter could not be had. It is proposed to permit the Government to exercise supervisory powers through the Treasury Department, and the principles governing the operations of banks of a similar character chartered by foreign nations are to be applied in its case.

Manifestly the bank must have branches at all of the chief ports on the American Continent south of us; the head office would be located in New York City. As the business develops, agencies and branches would be established at other places, such as New Orleans, San Francisco, etc., which ports carry on very considerable trade in that region now, and may be expected to increase it.

The report of the committee of the conference, made in 1890, pointed out very succinctly and cogently why such an institution is needed; only one of the members of that body was a citizen of the United States, the others representing various Latin-American States participating in the conference. The commerce of the West Indies, Central and South America was then valued at some $1,200,000,000, of which the share of the United States was $283,000,000, $181,000,000 representing our purchases from them. To-day our commerce with South America alone is nearly $280,000,000; our purchases in 1909 amounted to $193,000,000; our exports to only $83,000,000. This shows the heavy balance against us.

The great bulk of the purchases by Latin America is made in Europe; the great bulk of its trade with us is carried in European ships, and is adjusted by exchange upon European banks, which have branches in every important place in the Southern American Continent. The committee estimated that the tax on our trade paid to European bankers for exchange alone was at the rate of three-fourths of 1 per cent. Since that date the aggressive policy of Germany and the growth of French and Italian interests, particularly in Brazil and Argentina, have probably caused some reduction in the tax rate. But it is still of sufficient importance to make it a burden upon the trade.

The process of financing transactions is clearly described in "The Discount System in Europe," by Paul M. Warburg, recently published by the National Monetary Commission, from which the following is quoted:

"If an American merchant buys coffee in Sao Paulo, he will generally pay for it by opening for the shipper a documentary credit in Europe—that is to say, the American purchaser makes an arrangement with the European banker by which the latter agrees to accept, let us say, a three months' bill drawn on him, with shipping documents attached, covering a certain shipment of coffee, the amount to be drawn being the equivalent of the amount due by the American purchaser to the South American shipper. The shipper will have no difficulty in selling to a bank in Sao Paulo his bill drawn on a first-class European banking house, and thus will promptly secure the money due him for the goods sold. The local bank in Sao Paulo will buy the bill without hesitation, because it knows that it need only send this foreign bill to England, Germany, or France, as the case may be, where, owing to the extensive

discount market in these countries, it can immediately rediscount the bill, thus securing repayment in cash for the amount invested. Indeed, if the Brazilian bank prefers to do so, it can at the moment of shipment, by cabling to Europe, fix the discount rate at which the bills will be discounted upon their arrival in Europe.

"When the bill reaches Europe the drawee puts his acceptance on it, and having thus obligated himself to pay the bill when due, the documents are in most cases released and sent to the American purchaser of the goods who opened the credit with the European bank. Of course, the American purchaser pays a commission to the European banker for the service rendered. The compensation depends on the standing of the purchaser and, in part, on the question of whether or not the documents are to be released upon acceptance—the American purchaser obligating himself to put the bank in funds before the bill falls due—or whether or not the documents are only to be given up by the accepting bank against cash payment by the purchaser. It may be said that the average compensation for such acceptance is between a quarter of 1 per cent up to three-quarters of 1 per cent for three months, according to the conditions of the case."

The existing system naturally diverts trade to Europe. If to-day one wishes to go to a South American port below the north coast, the most direct route is by way of Europe. Great cargoes of coffee, hides, etc., come to New York from Rio Janeiro and Buenos Aires, chiefly in foreign bottoms, of course; but most of the ships, instead of taking return cargoes here, carrying our manufactured goods back to pay for our purchases, take bills of exchange upon London or Hamburg, proceed to those ports, empty, if need be, to take the British and German shoes, textiles, etc., to the people in Brazil and Argentina.

It would appear, therefore, almost necessary, and certainly desirable, to develop our transportation facilities coincidently with the creation of a Pan-American bank. These two improvements should be brought about at the same time—and as soon as practicable. Already the situation is rendered more difficult than it was 10 and 20 years ago by the increased competition for business since Germany began its well-planned and well-executed program of taking trade from Great Britain. It will require much careful and well-directed work to place us even in third rank in commercial and financial importance in South America as a whole. But we shall fall behind much more if we permit opportunities to pass without action.

To illustrate the power of the present competitors that are in the field, it will be sufficient to take a recent statement of banks in Argentina, which gives the British institutions deposits of approximately $95,000,000, the one controlled by Spanish $60,000,000, the French one $25,000,000, the German ones $20,000,000, and the Italian institutions $50,000,000. All of these corporations are making handsome profits and are helping very materially to promote the trade between Argentina and the countries which they represent there. We can not expect to compete with these nations unless we equip ourselves adequately. In order to do this we must look to Congress.

It was through favorable legislation that Germany and the other nations succeeded in wresting from Great Britain the practical monopoly of that great market, which had been hers for generations merely by reason of acute business judgment and wise statesmanship. All of these countries except Spain are farther away than we are from the chief South American ports, yet all do relatively a much larger business there, and what should give even more cause for consideration by us, they all take toll from us through their banks. It was well said by the Committee on Banking and Currency of the House of Representatives in 1897 that a condition more humiliating to the people of the United States can hardly be conceived.

It is high time that something be done both by way of improving transportation means and by way of providing banking facilities. The way is open; the representative South Americans who have discussed these questions with our representatives would welcome these steps; they would in fact assist in many ways toward the establishment of the bank, including the investment of their own means in the capital thereof. With such an institution at work there would, to again quote from the committee report mentioned, "be a stimulation of intercourse, commercial and financial, such as would surprise those who are content to transact American business through European bankers."

It developed at that time that goods produced by us and shipped to Europe were actually reshipped from there to South America at a profit which the committee said "we are too slow or stupid to secure for ourselves." With the proper facilities these goods could evidently have been provided by us for South American use more cheaply, and the South American, who is not abnormally fond of paying high prices, fully appreciates this fact. But he is helpless; he looks to this great and wealthy nation to take the steps necessary to correct this absurd condition to the advantage and profit of both.

There have been public men who have questioned the constitutional authority of Congress to charter such a bank, but that question is to-day no longer a rational one; only the most hide-bound bourbon could entertain such an opinion in the face of the decisions of our highest court from the days of Marshall down. The regulation of conditions bearing upon our foreign commerce is specifically placed in the hands of Congress by the Constitution; it may use such means as seem to it judicious and not otherwise forbidden to carry out that purpose. The benefit to the Nation is finally to be regarded as a determining factor in settling the question.

The CHAIRMAN. The time of the gentleman from Kentucky has expired.

Mr. MONDELL. Mr. Chairman, I yield one hour to the gentleman from Pennsylvania [Mr. TEMPLE].

Mr. TEMPLE. Mr. Chairman, the shipping bill now under discussion throughout the country may come before the House at a time when debate will be limited, and action hurried by caucus requirement. I venture, therefore, to take the opportunity now to lay before the House certain considerations concerning it which ought to have an influence in forming the judgment of men who will have to vote on this important measure. When a similar bill involving a transfer of belligerent merchant ships to a neutral flag was before us on August 3 I spoke as follows:

Now, it seems to me that if this bill is passed it will not create any more vessels. We will have to buy, if we buy at all, either vessels that belong to some of these belligerents, in which case the question of fraudulent transfer will be raised, or we will buy vessels that belong to citizens or subjects of some neutral power. They will be just as free from capture under any other flag as they would under ours. If we buy belligerent vessels, we are hunting trouble. The neutral vessels we do not need to buy, because we can ship our goods in them without buying them.

Now, it seems to me, with the definite announcement which has been made here that this bill is intended to be an emergency bill to meet the situation caused by the European war, the presumption of fraud in the transfer of foreign vessels to American registry would be held by a belligerent to be very great. Therefore the dangers that lie in this bill seem to me to be so great that I must vote against it.

To recapitulate: There are four ways in which the war is going to interfere with our foreign commerce. First, many merchant ships of the belligerents will be called into the naval service of their respective countries. Second, those that continue in the merchant marine will be subject to capture. Third, neutral ships carrying contraband will be subject to capture. Fourth, blockades will seriously interfere with all commerce bound to any of the countries engaged in the war.

We can not buy merchant ships of the class first mentioned; they will be in the navies. If we buy ships of the second class, we buy trouble. It will be of no use to buy vessels of the third and fourth classes, because as neutrals they already have all the rights they would have with American registry.

Further, on August 28, when the marine war-risk insurance measure was under discussion, the following colloquy occurred:

Mr. STAFFORD. I have in my hand the report of that conference (referring to the London conference of 1907), to which our Government was a party, which reads as follows:

"The transfer of an enemy vessel to a neutral flag effected after the outbreak of hostilities is void, unless it is proved that such transfer was not made in order to evade the consequences to which an enemy ship as such is exposed."

Mr. UNDERWOOD. It was vetoed by the English Government before it ever was adopted.

Mr. STAFFORD. Our Government committed itself to this principle, and the signatory powers submitted this rule to others for the guidance of the international prize court that was to be established pursuant to the recommendations of the second Hague conference.

Mr. TEMPLE. The Italian Government in its war with Turkey adopted this as its policy, in spite of the fact that it had not been ratified by the powers, and Great Britain and France have since announced they intend to act on the declaration of London, although not ratified.

And, again, on August 29, when the same bill was under discussion, I spoke as follows:

Now, it is a mistake to say that Great Britain vetoed that declaration. Great Britain signed it and the British Cabinet approved it. There is no ratification of a treaty in the Parliament, in either house, in Great Britain. Ratification is an executive act, according to the practice of the British Government, and is done by the cabinet. The status of this declaration of London in British law is perhaps about what the status of the Colombian treaty would be—the treaty that promises $25,000,000 to Colombia—if it should be ratified by the Senate and the House should fail to make the appropriation of $25,000,000. That would be a treaty signed and agreed to by the ratifying power, but failing to go into operation, because the legislation necessary to put it into operation failed to go through the House.

That is the status of the London declaration in British law. It was signed by the representatives of the British Government. It was approved by the cabinet. The Government prepared a bill to modify existing domestic law in England to bring it into harmony with the declaration of London. That bill passed the House of Commons, but failed in the House of Lords.

Mr. Chairman, before going into a discussion at length of the provisions of the declaration of London a short narrative showing the origin of the document would be in order. There has long been a difference in the practice of the nations with regard to a good many things covered by maritime law. We talk about international law, and international law is real. It has been ordinarily observed by nations at war and at peace; but with regard to maritime law there has been little uniformity, because there has been little agreement among the powers. The cases that come up—cases of contraband, whether absolute or conditional; cases involving the destination of conditional contraband; cases involving blockade, whether involving a neutral ship or an enemy or one that sails under the flag of the captor—all alike are tried in the court of the captor, and the courts of the various countries have followed different rules. There has been a general agreement as to the principles involved, but the principles have been variously applied under rules adopted by each power for its own courts. To meet that situation it was proposed at the second Hague conference in 1907 that an international prize court of appeals should be established, to which appeals might be taken from the decisions of the prize courts of the various nations. A treaty was drawn up and signed by the representatives of most of the powers at that conference. Certain objections developed later, however.

When the question of ratifying the prize-court treaty came up in this country there was objection upon the ground that we ought not to submit decisions of the United States to review by any court anywhere. This was to be an international prize court of appeals. Appeals may be taken from our ordinary prize courts—generally a United States district court acting as a prize court—to the Supreme Court of the United States. We were not willing to have the case appealed from the Supreme Court, and thus subordinate it to any court established in any part of the world.

Mr. YOUNG of North Dakota. Will the gentleman yield?

Mr. TEMPLE. I will.

Mr. YOUNG of North Dakota. Will the gentleman state whether a similar appeal is allowed, for instance, in the prize courts of Great Britain or France or Germany, to their higher court?

Mr. TEMPLE. To their higher courts?

Mr. YOUNG of North Dakota. Yes.

Mr. TEMPLE. Yes; the British naval prize act permits an appeal to a higher court, and so does the law of most, if not all, of the maritime powers.

Mr. MONTAGUE. Will the gentleman yield?

Mr. TEMPLE. I will.

Mr. MONTAGUE. I had not the pleasure of hearing the gentleman, but the subject upon which he is now talking is very interesting and a far-reaching one. Could not the objection, which touches our pride as respects an appeal from the United States Supreme Court to the international court, be obviated by permitting the appeal to go directly from the district court or the circuit court of appeals to the international court rather than through the medium of the Supreme Court?

Mr. TEMPLE. It was obviated in another way. The signatory powers agreed to an additional protocol to the original prize-court treaty which met the objection, and the treaty was afterwards ratified by the Senate with the protocol as an original part of the treaty. The protocol provided that powers which are prevented by difficulties of a constitutional nature from accepting the treaty in its original form shall have the right to declare in the instrument of ratification that recourse to the international prize court can only be exercised against them in the form of an action in damages for the injury caused by the capture.

When the Senate advised the ratification of the treaty it did so on the condition that such a declaration be made in the instrument of ratification. It follows that a case settled by the Supreme Court of the United States would not be reviewed in the international prize court.

That was not the only objection, however, to the international court of appeals. Great Britain objected to it on other grounds. The seventh article of the treaty to establish the prize court is as follows:

> If the question of law to be decided is covered by a treaty in force between the belligerent captor and a power which is itself, or whose subject or citizen is a party to the proceedings, the court is governed by the provisions of the said treaty. In the absence of such provisions the court shall apply the rules of international law. If no general recognized rule exists, the court shall give judgment in accordance with the general principles of justice and equity.

The last provision, that in the absence of treaty regulations and in the absence of recognized rule of international law the court shall give judgment "in accordance with the general principles of justice and equity," was deemed by the British authorities to be somewhat indefinite. "The general principles of justice and equity." That phrase might mean many things. Great Britain, in order that there might be recognized rules for an international prize court to follow, called a conference of the powers, which met in London.

The call was sent to 10 of the more important maritime powers of the world, including the six great powers of Europe—Germany, Great Britain, Austria-Hungary, France, Russia, and Italy—together with the United States, Japan, Spain, and Holland. In sending out her invitation the English Government declared "that it would be difficult, if not impossible, for His Majesty's Government to carry the legislation necessary to give effect to the treaty establishing the prize court "unless they could assure both Houses of the British Parliament that some more definite understanding had been reached as to the rule by which the new tribunal should be governed." I quote from the call sent out by Great Britain to the maritime powers.

Mr. GARNER. Would it disturb the gentleman if I asked him a question?

Mr. TEMPLE. Not in the least.

Mr. GARNER. If I understand the gentleman's definition of the condition of this treaty of which he has spoken and the protocol, it was that you could go directly to this Hague tribunal and sue for damages?

Mr. TEMPLE. Yes.

Mr. GARNER. Suppose that in the meantime the Supreme Court of the United States had held that the capture of a ship was legal, and later on The Hague tribunal should hold that the American Government was liable for damages. How would you enforce the decision of The Hague court, realizing that you would have to come to the Congress of the United States for an appropriation? Would not there be some difficulty in getting this body to accept The Hague tribunal's decision as against our own Supreme Court?

Mr. TEMPLE. The treaty obligation provides for a suit for damages, and I imagine that a treaty that has been approved by the Senate of the United States looking to this purpose would have very considerable influence with the House of Representatives. I do not know whether it would or not in the case of the Colombia treaty, but I think, in connection with a treaty of this kind there would be little doubt, if any, as to getting this House to make the appropriation which such action by the international court would require. But to continue with the narrative.

Mr. MONTAGUE. Would it disturb the gentleman if I asked him a question in connection with the one just suggested by the gentleman from Texas?

Mr. TEMPLE. Not at all.

Mr. MONTAGUE. Does the gentleman know of any adjudication by an international tribunal, whether it be an arbitration board or not, which has never been submitted and conformed to by the nation interested? Do I make myself clear?

Mr. TEMPLE. I do not know of any requirement that has ever been imposed on any nation by a board of arbitration that that nation has refused to meet.

Mr. MONTAGUE. I know the gentleman has studied matters of this sort and I wanted his opinion whether or not the prospects of the peace of the world are not very hopeful, so far as our past experince is concerned, in that all arbitrations heretofore rendered have been submitted to?

Mr. TEMPLE. The standard of honor among nations has ordinarily been higher than the standard of honor among men individually.

Mr. GARNER. Will the gentleman let me make a short statement in that connection?

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from Texas?

Mr. TEMPLE. Yes.

Mr. GARNER. Under our treaty-making power the President and the Senate of the United States negotiate and confirm a treaty with a foreign nation. They even make treaties obligating this Government to pay certain sums of money annually. This House on three different occasions since I have been a Member of it has refused to carry out the provisions of that treaty by refusing to carry the appropriation. So the result is that any treaty made by our Government which obligates this Government to settle a financial transaction has got to come back to the House of Representatives, and the House of Representatives, in the original instance, might not have confirmed the treaty.

Mr. TEMPLE. I am glad to have the gentleman's statement.

Now, the powers accepted the invitation that had been extended by Great Britain to send representatives. Prof. George Grafton Wilson, of Brown University, lecturer also at Harvard University and at the Naval War College, and Admiral Stockton were representatives from the United States, both of them known and recognized far and wide for their familiarity with questions of international law. The London declaration of 1909 was the result of that conference. Great Britain called the conference for the purpose of determining what are the general recognized principles of international law. I quote from the call:

> His Majesty's Government therefore propose that another conference should assemble during the autumn of the present year with the object of arriving at an agreement as to what are the generally recognized principles of international law within the meaning of paragraph 2 of article 7 of the draft convention, as to those matters wherein the practice of nations has varied, and of then formulating the rules which, in the absence of special treaty provisions applicable to a particular case, the court should observe in dealing with appeals brought before it for decision.

Let me call attention to the distinction made in that call between rules on the one hand and generally recognized principles on the other. It was for the purpose of arriving at an agreement as to what are the generally recognized principles of international law, and then for the further purpose of formulating the rules which should interpret and apply those generally recognized principles.

Let me read also from the general report presented to the naval conference on behalf of this draft committee. After speaking of the work that had been done by the British Government in preparation for the gathering of the conference, the preparation of the so-called "Red Book," which contained the views of the various nations, the draft committee says:

> The conference could not but express its gratitude for this valuable preparatory work, which was of great assistance to it. It made it possible to observe, in the first place, that the divergences in the practices and doctrines of the different countries were perhaps less wide than was generally believed, that the essential ideas were often the same in all countries, and that the methods of application alone varied with traditions or prejudices, with permanent or accidental interests. It was therefore possible to extract a common element which it could be agreed to recommend for uniform application.

A common element existed in the divergent rules and practices of the various nations, and the members of the conference believed that they had found universally recognized, or at least generally recognized, principles of international law. The declaration of London contains a preliminary provision, which is as follows:

The signatory powers are agreed that the rules contained in the following chapters correspond, in substance, with the generally recognized principles of international law.

Now, what is the force of this declaration of London? It was, of course, reported to the various nations by the representatives of those nations, carrying the force of this almost authoritative opinion, that its chapters correspond, in substance, with the generally recognized principles of international law. It went to the Senate of the United States, and the Senate, acting in accordance with its usual practice, advised the ratification of the treaty by the requisite two-thirds vote on April 24, 1912. That is, the Senate ratified the declaration of London just exactly as it ratifies any other treaty that ever goes into effect. Formally ratification is an executive act. The Senate has only power to advise and consent to the ratification. It did in this case what it does in all cases, and in common speech we speak of the Senate as having ratified treaties. As a matter of fact, no proclamation was ever issued by the executive power of the United States, and ratifications have not been deposited at The Hague as provided for in the treaty. Technically it has not been ratified.

Mr. GARNER. Will the gentleman yield just there?

Mr. TEMPLE. Very willingly.

Mr. GARNER. If the President negotiates a treaty and the Senate ratifies, and then the President never promulgates it, is it still a treaty?

Mr. TEMPLE. No. I say it is not ratified.

Mr. GARNER. So the President finally has an opportunity of withholding and nullifying a treaty after the Senate has ratified it?

Mr. TEMPLE. Ordinarily the President sends to the Senate only such treaties as he has already determined to ratify, if the Senate advises the ratification. In this case peculiar circumstances arose which I have already referred to. The English Government found that certain legislation was necessary to amend existing British law, to bring it into harmony with the new rules of the declaration of London. The bill so prepared by the Cabinet was passed by the House of Commons and failed to pass the House of Lords, so that the British Government was not ready to exchange ratification. We were ready. We were committed to it.

Mr. MADDEN. So that England is not committed to the London convention at all?

Mr. TEMPLE. Yes. England is committed to it very thoroughly, as I shall show later—not by an exchange of ratifications, however. Article 56 of the declaration of London is the article that is of importance in connection with the proposed legislation for the transfer of ships owned by subjects of belligerent powers to the flag of the United States. Article 56 is as follows:

The transfer of an enemy vessel to a neutral flag, effected after the outbreak of hostilities, is void, unless it is proved that such transfer was not made in order to evade consequences to which an enemy vessel as such is exposed.

Mr. MADDEN. So the burden of proof would be on the neutral nation?

Mr. TEMPLE. Yes; the burden of proof would be on the claimant, and not on the captor, in the prize court.

Now, the question arises as to whether this is in force. I was asked a moment ago whether England was committed to this treaty. I hold in my hand an order in council, dated at the court at Buckingham Palace, on the 29th day of October, 1914, the essential part of which is as follows:

Whereas by an order in council dated the 20th day of August, 1914, His Majesty was pleased to declare that during the present hostilities the convention known as the declaration of London should, subject to certain additions and modifications therein specified, be adopted and put in force by His Majesty's Government.

And then, after other preliminaries:

Now, therefore, His Majesty, by and with the advice of his privy council, is pleased to order, and it is hereby ordered, as follows:

1. During the present hostilities the provisions of the convention known as the declaration of London shall, subject to the exclusion of the lists of contraband and noncontraband, and to the modifications hereinafter set out, be adopted and put in force by His Majesty's Government.

I want to say that the exceptions and modifications have no bearing whatever on article 56, which touches the transfer of enemy vessels to a neutral flag. In the latter part of this order—and I shall not take the time to read all of it—is the following command:

The lords commissioners of His Majesty's treasury, the lords commissioners of the admiralty, and each of His Majesty's principal secretaries of state, the president of the probate, divorce, and admiralty division of the high court of justice, all other judges of His Majesty's prize courts, and all governors, officers, and authorities whom it may concern, are to give the necessary directions herein as to them may respectively appertain.

There is no doubt, then, that that paragraph of the declaration of London which bears on the question of transferring ships from a belligerent flag to a neutral flag is the law of the British prize courts that will try the cases. Secretary Bryan, in his letter to Senator STONE, said, "The declaration of London is not in force." That paragraph of it is in force in British prize courts, and they are the only courts that will have jurisdiction over cases of vessels captured by British warships.

Mr. MADDEN. Now, is there any appeal from those courts?

Mr. TEMPLE. There is no appeal to an international prize court.

Mr. MADDEN. That is what I mean.

Mr. TEMPLE. Because the treaty, like the London declaration itself, failed of the final exchange of ratifications, so that we are thrown back to the original basis. Each nation provides its own rules of contraband and its own rules of prize cases, just as they did before the declaration of London was formulated at all. If they had the right to do that before, then they will certainly exercise that right now.

Mr. MADDEN. And from the rule promulgated there is no appeal?

Mr. TEMPLE. No appeal, except to British courts.

Mr. MADDEN. Except the appeal to arms?

Mr. TEMPLE. Oh, it would be taken up for settlement by diplomacy, and the dispute might be referred to the court of arbitration at The Hague. What I wish to say is that the declaration of London is undoubtedly British law, whether it is recognized by the United States or not.

Now let me call your attention to the case of the *Benito Estenger*, which is recorded in volume 176 of United States Reports. This was a Spanish vessel, transferred to the British flag in June, 1898, captured by the United States steamer *Hornet* and condemned by the United States Court for the Southern District of Florida, sitting as a prize court. The case was carried by appeal to the Supreme Court of the United States. Chief Justice Fuller wrote the opinion, in which, after saying that the *Benito Estenger* "had complied with all the requirements of the British law," and had been transferred to British registry, he nevertheless affirmed the decision of the lower court. The vessel was sold and the money disposed of according to the prize law of our Nation then in force.

Mr. Beatty, the British subject who owned the vessel, had appealed the case, had lost, and had no recourse. I refer to that case not because it is on all fours with the case of the *Dacia* or any other case that might hereafter arise, but to show just one thing, that when the *Benito Estenger* complied with all of the requirements of British law that was not enough. We tried the case in accordance with our law. And when vessels transferred to the American flag comply with all the requirements of American law the British courts will try them in accordance with British law, and if we object they will cite the case of the *Benito Estenger* and many other cases. What we could do to them and that which we did to them without protest from them they will certainly claim the right of doing to us.

The declaration of London has been put in force not only by England but also by France, Russia, and Italy. Furthermore, Italy put it in force in the late war between Italy and Turkey, and article 47 of the declaration was tested in a peculiarly searching way.

I read from Oppenheim's International Law, volume 2, page 530:

According to the British and American practice, as well as that of some other States, which has hitherto prevailed, whenever a neutral vessel was stopped for carrying persons or dispatches for the enemy these could not be seized unless the vessel were seized at the same time. The release in 1861, during the American Civil War, of Messrs. Mason and Slidell, who had been forcibly taken off the *Trent*, while the ship herself was allowed to continue her voyage, was based by the United States on the fact that the seizure of these men without the seizure of the vessel was illegal. Since, according to the declaration of London, a neutral vessel rendering unneutral service of any kind is liable to be confiscated, it is evident that in such a case the enemy persons and dispatches concerned may not be taken off the vessel unless the vessel herself is seized and brought into a port of a prize court. However, article 47 provides that any member of the armed forces of the enemy found on board a neutral merchant vessel may be taken off and made a prisoner of war, although there may be no ground for the capture of the vessel.

And in a note on page 531, as follows:

Accordingly, in January, 1912, during the Turco-Italian War, the Italian gunboat *Volturno*, after having overhauled in the Red Sea the British steamer *Africa* going from Hodeida to Aden, took off and made prisoners of war Col. Riza Bey and 11 other Turkish officers. Although the declaration of London is not yet ratified by Great Britain, she did not protest.

She submitted to it without a protest, though she had not ratified the declaration.

Now, I want to say again, as I said on August 29, 1914, that it is the practice of nations that determines what international law is, and no legislative authority. I said then:

> Italy in her recent war with Turkey put that declaration of London into operation in spite of the fact that it is not international law. France and Great Britain have both announced their intention to put it into operation, in spite of the fact that ratifications have not been exchanged. That which is the practice of the nations becomes international law. There is no other test of international law than the practice of the nations. International law is not enacted. When we want to know what it is we study the practice of the nations, and when a maritime power like Great Britain and another like France and another like Italy put this into practice, and we ourselves have committed this Nation to it by signing it, by ratifying it in the Senate, as we have done, we, too, are committed to it. The only reason that it is not the law of the United States is because ratifications have not yet been exchanged. The Senate has acted on it finally. This is as nearly international law as anything can be that is not sanctioned and made certain by long practice.

I have just one other point that I wish to make, and I think it is a very important one. Suppose a dispute should arise between this country and Great Britain in regard to the seizure of some vessel transferred to the American flag from a belligerent flag, and we should succeed in taking it to the international tribunal at The Hague—the permanent court of arbitration at The Hague. What would be the decision of that court? In answer to that I refer you to the case of the French mail steamer *Manouba*.

In the note (Oppenheim, vol. 2, p. 531) is the following statement:

> The case of the *Manouba* ought likewise to be mentioned here. This French steamer, which plies between Marseille and Tunis, was stopped on January 16, 1912, by an Italian cruiser in the Mediterranean and 29 Turkish passengers, who were supposed to be Turkish officers on their way to the theater of war, were forcibly taken off and made prisoners. On the protest of France the captives were handed over to her in order to ascertain whether they were members of the Turkish forces, and it was agreed between the parties that the case should be settled by an arbitral award of the permanent court of arbitration at The Hague, Italy asserting that she had only acted in accordance with article 47 of the declaration of London.

Neither Italy nor France had ratified the London declaration. Neither of them had at that time issued any proclamation putting it into effect.

The two nations agreed to leave that case to the international tribunal at The Hague. I have in my hand here the award of the international tribunal at The Hague in this case, rendered May 6, 1913. Anybody who wishes to refer to this will find it in the American Journal of International Law for July, 1913, beginning on page 629. Without reading it at length, I read these sentences:

> Considering that the Italian naval authorities had, at the time of the capture of the *Manouba*, sufficient reason to believe that the Ottoman passengers who were on board were, some of them at least, soldiers enlisted in the enemy's army;
>
> That, consequently, these authorities had the right to compel the surrender of these passengers to them—

After an omission—

> For these reasons the arbitral tribunal declares and pronounces as follows—

And the fourth paragraph of its pronouncement is this:

> When once the *Manouba* was captured and taken to Cagliari, the Italian naval authorities were, in general and according to the special circumstances under which the act was committed, within their rights in proceeding, as they did, to the arrest of the 29 Ottoman passengers who were on board.

There was a case of a dispute between a neutral that had not ratified the declaration of London and a belligerent that was carrying it into effect, which dispute was carried to the International Tribunal of Arbitration at The Hague, and the international tribunal sustained the belligerent that was enforcing the declaration of London. We should avoid any controversy of that kind with any power. [Applause.]

Mr. THOMSON of Illinois. In that case neither the belligerent nor the neutral had ratified the declaration of London?

Mr. TEMPLE. Neither the belligerent nor the neutral had ratified it, just as neither Great Britain nor the United States has ratified it; but the belligerent was putting it in force, just as Great Britain is now putting it in force.

Mr. BOOHER. Will the gentleman yield for a question?

Mr. TEMPLE. Certainly.

Mr. BOOHER. The two nations got that case before The Hague tribunal by agreement, did they not?

Mr. TEMPLE. That was the only way they could get it there.

Mr. BOOHER. If the United States and England should have trouble, unless they agreed to submit it to The Hague tribunal, it could not go there at all.

Mr. TEMPLE. We would either agree to arbitrate or probably fight it out.

Mr. BOOHER. It could not go to The Hague tribunal without an agreement of the parties?

Mr. TEMPLE. Never. There is nothing compulsory about it. There is no compulsory arbitration.

Mr. BOOHER. If the convention had been ratified, as it has been ratified by the United States and Great Britain, it would go to The Hague tribunal without agreement, would it not?

Mr. TEMPLE. Not if we chose to violate our treaty, which provides for arbitration.

Mr. BOOHER. Does it not provide that such a case shall go there?

Mr. TEMPLE. This London declaration makes no provision of that kind.

Mr. BOOHER. It would go to The Hague without any further agreement, would it not?

Mr. TEMPLE. Irrespective of the London declaration, we have now a general treaty of arbitration. Now, if we choose to disregard that treaty, there is no power that can send us to The Hague. I do not think we would choose to disregard it.

Mr. BOOHER. Then the London declaration does not make any difference about the right of either or both nations to go to The Hague, does it?

Mr. TEMPLE. Not at all. The London declaration does not affect the question of arbitration. The question is whether it is the law that the court will enforce after arbitration has been agreed to. We have general treaties of arbitration. Our question is, What law would The Hague tribunal enforce if we kept our treaty and went there with an arbitral dispute?

Mr. BOOHER. The tribunal would not enforce a law that this Government has never ratified, would it?

Mr. TEMPLE. That is the point I am making. The tribunal did enforce it in a dispute between France and Italy.

Mr. BOOHER. But they both agreed to go there on that issue, did they not?

Mr. TEMPLE. They agreed to go there on that issue; but, as I understand it, they did not agree as to what the law was before they went there. If they had agreed as to the law under which it was to be determined, the dispute could have been settled without any arbitration.

Mr. BOOHER. But suppose, now, that one nation or the other had not agreed to go there and submit to the London declaration, would The Hague tribunal have enforced the London declaration?

Mr. TEMPLE. Italy claimed that she was acting under the London declaration, and, as I understand the contention, France claimed that she had no right to act under the London declaration, and they submitted that dispute to the arbitral tribunal at The Hague.

Mr. BOOHER. I am very much interested in the gentleman's argument, and I want to get a little light. Suppose France had refused to submit that question to The Hague convention; could The Hague convention have decided it?

Mr. TEMPLE. Not at all. Italy and France would have had war.

Mr. BOOHER. I am trying to get your idea whether the nations that have not signed that convention would have to agree to submit to The Hague convention the question whether or not the London declaration was binding.

Mr. TEMPLE. I think I catch the gentleman's point. Once in a while an agreement is made in the treaty itself as to the principles that are to determine a dispute, and those principles are set forth at length. Such was the case in the *Alabama* dispute between the United States and Great Britain after the Civil War. In the treaty of Washington of 1871 three principles were set forth which we claimed were international law and Great Britain claimed were not international law; and in order to settle the dispute Great Britain agreed that the court of arbitration should act as if these principles were international law. That is possible.

Mr. BOOHER. My point is that if Great Britain had not agreed to that they could not have settled that proposition and bound Great Britain.

Mr. TEMPLE. They would have been likely to have had war.

Mr. BOOHER. The gentleman does not quite answer my question; they could not have bound Great Britain.

Mr. TEMPLE. There is no international sheriff to drag the parties into court.

Mr. BOOHER. It would not be necessary; my question does not ask whether its judgment could be enforced, but could The Hague tribunal have decided it?

Mr. TEMPLE. When a question of what is the law is left to a tribunal, that tribunal decides what is the law.

Mr. THOMSON of Illinois. Will the gentleman yield?

Mr. TEMPLE. I will.

Mr. THOMSON of Illinois. In view of the case the gentleman has referred to, and the decision by the international

court, is it not true that if such legislation as is involved in the pending ship bill should be enacted and such a situation should arise as to the facts in that case disclosed, it would mean that the United States would be obliged to choose between the submission of the issues of that case to the tribunal at The Hague, which would doubtless decide as it did in the case the gentleman mentions, or go to war?

Mr. TEMPLE. There might be a third alternative; it might be settled by diplomacy. Many cases are settled by diplomacy.

Mr. THOMSON of Illinois. By our Government giving up?

Mr. TEMPLE. By somebody's yielding something.

Mr. PLATT. Might not the ship be taken into a French port and we have to submit to the old French law, which is much more severe than the declaration of London?

Mr. TEMPLE. Yes; the old French law is much more severe than the declaration of London. Under the old French law the transfer of a vessel from a belligerent flag to a neutral is forbidden, unless the claimant can show that when he bought the vessel he did not know there was a war going on, which would be difficult under the present conditions. Most people know that there is a war going on. The French law would be much more severe than the declaration of London, and I am inclined to think that the international court of arbitration will follow its own understanding.

Mr. LENROOT. The gentleman says "the French law"; is it not true that France is following the declaration of London?

Mr. TEMPLE. It is now; but if we convinced France that she ought not to put the declaration into effect, it would be her law, and not English law and not ours that would be our alternative.

Mr. MADDEN. They would try it under their own law and not under ours.

Mr. TEMPLE. Certainly.

Mr. GOODWIN of Arkansas. If the gentleman will yield, I have just come in, and therefore have not heard all that the gentleman has said. Does the gentleman have reference to the declaration of Paris?

Mr. TEMPLE. By no means. I am glad that the gentleman has mentioned the declaration of Paris, for I have some little time left and I want to show that unanimous consent is not necessary to the adoption of international law. The declaration of Paris in 1856 provided among other things that privateering is abolished. The other provisions of that declaration were: The neutral flag covers enemy's goods; neutral goods, contraband of war excepted, are not liable to capture under the enemy's flag; and that a blockade to be binding must be effective. But the first and most important thing is that privateering is abolished. The United States did not agree to that. It most decidedly dissented. President Pierce in his message of December 4, 1854, said that the bare statement of the condition in which the United States would be placed, after having surrendered the right to resort to privateers, in the event of a war with a belligerent of naval supremacy, will show that this Government could never listen to such a proposition.

So Secretary Marcy wrote, July 28, 1856, to Count Sartinges, French minister, replying to the invitation to adhere to the declaration of Paris:

> The policy of the United States has ever been, and never more than now, adverse to such establishments, and they can never be brought to acquiesce in any change in international law which may render it necessary for them to maintain a powerful Navy or a large Regular Army in time of peace. If forced to vindicate their right by arms, they are content, in the present aspect of international relations, to rely, in military operations on land, mainly upon volunteer troops, and for the protection of commerce in no inconsiderable degree upon their mercantile marine.

I should like to read what Oppenheim says about the declaration of Paris. Speaking of the declaration of Paris, Oppenheim, volume 2, page 220, says:

> Since, with the exception of a few States, such as the United States of America, Colombia, Venezuela, Bolivia, and Uruguay, all members of the family of nations, are now parties to the declaration of Paris, it may well be maintained that the rules quoted are general international law, the more so as the nonsignatory powers have hitherto in practice always acted in accordance with those rules.

We never agreed not to use privateers; but in the fierce struggle between the North and the South we did not use them, and we did not use them in the Spanish War. Why? We acquiesced in the declaration of Paris, although we never signed it. It is recognized as international law, our signature lacking nevertheless.

Also, let me mention one other thing which is of great general interest now, and which has become practically international law, to which the United States never agreed. Dumdum bullets were forbidden in the treaty adopted at The Hague conference, but some of the powers refused to sign the agreement not to use them.

As Great Britain had introduced bullets manufactured at the Indian arsenal at Dumdum, near Calcutta, the hard jacket of which did not quite cover the core, and which therefore easily expanded and flattened in the human body, the first Hague Peace Conference adopted a declaration, signed on July 29, 1899, by 15 powers, namely, Belgium, Denmark, Spain, Mexico, France, Greece, Montenegro, Holland, Persia, Roumania, Russia, Siam, Sweden and Norway, Turkey, and Bulgaria, stipulating that the contracting powers should abstain, in case of war between two or more of them, from the use of bullets which expand or flatten easily in the human body, such as bullets with hard envelopes which do not entirely cover the core or are pierced with incisions. Austria-Hungary, China, Germany, Italy, Nicaragua, Portugal, Japan, Luxemburg, Servia, Switzerland, and Great Britain acceded later.

The United States has never signed that treaty. Does anybody suppose that we would refuse to recognize that there is a general law, a general sentiment also, against the use of dumdum bullets? Unanimous consent is not required. The world almost, the great maritime powers certainly, have given adherence to the declaration of London. We have not. Whether it is law or not is one question. Whether we will be practically bound by the almost universal sentiment behind it is another question. It is dangerous to run into the face of the public opinion of the world on such points. [Applause.]

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. TEMPLE. Yes.

Mr. ROGERS. Is not the distinction in the cases the gentleman states rather that the nations which do not expressly ratify these agreements tacitly ratify them?

Mr. TEMPLE. I read from the President's message and from the correspondence of the Secretary of State who were in office in 1856 the emphatic refusal of the United States to recognize these things.

Mr. ROGERS. But there is a tacit agreement among the nations as to dumdum bullets, for example, I suppose, and the acquiescence is there, even though it has not taken the form of affirmative legislation or approval.

Mr. TEMPLE. Tacit acquiescence after a refusal to sign is what I am pointing out. I think there will be a tacit acquiescence in the declaration of London.

Mr. GOODWIN of Arkansas. We refused to accede to the declaration of Paris for the reason that we had no fleet of any moment but had a considerable fleet of merchantmen.

Mr. TEMPLE. We would not accede to it.

Mr. GOODWIN of Arkansas. I say we could not accede to it, and we have not in a formal way, but possibly tacitly will adhere to the declaration of London. How many nations were signatories to the declaration of London?

Mr. TEMPLE. The declaration of London was signed by 10 powers, and only 10 were represented at the conference.

Mr. GOODWIN of Arkansas. I was trying to reconcile our attitude with reference to a failure to accede to the declaration of Paris as well as the declaration of London.

Mr. TEMPLE. The point I was attempting to make was this, that a unanimous-consent agreement is not necessary to the actual existence of international law. We did not agree to the abolishing of privateering, yet it has been abolished. We did not agree not to use dumdum bullets, yet the world recognizes that there is a law against it. My hope is that this long advance in international maritime law, marked by the declaration of London, will not be hindered by the United States. It is a long step toward uniformity of practice and away from the old condition of things when every nation had its own law, and there was always friction. The United States is committed to it. It was signed by our delegates. Its ratification was advised by the requisite two-thirds vote of the Senate. We stood ready to exchange ratifications at the outbreak of this war. We advised it be made at least temporary law, and though Great Britain put it into effect, with certain modifications, we drew back entirely. And Mr. Bryan says it is not in force, when the King of England, in the order in council which I read to you, says it is in force in the only courts that will try prizes captured by vessels of the British Navy. We have no appeal from British courts, save an appeal that I am sure we would be horrified to make. We should rather avoid the entrance to a quarrel, especially when our cause at best would be doubtful and in opposition to the public sentiment of the nations and of our own people.

Mr. GILLETT. Mr. Chairman, I yield 20 minutes to the gentleman from Michigan [Mr. J. M. C. SMITH].

Mr. J. M. C. SMITH. Mr. Chairman and gentlemen of the House, by way of preface, I wish to say that when two or more nations go to war it does not necessitate that any neutral na-

tion shall quit or abandon its commerce. I wish to say, further, that we commit no unneutral act by permitting munitions of war to be shipped from any port of the United States or of its Territories. I wish to say, further, that after our experience in Mexico, I think we are as safe in the hands of this administration as we have been in any recent administration, as far as war is concerned. Besides, the administration is equipped and surrounded by high legal talent and experienced Army officers and high Naval admirals. The definition of every dictionary includes foodstuffs in the word "munitions."

Mr. Chairman, I ask the indulgence of the House to speak for a few minutes on the subject of neutrality. I am in receipt of many letters and petitions requesting me to support and vote for House joint resolution 377, and am now in possession of a large petition, signed generally by the merchants and leading business men of my home town, favoring such resolution.

This resolution is to prohibit the export of arms, ammunition, and munitions of war. The petitions and letters ask me to work actively and vote for it so as to enact it into law during this session of Congress. They are all of similar purport, and many are of similar wording. No doubt other Members are daily in receipt of like requests.

I have filed the petitions here in the House and had them referred to the Committee on Foreign Affairs, before which the resolution is now pending.

I herewith wish to testify to the intelligence and high character of the signers and their lofty citizenship as being unexcelled. Many are among my warmest personal friends and neighbors, and all are in every way entitled to my highest consideration.

The resolution is as follows:

House joint resolution 377.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is hereby authorized, in his discretion, to prohibit the export of arms, ammunition, and munitions of war of every kind (whether whole or in parts to be later assembled) from the territory or any seaport of the United States until otherwise ordered by the President or by Congress.

This resolution covers nearly everything that can be used to aid or further the prosecution of a war. Munitions of war include foodstuffs, clothing, automobiles of all sorts, horses, mules, wagons, sleighs, harness, saddlery, cotton, wool, and products of field and factory, when suitable and intended for army purposes, as well as armament, shot, and shell.

Our Nation is not in the shipping business, and does not sell, ship, or transport munitions of war directly to any other nation either at peace or at war, and so we are dealing with individual rights. The sale and shipment of these products are by individuals, and when publication is made that 1,000,000 bushels of wheat, 2,000,000 pairs of shoes, $10,000,000 worth of harness and saddlery, 40,000 Ford automobiles, 200 Duplex war trucks, or 50,000 bales of cotton are sold for shipment to England, Germany, France, Belgium, Russia, or any other country, it means simply that such an order for these goods has been taken by some American manufacturer or purchaser for delivery at the factory or maybe to an American port, and then it is up to the purchaser to make his shipment and take the risk of delivery on his own account at the foreign port.

MUNITIONS OF WAR.

By the law of nations a neutral nation has the right to carry on its commerce in all trades without liability of forfeiture in goods and products not declared to be contraband, and by common consent noncontraband is permitted to be shipped unrestricted in a neutral vessel, while in the shipment of wheat, horses, automobiles, firearms, and so forth, the owner takes the risk of capture and loss of property.

We find the balance of trade in our favor has increased from $16,000,000 for the month of September to nearly $132,000,000 for the month of December, 1914, and quite all of the products of this trade can be used in and for carrying on war.

It is as necessary to have food products and clothing, shoes, blankets, and vehicles to prosecute and carry on a war as it is to have armament, rifles, and shells, so that if the export of the munitions of war of every kind are to be prohibited, such prohibition will be very far-reaching, and not only will our exports be quite extinguished but our manufacturing greatly affected, the sale of farm products reduced, and our foreign trade virtually come to a standstill.

Mr. YOUNG of North Dakota. Will the gentleman yield?

Mr. J. M. C. SMITH. I will.

Mr. YOUNG of North Dakota. If the gentleman's resolution were changed or modified in such a way as to cover only the exportation of guns, bullets, munitions of war, would the gentleman support it under those conditions?

Mr. J. M. C. SMITH. Well, I will get to that a little later on; but that is not the resolution I was asked to work for and have passed this session. I am talking about the resolution which these papers and my people have asked me to support and work for and endeavor to have passed. I would say to the gentleman I would hesitate before I would vote against a resolution to prohibit the export of powder and bullets to kill people with, but I would not want to say I would vote for a resolution prohibiting export of munitions of war broadly.

Mr. YOUNG of North Dakota. Has the gentleman considered the question of the morality of the proceeding?

Mr. J. M. C. SMITH. That is different.

Mr. YOUNG of North Dakota. I understand now the gentleman is discussing the legal proposition.

Mr. J. M. C. SMITH. I have thought of that, but I am not basing this argument upon sympathy or upon the question of preference. I am basing it upon the law; and if we are going outside of this, as a moral question, why, of course, that might lead to my telling what particular faith I believe in. But that is not the question which we are dealing with. This is an international question. Now, if the gentleman will allow me to proceed.

The resolution makes no exception and seeks to prohibit our shipments to Italy, Holland, Spain, South America, China, and to all neutral countries.

The resolution further provides that it shall be discretionary with the President whether or not and when to prohibit such shipments. If it is wrong or unlawful to permit shipments of contraband or munitions of war, there should be no discretion about it. It ought not to be done.

But, Mr. Chairman, by the law of the very nations now at war, and by settled custom, this right is firmly and legally established.

I doubt not that the President has the right now to place an embargo upon the shipment of war material out of the United States. The President placed an embargo not long ago upon the shipment of arms into Mexico from the United States, although he subsequently permitted it.

Not long since a German vessel loaded with rifles and ammunition sailed for Vera Cruz, a Mexican seaport, and the President promptly sent our Army and fleet to that port, captured the city in battle, and prevented the unloading of the ship's cargo there; but the unloading took place at an adjacent port near Tampico. If the President had the authority then to say when firearms and ammunition might be transported into Mexico from the United States, or should not be shipped into Mexico, from Germany or any foreign nation, why has he not the discretion now?

But, Mr. Chairman, I do not want to say that we sent our Army and fleet to Mexico for the sole purpose of preventing that German ship from unloading 500,000 firearms and millions of rounds of ammunition, or whatever the number may have been, because I have such faith in the effectiveness of our Army and Navy, even if there is only 1 of the 59 submarines belonging to our Navy fit for service, and even if many of our battleships or dreadnaughts are not fit for first-line duty, and even if the size of our standing Army only equals the population of Grand Rapids, Mich., and a part of that Army is now in foreign lands, as to believe that we could have prevented that German ship from unloading the arms and ammunition if that had been the sole purpose, although I might be in a little doubt about our now being prepared to lick the whole world, as one might think we are from some of the hurrahs heard nowadays here on the floor of this Chamber.

We took Vera Cruz all right one day, with the loss of 17 of our brave boys and 70 wounded of the flower of our country. We held it a sufficient time, and then went away. When we left a considerable treasure followed us—only a million or so, but a considerable amount of money, we are credibly informed.

A majority of the Members are learned in the law and know that we ought not to break into a man's house or into his country or into his city and take away the property of another. When I was a child I was taught the Ten Commandments. Later I attended church on Sunday and enjoyed the sermons then as I do now. I remember some of the commandments yet—one about taking that which did not belong to me, and the one about killing. I wish that the rulers, crowned heads, and other potentates of Europe would keep all the commandments. I always enjoyed the sermon when the preacher would tell about the coming of the Prince of Peace, of Emmanuel, and also about beating the swords into plowshares and the spears into pruning hooks. God speed the day! But until that time we must as a nation work out our own destiny. I am for peace. I want to be one of the last to favor war. It seems we ought to get along

without war in this enlightened age and generation. But, my friends, the Golden Age has not yet come—

When the war drum throbs no longer, and the battle flag is furled
In the parliament of man, the federation of the world;
There the common sense of most shall hold a fretful realm in awe,
And the kindly earth shall slumber, wrapped in universal law.

To-day a majority of the most civilized nations of the earth are in brutal and unnecessary war. By this war not only the boundary of nations will be changed, but the struggle involves their very existence. The times call for clear-headed, patriotic statesmanship as much as they ever did in the history of our Republic. What is our duty? We as a nation have our rights. Those rights are of greater importance to us than the rights of any foreign nation. Among our rights are the rights of life, liberty, and the pursuit of happiness. We do not want them invaded. We must know the right, and "knowing it, dare maintain."

NEUTRALITY.

President Pierce in his third annual message to the Thirty-fourth Congress in 1855 defined our rights as a neutral nation to carry on our commerce when he said:

The laws of the United States do not forbid their citizens to sell to other of the belligerent powers articles of contraband of war or to take munitions of war or soldiery on board their private ships for transportation, and although in doing so the individual exposes his person or property to some of the hazards of war, his acts do not involve a breach of the national neutrality nor of themselves implicate the Government.

This was six years before the Civil War, and that principle of international practice was incorporated in article 7 of the Hague convention, October 18, 1907, which provides:

A neutral power is not called upon to prevent the export or transport on behalf of one or other of the belligerents of arms, munitions of war, or, in general, of anything which can be of use to an army or a fleet.

This convention was attended by the representation of the German Empire and signed by its delegates.

As a Nation we are friends of both sides of the contending nations of Europe. We are nowise responsible for the war. By electing to go to war these nations have fixed their status as that of belligerents, and their rights are determined by the rights of warfare. If this gives an advantage to either side, we are not responsible for it, and as a neutral Nation we can not change it.

By remaining neutral our status is fixed by the laws and customs of war and international agreements. Chief among the rights of the citizens of a neutral nation is the right to carry on commerce in all its branches, subject to the chances of seizure and forfeiture in case the merchandise is contraband, but with the utmost freedom in case the products are noncontraband. As neutrals we must treat all the belligerents alike, allowing to each side the same privileges, and not give a right to one side which we do not accord to the other. If to prohibit shipments would deny one side an advantage which rightfully belongs to it, or give to the other side rights to which it is not entitled as a belligerent, we should be very circumspect before enacting such a law and be careful that we do not commit a nonneutral act.

During the Franco-German War there was correspondence between the Prussian diplomatic representation in London and at Washington and the British and United States foreign secretaries concerning shipment of arms and ammunition to French armies, in which the Prussian Government contended that it was incompatible with strict neutrality that French agents should be permitted to buy up in the neutral country, under the eyes and cognizance of the neutral Government, many thousand breechloaders, revolvers, and pistols, with the requisite ammunition, in order to arm therewith the French people and make the formative of fresh army corps possible after the regular armies of France had been defeated.

Nothing, however, was done to prevent the shipment of these supplies, and the United States claimed entire liberty for the traffic in question.

OUR STATUS DEFINED.

Very recently, on January 8, 1915, Mr. Bryan, as Secretary of State, in a communication (S. Doc. No. 716) covering this subject to Senator STONE, defined, among other things, our rights and status as a neutral Nation, and I call your attention to two paragraphs of that letter. Answering the statement that the United States has not interfered with the sale to Great Britain and her allies of arms, ammunition, horses, uniforms, and other munitions of war, although such sales prolong the conflict, the Secretary says:

There is no power in the Executive to prevent the sale of ammunition to the belligerents.

The duty of a neutral to restrict trade in munitions of war has never been imposed by international law or by municipal statute. It has never been the policy of this Government to prevent the shipment of arms or ammunition into belligerent territory, except in the case of neighboring American Republics, and then only when civil strife prevailed. Even to this extent the belligerents in the present conflict, when they were neutrals, have never, so far as the records disclose, limited the sale of munitions of war. It is only necessary to point to the enormous quantities of arms and ammunition furnished by manufacturers in Germany to the belligerents in the Russo-Japanese war and in the recent Balkan wars to establish the general recognition of the propriety of the trade by a neutral nation.

It may be added that on the 15th of December last the German ambassador, by direction of his Government, presented a copy of a memorandum of the Imperial German Government which, among other things, set forth the attitude of that Government toward traffic in contraband of war by citizens of neutral countries. The Imperial Government stated that "under the general principles of international law, no exception can be taken to neutral States letting war material go to Germany's enemies from or through neutral territory," and that the adversaries of Germany in the present war are, in the opinion of the Imperial Government, authorized to "draw on the United States contraband of war and especially arms worth billions of marks." These principles, as the ambassador stated, have been accepted by the United States Government in the statement issued by the Department of State on October 15 last, entitled "Neutrality and trade in contraband." Acting in conformity with the propositions there set forth, the United States has itself taken no part in contraband traffic, and has, so far as possible, lent its influence toward equal treatment for all belligerents in the matter of purchasing arms and ammunition of private persons in the United States.

Answering the statement of general unfriendly attitude of the Government toward Germany and Austria, the Secretary says:

If any American citizens, partisans of Germany and Austria-Hungary, feel that this administration is acting in a way injurious to the cause of those countries, this feeling results from the fact that on the high seas the German and Austro-Hungarian naval power is thus far inferior to the British. It is the business of a belligerent operating on the high seas, not the duty of a neutral, to prevent contraband from reaching an enemy. Those in this country who sympathize with Germany and Austria-Hungary appear to assume that some obligation rests upon this Government in the performance of its neutral duty to prevent all trade in contraband, and thus to equalize the difference due to the relative naval strength of the belligerents. No such obligation exists; it would be an unneutral act, an act of partiality on the part of this Government to adopt such a policy if the Executive had the power to do so. If Germany and Austria-Hungary can not import contraband from this country, it is not, because of that fact, the duty of the United States to close its markets to the allies. The markets of this country are open upon equal terms to all the world, to every nation, belligerent or neutral.

The foregoing categorical replies to specific complaints is sufficient answer to the charge of unfriendliness to Germany and Austria-Hungary.

I am, my dear Senator,
Very sincerely, yours, W. J. BRYAN.

Hon. WILLIAM J. STONE,
Chairman Committee on Foreign Relations,
United States Senate, Washington, D. C.

WAR.

I am for peace all the time, and would only consent to declare war when justice demands it and the right is absolutely unquestioned. I am not for peace at any price, else there would have been no War of Independence, and we would be a dependency of England and not enjoying our independence to-day; else there would not have been the War of the Rebellion, and we would be two nations on this continent to-day instead of one.

When the right to arbitrate all questions of national dispute comes up, and the Monroe doctrine is submitted, it may surrender Mexico to colonization by other nations. If the Chinese or Japanese question comes up for arbitration at The Hague, the sun will not shed such radiant hues on the Golden Gate, and much of the attraction will have flown from the splendid domain of our beautiful Pacific coast.

Neither would I for one want to submit the right of a foreign nation to have a coaling station in Mexico or Cuba or in the Central American States.

I am not in favor of submitting all questions to arbitration as a national policy. Neither do I think that preparedness leads to war. We were not prepared in 1860 for the war so nobly fought and won by the boys in blue, but it came.

We were prepared for war when we told Maximilian to get his French Army and himself out of Mexico immediately after that war, and no war came.

ARMY AND NAVY.

Our national wealth is $150,000,000,000, double that of any other. Our Navy ranks third, and 14 nations of the world have a larger standing army than we have.

The following table showing the peace strength of nations having a larger standing army than the United States is found in the World Almanac, 1915, page 420:

Germany	870,000
France	783,493
Russia	1,500,000
Austria-Hungary	435,127
Italy	306,000
Great Britain	262,296
Japan	217,032
Spain	140,673
Roumania	103,460
Switzerland	143,220
Turkey	230,000
Greece	29,000
China	180,000

I voted for the Army appropriation bill; a standing Army of 100,000 men; for an appropriation for the upkeep of our Navy, providing for 2 battleships, 11 submarine torpedo boats (1 of the seagoing type), 5 torpedo-boat destroyers, 1 fuel-oil ship.

The total cost of this program is about $50,000,000, and the sum of $22,903,998 is recommended for construction the first year, and if we had kept the duty on sugar it would have paid the whole cost of their construction.

Much is said about the citizen soldier, but how many citizens nowadays are acquainted with firearms? Many of them never shot a gun, and fewer of them ever saw a modern weapon. In the days of the rebellion nearly every man was a marksman, and the first call recruited the squirrel regiments; but it is different now. In some of the States we have stringent game laws and less game, and the use or need of the gun does not obtain.

It would cost the Government little or nothing to make it mandatory for all citizens within military age to meet at least once a month at the country townhouse or city hall during the wintertime, if no oftener, and be shown a regulation Army rifle or be given an evening's instruction or lecture by a military officer or soldier, and be told with which foot to step off and upon which heel to about face. By so doing the citizen soldier would at least know something of what would be expected of him should he ever be called to arms.

DISARMAMENT.

Mr. Chairman, I hope the time will come when it will not be necessary to ever call our young men to arms, but now is not the time to disarm. World conditions are against that step at present. I wish that we might not furnish guns and bullets to kill people with. But whatever we may do in this regard the war will continue to the end. We must keep an even poise; we must keep strictly within our rights; we must maintain strict neutrality. We are not legally or equitably bound to close our factories or give up all our commerce. The belligerent nations alone must decide when to shut up their own great arsenals and factories and when to quit making guns and powder. I wish they would quit to-day. It was not contemplated by any nation that in case of war we should close our factories or not sell our farm products to any warring nation. That has never been the law, and we should exercise great care in adopting such a law. I would have some hesitancy in voting against a law placing an embargo upon powder and bullets should the President make the order, but would not want to support a law which would prohibit the shipment and exportation of all articles that could be used by an army to prosecute or carry on war, and am very much in favor of sending foodstuffs and raiment, medicine, and aid to the helpless and famine stricken in Europe. [Applause.]

The CHAIRMAN. The gentleman from Massachusetts has five minutes remaining.

Mr. GILLETT. Will the gentleman from New York yield me 10 minutes?

Mr. FITZGERALD. I yield the gentleman 10 minutes.

Mr. GILLETT. I yield to the gentleman from California [Mr. J. R. KNOWLAND] such time as he desires.

Mr. J. R. KNOWLAND. Mr. Chairman, I ask leave to extend my remarks by inserting in the RECORD an article appearing in the February North American Review entitled "The bases of Republican confidence." The article was written by Col. George Harvey, editor of the magazine, and the man claiming to have originally discovered President Woodrow Wilson. While the public was aware that there have been some little differences between the discovered and the discoverer since the original discovery, there were recent indications that a happy reconciliation had taken place, but evidently the truce was but temporary. The article is somewhat illuminating and is presented in full:

THE BASES OF REPUBLICAN CONFIDENCE.

[By the editor.]

In idle wishes fools supinely stay;
Be there a will, and wisdom finds a way.
—The Birth of Flattery.

We may as well admit at the outset that the quite universal and plainly increasing confidence of Republicans with respect to the next national election is no mere "triumph of hope over experience"; it is a firm conviction. Neither leaders nor rank and file have the slightest doubt of coming success. Nor, incidentally, we are informed, if a liberal Republican be nominated, has Mr. Roosevelt—a fact of deep significance.

What, then, are the bases of this quite unprecedented feeling of certainty which finds manifestation a full 20 months before the event? Let us engage in common counsel forthwith.

The Republican chairman insists that the results now compiled prove conclusively that, if the recent November election had been for President, his party would have won not less than 288 electoral votes—a majority of 45. President Wilson, on the other hand, in his speech in Indianapolis, interpreted the figures as showing a Democratic majority of "about 80." Both seem to have erred. Putting aside all guesses and deductions, the votes actually polled for Senators and Congressmen are recorded as follows:

Votes polled at elections of 1912 and 1914.

STATES CARRIED BY REPUBLICANS ON NATIONAL ISSUES.

[S, popular vote for Senator; C, popular vote for Congressman.

States.	1914					1912		
	Electoral vote.	Vote.	Republican.	Democrat.	Progressive.	Taft.	Wilson.	Roosevelt.
Connecticut	7	S.	89,983	76,081	6,853	68,324	74,561	34,123

Republican majority of electoral vote, 19; Democratic plurality of popular vote, 210,976.

Chairman Hilles attains his result by transferring Wisconsin's 13 votes from the Democrats to the Republicans upon the ground that, although a Democratic Senator was elected by a few hundred as a consequence of "local conditions," the total Republican majority for Congressmen exceeded 40,000.

President Wilson reached his conclusion by "taking the States where Senators were elected and, where Senators were not elected, taking the election of governors, and, where governors were not elected, taking the returns for the State legislatures or for the congressional delegates." Ignoring the vote for State legislators, which seems rather far-fetched, and substituting the vote for governor wherever one was chosen for the vote for Senator or Congressman given in the above tabulation, we find that—

Net Democratic gain, 18; net Republican loss, 31. Progressive gain (California), 13.

ELECTORAL VOTE UPON THIS BASIS.

Democrats, 274; Republicans, 244; Progressives, 13—531. Democratic plurality, 30; Democratic majority, 17.

Assuming, as we fear we must, that the vote on national issues affords the better criterion, the question immediately arises, Can the Republicans reasonably expect to hold the 22 States, carrying 275 electoral votes, which they won in November? That the shrewdest of them honestly think so there can be no doubt. Indeed, they feel equally certain that they can abstract from the Democratic column Colorado (6), Maine (6), Oregon (5), South Dakota (5), and Wisconsin (13), making a grand total of 310 and affording a clear majority of nearly 100 electoral votes. Clearly, however, this calculation would be upset if President Wilson should succeed in winning over the remaining Progressives who still hold the balance of power in Illinois, California, Pennsylvania, Idaho, and Washington. For ourselves, we have reached only the negative conclusion that whichever party loses New York is likely to lose the election. But so far as the actual results of November, 1914, are concerned, it was a drawn battle, leaving the Democrats slightly ahead in the popular vote and slightly behind in prospects relating to the choice of electors.

We come now to consideration of the political effect of the President's speech in Indianapolis from which the Republicans profess to have derived no little satisfaction. The common assumption that this deliverance signalized Mr. Wilson's purpose to become a candidate for reelection may be ignored. Whatever warrant the audience may have had for drawing such an inference from his remark to the effect that "there may come a time when the American people will have a chance to say whether I know what I am talking about or not," was dissipated instantly by his quick disavowal of intent to "start anything." Subsequently, moreover, he made it quite clear that he had in mind no more than a prospective verdict upon the achievements of the Democratic Party under his leadership.

That Mr. Wilson will make his attitude with respect to a renomination known at no distant day may be assumed with surety. So much he owes to his party no less than to other possible candidates who now courteously await an expression of his desire, but none knows better than Mr. Wilson himself that such a declaration necessarily involves interpretation of the second-term provision in the Democratic platform and, to be truly effective, must be explicit, not casual or inferential, and buttressed by sound and sufficient reasoning.

That he should seek to win popular favor in his first political utterance addressed directly to the people was but natural and no more than his duty, but his real purposes clearly were: (1) To justify the administration; (2) to confound his enemies within and without his party; and (3) to indicate a definite purpose to appeal to the great body of Independents and Progressives for support in the forthcoming national campaign. The speech was in effect a call to combat, and the challenge was accepted promptly by Senator WILLIAM E. BORAH, the most forceful spokesman of the opposition and, as the foremost liberal Republican now living, a most promising candidate for the presidential nomination. This makes for an interesting contrast at the very beginning of a campaign which bids fair to find a high place in our political history.

The President spoke first as a militant partisan: "If I were not ready to fight for everything I believe in," he began, "I would think it my duty to go and take a back seat." He continued:

"The trouble with the Republican Party is that it has not had a new idea for 30 years. I am not speaking as a politician; I am speaking as a historian. I have looked for new ideas in the records and I have not found any proceeding from the Republican ranks. They have had leaders from time to time who suggested new ideas, but they never did anything to carry them out. I suppose there was no harm in their talking, provided they could not do anything. Therefore when it was necessary to say that we have talked about things long enough, which it was necessary to do, and the time had come to do them, it was indispensable that a Democrat should be elected President.

"I would not speak with disrespect of the Republican Party. I always speak with great respect of the past. The past was necessary to the present, and was a sure prediction of the future. The Republican Party is still a covert and refuge for those who are afraid, for those who want to consult their grandfathers about everything. You will notice that most of the advice taken by the Republican Party is taken from gentlemen old enough to be grandfathers; and that when they claim that a reaction has taken place, they react to the reelection of the oldest members of their party. They will not trust the youngsters. They are afraid the youngsters might have something up their sleeve."

Senator BORAH resented this as "a virulent attack upon one of the great political parties of the Nation," not only challenging "the wisdom of the leaders," but also assailing "the intelligence and the patriotism of its rank and file." Denying that the Republican Party had "not had a new idea in 30 years," he instanced the passage of the interstate commerce act in 1887, of the Sherman Antitrust Act in 1893, of the antirebate act, and proceeded:

"We created a Bureau of Commerce and Labor, afterwards passing what is known as the pure-food law, of incalculable value to all the people, the postal-savings law, the parcel-post law, the physical valuation of railroads law, the employers' liability law, the law limiting the hours of service of railroad men, compensation for injuries to Government employees, the child-labor law for the District of Columbia, the Children's Bureau was established, publicity of campaign funds provided for, eight hours a day for Government employees and under Government contracts provided for, a law requiring the railroads to report accidents provided for, the boiler-inspection law, the Bureau of Mines established, the amendment of the Constitution providing for an income tax, the election of Senators by popular vote—and so on ad infinitum, dealing with each particular subject as it arose. Dealing with them sanely, safely, progressively, permanently.

"Then finally we passed that bill which has been so often criticized by the opposition, known as the Vreeland-Aldrich Act, dealing with the finances of the country. I call your attention to the fact, my friends, that when the crisis came a few months ago, and the European situation brought to us a condition unexpected, it was under the Vreeland-Aldrich Act that you proceeded to protect the credit and the business interests of this country. We had months before passed the Federal reserve bank act, but it was not called into activity; it was not put into operation. It was not tested in that crisis, but when the crisis came it was permitted to remain idle while the Vreeland-Aldrich Act was the act under which we proceeded to pass the shoals and pitfalls of those first days of the European crisis. While we did so the Federal reserve bank act lay—huge, cumbersome, bulky, expensive—cast upon the shore of the legislative sea like some antediluvian mastodon, not quite live enough for the menagerie and not quite dead enough for the operating table of the taxidermist; designed apparently for the Federal Treasury, but apparently on its way to the Smithsonian Institution."

When it is recalled further that, while the new banking law was finally enacted by the Democrats, its genesis was Republican and the "idea" from which it was developed was hatched in the brain of Grandfather Nelson W. Aldrich, the difficulty of finding warrant for the President's assertion that he spoke "not as a politician, but as an historian" becomes quite painfully apparent. Why Mr. BORAH refrained from contrasting the relative advantages to the country of lawmaking by grandfathers and youngsters can only be imagined; possibly because he felt abashed at being only 49 years old, while the President, at 58, was welcoming his first grandson. But let us pass on.

After having admitted with commendable frankness that each of the big parties is a minority and dependent for success upon the favor of

the unattached, the President evinced a most cordial and sympathetic regard for independent voters, saying:

"I am not an independent voter, but I hope I can claim to be an independent person, and I want to say this distinctly. I do not love any party any longer than it continues to serve the immediate and pressing needs of America. I have been bred in the Democratic Party; I love the Democratic Party, but I love America a great deal more than I love the Democratic Party. And when the Democratic Party thinks that it is an end in itself, then I rise up and dissent. It is a means to an end, and its power depends, and ought to depend, upon its showing that it knows what America needs, and is ready to give it what it needs. That is the reason I say to the independent voter, you have got us in the palm of your hand. I do not happen to be one of your number, but I recognize your supremacy, because I read the election returns, and I have this ambition, my Democratic friends—I can avow it on Jackson Day: I want to make every independent voter in this country a Democratic voter. It is a little cold and lonely out where he is, because, though he holds the balance of power, he is not the majority, and I want him to come in where it is warm. I want him to come where there are great emotions."

To this Senator BORAH made no response. Possibly he considered accurate definitions injudicious at a time when Republican candidates are wondering just how "independent" it is desirable to be, or even to have been. Or it may be that he doubted his ability to compete with Mr. Wilson in conjuring up overpowering emotions for use upon occasion. In any case, he awaited elucidation, which forthcame—if we may use the President's own term as applied to Grandfather Andrew Jackson—forthrightly. It appears that the one thing Mr. Wilson has "a great, almost a reckless, enthusiasm about" is "human liberty," especially at this particular time in Mexico. His heart still beats loudly for the 80 per cent of submerged peons who have never had a "look-in," and he hopes that "God may speed them in getting it."

"That," he continued, "is what I mean by a great emotion, the great emotion of sympathy. Do you suppose that the American people are ever going to count a small amount of material benefit and advantage to people doing business in Mexico against the liberties and the permanent happiness of the Mexican people? Have not European nations taken as long as they wanted and spilt as much blood as they pleased in settling their affairs, and shall we deny that to Mexico because she is weak? No; I say. I am proud to belong to a strong nation that says, 'This country, which we could crush, shall have just as much freedom in her own affairs as we have. If I am strong I am ashamed to bully the weak. In proportion to my strength is my pride in withholding that strength from the oppression of another people.' And I know when I speak these things, not merely from the gracious response with which they have just met from you, but from my long-time knowledge of the American people, that that is the sentiment of the American people."

While frankly confessing our inability to comprehend this extraordinary blending of emotion and cynicism, it is perhaps explicable as an attempt at excuse for failure of a policy when compared with this, which follows:

"With all due respect to editors of great newspapers, I have to say to them I never take my opinion of the American people from their editorials. So that when some great dailies not very far from where I am temporarily residing thundered with rising scorn at 'watchful waiting,' Woodrow sat back in his chair and chuckled, knowing that 'he laughs best who laughs last'; knowing, in short, what were the temper and principles of the American people."

The time may come when we shall venture to surmise the aspiration which induced this curious self-delineation, but for the moment a sense of bewilderment is overwhelming. We quote again from Senator BORAH:

"The President now says that we are to let Mexico alone. How unfortunate that that was not the policy from the beginning. I think if he had said in the beginning that we were to let Mexico alone he would have been in an almost impregnable position. All that needed to have been added to that to make a perfect policy would have been that Mexico should respect the rights of American citizens and of foreigners living in that country. Let them settle their own form of government, let them elect whom they would, let them have a despotism or a republic, according as they lived up to the one or the other, and that we would recognize whatever form of government they established, always adding the proposition that, whether it was one form of government or another, the rights and the lives of American citizens should be protected thereunder.

"But we did go to Mexico, Mr. President. What did we go for? What were we at Vera Cruz about? What were the results of the expedition? The first result was that we killed 200 Mexicans; the second result was that we lost 19 of our own men. We were at war with Mexico. Had we killed one English subject or one German subject or one subject of France, there would have been no doubt about our being at war with that country. The only reason it did not take on all 'the pomp and circumstance of glorious war' was the fact that the country with which we were at war was unable to respond against the powerful enemy who had entered its borders. Not only did we intervene when we declared against Huerta, but we were at war when blood was shed upon the soil of Vera Cruz. That was the first result.

"The second result of our going there was the destruction of the only semblance of government which they had in Mexico.

"The third thing which we did in connection with it is one which may have far-reaching consequences in the future, and that is, we notified foreign nations that they must keep hands off of Mexico; that they must not build up or give sustenance and support to Huerta or to any form of government. The result of it was that we assumed the responsibility morally, if not legally, for the injuries which flowed from that time on to those foreign powers or to their nationals by reason of the acts or of the conduct of the warring factions of Mexico.

"Then we assumed further, Mr. President, at that time to reform the land laws of Mexico. So we did not let Mexico alone.

"What is the situation in Mexico to-day? Mr. President, the situation in Mexico to-day is indescribable. We have no conception of it. I doubt if it would be possible to conceive a proper measurement of the condition of affairs in Mexico unless we were there, but we know that it is as bad as it could possibly be in a civilized or semicivilized community. We know that over 250 of our own citizens have from time to time been murdered; we know that countless others have been injured in different ways and have no apparent remedy or redress.

"Now, sir, when a condition of affairs exists in Mexico such as the civilized world has seldom witnessed and Republicans rise to express their views as to what shall be done, the answer which we get from the public rostrum of the country by the Chief Magistrate of the Nation is practically, in the language of Barère, that the revolution in Mexico 'shall be permitted to float in upon seas of blood and that the man who questions the course of revolution in Mexico is to be suspected before the American people!'

"Mr. President, speaking for myself, I am desirous of peace with Mexico; I want no war; and I know we shall never take any part of the territory of that Republic; but above and beyond that, and more important to my mind, is the fact that we should at least protect our own citizenship, securing our women against ravishment and our men from murder at the hands of those ferocious men who prey upon our nationals wherever they find them in their territory. There are some things which are dearer to me than peace. I do know this, Mr. President, that no nation ever retains respect among the other nations of the earth or long maintains the consideration of other powers that does not protect its citizens and the honor of its women and prevent them from being ravished and murdered even upon its very doorsteps."

We make no comment now upon this utterance; we merely place it beside the President's declaration for comparison and judgment as to both relative merit and possible political consequences.

Senator BORAH expressed regret that the President should have made a partisan speech "at a time when this country had sore need of united wisdom and patriotism to deal with those matters which have been rendered delicate by reason of foreign conditions," resented his seeming insistence that Senators should accept his judgment without question or regard for their own convictions, deplored Democratic extravagance, quoted freely from Mr. Wilson's book on Constitutional Government, etc., greatly to the satisfaction of his Republican colleagues. With these outgivings, however telling, we need not concern ourselves. The real quality of Senator BORAH'S argument is indicated sufficiently by the excerpts presented above. Let us glance now along the whole fighting line.

The points of presumed weakness in the Democratic line-up selected by the coaches of the Republican team as likely to prove most vulnerable may be summarized as follows:

Depression of business: Despite the hopefulness manifested by financiers with respect to the future, the Republican leaders insist that prosperity is yet afar off; that the existing stagnation—18,280 commercial failures compiled by Bradstreet's for 1914—mark a new high record in sharp contrast with the reiterated assertions of the Secretary of Commerce and Labor; that the existing stagnation is as far from being "a state of mind" as the depression of six months ago is proven by this result to have been "psychological"; and that in only a few lines of manufacturing can improvement be anticipated as a consequence of the war. That there is no limit to the foreign demand for war material is admitted, but, it is urged, the present capacity of factories is already overtaxed and can not be increased except through the construction of huge new plants, possibly in contravention of the administration's conception of neutrality, and in any case impossible of material accomplishment before November, 1916.

Prospective bankruptcy of the Treasury: This is fully anticipated as a consequence of declining revenues and increased appropriations, as indicated by the Treasury report of January 8, 1915, as follows:

Income of fiscal year to date	$319,609,606.02
Income last year to same date	354,867,122.21
Decrease in income	35,257,516.19
Outgo of fiscal year to date	401,798,001.15
Outgo last year to same date	390,892,111.52
Increase of outgo	10,905,889.63
Outgo over income this year	82,188,395.13
Outgo over income last year	36,024,989.31
Decrease in surplus	46,163,405.82

The Treasury estimate, submitted at the opening of Congress, of $1,090,775,154, or $18,000,000 less than the preceding year, is pronounced fictitious evidence of economy for political effect, since the "supplemental" estimates already aggregate $44,000,000, exclusive of $30,000,000 proposed for an omnibus public bill, $14,000,000 already made available in the urgent deficiency bill, and a possible appropriation of $30,000,000 for the purchase of ships. To the suggestion that partial relief may be obtained through the sale of Panama bonds, the reply is made that the bonds pay only 3 per cent, and, since they do not have the circulating privilege and can not under the law be sold for less than par, could not possibly find a market at this time.

Government ownership of ships: This proposal, although fathered by the Secretary of the Treasury and warmly espoused by the President, has found little public favor. It will be attacked as undemocratic; as a plain subsidy; as a deterrent of private investment in competition with the Government, which avows its intention to transact business at a loss; as advantageous only to shipbuilders and possibly to owners of interned German ships; and as perilous to the maintenance of peace with foreign nations. To the President's declaration that the scheme is necessary as a temporary measure to enable producers to reach markets the answer is made that inadequate transportation is due, not to dearth of ships but to lack of pier facilities, longshoremen, and other helpers in foreign ports, as indicated by the fact that 56 ships at London and 54 at Genoa were at the latest report awaiting turn to be unloaded. The President's accusation of excessive rates being charged is met with the assertion that the great delay caused by these conditions necessitates extra remuneration, and by reference to the fact that the present price of wheat is the highest ever known. The bill will probably succumb in this session to the determination of Republican Senators and the indisposition of Democrats headed by Mr. VARDAMAN. It is thought that the administration must then suffer from facing the alternative of acknowledging defeat or calling an extra session.

Mexico: If the warring factions and bloodthirsty bandits who now are despoiling their country shall soon heed the admonition of the President to unite in noble endeavor to establish a just Government with the consent and under the direction of the great majority of common people, the triumph of the administration's policy will be so overwhelming as to confound its critics. If not, the issue inevitably will be whether the United States owes it to her citizens to protect their lives and properties abroad as well as at home, or has no obligation beyond the shouting of caveat emptor to all who so far forget themselves as to cross the border line. In any case, it is quite evident, from the impassioned utterances of Senators LODGE and ROOT and BORAH, that the Republican team has yet to be convinced that the President's

chuckle at the prospect of laughing last is fully warranted by his intuitive knowledge of "the temper and principles of the American people."

National defense: It is perhaps but natural that the Republicans should feel that as a unit for preparedness they possess an advantage over political antagonists whose views are diversified.

The Colombia treaty: Whether or not an apology should be made to Colombia, accompanied by a payment of $25,000,000 for the loss of Panama, is beside the political mark. It suffices for the Republicans to know that the mere proposal has alienated Mr. Roosevelt and his considerable personal following so completely that the administration can not hope for support or cooperation from that source upon any conceivable grounds.

The Diplomatic Service: The mortification of Republicans at the unexpected efficiency demonstrated by our representatives in Europe is mitigated by the common judgment that the most useful services were rendered and the most notable success was achieved by the Republican ambassador who was retained in France long after his successor was appointed. It is also regarded as certain that such of the independent voters as are devoted to civil-service reform will not be attracted by the appointments to South America and may view the proceedings in San Domingo with aversion as a violation of trust.

Sectionalism: Republican leaders are well aware of the danger of playing with fire, but they will have difficulty in quenching the flame which leaped forth in New England when a leading journal asked bitterly if 20 dead men would have been branded as "conspirators" in Texas, as they were branded in Massachusetts and Connecticut, while three sons of the Lone Star State were sitting in the Cabinet and another was acting as the intimate adviser of the President.

Woman suffrage: Final relegation of this subject to the States, it is believed, will deprive the Democrats of an issue which Mr. Bryan surely would have espoused as an appeal for the 91 electoral votes easily controlled by women if they should act as a unit.

The colored vote: No doubt is felt that segregation at Washington will hold every negro in the Republican ranks—a fact, if it be a fact, of no little importance in States like Ohio, Indiana, New York, New Jersey, and Massachusetts.

Such, in brief, are some of the bases of Republican confidence. There are others of a more definitely political nature, embracing the universal disgust with Mr. Daniels, the quite common doubt of Mr. Bryan's efficiency as an executive, the propriety of Mr. McAdoo remaining in the Treasury as a son-in-law, the alienation of three at least of the ablest Democratic Senators, the disaffection of the so-called Clark Democrats who have not been accorded recognition, the seeming dissatisfaction of the chairman and other members of the national committee, and so on; but these are family affairs forbidden to intermeddlers.

Most satisfying of all to the Republicans is the reflection that they have a team, while the Democrats have only a captain—a great captain, to be sure, bold from his sense of power, firm in his resolute aloofness, sure of the justice of his cause—yet but one against so many and so strong.

So the President, in a speech which must be pronounced ill timed and ill judged, resembling nothing more closely than the traditionally putative effort of a tenor to sing bass, turns to the people. In them he has implicit confidence.

But that is not the question. Quite the contrary, we should say.

Mr. GILLETT. Mr. Chairman, I yield such time to the gentleman from Nebraska [Mr. KINKAID] as he may desire.

[Mr. KINKAID addressed the committee. See Appendix.]

Mr. GILLETT. Mr. Chairman, I yield 15 minutes to the gentleman from Wisconsin [Mr. FREAR].

Mr. FREAR. Mr. Chairman, the pending sundry civil bill carries about $4,000,000 for rivers in addition to a $38,000,000 river and harbor bill now reported to the Senate; or in all $42,000,000 for dredgers, contractors, land reclamationists, and other beneficiaries for next year. This bill has the right of way in the Senate. By a peculiar situation other appropriation bills have not been reported.

Yesterday the House refused to give to the Navy a hospital ship in place of a worthless tub that has been used for many years.

The country is paying an income tax and a war tax and is facing a depleted Treasury in times of peace. It is not my purpose to discuss a mistake made by enacting the Underwood tariff bill, because that is now past history. The country has discovered that while striking down the domestic sugar business built up by an investment of hundreds of millions of dollars of private capital, we left the control of that business in the hands of refiners and irresponsible agencies without reducing one farthing the cost of sugar. While discouraging wool raisers of the country in striking down wool tariffs, we benefited no one excepting the foreign producer. While removing all protection to agriculture we did not aid domestic producers or consumers, because board of trade jugglers, whose customers own or control marketable wheat and other grains, do not include many farmers among the number. The American people know these things and they also know that many needed millions formerly used to run the Government were sacrificed by tariff tinkering until to-day we are confronted by new and differing forms of taxation and an empty Treasury with which to meet necessary burdens.

Before the passage of either the income tax or the war tax the Democratic platform, in 1904, said:

Large reductions can easily be made in the annual expenditures of the Government without impairing the efficiency of any branch of the public service, and we shall insist upon the strictest economy and frugality.

During the years 1904 and 1905 Government appropriations included the following items:

	Army.	Navy.	River and harbor.	All appropriations.
1904	$77,888,752	$81,876,791	$20,233,150	$736,578,402
1905	77,070,300	97,505,140	10,872,200	732,197,855

In 1912 the Baltimore Democratic platform said:

We denounce the profligate waste of money wrung from the people by oppressive taxation through the lavish appropriations of the recent Republican Congress, which have kept taxes high and reduced the purchasing power of the people.

Our Democratic friends are now in power. Facts speak louder than idle arguments, and we turn to comparisons with the following results:

	Army.	Navy.	River and harbor.	All appropriations.
1914	$94,266,145	$140,800,643	$51,118,889	$1,098,678,788
1915	101,019,212	144,868,716	26,998,500	1,116,118,138

Additional contract authorizations were made in 1914 of $68,505,074, and in 1915 of $40,333,000. Appropriations for 1916 fiscal year are not yet passed.

Instead of decreasing the appropriations or lessening "oppressive taxation" the party in power has jumped every appropriation in 10 years approximately 50 per cent, and rivers and harbors over 100 per cent, while "oppressive taxation" now includes every tax formerly levied with an income tax and oppressive war tax added to our burdens. Nor has the high cost of living been reduced in a single instance. The wastefulness and extravagance of this Democratic Congress has become generally known, but the opinion of Mr. FITZGERALD, the able chairman of the Appropriations Committee, a Democratic leader and a man best qualified to speak, is as follows:

Whenever I think of the horrible mess I shall be called upon to present to the country on behalf of the Democratic Party I am tempted to quit my place. * * * Our Democratic colleagues have not given support to us thus far during this session of Congress. They have voted against recommendations they should not have voted against; they have unnecessarily piled up public expenditures until the Democratic Party is becoming a laughingstock of the country.

Here we have a Democratic platform utterance pledging economy, next a record showing unparalleled waste and extravagance in an administration, and finally the condemnation of his own party by its Democratic chairman of the Appropriations Committee.

What will be the record for 1915? Will we curtail or reduce our expenditures? If so, where and how?

Within the past half dozen years we have been piling up enormous future obligations for worthless and wasteful waterways. After an expenditure of about $800,000,000 for waterways, nearly half of which has come in the past dozen years, we learn that future obligations have grown as follows:

Projects under way, due	$250,000,000
New projects, amount required	101,000,000
197 surveys 1915 bill, approximately	78,000,000
Total	429,000,000

We have been saddled with extravagant expenditures and more taxes and, in addition, with a future debt for waterways alone which may reach approximately $429,000,000, if the 1915 bill in the Senate becomes law. Only a portion of this indebtedness has been created by the present administration, but it is rapidly increasing, and no effort has been made to retrench. On the contrary, the 1915 bill pending in the Senate carries over $38,000,000, and 197 new surveys, involving an estimated present and future expenditure of $116,000,000. It is no excuse to say new surveys are not to be undertaken as present projects. Why appropriate $400,000 to make 197 new surveys? Why should we invite greed and waste on the one hand, while on the other is a declaration adopted by the Baltimore platform that economy shall rule and oppressive taxation cease? Wherein has an attempt been made to keep that promise?

I shall only briefly refer to the waterway waste, better known as the annual "pork barrel," which is typical of other expenditures denounced by Mr. FITZGERALD. In addition to an increase of over 100 per cent in 10 years, as shown, the 1914 pork-barrel bill reached over $60,000,000 in cash, counting in sundry civil bill items, or nearly 100 per cent more than all the appropriations for rivers and harbors for the two years of 1904 and 1905 put together, which a Democratic platform denounced. When

the last river and harbor bill was before the Senate, it was fought by Republican Senators, who denounced it because of its unparalleled fraud and waste. Search the records and you will not find the voice of a single Democratic leader at the other end of the Capitol raised in protest. The bill was defeated by a handful of Republican Senators, while the $20,000,000 substitute adopted by the Senate and the House was drawn by a Republican Senator.

There should be no politics in Government economy, but the record can not be disputed.

Mr. BARTLETT. May I interrupt the gentleman?

Mr. FREAR. For just a moment.

Mr. BARTLETT. What did the gentleman say was the appropriation for 1902–3?

Mr. FREAR. For 1904–5 they aggregated $31,000,000.

Mr. BARTLETT. For the two years?

Mr. FREAR. For rivers and harbors.

Mr. BARTLETT. For the two years or for each year?

Mr. FREAR. For the two years combined. This year $42,000,000.

Mr. FITZGERALD. Does that include contract authorizations?

Mr. FREAR. That includes the sundry civil items.

Mr. FITZGERALD. But does it include contract items?

Mr. FREAR. I suppose it does. In 1904 the river and harbor bill was $20,333,150.

Mr. FITZGERALD. That was the actual appropriation. What were the contract authorizations?

Mr. FREAR. I do not know; but it includes the sundry civil bill items and all.

Mr. FITZGERALD. No; the sundry civil bill carries the appropriations——

Mr. FREAR. Then it includes all, because I took the sundry civil bill items.

Mr. FITZGERALD. What I asked the gentleman is, How much were the authorizations in the river and harbor bill in addition to the actual appropriations?

Mr. FREAR. In both cases I have taken the same standard; that is, all that was contained in the river and harbor bill and in the sundry civil bill. I can not say as to the specific items.

Mr. FITZGERALD. Last year there were practically no contract authorizations, but all cash appropriations, in the river and harbor bill.

Mr. FREAR. There were in the original sundry civil bill, and there are in this sundry civil bill here.

Mr. MANN. Besides, if the gentleman will permit, contract authorizations are paid for over a series of years. That is quite different from the actual appropriation to be paid for during the year.

Mr. FREAR. That is true.

Mr. FITZGERALD. But if, for instance, there are fifty millions obligations, it must be met in the future. It does not attract as much attention, but there is more financial difficulty than where you make specific appropriations.

Mr. FREAR. In an attempt to economize we are refused a hospital ship for the Navy. What business man discharges his doctor or throws away money when times are close? What man refuses to buy medicine while extending gratuities to relatives and friends in times of business depression? What corporation other than our Government throws economy to the winds when burdensome taxes are levied to meet extravagances?

According to Engineers' reports, the total maintenance items in the 1915 rivers and harbors bill are $4,760,540. That sum should carry over until next year. When the House bill aggregating $34,000,000 was before us I briefly analyzed many of the worthless and many of the extravagant projects it contained. In the RECORD of Friday, January 29, were offered official refutation of claims of commercial needs, with a disclosure of the small actual commerce served by many expenditures. That bill, now reported to the Senate, reaches $38,000,000, in addition to $4,000,000 contained in the sundry civil bill before us, although $4,760,540 will meet pressing necessities of maintenance. Why is an appropriation made eight times larger than maintenance estimates? Why are we asked to survey 197 new projects contained in the bill when the Treasury is depleted and taxes were never more burdensome? Why are we placing approximately $78,000,000 more in obligations for 40 per cent of approved surveys, in addition to $350,000,000 in present obligations? Why does the 1915 economy rivers and harbors bill carry over $100,000,000 in present and probable future obligations? Why does a party that denounces oppressive taxation before election refuse to raise its voice against a hypocritical, wasteful "pork barrel" again thrust upon the people? Why does it refuse a hospital ship in order to waste millions, including $6,000,000 for a Mississippi land-reclamation scheme?

If we would find answer, ponder well these facts: Florida, with a comparatively small actual commerce, gets 30 projects out of 250 contained in the $38,000,000 bill. Do we not know that one of the custodians of the merchant marine bill and influential officials on committees at both ends of the Capitol are in a position to strongly represent Florida's interests in this bill?

North Carolina, with an insignificant actual commerce, gets 20 out of 250 contained in the $38,000,000 bill. Is it not true that close administration leaders, who steered the tariff bill to safety, have great influence on the committees and upon Congress when North Carolina's claims are urged?

Texas, with a comparatively small actual shipping traffic outside of Galveston, gets 20 extravagant projects out of 250 contained in the bill. It includes the trafficless Trinity, the trafficless Brazos, and a dozen other inexcusable items; and Texas has 18 distinguished Democratic Congressmen—all leaders. Why do Louisiana and Mississippi get 25 projects for those two States, and why does the lower Mississippi get $6,000,000 from the Government Treasury for a private land-reclamation project?

Who are two of the most influential and industrious and liberal waterway members to be found on the respective committees of either House or in the country? Why are the trafficless Missouri and the Mississippi and the $64,000,000 Ohio River extravagance to be given over $15,000,000 in the present bill?

Why has the bill been presented to the Senate by jumbling together projects in different States under one item, excepting to hide the actual projects and amounts given for maintenance to each? Why this sudden change in policy? Why not lump the whole bill, and thereby better deceive and confuse as to all of the projects? Why are the remaining projects in the bill scattered all over 35 remaining States of the country except to touch districts here and there and quiet opponents of the bill?

Why are 197 surveys to aggregate approximately $78,000,000 in approved projects scattered throughout the country, excepting to help bring votes to insure the bill's passage in both Houses? Why do we continue a waterway pork barrel in these days of war taxes and hard times?

The $38,000,000 river and harbor bill, with 197 new surveys, approximating $78,000,000 in additional future obligations, or about $116,000,000 in all, is one of the most extravagant waterway bills ever attempted to be saddled onto a tax-ridden people. It is a Democratic appropriation bill that discredits all partisan platform pledges of economy and merits the deserved denunciation given by Representative FITZGERALD. No extravagant pork bill was ever before passed in days of business depression, but we are now asked to break down all professions of economy and continue to improve wasteful or worthless projects.

The last river and harbor bill was for $53,000,000. It was killed by Republicans. It saved $53,000,000 in war taxes. The $38,000,000 bill of this year can be cut to $5,000,000 for maintenance, and thereby save another $33,000,000. Will any Democratic leader of the administration aid in realizing economy professions by helping to defeat the bill if it comes back to the House? Why is the $38,000,000 pork barrel of 1915 larger than the combined bills for 1904 and 1905, when Democratic conventions were resolving to economize and Democratic Senators were denouncing such bills?

What excuse is offered for a 100 per cent increase in 10 years?

What excuse is offered for the 197 new surveys in the 1915 bill? What excuse is offered for the present $350,000,000 waterway obligation?

What misrepresentation can pull a hypocritical veil over the 1915 bill so as to deceive the American people as to its contents or wastefulness?

Mr. MANN. It does not cost as much a year to extend it over a series of years within the discretion of the Committee on Appropriations.

Mr. FREAR. The House is aware of the fact that the river and harbor bills are prolonged by the dribbling appropriations which are made.

If the country will pillory the bill and those who defend it, we will soon have a better system, a more economical administration, and an abolition of war taxes.

An ounce of prevention is worth a pound of cure, and an ounce of performance is worth many pounds of convention pledges.

The American sailors yesterday asked for a hospital ship to care for the country's invalid defenders. Under the leadership of the distinguished gentleman from Alabama [Mr. UNDERWOOD]

their request was rejected on the grounds of economy. Do we forget that less than three weeks ago an $18,700,000 private water-power project had an initial appropriation in the rivers and harbors bill? Its allowance was urged by the same Democratic leader upon the floor, but was defeated. Do we forget that less than three weeks ago a $34,000,000 river and harbor bill filled with wasteful and extravagant items was defended by the same able Democratic leader, and it was passed by his party, pledged to economy.

The American sailor asked for a hospital ship for the man who has volunteered to defend the Nation, but who is temporarily disabled—for the man who is lauded by all patriotic citizens and whose life is dedicated to his country's cause. He asked for bread and you gave him a stone.

Mr. TOWNSEND. Will the gentleman yield?

Mr. FREAR. For just a question.

Mr. TOWNSEND. Upon what authority does the gentleman think the American sailor asked for that hospital ship? The Secretary of the Navy did not ask it.

Mr. FREAR. I assumed from the arguments made here yesterday that you had no suitable boat to answer that purpose.

Great political interests to-day are asking that you give them another pork barrel. Will you do it? We could almost buy three hospital ships with what we are spending for the lower Mississippi land-reclamation project. We could buy three hospital ships with what we are spending for the Ohio canalization scheme, counting sundry civil items. We could buy 15 hospital ships with what is contained in waterway appropriations this year over the cost of actual maintenance, and we would still have several million dollars left for emergencies.

Do not deceive yourselves. The country will hold any administration responsible for passing such a "humbug and a steal," as it was termed by one of your foremost statesmen in Congress.

Do not forget that a hospital ship is more necessary to the country than a pork barrel, and the country will not justify your actions in defeating the one or in passing the other.

When such standards of economy become known, sure and swift reward will come to any party that is responsible, nor will a war-tax-ridden people patiently bear wasteful and worthless waterway burdens when confronted by an empty treasury.

The CHAIRMAN. The time of the gentleman has expired. All of the time of the gentleman from Massachusetts [Mr. GILLETT] has expired. The gentleman from New York [Mr. FITZGERALD] is recognized.

Mr. FITZGERALD. Mr. Chairman, the gentleman from Kentucky [Mr. SHERLEY], a member of the subcommittee which prepared the bill, is unable to be present to-day. He desires to use some time in general debate, and I therefore ask unanimous consent that the time for general debate remaining on this side may be reserved, to be occupied some time next week by the gentleman from Kentucky.

Mr. BRYAN. Mr. Chairman, reserving the right to object, I wanted some time, and I was going to take some time between now and the next two or three weeks. I would like 10 minutes of time at least. Of course, I can not save this time for Mr. SHERLEY. He can get what time he wants at any time.

Mr. FITZGERALD. We can save it with the consent of the House.

The CHAIRMAN. The gentleman from New York [Mr. FITZGERALD] has 58 minutes remaining under the agreement entered into this morning as to the amount of general debate.

Mr. MANN. Mr. Chairman, reserving the right to object, I feel like accommodating the gentleman from Kentucky [Mr. SHERLEY] in every way, but it does not seem to me desirable to make an agreement at this time in reference to the continuation of the general debate after we commence reading the bill. When the gentleman from Kentucky [Mr. SHERLEY] makes his request later I think it will be sufficient time to pass upon it, if he wants general debate on this bill. Of course his own bill will be before the House soon—the fortifications bill, of which he will have charge. I do not think it is desirable at this stage in the session to make an agreement about throwing over general debate until some time under the five-minute rule.

Mr. FITZGERALD. It is an unusual condition. The gentleman wishes to discuss matters pertinent to the bill.

Mr. MANN. If that is the case, and he makes the request in the House, I have no doubt the House will treat him with all courtesy at that time. I shall have to object to the request at present. I think we ought to make some progress.

Mr. FITZGERALD. Has the gentleman from Massachusetts [Mr. GILLETT] any time remaining?

The CHAIRMAN. The gentleman from Massachusetts has exhausted his three hours.

Mr. FITZGERALD. Mr. Chairman, I yield to the gentleman from Washington [Mr. BRYAN].

Mr. BRYAN. Mr. Chairman, through the courtesy of the gentleman from New York [Mr. CALDER] I had the privilege as well as the honor of an invitation to address the Republican Club of New York City on the 23d of last month on the subject of Government ownership of railroads. The occasion was a most pleasant and enjoyable one so far as I was concerned, for I found myself in the midst, I am sure, of the most hospitable surroundings and among the finest set of gentlemen to be found anywhere on earth outside of the precincts of home, or out West, where I reside. The program called for an informal discussion of the subject, much like a debate, in which I was followed by Mr. B. F. Yoakum, of the Frisco system; Mr. Thomas F. Woodlock, formerly of the Wall Street Journal; and Prof. Edward Sherwood Mead, of the University of Pennsylvania. Under the arrangements I was allowed 10 minutes at the close of the debate for rebuttal.

I can not claim to have been as successful in convincing my audience of financiers, bankers, railway men, and New York Republican Club members that the Government should adopt Government ownership as they were in convincing me that they knew how to royally treat a guest; but even from the standpoint of an ardent believer in Government ownership, I am sure the occasion was productive of great good. It was agreed as a preliminary rule of the debate that I was to go the limit for the doctrine in which I believed and should not hold back or expurgate my remarks for fear I would come in conflict with somebody's preconceived notions.

As a result of the notice given to that occasion by the Associated Press, the United Press, and other news agencies throughout the country, I have been besieged with requests for copies of the speech or for information on the subject of Government ownership of railroads by high-school debaters and others all over the country. I now desire to give all of these an opportunity to make such use of the results of my efforts as they can through the CONGRESSIONAL RECORD.

I do not expect to incur the expense of reducing this speech to pamphlet form, and debaters and others wanting the information, or perhaps I should say wanting to learn if there is any information contained in my remarks, will have to inform themselves by obtaining a copy of the RECORD of this day.

Since that occasion I have added to and amplified my arguments, and I now present these, together with certain pertinent observations, which seem to me to be conclusive, on behalf of Government ownership of railroads.

I shall handle the subject here to-day as a repetition of the presentation made at that time, the only difference being that on this occasion, with the time allowed and the privilege of extension in the RECORD, I will be able to present arguments much more voluminous, if not more convincing.

The question for discussion, as stated on the program, was, "Should the Federal Government own or operate or only supervise the interstate railroads?"

This limited the subject matter to interstate railroads only, not intrastate or lines exclusively under the jurisdiction of any one State.

Next, the statement of the question conceded supervision by the Federal Government as essential. It raises no question on that score, nor would any sane, well-informed American raise that question. We might restate the proposition like this: Conceding that it is a proper policy for the Federal Government to supervise and regulate interstate railroads, would it be a proper policy under existing conditions for the Federal Government to own or operate them?

UNCLE SAM KNOWS HOW TO OPERATE THE RAILROADS.

It being agreed that Uncle Sam knows how to supervise the railroads, it must be admitted that he knows how to operate them. If he can tell the railroad owners exactly how to execute every detail of operation and management, as he is now doing through the Interstate Commerce Commission, he must know how.

Then we might again state the question like this: Since the Federal Government is competent to operate the railroads, and must instruct the present owners how to operate them, and must enforce its instructions and orders with United States marshals and penalties, should the Government also own or operate?

THE GOVERNMENT IS BIG ENOUGH TO OWN AND OPERATE THE RAILROADS.

Let us consider the Government of the United States as a great corporation, with 100,000,000 stockholders and a capitalization of $150,000,000,000, the latest estimate of our national wealth, with annual savings or dividends of $5,000,000,000.

The activities of this greatest corporation on earth extends in every conceivable direction. In the West it reclaims arid lands and owns and operates two short railroads in the Reclamation Service, and in Alaska it administers the details of its vast properties up there and is building and will operate its railroad system.

This gigantic corporation, with the people as its stockholders, manages a tremendous Military and Naval Establishment and controls in various ways the vast commerce between the States and safeguards American commerce on the high seas. It owns and operates for pay the Panama Canal and the Panama Railroad and five great ocean liners between New York and Panama in ordinary carrying trade in competition with privately owned merchant ships.

This great corporation, whose monopolistic power makes no one fear except its enemies, if such there be, is not so great as to prevent it from successfully operating an ice-cream factory at Colon, hotels, eating houses, grocery stores, meat markets, steam laundries, and various other enterprises in the Canal Zone.

In the West it markets its timber on its vast public domain, and tells the coal baron who would monopolize the coal to figure how much coal he wants for actual use, and it—this vast corporation of yours and mine—will see what can be done toward a transaction that will have regard first of all for its stockholders—for you and me. To the water-power syndicate this corporation says: "I own these waterfalls for my stockholders, just as I own the timber and the coal. I'll enter into a lease with you if you will agree to operate the lease for the benefit of my stockholders first and your own stockholders second. If you want to sell water power on the square, all right; if not, I'll do it myself."

Every intricacy of the Postal Service, from the delivery of a post card to the shipment of a 20-pound parcel, is handled by our corporation with a nicety of perfection that makes every American proud. It accepts our savings on deposit and distributes the one billion of annual assessments in the education of our children, the training of the farmers and artisans, the saving of life and health, and for the well-being of us all.

Already 11 Republican Senators and 1 Progressive have gone on record without qualification for the most sweeping proposition for ship ownership and ship purchase and ship operation by the Federal Government that has ever been proposed. On January 24, 1914, when the Alaska railroad bill was up, such progressive men as Senators BRADY, BRISTOW, CUMMINS, FALL, GRONNA, KENYON, LANE, MARTINE of New Jersey, NORRIS, WORKS, and POINDEXTER—LA FOLLETTE was sick and could not vote—in supporting the Norris amendment took a stand with the vast body of American people when they voted to direct the President to acquire not less than 10 nor more than 20 merchant ships to engage in the passenger and freight business on both the oceans and in the coastwise trade. These splendid statesmen, exercising their honest, faithful, well-matured convictions, voted to appropriate $15,000,000 to start the Government in that enterprise. That proposition was defeated; but now the administration in power stands for the same thing. Can there be any doubt in the minds of any man who believes in the courage and sincerity of American statesmanship that this great corporation, which the people love, will stand its ground against the measly, grasping, greedy Shipping Trust, which stands at the doors of parliaments and on the thresholds of kings and proclaims its right and power to make and unmake republics and the governments of the earth according to the amount of gold in the form of subsidy it can bluff out the fawning, cringing, cowardly lords or sires or legislators with knee breeches and goggle-eyes, or whatever you call them in parliamentary terms?

Think of the insolence of a trust like the International Mercantile Marine Co., with Mr. J. Bruce Ismay of *Titanic* fame as president, which owns the American Line, the White Star Line, the Red Star Line, the Atlantic Transport Line, the Dominion Line, and controls the Leyland Line and the National Line, whose sailings comprise 47 distinct lines of service, which extend to practically all the ports of the world, with a fleet of 138 vessels of a tonnage of 1,355,236 tons, shifting its American-built and foreign-built vessels from English to American flag, according to legislation, for it owns English corporations and American corporations. With this vast fleet of vessels it says, "Ha, ha; sure, we are Americans; we know you want vessels to fly the American flag; we know you want vessels that can be converted into American transports in time of war; we know you want the Stars and Stripes to fly on an American merchant marine; and we know our boats will be used by the foreign nations for their troops in case of war. We know you need neutral ships to carry your cotton and your wheat, but we demand that you tax the people and give us a subsidy in gold or you do not get our ships. Of course, we are making 30 per cent; that is what we are in business for. My name is J. Bruce Ismay, saved from the *Titanic*, who is still defeating American claimants in their efforts to get damages for injuries for their losses on the *Titanic*, although we have had to pay the English claimants long ago. I am not afraid of your Government competition, because I know full well you will not get the votes except when you do not need them."

The Shipping Trust is the most infamous, independent, and arrogant combination on earth. We could cope with piracy on the high seas. We had naval heroes who were not afraid to lash their vessels to the sides of the pirate ships and take their crew but—

All right; but just watch what will happen when the American people really find out what is being handed to them.

I did not intend to make this diversion, but in laying down the lines of activity of this great corporation which we own, and in contemplating the necessity for Government ownership of railroads, it was natural to stray off a little on a burning subject like this, especially since the railroad interests in reality own most of the steamships flying the American flag.

I shall classify my arguments under three heads: (1) Democracy, (2) economy, and (3) efficiency.

DEMOCRACY DEMANDS GOVERNMENT OWNERSHIP OF RAILWAYS.

The rule of democracy must be maintained among the stockholders of this great corporation, or else democracy and republican institutions will forever vanish from the earth and the idea of the people ruling a great nation will become a myth.

The railway system of the United States is valued by its owners at approximately $20,000,000,000. It collects annually over $3,000,000,000 of revenue and floats nearly a billion a year of new stocks and bonds. It has increased in value tremendously in the last decade. The unearned increment is far greater than the original investment. In other words, they have more than doubled in value and will continue to increase tremendously as the country develops.

COMBINATION AND CONCENTRATION POSSIBLE ONLY UNDER GOVERNMENT MONOPOLY.

Combinations and centralizations in transportation are absolutely essential. Monopoly of railways is inevitable and necessary. The attempt to keep the railways apart and compel them to fight each other is absurd and wasteful. Harriman, from one standpoint, did a great service for the people of the United States in going as far as he did toward Harrimanizing the railway systems. But such a tremendous machine, such a gigantic monopoly, can not live within the bounds of a republic. A government which collects only $1,000,000,000 a year for its own operation feels its weakness in the presence of an internal corporation whose annual revenues are three times that of the government itself and which passes into the hands of a very few men who control almost unlimited additional wealth through interlocking and correlated corporations. The only check to such powerful concentration is Government ownership.

PRIVATE OWNERSHIP OF RAILROADS CREATES AN ARISTOCRACY OF WEALTH.

The raising of tariff by which some $300,000,000 is collected annually is said to be a power in the Federal Government which may make or unmake the business of the country over night. If the Government has power to paralyze industry and throw millions of men out of work or bestow untold blessing on everyone by a mere rearrangement of tariff schedules involving the collection of $300,000,000, how much greater than the Government is the organization which has the right to arrange freight and passenger tariff schedules for the collection of $3,000,000,000 annually, an amount that will probably be doubled in another decade. Such power naturally adds to itself other great interests such as the banking interests, the manufacturing interests, the water-power interests, and leads to an aristocracy of wealth in which a half dozen men become enthroned with more power than a king, a czar, or a kaiser.

The big transportation machine in the United States has become too big to live as a privately owned machine under the people's corporation known as the United States of America. The 100,000,000 stockholders of this $150,000,000,000 company called the United States of America have already concluded that the supremacy of the Government is challenged by this power within itself greater than itself. The inevitable result has been the opening of a fight which will be to a finish between the two institutions. Either the democracy of the people, asserting itself through the Federal Government, or the aristocracy of wealth, centered about the railway owners, must eventually fail. The Federal Government has already won the prelimi-

nary skirmish by compelling the railroads to submit to supervision even to the extent of fixing rates and controlling expenditures. There will be no retrogression, the people through their representatives will stand by the fight, public ownership will come very soon, and democracy will permanently prevail.

ECONOMY DEMANDS GOVERNMENT OWNERSHIP OF RAILROADS.

Who has the ability to sound the depths or measure the heights of railroad extravagance in this country. Capitalized at $20,000,000,000, they give that sum as the present value of the railroad properties in the United States. I can not set forth what portion of this $20,000,000,000 is mere water, so called, or what portion represents a cash investment, but I have substantial proof that the water exceeds the cash that has been paid into the railroads out of the pockets of railway owners or investors.

There is no way to figure accurately this phase of the subject, but I find in the Railway Age Gazette, a partisan railway journal, for August 21, 1914, some very convincing evidence taken from the book by Prof. Walther Lotz, who is vouched for by the Railway Age Gazette as one of the best authors on railway management in the known world and accordingly a most valuable witness.

THE RAILWAYS OF GERMANY A "MILCH COW" FOR THE GOVERNMENT.

The author is against public ownership, and starts out with the statement that "Germany's State railroad system is an oppressive monopoly and a political mistake." He warns America and England against a similar error. The author presents that the Prussian railways are taking from the people vast sums of money to assist the Government. An annual profit of 4 per cent over interest is alleged to be harvested by these Government-owned railroads.

I quote from the report of the statement of Prof. Lotz as published in the Railway Age Gazette of August 21:

In addition to subsidizing out of railroads the ill-balanced State finances, Prussia has created from the same source a vast State property. This is shown by the railroad capital account. The railroad administration has written off an excessive amount of the original small capital outlay of $2,875,000,000. Altogether $750,000,000 has been amortized. So that of the original railroad debt only $2,125,000,000 remains outstanding. This, judged by European values, is ridiculously small capitalization for 38,000 kilometers, nearly all double, treble, or even quadruple tracked, and splendidly equipped. As a fact the present sale value of the state railroad system is appraised at $5,200,000,000. The increase in value is due to the putting back into the roads of part of the profits, to extensions built out of profits, and to natural rise in land and other values. The difference between the outstanding capital of two billion and odd dollars and the present value of $5,000,000,000 is the profit and property of the State.

GERMAN PEOPLE MAKE THREE BILLION BESIDES THE 4 PER CENT.

Consider this astounding statement of Prof Lotz—that the Prussian railroads referred to are worth $5,200,000,000 while they are capitalized on the Government capital account at only $2,125,000,000, so that, to use his own words—

the difference between the outstanding capital debt of two billion and odd dollars and the present value of $5,000,000,000 is the profit and property of the State.

A part of Germany's profit on the $5,000,000,000 worth of railroads referred to is $3,000,000,000. It has amortized a sufficient sum which, when added to the increased value or unearned increment of the roads, makes the entire system 60 per cent paid for and leaves only 40 per cent of its value, or two and one-quarter billion, still standing on the books. But that is not all. Prof. Lotz says these roads, after paying the 4 per cent interest and the amortized surplus of three billion and interest—

between 1882 and 1912 over one and one-quarter billion dollars has been taken out of the railroad profits and handed over to balance the State budget.

So in reality there is only one billion not already taken out of these roads by the people, or 20 per cent of the present value of the roads.

Apply these figures to our experience, and surely the advocates of private ownership would not claim less for American privately owned lines than is admitted for the German lines; and admitting for argument's sake that our roads are worth $20,000,000,000, that there is not a drop of water in the stocks and bonds, we find that the $20,000,000,000 worth of railroads should stand on the books at $4,000,000,000—20 per cent of their value—the $16,000,000,000 would have to be charged off, used to "subsidize ill-balanced State finances," amortized, credited to profits or surplus, if we have done as well as Germany, and all this in addition to 4 per cent interest. If the Government owned the lines as Germany does, and had done as well as Germany, the people would have that $16,000,000,000 as well as the interest paid in full. Certainly our private owners have done that well, because this eminent author says public ownership is a failure and American private ownership a success.

I am convinced that these figures as to German conditions are accurate, and that if the Government of the United States had operated the railroad system it would not have more than $4,000,000,000, or 20 per cent of the value of the roads, invested, so far as the "capital account" would show. The people would have the sixteen billion that are now the assets of the Harry Thaws, the Goulds, the Vanderbilts, the Rockefellers, the Hettie Greens, the Gates, the papas-in-law of foreign counts, and the guardians of rare and nameless poodles and collies and trotters and yachts.

AMERICAN PEOPLE LOSE SIXTEEN BILLION.

Who got the sixteen billion—the 80 per cent? In Germany it went into the public resources. Would it not have promoted economy for the sixteen billion to have gone to the public in America? In England it has gone to the Rothschilds, and in America it has not only been used to swell private fortunes but to gouge the public and corrupt public servants; to New Haven the widows, Rock Island the farmers, and Pere Marquette the Michiganders.

The bitterness of the dregs of the cup the people must drink in considering railroad extravagance in this country, and the reckless disregard of the public in developing these lines, is intensified by calling attention to the statement of this eminent railroad witness, Prof. Lotz, that the German lines are nearly all double or treble or even quadruple tracked and splendidly equipped.

It may be said that railroad construction, because of labor and prices of commodities, has been more expensive in this country than in Germany, but that will not hold good, for it is the stock argument of the private owners that German railways cost half as much again as ours, and owing to the excessive cost of right of way there as compared with the lavish 40-mile-wide gifts here there is truth in the claim.

Let him who would ridicule these figures, deduced from Prof. Walther Lotz, and the twenty billion capitalization claim of the railways, please consider what has happened in Great Britain. The railways in the United Kingdom under private ownership are valued at $314,000 per mile. Our lines will follow suit if they are permitted. At the same rate our system would be capitalized at eighty-one billion instead of twenty billion. There must be some reason why Germany can fight against the world and England can hardly fight with the world.

I have compiled some figures which appear to me to go a long way toward confirming the deductions just made in so far as reference is made to the American lines, which I now make part of these remarks:

Years.	Mileage.	Annual increase of mileage.	Freight cars owned.	Number of employees.	Total mileage of freight cars.	Passengers carried 1 mile.	Stock.	Bonds.	Total railway capital.	Capital increase by years.	Annual increase of capital per added mile.
1903	213,422	.....	1,753,389	1,312,537	[1] 14,039,924,661	[1] 20,795,314,141	$6,155,559,032	$6,444,431,226	$12,599,990,258	.....	.....
1904	220,112	6,690	1,798,561	1,296,121	[1] 14,560,997,712	[1] 22,347,726,788	6,335,899,329	6,873,225,350	13,213,124,679	$615,144,421	$91,950
1905	225,196	5,084	1,842,871	1,382,196	15,082,070,763	23,800,149,436	6,554,557,051	7,250,701,070	13,805,258,121	592,133,442	116,461

Increase in 10 years	.....	33,611	629,258	392,843	5,426,477,406	12,337,040,642	2,466,841,789	4,685,604,217	7,152,545,006	.....	.....

[1] 1903 and 1904 as to freight and passengers averaged from reports for 1900 and 1905.

Note that the railroads increased in mileage in the 10 years from 1902 to 1912, 33,611 miles, or 15.7 per cent. In the same period the total capitalization in stocks and bonds went up from $12,599,990,258 to $19,752,536,264, which amounted to an increase of $7,152,546,006, or 36 per cent. The railroads enjoyed tremendous prosperity during the 10 years immediately prior to 1903. There was plenty of water pumped into the capitalization during that period. There was no real reason why the railway capital should have even gone as high as it was then.

"THE WHOLE OF LAKE MICHIGAN" LET IN.

In May, 1879, when the St. Paul, Minneapolis & Manitoba Railroad was formed, the fixing of the amount of the capital stock was a much-discussed question. James J. Hill wanted to hold it at $5,000,000. George Stephen wanted it $25,000,000. He argued that they might as well put the stock up to begin with, for if they tried it later there would be raised the "demagogic" cry of "water."

"Water," said Hill; "we've let the whole of Lake Michigan in already."

Their differences were compromised at $15,000,000, for what was a difference of $20,000,000—all excess water—between "empire builders," especially since the real builders of the West—the farmers, the artisans, the merchants, the home builders yet to come to the West—would have to pay the debt and the dividends and interest for all time to come and make it a source of revenue, not burden, to these private fortune builders.

How is that for economy? Does anyone suppose Uncle Sam could possibly have been as extravagant, if he had taken the view that it was his duty to build and own the railroads instead of subsidizing them with land grants and concessions with these "empire builders" at the pump handle?

The railroads were generally started off on a three-to-one basis. If the road was to cost $100,000,000 they would issue $100,000,000 of bonds and $200,000,000 of stock. Then they would double this when they began operations.

THREE HUNDRED PER CENT OR NOTHING—BUT FIGURES AND PAPER.

Prof. William Z. Ripley, professor of economics in Harvard University, in "A comprehensive, unbiased study of the methods that have been used to raise money for American railroads," published in the Railway Age Gazette for May 29, 1914, sets forth the practices a generation ago. It might be remembered that the organizing and the financial methods of a generation ago were as far behind the frenzied railroad financing of to-day as the oxcart of that period was behind the automobile of to-day. Here is what Prof. Ripley had to say:

A knot of promoters planning an enterprise first formed a railroad corporation and authorized, let us say, capital stock to the amount of $1,000,000. This consisted of 10,000 shares, par value $100. This stock was issued to themselves part paid ($10 per share), $100,000 in all being temporarily borrowed for the purpose. A glowing prospectus then offered for sale two millions of bonds, with the proceeds of which the road was to be built. These bonds were sold at 80, with perhaps a bonus of stock thrown in, thus realizing $1,600,000 in cash. From this the promoters reimbursed themselves for the $100,000 already advanced, by charging a 5 per cent commission for placing the loan. This left $1,500,000 cash in the treasury of the railway corporation, as well as a controlling portion of its own capital stock. The next step was the organization by these same directors of a construction company, which built the road for an actual outlay of $1,200,000. The railway directors now voted to pay their construction company $1,500,000 in cash for this work, and in addition the remainder of the share capital of the road. A profit to themselves of $300,000 plus the prospective value of the capital stock, which had cost them nothing, obviously resulted. If the enterprise were henceforth profitably operated, all well and good. If not, it might fail even to pay interest on its bonds. If bankruptcy ensued, a receiver, possibly representing the old stockholders rather than the bondholders, was appointed. In any event the promoters had realized 300 per cent on their first investment, itself borrowed, from the profits of the construction company. Moreover they still controlled the railroad through its capital stock. Thus were the foundations of a number of large fortunes laid—enough, that is to say, to envelop American railroad construction in an atmosphere of disrepute by no means generally deserved.

"JONES PAYS THE FREIGHT."

Remember that the people of the United States are the ones that have to pay every cent of revenue the railroads collect. "Jones pays the freight." "All the traffic will bear," said James J. Hill after he had "let all of Lake Michigan in."

Let us see what that kind of capitalization and organization led to. I am, as near as possible, proving my case out of the mouths of the railroads themselves, so I turn again to the Railway Age Gazette and urge my economy argument—and, I might add, a morality argument—by quoting from that journal's editorial utterance of May 29, 1914:

What are the remedies for such outrageous mismanagement as obtained on the New Haven when Mellen was its president? It is up to the financiers and railway executives of America to cooperate with public officials in finding an answer to that question. The New Haven is not the only railway that has been Mellenized, and such revelations as have been made regarding the financial management of some roads are enough to shake public confidence in railroad management in this country. The situation is worse than that. They are enough to shake the foundations of the confidence of the people of this and of other countries in the financial management of all kinds of business concerns in America, for the men directly or indirectly responsible for the mismanagement of railroads are as largely interested and as potent in manufacturing, mining, and other industries as they are in the railroad business.

And observe further, from the same article:

The great danger is that the disclosures regarding the conduct of the Mellens and the rest of their ilk will cause the passage of more radical legislation than the conditions justify. If excessively drastic legislation shall be passed, we trust that there will be no hypocritical wailing from Wall Street about ignorant public hostility toward railways and about the public being misled by demagogues. The buccaneers in Wall Street and the fools and cowards in Wall Street who let the buccaneers work their wills are the chief authors of such legislation. It is a toss-up whether the demagogues or the highbinders of finance are doing the more to bring all the details of business under the regulation of public officials. Eugene V. Debs, Morris Hillquit, and Upton Sinclair think that they are the real leaders of the socialistic movement in this country. They take themselves too seriously. The real leaders of socialism in this country are such men as Charles S. Mellen and the directors of the New Haven, Frisco, and other roads, who are too crooked, cowardly, indolent, or incapable to perform the duties of their positions.

That is not spoken from a soap box. That is uttered by the railroads' own darling publication. It is not owned in the sense that Mr. Slason Thompson's "Bureau of Railway News and Statistics" or the "Washington Bureau of Railway Economics" is owned. That "bureau" is the railroads, but the Railway Age Gazette is very dear to the heart of the railway world. It has an authorized capital of $1,200,000.

THE WHOLE SYSTEM WRONG—THE MORGANS AS WRONG AS THE MELLENS.

The quotations cited tend to lay all this extravagance and the blame therefor on the Mellens and other managers. But at this point the editor of the Railway Age fails in his application of the facts. He is accepted as a good witness as to what are the facts, but when it comes to his opinion testimony we will have to go a little further, reserving the right to recall this able editor and his splendid journal from time to time as to additional facts. This New Haven case is so typical and bears so strongly on the economy feature of my argument that I am impelled to give a view of Mr. J. Pierpont Morgan and the House of Morgan as the most extravagant set of men known in the railway world from the standpoint of the public, of "Jones," if you please, who pays the freight. The Mellens are mere tools of the Wall Street looters.

Morgan & Co. admit having received $837,608 from New Haven loans under a certain fiscal agency contract entered into on December 19, 1910, and terminated December 4, 1913, for themselves and their associates. In the Morgan letter, published in Railway Age Gazette March 13, 1914, attempt is made to apportion over a period of 20 years the income received from the New Haven by the Morgan firm, such amount being fixed by the figures presented by Mr. Morgan at $17,500 per year.

That suggestion naturally brings to mind the question of annual outlay under this fiscal agency contract covering a period of three years. Divide the total by three and you have $279,201.66 per year for the three years.

ENOUGH TO SALARY COL. GOETHALS FOR 55 YEARS.

This sum of $837,605 would salary a Col. Goethals at $15,000 per year for more than 55 years. If anyone supposes it was not a bigger job to build the Panama Canal than it would be to manage the railroads of the United States as one great system, then such a one ought to stop the leak in his think tank. The canal job was a fight in the Tropics against terrific obstacles, involving sanitation problems and calling for ability to pioneer and blaze a way without precedent. The railway machine is already on the go. Its new problems could be solved one at a time with the aid of a big machine constructed through many years.

What did Morgan and his friends do for the $837,605 of admitted commission, which, of course, constitutes but a small part of the Wall Street peculations on the New Haven? He attached his signature to a few papers, thereby pledging the savings of the people on deposit with him and his associates. Then he wrote out a nice letter on a letterhead bearing the inscription, "We loan on character only," to the widows and fiduciary agents of orphans and incompetents, "We offer an unusually good line of securities; you are advised to buy quick." All the time Mr. Morgan had on deposit at least $1,415,000 of the company's funds. His letter admits this amount as the average deposit for 11 years. The deposit was probably very much larger during the period of the fiscal contract.

If the Government had owned the New Haven, Mr. Morgan and all underwriting banking connections would have been as

useless as are the unemployed in an automobile plant. He would have been in the way, wanting to get the bonds and tendering a premium for them at 2½ per cent. But under the other scheme he and his friends took down nearly a million in cash, besides the velvet in securities for selling the bonds at nearer 7 per cent, and he was after a million and a half more. Uncle Sam sold his canal bonds at 2 per cent; but they say he could not sell railroad bonds. No; not after the Morgan plan, the American people would not permit it.

ECONOMY, THY NAME IS NOT MORGAN OR WALL STREET.

I say, economy demands Government ownership. Remembering that the New Haven is only one little corner—a drop in the bucket—of the railway machine in the United States, it seems further proof would be unnecessary. But what I have just set forth is nothing, comparatively speaking. I have not hinted at the peculations yet. When the storm broke over the New Haven and the widows and orphans realized they had been robbed blind by Mellen—no; by Wall Street—these same men, led by Morgan—operating on "character"—were about to take another commission twice as large as the entire grab already referred to. He had his hands on $1,670,000. The whole crew were about to be prosecuted, when Mr. Morgan resigned, and gave out a lot of philanthropic blubber about having resigned to put an end to interlocking directors and to aid the President in establishing his "constitution of peace."

The New Haven is very like the others as an economy argument. Ex-Gov. Folk, of Missouri, as attorney for the Interstate Commerce Commission, rendered an invaluable public service in exposing these transactions, notwithstanding the unpatriotic efforts to defeat him in his splendid work. Attorney General McReynolds was going through a pantomime, pretending to want to get at Morgan and his assistants who looted the New Haven; but Gov. Folk was holding him. "Turn me loose and I'll get him," said the Attorney General. All the while he was as free as the birds. In a few days the whole aggregation were closeted with the President, getting aid to the tune of about a billion dollars of extra currency at public expense, issued by emergency act of Congress on money and credits owned by the people, to pay for the stocks Wall Street had bought and did not have the money to pay for. And such was the interconnection between the Government and these financiers, that they got the money and Mr. McReynolds got the Supreme Bench, while ex-Gov. Folk got the thanks of all sincere men for his splendid work.

WHAT DID THEY DO WITH THE SEVEN BILLIONS?

While economy is under consideration let us revert to the fact, as shown by the table I have incorporated in these remarks, that the total railway capital of the railways in the United States increased in the 10-year period expiring June 30, 1912, $7,152,546,007. What did they do with this vast sum, which is more than a third of the entire present railway capitalization? During the 10 years 33,611 miles of new lines were constructed. If the above sum was used for new mileage, the cost per mile was $212,801.

During this time the United States Government, which the railway men say is so extravagant, built two railroads and equipped them in the Reclamation Service, one in Idaho 19 miles long and one in New Mexico 13 miles long. Both are standard gauge. The Idaho railway has for three years been in operation with daily train service, carrying mail, passengers, and freight. Both lines are in mountain country, with heavy rock cuts and bridges. On the Idaho railway the cost was $19,937 per mile and on the New Mexico line $21,085 per mile. There are three expensive bridges on the Idaho line. Equipment on this line cost $35,000 additional.

If Uncle Sam can build railroads at $20,000 per mile, why can not the "empire builders" do as well? It is a well-known fact that standard-gauge railroad can be built over the western prairies under favorable conditions as low as $10,000 per mile. But suppose we allow for awkward empire builders and estimate their new line at $25,000 per mile. At this rate it took $840,275,000 to build the 33,611 miles. But that takes only a little more than 10 per cent of the original sum. Subtract this amount and there still remains $6,512,710,006. Now, the question remains, Who got this six and a half billions?

WHO GOT THE SIX AND ONE-HALF BILLIONS?

That would buy a great many poodles and even race horses and yachts. What became of it? Economy cries out and demands information. Unborn generations as well as the present are to pay interest on this $6,500,000,000 for all time. The public is interested directly in the matter. The empire builders simply laugh at the ignorance back of this question. "You go along, now," he says, "That money went for improvements." Hold on; let us see about that. The policy has been to limit the new capital to new construction and to make improvements out of surplus and earnings.

James J. Hill made that plain in a speech on December 19, 1912, at the annual dinner of the Railway Business Association, in New York City, when he made this statement:

Our capitalization per mile is from one-half to one-fifth that of European countries, partly because the initial cost of construction was greater there, but largely because of a fixed difference in policy. The American railway makes improvements so far as possible out of earnings or surplus, leaving capital account to carry only new construction.

Does anyone maintain that Mr. Hill did not know what he was talking about? Of course not. Then it must follow that the six and one-half billions was not spent for improvements, for American railways do not do it that way. Mr. Hill says they do not. Besides this the records indicate that the railroads claim to have spent out of earnings approximately $2,000,000,000 during those 10 years for improvements. That was over $8,000 per mile, and it would seem that no greater sum was spent exclusive of the liberal chargings for upkeep and maintenance. Besides, this six and one-half billions is over $26,000 per mile, and that was enough to build the whole line new, as is proven by the United States Government building difficult and expensive construction at $20,000 per mile.

SIX AND A HALF BILLIONS GONE; NOTHING TO SHOW FOR IT—THEY TOOK BILLIONS IN DIVIDENDS BESIDES.

Another reason why it is impossible that this six and one-half billions was spent for improvements is the present deplorable condition of the lines. Because of railway insufficiency, disaster threatens the welfare of every man who engages in any gainful occupation. But let Mr. James J. Hill say it. He knows. I might put it too weak. I quote from his speech in New York City December 19, 1912:

It is no exaggeration to say that the commerce of the country, its manufacturing and agricultural industry, its prosperity as a whole, and the welfare of every man in it who engages in any gainful occupation can escape threatened disaster only by such additions to and enlargements of existing terminals at our great central markets and our principal points of export as will relieve the congestion which now paralyzes traffic when any unusual demand is made upon them. Our natural material growth will make this their chronic condition in the near future unless quick action is taken.

If you increase the size of a bottle without enlarging the neck, more time and work are required to fill and empty it. That is what has happened to the transportation business. In 1907 traffic was blocked on nearly all the principal eastern railway lines. It took months to convey an ordinary shipment of goods from one domestic market to another. The deadlock was broken partly by a panic that lessened the volume of business and partly by the efforts of railway managements to add, by increased efficiency, to the moving power of facilities at command. We neither anticipate nor desire perpetual business depression. While the limits of efficiency have not been reached, we know that it can not be made to cover the demands of our growth in population and production.

You can see that the six and one-half billions was not spent for terminals or equipment or efficiency, because "there ain't no such animal." As Mr. Hill says:

In 1907 traffic was blocked on nearly all the principal eastern railway lines. It took months to convey an ordinary shipment of goods from one domestic market to another. The deadlock was broken partly by a panic * * *.

That is quoted, mind you, from Mr. Hill. It took a panic to save the railroads and move the freight. That very year—1907—the railroads issued $1,511,725,205 of new stocks and bonds. Oh, you Empire builder, you high financier! That was $244,461 per mile for every mile of new line constructed that year. I say economy demands that the people, through their Government, raise the necessary money and see to it that it is spent on the roads, and not to buy poodles and yachts. Mr. Hill says from five to seven billions additional will be required. "Rates and capital must go higher, stocks and bonds must more nearly approach the European level," he says.

TREASURIES EMPTY—RECEIVERSHIPS, 754; FORECLOSURES, 994; BILLIONS GONE, 6½+.

Another reason why I am convinced that these tremendous stock and bond flotations—this six and one-half and other billions—did not go into the properties either in the form of improvements or newly added lines is the record of financial failures the railroads have shown. The Statistical Abstract gotten out by the Bureau of Domestic Commerce of the Federal Government, page 285, shows that since 1874, 754 railroad companies, with an aggregate mileage of 145,176 miles and a capitalization of $8,262,453,699, have gone through the hands of the judiciary under receiverships, and that during the same period 994 companies of 121,026 mileage and $7,392,978,502 capitaliza-

tion have been sold by the courts under the hammer in foreclosure proceedings.

UNCLE SAM HAS BEEN SOME RAILROAD MAN AFTER ALL.

Approximately two billions of these receiverships occurred while the mysterious handling of this six and one-half and other billions took place—that is, in the last 10 years—and to-day 23,000 miles of the Rock Island is in trouble—worse trouble, beyond all comparison, than exists or ever has existed in the Government-owned roads of France or elsewhere, I might remark in passing. Then there is the Kansas City, Mexico & Orient, the Atlantic, Birmingham & Atlantic, and the Moffat road in Colorado, all in the same wrecked condition. Prof. Ripley, of Harvard, commenting on these last-named roads, says in the Railway Age Gazette, August 28, 1914:

Their troubles are somewhat peculiar and are, in the main, due to local circumstances; for most of them represent invasion of territories in which the great banking and railroad interests are already intrenched. Undoubtedly the hostility of the great powers to these independent companies has been an appreciable factor contributing to their downfall.

Note the words "the great powers" and "the great banking and railroad interests." Here you have a fundamental argument for public ownership. Not only an economy argument, but a moral argument, and a democracy as well. The New Haven and other lines might be added to the list and, according to the representations recently made in the effort to get the 5 per cent rate increase from the Interstate Commerce Commission, they are practically all broke or they will be. James J. Hill in the speech above quoted referred to impending ruin if rates were not raised, and added:

That ruin will not be so immediate or complete for the railroads themselves as it will be for the business interests to which they will no longer be able to give a prompt and adequate service. It will be far-reaching, because its effect will touch every man, however humble, who is engaged in protective industry.

Do not forget the point; I am talking economy, and asking what became of the six and one-half billion dollars of stocks and bonds above any sum that could have been spent on new lines. It appears that the vast sum was not spent in such a way as to prevent deficits, receiverships, foreclosures, and shortages—preventing improvements.

GOVERNMENT OWNERSHIP WOULD GIVE LOWER RATES.

Economy demands careful and honest rate making. It is not the men who ride upon the train or the merchants or the manufacturers alone who pay the transportation tax. Every individual pays a part of the tax whenever he eats a meal of victuals or buys a hat or a paper of pins. The transportation tax is parceled out almost on a per capita basis to everyone. The transportation tax is truly collected "at the source," the usual method being for the merchant to add 10 per cent for freight to every article as part of cost price before he offers it for sale.

The rate-making system of the railroads, instead of being a model arrangement where economy and impartiality prevails, as the defender of the special privilege of the railroad would have us believe, is the most gigantic travesty upon common sense or system in the world. Mr. Stickney, former president of the Chicago Great Western—an able railway president on the stand, remember—said in 1910 that there are 86,000,000,000—eighty-six billions; do you get that?—different rates in existence, and that these railroad tax collectors are changing these rates every minute in every working day.

If published—

Mr. Stickney says—

these rates would fill a bookshelf 1,530 feet long with books 8 by 10 inches in size. They would make 4,000 printed volumes of 1,000 pages each, an aggregate of 4,000,000 pages. (World's Work, November, 1910.)

With this conglomeration the railroads have been able to cover up the most glaring extravagance and favoritism, involving rebates and special privileges given to their particular friends. As tax gatherers they have used this transportation tax to develop certain sections at the expense of other sections. High-protection men would build a tariff wall to protect an "infant industry." Factories would grow up in various sections of the country in a dozen or more cities. In time in one of these cities, where the "right people" lived, the railroad transportation tax collectors would grant a special low commodity rate, and in a short time the other cities would find themselves short of orders, and the place that had the special rates would outstrip all other sections and become established as the great center for that particular product. Later I will take up the rate proposition more in detail and comparison. I refer to the general system now only to demonstrate that economy demands a change.

GOVERNMENT-OWNED LINES OF GERMANY ARE NOT BROKE.

But please compare the present policy in America with that which prevails in Germany. Prof. Lotz, cited by the Railway Age Gazette as a most reliable German authority, says Germany is charging too much. The railway system is a "Government milch cow," is the figure used, by which the German Government collects $200,000,000 clear profit, which sum goes into the public treasury each year, and three billions of value has been amortized for the public. Compare that situation with the deplorable condition the American roads are in. Prof. Lotz says German roads are "double, triple, and quadruple tracked," equipped up to the minute for military emergency as well as for commercial needs, but our poor, broken-down, failing, trust-tied, receiver-ridden, Mellenized, Morganated lines need from five to seven billion dollars, according to Mr. Hill, to put the roads in shape. They do need a tremendous sum to make up for the work of the looters, but who would get the money if they were permitted to sell the securities? You can hear them always calling for "More revenue," "More revenue." My mother used to tell us children a frog story along about time for the sandman's coming that ran like this:

"There was once an old toper who sat down to rest beside a stream in a lonely glen. A bullfrog observing a jug at the old man's side began to call out, 'More rum,' 'More rum.' The old fellow was good-natured, so he went to the brink of the stream where he heard the sound and poured overboard a little rum from his well-filled jug, and he returned to his rest. Presently the same voice was heard again calling, 'More rum,' 'More rum,' 'More rum.'

"The old man was a good-hearted son of old Erin, and so he responded time and again till the jug was about empty. The greedy frog increased its demand and set up a cry of 'Jug-an-all,' 'Jug-an-all,' 'Jug-an-all.'

"The old man saw he had yielded unjustly, but without feeling any pain of sacrifice whatever he heaved overboard the jug and all."

So we have the railroads calling for "More revenue," "More revenue."

It cost $12,000 to publish in the CONGRESSIONAL RECORD copies of the letters and communications sent to the Interstate Commerce Commission to try and intimidate that body into granting the rate increase recently.

Senator LA FOLLETTE, efficient, earnest, faithful, as he has always been, had the commission hand over to the Senate these myriads of communications. It took 50 men running a half million dollars' worth of linotype machines all day long to set the type, which amounted to nearly a ton of metal when ready for the cast. Think of the lawyers' fees, the salaries of secretaries and stenographers in railroad offices and chambers of commerce required to prepare those communications.

The demands of the private owners for "more revenue" will not end as long as human avarice and the "itching palm" exists. The time has arrived to call a halt and for the American people to no longer play the part of the silly and stupid old rummy. Transportation is a public function, and the time has come for the public to take the railroads, ownership and all.

GOVERNMENT ECONOMY AND LOW RATES DEMANDED.

In India you can ride at two-fifths of a cent a mile. In Switzerland you can ride half a month for $8.60 over all the steam, electric, and steamboat lines of Switzerland, or you can ride a whole year at a cost of 20 cents per day.

The following data is taken from Martin Johnson's book on Government ownership:

The public system of Belgium will carry you one-half a month for about $4.50; so also the public system of Hungary will carry you at $2.70, which is one-tenth of the charge here. The public system of Italy will carry you 963 miles for $7; the public system of Sweden 1,400 miles for $8.55; and that of Russia about 2,000 miles for $6. The Belgium system, furthermore, grants weekly tickets to workmen, good for 6 round trips or 12 rides, for distances and at rates as follows:

Three miles, 19 cents; 6 miles, 24 cents; 12 miles, 29 cents; 24 miles, 39 cents; 31 miles, 43 cents; 62 miles, 61 cents.

It will thus be seen that the Belgian laboring man can go to his work, 62 miles distant, or return for 5 cents, or a rate less than one-twelfth of a cent a mile.

These rates of travel promote the mobility of labor by enabling a man to go from his suburban place to the shops to work and in many other ways.

Prof. Frank Parsons says:

After studying Government freight rates on the ground and comparing them with American rates for similar distances and shipments, I found that the German per ton-mile rates on local traffic are generally less than one-third of ours.

Local rates in Germany and America compared.

Items.	Miles.	Average rate per ton-mile.	
		American railways.	German railways.
Iron ore	327	0.492	0.474
Structural steel	398	.73	.45
Cast-iron fittings	377	.69	1.28
Structural steel	63	2.22	1.17
Fertilizer	18	5.28	1.56
	36	3.33	1.20
	40	2.75	1.14
Raw cotton	22	4.55	2.75
	44	3.18	2.16
	39	3.08	2.24
Portland cement	65	2.15	1.16
	69	1.96	1.13
Hay	42	3.81	1.39
	98	2.45	1.04
Potatoes	34	3.53	1.21
	94	2.98	.92
Linseed oil	38	4.21	1.50
	39	3.59	1.50
	43	3.72	1.46
	78	2.05	1.34
Milk	20	18.40	5.18
	70	5.94	4.26
	31	9.68	4.81
	65	7.69	4.20

Is it not necessary to call a magician, a soothsayer, a wise man, to explain why the first four articles above fare so well on the trust-owned railroads of the United States?

AMERICAN RATES HIGHER THAN GERMAN.

They tell us American rates are lower than German rates. The facts prove the contrary. It is evidently unfair to compare German rates within the comparatively small area of Germany with rates in the United States at large, which contains an area so many times greater than Germany. By making a general average in which is included transcontinental hauls of trainload after trainload of lumber and coal and other commodities from one ocean to the other with the rate in Germany on small packages and large over the lesser area and the shorter haul, a lower rate per ton-mile apparently may be "figured" in this country by a good figurer, but in this discussion, in such imposing presence as is here assembled, it would be an insult to make any such comparison.

Railroad rates in the United States will not stand up under a fair comparison with German rates. It is conceded by all that the loading and unloading charges are the principal expense in freight transportation.

In Germany the average haul is 70.7 miles; in the United States the average haul is 244.05 miles. There is much more to be said for German rates as against American rates.

In Germany express is carried as regular freight. This is handled, of course, quite often and involves short local deliveries. Think of comparing the average rate per ton-mile on a carload of express packages hauled 100 miles and delivered at points along the line with a trainload of wheat or coal or lumber hauled 3,000 or more miles. In America we haul much more raw materials and mining products than in Germany, where more manufactured articles are hauled.

RATE COMPARISONS IN ENGLAND AND GERMANY.

England and Germany are similarly situated, and a comparison of rates in those two countries would be a test of private ownership and Government ownership under like conditions. The following comparisons are to the point:

It costs $5.72 to transport a ton of hardware from Birmingham to London, while the rate for the same class of goods over the same distance in Germany is about $2.25. Cotton goods, from Manchester to London, cost per ton $8.76; in Germany, the same distance, $4.86 to $5.60. General machinery, from Leeds to Hull, costs $6.09; in Germany, over precisely the same distance, $1.09 per ton.

SOME POSSIBLE SAVINGS ENUMERATED.

There are many other savings that would be made in addition to the savings on dividends and interest, which I will discuss later. Slason Thompson says in the New York Herald, August 30, 1908, that Government and State regulation cost the railroads $20,000,000 annually. I think that is a very conservative estimate for all the attorneys' fees and other expenses of the railroads in this line. No doubt the expense to the National Government and the 48 States is another $20,000,000. Here is $40,000,000 that could be saved to the public by Government ownership. The court expenses and receiverships, with all the fees and costs attached, when allowance is made for the judges' salaries, the witness fees and jury fees, lawyers' fees and all other expenses, I have no doubt, amount to another $20,000,000; so here we have $60,000,000 that the Government would save at the start.

In every city and town the several railways keep offices, with expensive appointments and clerks and stationery. Agents are kept in the field to solicit passengers and freight. Advertisements of all kinds are used. If the Government owned the railroads all these duplications would be cut out. Tremendous rent charges in the cities and towns would be saved, salaries of presidents would be eliminated. Freight cars would be at home wherever they were found, always ready for a load in any direction. They would not have to be sent back home. With a big "U. S." they would always be at home. Harriman always claimed that concentration would effect great savings along these lines. The Government pays a tremendous sum to the railroads for carrying the mail and other Government freight, and for carrying Government officers on official business and men of the Army and Navy. The profit on all this traffic would be saved. All these items would surely reach $40,000,000, and raise the total savings from these incidental items to $100,000,000 per year.

SAVINGS ON INTEREST AND DIVIDENDS.

All interest, dividends, surplus, and profits of every kind now realized, except the interest the Government would pay on the actual cash paid for the railroads on their funded debt, would be velvet for the Government. It seems to be generally conceded that $16,000,000,000 will cover the value of the roads and that the sum the Government would have to pay would not exceed that amount.

The Government could doubtless fund this sum in Government bonds at not over 3 per cent, or at $480,000,000 per annum for interest. In 1912 the total net revenue of the railroads was $871,005,294. The saving here would accordingly be $391,005,294. It should be remembered that we probably could not refund by ordinary methods all the bonds at once, some not being due, and all of this saving on interest could not be realized till all the bonds were refunded. But there would be many ways to bring the bondholders to time.

Another source of saving would be the increase in value of the real properties of the railroads, the coal lands, the oil lands, the terminals. That would surely amount to 2 per cent on the value of the roads, or $320,000,000 per year. In other words, the railroads, their upkeep being already fully allowed for, will double in value, reach $320,000,000, through unearned increment in 50 years. This is not an unreasonable estimate, considering the natural increase in population and in commerce in 50 years. German roads have more than doubled in value in less time.

Scientific management, according to so eminent an authority as Louis D. Brandeis—I will cite him presently—would save the railroads $365,000,000 a year, or one million a day. Depending on this feature, forgetting the melons that no longer would be cut, forgetting the commissions that never again would be paid to the Morgans and the great banking interests, forgetting the rebates that would be saved, and many other savings that might be mentioned, and we yet have to our credit over a billion dollars a year, as follows:

Miscellaneous	$100,000,000
Interest and dividends	391,005,294
Scientific management	365,000,000
Increase through unearned increment	320,000,000
Total	1,176,005,294

From this you can deduct 10 per cent for safe figuring and still have more than a billion a year, or practically $3,000,000 a day, of savings, or two million a day, exclusive of the unearned increment.

EFFICIENCY DEMANDS GOVERNMENT OWNERSHIP.

I have assigned efficiency of railroad service and management as a ground for Government ownership. Efficiency is involved in all I have heretofore said. There can be no efficient operation that is immoral. The widespread immorality in railway management is known to every child that is able to lisp the words "New Haven, Rock Island, Frisco, Pere Marquette, Southern Pacific." There have been investigations, prosecutions, and exposures without number.

I can not at this time go into the question of safety and dispatch, which is involved in efficiency, but I am sure that the administration of the post-office system shows that the Government will promote safety and dispatch to the highest degree possible. The great bulk of governmental activities are such that financial return, the balancing of expense against income, does not have to be considered. There is often criticism of the financing in those departments. But in every case where this

financial problem enters the Government always gives a good account of itself. The critics against the postal operation are growing fewer and fewer every year.

Three years ago Louis Brandeis (already referred to), opposing an increase of rates which was demanded by the railroads with an urgency most remarkable, advised the railroads that huge economies could be attained through scientific management that would save at least "$1,000,000 per day." In the conclusion of his brief in opposition to the granting of the demand for increase in rates Mr. Brandeis said:

> This investigation has developed clearly that the railroads, to meet any existing needs, should look not without but within. If their net income is insufficient, the proper remedy is not higher rates, resulting in higher costs and lessened business, but scientific management, resulting in lower costs, higher wages, and increased business. If their credit is impaired, the proper remedy is not to apply the delusive stimulant of higher rates, but to strengthen their organizations by introducing advanced methods and eliminating questionable practices. Thus they will maintain credit by deserving it.

I have already shown that there were many receiverships during all this period, and the railroads presented an awful story in order to get this increase. But all the railroads were not suffering. Some roads were prospering while others languished. There was not uniform efficiency; hence there was uniform inefficiency, for the lines must be considered as a system. The fact that the Pennsylvania carried an item of freight from New York to Chicago with absolute efficiency does not make efficient service if the item of freight originated at Boston and was not properly handled before it got to New York. The very fact that some roads are piling up such tremendous profits while others languish speaks most emphatically for inefficiency.

The rate increase in which Mr. Brandeis was first engaged was refused, but within a few months Sir George Paish, of the London Statist, a very eminent English authority on financial matters, expressed his views as follows, to Englishmen, who own about $4,000,000,000 of American railway securities:

> The securities of American railways appear to be specially attractive at current prices and were it not for the situations in the Balkans, and the heavy sales of stock that have been effected in consequence, much higher prices than those now current would prevail.

Yet American railway men a few months before were claiming their rates were too low to permit sufficient revenue and make their securities go on the market.

Further in the same article Sir George Paish says:

> From whatever point of view, therefore, the matter is regarded, stocks at current prices are attractive. * * * It will be seen from the statement herewith that, apart from any additional expansion, the Great Northern is earning a dividend of 11.6 per cent at the present time, and it is distributing only 7 per cent; that the Northern Pacific is paying 7 per cent on a very large ordinary capital; that the Union Pacific is earning 15 per cent and is paying 10 per cent; and that the Atchison and Southern Pacific are earning 9 per cent and distributing 6 per cent. * * * Indeed, we could go through the greater part of the securities of the railways of the United States and show the attractiveness of both bonds and stocks.

And in the Statist for March 1, 1914, only a few weeks later, Sir George says:

> The earnings of American railways continue to show large expansion. * * * In fact, all the indications continue to show that the profit in American railways in the current year to June 30 will be very large, and that no one need have any doubts as to the ability of the companies to maintain their current rates of distribution.

To be sure these views do not gibe with the dolorous records of receiverships and foreclosures any more than they do with the awful representations made of impending disaster when increased rates were wanted. But, aside from the fakery practiced, the whole situation tells of inefficiency, because the transportation problem is one problem for the whole country. Inefficiency in New England and Colorado and Texas cause the public to suffer. The Postal Service is the same everywhere, and so ought the transportation service to be uniform. It is absurd to call it efficient with one end of the line in the hands of a receiver or being sold under the hammer and the other end paying 15 per cent on "all of Lake Michigan." The toll of profits, the transportation tax, is not uniform. One section has to pay more than the other and every section suffers from inefficient service.

Some must do without service entirely, as is shown by the following instance of inefficient management and investment given Engineering News, November 5, 1914:

> A railway 90 miles long in western New York was to be abandoned on November 1, according to an order issued by the New York Supreme Court, which has directed the receiver of the property to cease all operation of trains and take up the track. The railway in question is that part of the Buffalo & Susquehanna Railway extending from near Buffalo to Wellsville. The company owning the road has been in the hands of a receiver for over four years. The court's action in ordering the discontinuance of operation of the road and the taking up of the track was made on petition of the United States Trust Co. of New York, the trustee for the bondholders of the company.
>
> The facts appear to be that the road in question is the least profitable part of the Buffalo & Susquehanna line to operate. Lines located farther south in Pennsylvania do an extensive coal business, but the difficult grades to the north make it cheaper to send the coal to lake ports over other roads than to haul it over the Buffalo & Susquehanna line from Wellsville. Undoubtedly the bondholders have the right to stop operating an unprofitable property and to get what little salvage they can out of it by taking up the rails. This salvage will be small, however, for under present market conditions relaying rails are salable only at a very low price.
>
> The abandonment of the road will be a serious matter to the farming communities along it, which depend upon it for transportation. The roadbed and tracks are in good condition, and represent an investment that could not be replaced, probably, short of $2,000,000.

Imagine how Mr. Slason Thompson would interview himself in a leaflet from his "Bureau of railway news and economics" if he had noted an incident of this kind in some Government-owning country. "A State railroad on the rocks," he would say, yet he could get the records of over 900 foreclosures in the United States alone under private ownership.

The article above quoted, which is perfectly reliable, gives the value of the road, which consists of 90 miles, at about $2,000,000, or $22,222 per mile. This company was capitalized at $10,000,000, and had a funded debt of $7,059,000. Stocks and bonds to value of road was nearly 10 to 1. Get the conductor to "put you off at Buffalo" and you can go out and see this. It is not in New South Wales or Borneo; it is in New York.

ENGLAND A WARNING AGAINST PRIVATE OWNERSHIP.

It may be profitable to consult the experience of other nations whose railways are privately owned. The only leading nations where private ownership prevails and Government ownership is not accepted as a national policy are the United States and England. Spain and Turkey come next, if you would call them "leading." I have already cited the United States to prove the general proposition that private ownership leads to extravagance and public ownership to economy and efficiency, and have shown by the excessive aggregate English capitalization where we are going to land.

When an empire builder wants to brag about what American private lines have done, he generally refers to the high capitalization of England. James J. Hill, in his New York speech, December 19, 1912, placed the capitalization of the lines of the United Kingdom at $275,000 per mile and in England alone at $314,000 per mile. Here you have a sample of what private ownership will do if given license. I have already shown that American roads increased their capitalization over $7,000,000,000 in 10 years. With the surplus laid aside and the betterments they claim to have made out of earnings during this 10 years you have nearly a billion of increase per year. How long will it take us to reach England's capitalization?

Mr. Slason Thompson, of his railway bureau, issued a statement on October 4, 1908, which he called Leaflet No. 2, to show the utter futility of Government ownership. Comparing the American railway shipping with that on the State-owned lines of New South Wales, Australia, he said:

> If American shippers, in 1907, had paid the Australian rates on the freight carried, their total payment to the railways would have been $5,678,433,362, instead of $1,823,651,998 they actually paid; where they have been credited with nearly $4,000,000,000 in the ledgers or the good will of American shippers.

Of course it would be just as reasonable to compare taxicab rates with street car rates as to compare the sparsely settled island Commonwealth of Australia with the great American Republic. But the comparison is useful, for 12 days later Mr. Thompson, who is doing this work for the railway companies, issued Leaflet No. 3. In this he compared England and the United States, and told the public what the American people would have to pay at English rates. He said:

> Applying the British rate of 2.34 cents to the freight carried by American railways in 1907 would have cost American shippers $5,536,472,527, which is $3,712,820,618 more than they did pay—or within $300,000,000 of $4,000,000,000.

So, according to the railways' bureau, run by the railways' representative, Mr. Thompson, if American shippers paid Australian rates they would lose approximately $4,000,000,000, or if they paid British rates they would lose approximately $4,000,000,000. The United States is all right in that comparison, but what becomes of England, with a population of 34,488,233, to 1,646,734 in New South Wales—the particular Australian State in question—over twenty times the population, yet an area in England of 58,575 square miles to 309,460 in New South Wales. The density of the population in England is 588 to the square mile, in New South Wales 5. About 100 to 1, yet New South Wales, under State-owned lines, has just as low rates as England under private ownership. The States of the Commonwealth of Australia are unfortunate in not having uniform gauge of railway between the several States, much to their detriment. But any arrangement under Government ownership can cope with private ownership in its native heath

and fully perfected as in England. Certainly England has had time and opportunity to perfect her system.

Mr. Slason Thompson made a comparison of interest which I will quote here which compares Government ownership with private ownership in Europe as to the proportion of earnings paid to labor. He compares these figures with certain American figures which I will not add. He made the comparison on December 17, 1908, in a paper before Friendship Club at Oak Park, Ill., referring to 1907 records as follows:

England devoted to earnings 37 per cent of income and to labor 27 percent.

Germany devoted to earnings 35 per cent of income and to labor 34 per cent.

France devoted to earnings 40 per cent of income and to labor 31 per cent.

These figures show private ownership of England lowest in proportion of income devoted to labor.

ENGLISH FINANCIERS AND RAILROAD MEN ASHAMED OF THEIR SYSTEM.

Let us get the full truth about private ownership of railroads in England from those who know. Every student of financial and commercial subjects knows Sir George Paish, editor of the London Statist. I am going to quote from "an authorized report"—perfectly English, don't you know—by Lord Claud Hamilton, chairman of the Great Eastern Railway, to his executive board, published in the London Statist on February 21, 1914; and for fear some one will think this a phoney statement or some wild-west ebullition—such, for instance, as Mr. James J. Hill made when he told how all the American privately owned railways are about to go broke and bring calamity on the country and on every individual engaged in industry, "inevitable unless you raise rates so we can get several necessary billions"—I am going to let Sir George Paish introduce Lord Claud Hamilton, chairman of the railway board, and editorialize his "authorized statement." I quote from a leading editorial by Sir George Paish, in the Statist of February 21, 1914, entitled "Railway management: Science versus rule of thumb":

The country owes a deep debt of gratitude to Lord Claud Hamilton and to the board of the Great Eastern Railway for having at length discovered the grave situation of our railway industry and in having manfully and honestly disclosed to everyone the real state of affairs. The disclosures of the chairman of the Great Eastern Railway are the more important because hitherto Lord Claud Hamilton has been one of the pillars of the old edifice, has imagined that the management of the British railways was beyond criticism, and that what British railway managers did not know was not worth knowing. We are convinced that no one deplores the necessity for his statements more than Lord Claud Hamilton himself, an Englishman of Englishmen.

* * * * * * *

No one regrets the necessity for the speech of the chairman of the Great Eastern more than the editor of this journal. In almost every direction England takes either the premier position or is a good second.

* * * * * * *

But the business of railway transportation, where everything was favorable to us and where we ought to have held the lead and set an example to all the world, is still conducted upon principles very similar to those upon which our great-grandfathers carried on the business of transportation in mail coaches and in carriers' carts.

* * * * * * *

Lord Claud Hamilton has truly described what has been going on in an interview this week: "My company has endeavored, by arranging for their staff to attend lectures at the London School of Economics, to give them some training, but it did not appear to have led to any result." How could Lord Claud expect results? The lecturer can not lecture without material, and scientific material about British railways is neither compiled nor permitted to be compiled, except by the Northeastern Railway, and only a very small amount of the Northeastern data are published.

I might break in at this point to call attention to the fact that it was the Government of the United States, not the American railway managers, that forced the collection of data and scientific material in the United States.

Sir George Paish continues:

Surely when a chairman of the importance of Lord Claud Hamilton makes a statement such as the following the errors from which our railways have suffered and are still suffering will now be remedied:

"It is a subject of great regret to my mind and to the minds of all chairmen that on our English railway systems at the present time there is an acknowledged dearth of first-class men coming to the front capable of fulfilling the duties of general managers. But this does not apply merely to the office of general manager. There is dearth of first-rate men coming to the front for even our minor appointments."

* * * * * * *

Sir George continues to quote from Lord Claud:

I believe the system in vogue at the present time on all our railways has outgrown its usefulness. Our railway systems are divided into what I may call water-tight compartments. You have the traffic department, the goods department, the engineer's department, and other departments, and they are kept so apart that as a rule there is very little exchange from one to the other on the part of young men who form the majority of the clerks belonging to those departments.

Sir George concludes the write up:

We have dealt with it (Lord Claud's statement) in the manner that we have because we realize that the unscientific working of British railways was a very serious matter, * * * because it entails heavy and unnecessary burdens of expense for railway transportation, which the country ought not to be called upon to bear, a burden that falls with great weight upon the shoulders of the vast number of men employed in the railway industry at low rates of wages, as well as upon traders and passengers. Our unscientific railway methods have already caused the country unnecessarily to expend hundreds of millions of pounds of capital which otherwise would have been available for increasing the income and wealth of the nation and thereby contribute to the well-being of every citizen.

The upshot of this whole affair was that Lord Claud announced to his board that he had hired an American railway manager to come over and take charge of the road. But that will not remedy the situation. The American manager will find his hands tied—and then the things already full of water—might as well send for the hose to cure dropsy.

NATIONALIZATION IS THE PROPOSED REMEDY IN ENGLAND.

There is only one remedy. That is for the public to take over and own the agencies of transportation. It will come in England either by revolution and confiscation or by a square bargain. In England it is admitted that public sentiment is strongly in favor of Government ownership, and a royal commission has been appointed to study the matter. In commenting on the situation in England, the Railway Age Gazette of December 5, 1913, says:

The growing interest in the subject of railway nationalization is strikingly illustrated by the recent appointment in Great Britain of a royal commission to inquire into the relationship between the railway companies and the State in respect of matters other than safety of working and conditions of employment, and to report what changes, if any, in that relationship are desirable. The announcement comes almost simultaneously with that of the National Civic Federation in this country of its intention to undertake a national survey of social progress which will include a study of the question whether regulation of railways and other public-service corporations is a failure and whether State ownership should be substituted for that of private capital.

Mr. E. M. Ackworth, the most conservative railroad authority in England, made a statement recently to the effect that 9 out of every 10 people in Great Britain would vote for public ownership if the question were submitted to a vote.

The Nation, one of the most reliable English journals, on October 11, 1913, had an article on "The coming nationalization of railways." The article referred to the movement as one which is "rapidly advancing." Further the following language is used:

When we find such a champion as Mr. W. M. Ackworth predicting the probability of nationalization we know what to think. Indeed, any far-reaching business man with a large holding of railway capital can hardly fail to perceive that he stands to gain by a favorable deal in the near future with the State.

I have already compared rates in England and Germany and showed the advantages that exist in favor of Germany.

SPAIN SUBSIDIZES PRIVATE LINES.

Spain is recognized as a private-ownership country. Every year the people go into their pockets for taxes to the railroads. Under public ownership such taxes would be heralded by the paid publicists of the American railroads as deficits. The roads would be called failing lines. Spain levied and laid aside for railroad aid in 1908, 10,000,000 pesetas—about $2,000,000—and in 1912 this sum was increased to $3,000,000. It is said, however, that the actual liability of the Government under its guaranties in respect to its concessions granted up to January 1, 1912, amounted to $600,000, the remainder of the sum still being held as a surplus to guarantee private railroad interest. The service is wretchedly poor, and rates are high for the service rendered. The lines are maintained at a different gauge to the French roads. Great inconvenience is experienced and great economic losses sustained. The remedy there is the same as elsewhere. Last March the following press notice was sent out, which tells of the awakening of Spain to the necessity of nationalization:

MADRID, *March 17.*

The ministry of commerce has ordered plans drawn for a standard gauge railroad with double track from the French frontier to Madrid to insure direct and rapid communication between the Spanish capital and the north.

It is calculated that the time occupied by the journey can be reduced from 13 hours to 7, and the journey from Paris to Madrid, which now takes 27½ hours by the fastest train, it is hoped will be reduced to 20 hours. The new road will also do away with the inconvenience of changing cars at the frontier.

GOVERNMENT OWNERSHIP BEING UNIVERSALLY ADOPTED.

Many do not realize that Government ownership of railroads has been accepted by the verdict of practically all the civilized nations of the world as essential. The soundness of the principle that railway transportation, just as the postal service, is a Government function has been generally recognized. Only four important nations refuse to recognize the principle. These are England, Spain, Turkey, and the United States.

Without question public ownership is inevitable, and, for many reasons, the quicker it comes the better. Like the offerings of the sibylline woman to Tarquin, the Roman Emperor, the price is ever increased while the value and volume of the

offering diminishes. The Government has already advanced far toward public ownership. The railroads recognize this fact. It is the universal claim of the railroads that unless the lines of regulation are relaxed Government ownership will come, and the representatives of the people say to the railroads that unless they reform and submit to regulation cheerfully the people will take the roads.

The Railway World, though strongly opposed to Government ownership, in March, 1909, said:

Government ownership is the inevitable consequence of the present system of regulation.

The late President Finley, of the Southern Railway, said in 1909:

I do not believe that the sentiment of a majority of our people is in favor of Government ownership, nor do I believe that Congress and our State legislatures are consciously moving in that direction; but I do believe that if some of the more extreme legislation already enacted is supplemented along the lines now proposed the immediate result must be the breaking down of the system of private ownership.

Surely there has been no let-up, and plenty of supplemental legislation has been enacted. There is no disposition to retreat. The Interstate Commerce Commission assumes new and far-reaching power in the recent rate decision.

Prof. Hadley, president of Yale, a firm believer in private ownership, sums up the situation in his work on Railway and Transportation as follows:

There is a strong popular feeling, to a large extent unsuspected by those in authority, in favor of Government ownership of railways as a system. No one can have much to do with the more thoughtful laboring man without finding out how strong the feeling is and what hopes are based upon it. The fact that the question is not under discussion must not blind us to the fact that forces are at work which may prove all but revolutionary when the question does come under discussion.

Only a few months ago Chairman Thorne, of the Iowa State Railroad Commission, declared for Government ownership of railroads, and expressed the opinion that Government ownership would lessen transportation taxes at least $400,000,000.

The Railway Age Gazette, very partisan in favor of private ownership, and an advocate of the railroads from every standpoint, in its issue of December 12, 1913, recognized that the question of Government ownership is now a burning question before the American people and urges the railroads to meet the question with the best arguments that can be presented.

PRESIDENT WILSON FOR GOVERNMENT OWNERSHIP IN ALASKA.

What does President Wilson mean in his recent message, when he says:

A duty faces us with regard to Alaska which seems to me very pressing and very imperative; perhaps I should say a double duty, for it concerns both the political and the material development of the Territory. The people of Alaska should be given the full Territorial form of government, and Alaska, as a storehouse, should be unlocked. One key to it is a system of railways. These the Government should itself build and administer, and the ports and terminals it should itself control in the interest of all who wish to use them for the service and development of the country and its people.

There is no argument for Government ownership and operation of railroads in Alaska that does not obtain everywhere else in America. Private ownership is just as logical or illogical there as anywhere else.

Under date of June 8, 1914, the following news item was published from London:

Probably the most important and significant—certainly the most comparative and frank—statement yet made by a United States railway magnate was given out to-night by Newman Erb, president of the Minneapolis & St. Louis, Denver & Salt Lake, Ann Arbor, and Tennessee, Alabama & Georgia Railroads. Mr. Erb for the past 30 years has been prominent in the railway enterprise of the United States. The fact that he is in close touch with President Wilson and intimate friend of former President Roosevelt and a frequent witness at sessions of the Interstate Commerce Commission lends added interest to the statement: "Nationalization (Government ownership) of railways in the United States is inevitable. The prime troubles of the railways as at present constituted is the fact that the actual owners no longer control them, but are forced to bow to the dictates of the great banks upon which they are dependent. What I am going to say I already have told President Wilson. And when I addressed the President I spoke for, and now speak for, virtually every practical railroad man in the United States; that is to say for every man interested in the ownership of railroads. The nationalization of railroads is as sure now as taxes."

A still better argument for Government ownership than the fact that it is coming is that it already has come. Only minor and unimportant countries hold out firmly and rigidly against it.

The Government can operate these enterprises successfully. The Panama steamships, after allowing the ordinary amount for depreciation, charging to profit and loss the value of one of the vessels which was wrecked, still made an ample return on the capital invested, after reducing the rates practically 50 per cent and hauling cargo after cargo of Government freight and passengers without any profit whatever. The Panama Railroad is making a splendid success, as the Government reports will show.

The Reclamation Service is a marvelous success, and has increased the national wealth in large sums by turning barren wastes into cultivable lands. The Government operates a coal mine about three-fourths of a mile north of Williston, N. Dak., to supply fuel for the reclamation power house.

The main entry to the mine is about 2,000 feet in length, 6 feet wide, and 6 feet high. The underground workings are at an average depth of 100 feet. Ventilating shafts secure good air. Perfect drainage is maintained, and the mine is kept dry for the workmen.

ONE OF THE BEST ARRANGED MINES IN THE STATE.

The State mine inspector inspects the mine regularly, and in a recent report says:

This is one of the best arranged mines in the State and is kept in safe condition.

The average output is 100 tons per day. About 12 to 15 miners are employed and paid 60 cents to 80 cents per ton, depending upon location. The average output of a miner is 6 to 10 tons per day. On December 31, 1913, the report showed that 34,365 tons had been mined.

The net average earnings after expense for explosives and supplies is deducted are $3.50 to $5 per day of eight hours. Laborers on track work, hauling, and so forth, are paid $2.75 per day for surface and $3 per day for underground work. Miners are furnished with permissible explosives at a slight advance above cost. A mess is maintained at the mine where meals can be obtained for 25 cents. Sleeping quarters are furnished free. A bathroom with individual lockers gives the men an opportunity of using hot and cold shower baths. During the six years that this mine has been operated no fatal accidents have occurred, and only two or three serious ones. One miner had his leg broken by the fall of coal immediately after a blast. His net earnings were $4.72 per day, and he was paid this amount under the compensation act of May 30, 1908, during the period of disability.

The mine was opened in 1908, and up to 1913 was operated only during the irrigation season of about five months in each year. The average amount of coal mined has been about 5,000 tons per year, and on June 30, 1913, a total of 30,000 tons had been mined at a cost of $1.78 per ton, including all maintenance costs. In future, due to the fact that electric current is being supplied to the city of Williston under contract, the mine will be operated continuously, and it is expected that about 10,000 tons of coal will be mined per year and that the cost will be reduced, as it will not be necessary to maintain the mine idle for seven or eight months of the year. In 1911, during the five months that the mine was in operation, the cost of mining coal was $1.41 per ton, with a minimum charge of $1.31 in July.

If we adopt the lessons of the Panama Railroad and its steamships, and the Alaska Railroad, and the Government railroad at Arrow Rock Dam, in North Dakota, in the Reclamation Service, all owned by the Government; and if we catch the facts about the ship-purchase bill, now pending, and, it is hoped, soon will be enacted into law, we must conclude that the policy of Government ownership of railroads soon will become an established policy of the United States of America.

MESSAGE FROM THE SENATE.

The committee informally rose; and Mr. IGOE having taken the chair as Speaker pro tempore, a message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed joint resolution of the following title, in which the concurrence of the House of Representatives was requested:

S. J. Res. 210. Joint resolution to authorize the President to invite certain Governments to send delegates to the Pan American Medical Congress.

The message also announced that the President had approved and signed bill of the following title:

S. 6121. An act to authorize the construction of a bridge across the Niagara River, in the town of Lewiston, in the county of Niagara and State of New York.

SUNDRY CIVIL APPROPRIATION BILL.

The committee resumed its session.

The CHAIRMAN. If there is no further general debate, the Clerk will read.

The Clerk read as follows:

Aberdeen, Wash., post office: For commencement, $1,000.

Mr. GILLETT. Mr. Chairman, I have an amendment which I wish to offer, but before offering it formally I think I can save time by stating the purpose of it. It is a very long one and I will not read it. I now move to strike out the last word.

Mr. BARTLETT. May I interrupt the gentleman?

Mr. GILLETT. Certainly.

Mr. BARTLETT. I understand the gentleman from Massachusetts [Mr. GILLETT] proposed to offer an amendment as to certain various items in this bill. And the purpose of your

suggestion was that the motion to strike out might be made in a lump? Is that it?

Mr. GILLETT. I will explain. My purpose is this, namely, to strike out all after line 2, on page 2, down to and including line 6, on page 22, which means to strike out all the appropriations for public buildings, and then insert a list which I have written out here, covering two pages, of all the buildings which are now in progress.

Mr. BARTLETT. In other words, the gentleman proposes to strike out of the bill all beginning with line 2, page 2, down to line 7, page 22? Is that it?

Mr. GILLETT. That is my purpose. It is to strike out all the public buildings, and then reinsert those which are under progress of construction now. My intent and argument is this, that with the state of the Treasury to-day and the probable income during the next fiscal year public buildings are a luxury and not a necessity, and it is wise for us to defer these buildings, which can be just as well appropriated for later, and not appropriate for any of them the coming year.

Mr. PAGE of North Carolina. Will the gentleman allow a suggestion? Will the gentleman ask unanimous consent to be allowed to offer his amendment at the place designated at the end of these public buildings, covering all these items? I think that would reach the purpose the gentleman has in view.

Mr. GILLETT. I will be perfectly willing to do it in that way.

Mr. PAGE of North Carolina. That will save the gentleman offering an amendment after each of these items separately, and would be valuable in the interest of time.

Mr. HARRISON. Mr. Chairman, is it proposed not to have the amendment read?

Mr. BARTLETT. It has not been read yet.

Mr. GILLETT. I was going to explain it first.

Mr. MANN. If the gentleman will permit, the amendment is in order at this place, and he has the right to offer an amendment here.

Mr. PAGE of North Carolina. To strike out this amendment?

Mr. MANN. To strike out this amendment and give notice after his amendment is agreed to to strike out the other items as they were read.

Mr. PAGE of North Carolina. As they were read?

Mr. MANN. Yes; as they were read; but it would probably be better to give him the right to offer his amendment after line 6, on page 22, is read.

Mr. PAGE of North Carolina. That was the suggestion I made to the gentleman, to proffer a unanimous-consent request, in the interest of saving time.

Mr. GILLETT. Mr. Chairman, I wish to consume as little time as possible, and so, in accordance with the suggestion of the gentleman from North Carolina [Mr. PAGE], I ask unanimous consent when we shall have reached line 6, on page 22, to offer an amendment.

Mr. FERRIS. Mr. Chairman, reserving the right to object, what is the purpose of this, more delay?

Mr. PAGE of North Carolina. The gentleman should know that the committee in reporting it is going to stand by this bill.

Mr. FERRIS. Some of these buildings have been authorized for seven years, and they have not been built yet. I do not think we should wait any longer.

The CHAIRMAN. The gentleman from Massachusetts [Mr. GILLETT] asks unanimous consent that when we shall have reached line 6, of page 22, he shall be permitted to return to offer an amendment striking out all the items after line 2, of page 2, and substituting some provision in lieu thereof. Is there objection?

Mr. DONOVAN. I object, Mr. Chairman.

The CHAIRMAN. The gentleman from Connecticut [Mr. DONOVAN] objects.

Mr. DONOVAN. I will withdraw it, Mr. Chairman.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none, and it is so ordered. The Clerk will read.

The Clerk read as follows:

Fayetteville, Tenn., post office: For completion, $15,000.

Mr. TAYLOR of Arkansas. Mr. Chairman, I offer an amendment, which I send to the Clerk's desk.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Arkansas.

The Clerk read as follows:

Page 7, line 13, after the figures "$15,000" insert "Fordyce, Ark., post office: For completion, $50,000."

Mr. TAYLOR of Arkansas. Mr. Chairman, in 1910 Senator ROBINSON, who then represented my district, obtained an authorization for a site for this building, and in March, 1913, I secured authorization for the building. I trust the committee will now permit my amendment to go in. The people need this building. Fordyce is a splendid and flourishing little city. Until this bill was reported I felt, from information obtained, that the authorization which I had secured would be carried and that the appropriation of $50,000 would be made available. I know that war conditions have shortened our revenues, but, considering the fact that the Government is now paying six or seven hundred dollars yearly as rent for a post-office building, I sincerely hope the appropriation will be granted.

Mr. FITZGERALD. Mr. Chairman, I wish the committee to understand exactly what the situation is relative to this building. The same situation exists relative to two other buildings. The appropriations for public buildings carried in the bill are for public buildings in their order in the program established by the Treasury Department in accordance with the well-known rule. When a site is actually obtained and the building authorized, a number is given to the project. Thereafter, as new projects are taken up, they are taken up in numerical order. No building is provided for in the pending bill except such as have been taken up in accordance with that well-established rule.

The Treasury Department requested that provision be made for three buildings which it was proposed to advance out of their turn—one at Arkadelphia, Ark.; one at Fordyce, Ark.; and one at Willow, Cal. It was stated that the reason for advancing those buildings out of their order was that a proposal had been made that the citizens of the localities or some other persons should furnish to the Treasury Department the plans in accordance with which the buildings were to be erected. The committee reached the conclusion that even if the plans were prepared and furnished by some outside party, the Supervising Architect's Office would be compelled to give such time and service in the examination of the plans in order to determine whether they were satisfactory, as to amount, practically to the preparation of the plans themselves. The committee followed the rule that has been followed by the committee during my service upon it—not to recommend appropriations for buildings out of their order except in the case of some very extraordinary emergency, resulting, for instance, from the destruction of an existing building by fire or some other catastrophe.

At Fordyce, Ark., a site was authorized in 1910, to cost $5,000. In the public building bill of 1913 a building to cost $50,000 was authorized. If this building be provided for at this time because plans are furnished by some source other than the Supervising Architect's Office, it means that this building will be advanced over a great many other buildings which had been authorized a number of years previously.

These are the facts. The Committee on Appropriations did not believe that it would be justified in recommending appropriations to advance the three buildings out of their turn, and I am compelled to antagonize the amendment offered by the gentleman from Arkansas.

Mr. BURKE of South Dakota. Mr. Chairman, will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. BURKE of South Dakota. I would like to ask the gentleman on what basis these estimates are made. Are the buildings on the market and ready for construction when these appropriations are made?

Mr. FITZGERALD. Some of the appropriations are for buildings now under construction, and others are for buildings for which it is expected contracts will have been let and construction commenced prior to June 30, 1916.

Mr. BURKE of South Dakota. I notice there are a number of these items, where the appropriation is only $1,000, reading, "For commencement, $1,000." Is it expected that you can commence the construction of a public building to cost perhaps from $50,000 to $300,000 by expending a thousand dollars?

Mr. FITZGERALD. The appropriations for public buildings are immediately available, and continue available until expended. For more than 20 years at the short session of Congress it has been the policy to appropriate for a period of 16 months, and at the long session of Congress to appropriate for a period of 7 or 8 months. Now, for any building that the Treasury Department believes will be under contract and work commenced upon it prior to the 30th of June, 1916, such sum has been included as will be required, and in a number of instances not more than $1,000 is required to pay for some preliminary expenses.

Mr. BURKE of South Dakota. Let me ask the gentleman one further question. Do these amounts usually follow the estimates submitted by the Secretary of the Treasury?

Mr. BARTLETT. Altogether.

Mr. FITZGERALD. Altogether. The committee accept the recommendation of the department and carry the amount recommended.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas.

The amendment was rejected.

The Clerk read as follows:

Georgetown, Ky., post office: For completion, $45,00.

The CHAIRMAN. The Chair will call the attention of the gentleman from New York to the fact that a cipher has been omitted inadvertently in line 25, on page 7.

Mr. FITZGERALD. It should be $45,000. I ask that the Clerk correct it.

The CHAIRMAN. If there be no objection, the correction will be made.

The Clerk read as follows:

Globe, Ariz., post office and courthouse: For commencement, $1,000.

Mr. MADDEN. I move to strike out the last word. What is the limit of cost on this post office where $1,000 is appropriated?

Mr. BARTLETT. One hundred thousand dollars.

Mr. FITZGERALD. Very frequently this appropriation is to pay the expenses of sinking test pits on the site.

Mr. BARTLETT. Getting ready.

Mr. MADDEN. That is an extraordinary situation.

Mr. MANN. At Globe, Ariz.; that ought to be sufficient to build a post office for that town.

Mr. FITZGERALD. The Supervising Architect states that it is expected that funds will be required before the close of the fiscal year 1916 for the sinking of test pits and the surveying of the site, and he asks $1,000.

Mr. MADDEN. Is the lot purchased?

Mr. FITZGERALD. Oh, yes.

Mr. MADDEN. One thousand dollars for sinking test pits!

Mr. FITZGERALD. And surveying the site, in order to determine the dimensions of the building.

Mr. MADDEN. Everybody who builds a building in Globe, Ariz., or anywhere near there, knows exactly what the character of the earth is upon which the foundation will have to be built.

Mr. FITZGERALD. The Supervising Architect's Office in all these cases determines the character of the earth in which the foundation is laid.

Mr. MADDEN. It is just like throwing money into the lake to spend $1,000 for the purpose which the gentleman has stated, and it is evidently only for the sentimental purpose of allowing the Representative from that district to say to his people that he got an appropriation.

Mr. FITZGERALD. I am unable to answer that. The Supervising Architect states that that is what is required.

Mr. MADDEN. What is the limit of cost of the building?

Mr. FITZGERALD. One hundred thousand dollars.

Mr. MADDEN. An appropriation of $1,000 is a farce under such circumstances, and it ought not to be allowed to go into the bill. It is just like a game of bunco on the Members of the House, pretending to say that $1,000 is needed for the purpose of sinking test pits. I have never seen a case before in any other bill where such an appropriation was made. It is the first case. It is useless. It is a waste of money. It does not accomplish any good, unless it helps the Member from that district politically, and I do not know whether that is any good or not.

Mr. FITZGERALD. Such items have been carried in the sundry civil bill as long as my memory goes back.

Mr. MADDEN. A thousand dollars?

Mr. FITZGERALD. A thousand dollars. The gentleman will understand that when the department advertises for bids it either must give information as to the character of the material to be found in the excavation or else the contractor must make such allowances that it will be impossible for the department to make contracts that will be of very great value.

Mr. MADDEN. In all my years of experience I have never seen anything of that sort necessary, unless you were going to build a tunnel somewhere.

Mr. FITZGERALD. The gentleman is talking about how private concerns would conduct business, and we are talking about how the Government conducts it.

Mr. MADDEN. I know how the Government ought to conduct it.

Mr. FITZGERALD. The Government advertises for the construction of a building upon a certain site——

Mr. MADDEN. I know.

Mr. FITZGERALD. And it furnishes the bidders information regarding the site itself.

Mr. MADDEN. It furnishes a plan of the site and the specifications on which the man makes the figures in connection with the plan.

Mr. FITZGERALD. And it furnishes information of the character of the ground.

Mr. MADDEN. Everybody that bids on a little building like this knows the character of the ground, and if the Government did not furnish it he would find out himself. No man of any responsibility would bid on putting up a building and take the Government information without ascertaining it for himself. I say it is money thrown away.

Mr. FITZGERALD. I suppose somebody must make a survey so that the building will fit the site.

Mr. MADDEN. The plans are there, and the man that is going to put up the building always sees that the building is put on the lot in the way that it ought to be, and there is no need of any special survey.

Mr. FITZGERALD. The gentleman from Nebraska [Mr. MAGUIRE] smiles at me. I recollect that in a case in Nebraska, I do not know whether it was in his district or not, after a building had been erected, it was found out that one side of it had been erected upon either a filled place or on particularly soft ground, and before it was possible to move into the building it was necessary to provide money to make the building stand up and keep it stable.

Mr. MAGUIRE of Nebraska. Mr. Chairman, I wish to verify in part what the chairman has just said. There were unforeseen conditions in the earth, the ground many years before had been filled in, and it made it practically impossible to complete the building in the best form. The architect had to do a part of the work over again, to reinforce the foundation, because of the fact that the architect and inspectors did not understand the formation of the ground upon which they built.

Mr. DILLON. Will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. DILLON. I see that there are 36 of these $1,000 appropriations. They are for sites that have already been secured.

Mr. FITZGERALD. They are for buildings upon sites that have been secured.

Mr. DILLON. I fail to see any necessity for the appropriation, but it rather shows the activity of the 36 Congressmen.

Mr. FITZGERALD. That may be a desirable reason.

Mr. GOULDEN. Will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. GOULDEN. In looking over the bill, which I see is very carefully and skillfully drawn, I notice that the gentleman has about 80 commencements, and they run from $1,000 to $200,000. Will the gentleman kindly explain about that? He has explained about the $1,000, but what about those that exceed $1,000?

Mr. FITZGERALD. Those are the amounts of money that the Supervising Architect states will be required between now and the 30th of June, 1916, to meet the continuing obligations on the buildings.

Mr. GOULDEN. Why are they called "commencements"?

Mr. FITZGERALD. Because they are the commencements of new buildings. The items are distinguished in this way: When an appropriation is made for a building for the first time the word "commencement" is used; where a building is under construction and an additional amount is required but not all needed to complete, the word "continuation" is used; when the appropriation is finally made, within the authorization, the word "completion" is used. By the use of the different terms it is possible to tell by looking at the item within what category the project is.

Mr. GOULDEN. The word "commencement" seems to be a misnomer, because it looks as if after the site had been secured you are going to appropriate money to begin over again.

Mr. FITZGERALD. This is to begin the building.

Mr. GOULDEN. You are starting a new building.

Mr. FITZGERALD. Yes; and we begin the building under a definite contract. Nothing has been appropriated prior. The first paragraph in the bill for sites says:

PUBLIC BUILDINGS, CONSTRUCTION AND SITES.

For sites, commencement, continuation, or completion of public buildings within the respective limits of cost authorized by law, rent and removal expenses in cities pending extension and remodeling of buildings, severally, as follows.

Whichever expression is used describes accurately the category in which it belongs.

Mr. GOULDEN. In a section of the district that I represented for eight years, but now by another [Mr. BRUCKNER, of the twenty-second], a site has been secured costing $250,000, and I have held this Member back from trying to secure money for the building by telling him that this was not the time to make a demand on the Treasury; and, secondly, that the building had not been authorized by the Committee on Public Buildings and Grounds, and now, from the reading of the bill, these are new buildings to be appropriated for, and I feel that perhaps I have misled him.

Mr. FITZGERALD. These buildings have been authorized for some time, and they are now being reached in their order. If the building that my colleague refers to had been authorized and was reached in order, provision would have been made in the bill for it, whether he or his colleague had any knowledge of it or not.

Mr. GOULDEN. The building has never been authorized, but we have the site, and have had for some time.

Mr. FITZGERALD. Then, no money in this bill will be carried for it. No money in this bill is carried for buildings that have not been authorized. The Committee on Appropriations does not authorize public buildings.

Mr. GOULDEN. I wanted to make sure about the use of the term "commencement."

Mr. FITZGERALD. It is as I have said—the commencement of a building which has been authorized.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. BURKE of South Dakota. Mr. Chairman, I move to strike out the last word. I do not think the gentleman from New York has made this matter clear, at least he has not to me. I want to call his attention to lines 13 and 14 on this same page 8:

Greenwich, Conn., post office: For commencement, $50,000.

That is exactly the same language that is used in the item now under consideration, found in lines 3 and 4. In the case at Greenwich, Conn., I presume the plans have been completed and a contract is or is about to be let, and it is estimated that it will require $50,000 to meet the money that the contractor will earn between now and June 30, 1916. In the case of Globe, Ariz., I would like to ascertain whether or not that is money to be used in preparing plans and specifications or money that will be earned by a contractor who may get the contract to erect that building?

Mr. FITZGERALD. Mr. Chairman, my understanding is that it is to provide the surveys necessary to be performed before they feel free to advertise and let the contracts.

Mr. BURKE of South Dakota. Mr. Chairman, I think the gentleman is probably correct about that, because the man who may bid on this building in Arizona may live in the city of New York, and the plans and specifications, in order to be complete, must show what the foundation will be. I can appreciate how some money may be necessary to be expended by the department in preparing plans and making a survey, but I do not believe this money is to be used to pay a contractor who subsequently may take the contract. I would like to ask the gentleman in the case of Greenwich, Conn., whether there was ever an appropriation for that building previous to the $50,000 item? In other words, was $1,000 appropriated there?

Mr. FITZGERALD. It was not.

Mr. BURKE of South Dakota. Then, this is a departure, as was suggested by the gentleman from Illinois [Mr. MADDEN], to make these small appropriations?

Mr. FITZGERALD. Mr. Chairman, the gentleman is mistaken. The condition is this: In Greenwich, Conn., a building to cost $90,000 is authorized. It is expected that they will be ready to let the contract in the second quarter of the fiscal year 1916, so that for the balance of that fiscal year $50,000 will be earned. Globe, Ariz., is not nearly as far up on the list, if I recall correctly, as Greenwich, and they will not reach anything like the stage where they are ready to let a contract during the fiscal year 1916, but they will be prepared to survey the lot and to make the tests. If I understand anything about buildings, before plans are prepared for the erection of a building on a certain lot a survey is made. For instance, under the law a public building can not be constructed within a certain distance of another building. There must be a certain space between the building and the adjacent building, and a survey is necessary.

Mr. BURKE of South Dakota. I understand that. Here is a case where a building at Globe, Ariz., is authorized to cost $100,000. A building at Greenwich, Conn., is authorized to cost $90,000. In the one case where the building is to cost $100,000, $1,000 is now proposed to be appropriated, while in the other case $50,000 is to be appropriated. I assume from what the gentleman says that the Greenwich case will probably be upon the market and the contract let by reason of the fact that it was authorized at some previous Congress to the one in Arizona, several months ahead of the building at Globe.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. BURKE of South Dakota. Yes.

Mr. MADDEN. What is the population of Globe, Ariz., I will ask the gentleman from New York?

Mr. STEPHENS of Texas. I can state to the gentleman that I have been there and it is quite a large town.

Mr. FITZGERALD. The population in 1910 was 7,083.

Mr. MADDEN. And what are the postal receipts?

Mr. FITZGERALD. The postal receipts in 1913 were $21,784, the money-order receipts were $307,942, and the postal savings receipts were $57,324.

Mr. MADDEN. Mr. Chairman, here we have a town with 7,500 people, with postal receipts——

Mr. FITZGERALD. If the gentleman will permit me, the authorization was $15,000 for the site in the act of 1910, and the building, to cost $100,000, was authorized in the act of 1913.

Mr. MADDEN. The total amount is how much?

Mr. FITZGERALD. One hundred and fifteen thousand dollars for building and site.

Mr. MADDEN. Mr. Chairman, here we have a town of 7,500 people, with postal receipts of $21,000, and we propose to erect a building the cost of which, including the lot, will be $115,000. The interest upon that will be $3,450 a year at the rate of 3 per cent; the janitor service will not be less than $600; lighting, heating, and repairs will amount to $1,200; making, in all, $5,250, while a building suitable for the city's needs could be rented for not to exceed $1,200 a year. Post-office revenues during the current fiscal year are running behind at the rate of $20,000,000, and to-day I have word from the city of Chicago, that turns in $20,000,000 of surplus every year from its post office, that because of the shortage of revenues 350 letter carriers have had their salaries cut from $1,200 a year to $1,000 a year, and more to come; and yet we go on with this extravagance and this waste of public money and take it out of the hides of men who carry tons of mail every week upon their backs. There is not any justification for putting up a public building in any town in the United States with a population of less than 25,000 people. Nobody can justify it either from a governmental standpoint or from the standpoint of economy, and no man engaged in a private business enterprise would submit to this kind of extravagance for a minute.

Mr. BARTLETT. May I interrupt the gentleman?

Mr. MADDEN. Not just now.

Mr. BARTLETT. I wanted to ask the gentleman a question.

The CHAIRMAN. The gentleman declines to yield.

Mr. MADDEN. Twenty million dollars surplus from one city office, and yet, on account of the $20,000,000 shortage of revenue and the enactment of Democratic tariff laws, we are compelled to turn the men who have devoted their lives to the Government service either out of employment or reduce their wages from $1,200 to $1,000 a year. Can you justify this kind of appropriations under such conditions? I do not believe that the American people when they understand the facts in the case will submit to this kind of appropriations. Public buildings for the performance of public business ought to be erected only in places where the business of the Government justifies it, and I maintain that the business of the Government does not justify appropriations for public buildings where the cost of maintenance of a building, including the interest charge, is five times as much as you can rent a building for to do the work. You talk about Government ownership and some men plead for it. Go on with it if you will; plunge the country into bankruptcy if you want to; but you can not do it with my vote or except over my protest. Here we have an opportunity to economize and we will not do it. We still spring forward in our reckless waste of public money. We have taxed the people on every necessity of life to maintain the ordinary running expenses of this Government. We have appropriated more money in the last year than in any year of the Government's history. Never in all the history of America was there such extravagance as is witnessed under the present administration, and as a result of that extravagance we are obliged to witness the appalling spectacle of men who have devoted for the past 20 years the best there is in them having their salaries reduced from a living wage to the standard of poverty. No consideration whatever is given to the work that they have already done or the advancement of the interests of the Government by their work. All they are given in return for their patriotic devotion to the Government is an order to reduce their compensation or to be thrown out of employment.

The CHAIRMAN. The time of the gentleman has expired.

Mr. DONOVAN. Mr. Chairman, I move to strike out the last two words. If the distinguished gentleman from Illinois [Mr. MADDEN] in his younger official days had had as much virtue or care or concern for the Treasury as he has to-day we would not know of the conditions that have taken place in the past. This authorization was under Republican government originally, and the gentleman was present and submitted without any protest.

Mr. MADDEN. This is a good time to stop it.

Mr. DONOVAN. Mr. Chairman, if the gentleman wished to be fair, he would say to his associates, "We will give the Democrats credit." The Republican Member from Illinois should say of the Democrats, "They did not have the greed, they did not have the avarice, in getting appropriations that we had when we Republicans were in power."

Mr. MADDEN. Will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman yield?

Mr. DONOVAN. Because five places in the State of Wyoming, with a total population of the whole State only half the population of the district I represent, five buildings with an expenditure amounting to $497,000 passed a Republican Congress, although the total population of the five localities was less than 10,000 souls. If the gentleman wanted to be fair, as an old Member, a capable Member, he should not arrogate to himself——

Mr. MADDEN. Will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman yield?

Mr. DONOVAN. Mr. Chairman, I will signify when I get ready to yield to the distinguished gentleman. [Laughter.]

I am going to heap coals of fire upon his head. He ought not to rise in his seat and appear indignant as to things he has seen to-day, because he has seen them before. I repeat, $497,000 were appropriated for five public buildings in the State of Wyoming, and the total population of the five localities is not over 10,000, and no protest from the distinguished gentleman from Illinois. There was no wail from the men who were plucking the Treasury at that time. But now he has become virtuous, and on the eve of his day, like those other great philanthropists, he is trying to do something in the way of restitution, hoping that in his future home it will be noticed.

Mr. Chairman, I yield back my time.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

Mr. MADDEN. Mr. Chairman, I will just say to the gentleman that the Republicans always had funds with which to meet their obligations when they were in power.

Mr. MANN. Mr. Chairman, I move to strike out the last three words. I would like to suggest to the gentleman from New York that this is Saturday night, and that we commenced at 11 o'clock this morning and it is now after 5 o'clock. We have probably gotten into a debate that will prevent any progress with the bill, anyhow, to-night. I think we ought to adjourn.

Mr. FITZGERALD. Mr. Chairman, I wish to suggest to the gentleman from Illinois [Mr. MADDEN] that the time to have protested against these public buildings was when the bill authorizing the construction of the buildings was before the House.

Mr. MADDEN. I will say to the gentleman from New York that I did.

Mr. FITZGERALD. But I think the gentleman's recollection is in error.

Mr. MADDEN. Oh, no.

Mr. FITZGERALD. I protested, but the RECORD does not show that the gentleman from Illinois made any protest at that time.

Mr. MADDEN. The RECORD shows that I made a speech against it.

Mr. FITZGERALD. No; I have just had the matter looked up in the library, and that is why I am speaking so authoritatively.

Mr. MADDEN. Look it up again.

Mr. FITZGERALD. I was one of those who protested against the public building bill. I tried to have a record vote of the Members of the House upon it. I could not even get one-fifth of those present to join in ordering the yeas and nays upon the bill.

Mr. MANN. Mr. Chairman——

Mr. FITZGERALD. Just a minute. I have not finished yet.

Mr. MANN. I yield to the gentleman.

Mr. FITZGERALD. The gentleman from Illinois did not do that; and I am not certain that the item in which he was interested was in that bill or in a separate bill. That was an item providing $75,000 for the immigrant station at Chicago.

Mr. MADDEN. I will say to the gentleman that I am not interested in any item. I have never asked for any item.

Mr. MANN. That was not in the public building bill at all.

Mr. MADDEN. I will say to the gentleman that I have never asked for any item in the bill.

Mr. DONOVAN. Will the gentleman from New York yield?

Mr. FITZGERALD. No.

Mr. DONOVAN. You have not the floor.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] has the floor, and is yielding to the gentleman from New York [Mr. FITZGERALD].

Mr. FITZGERALD. Then I decline to be interrupted. Mr. Chairman, the time to protest against public buildings, on the ground that it is unwise and bad policy to erect them, is when the buildings are authorized. After they are authorized and sites have been acquired and plans have been prepared and work is about to be commenced, it is just as futile as shooting at the moon as to try to stop the appropriation. I know I do a great many things that do not always meet the success they deserve in this House, but I always try to avoid antagonizing things as utterly impossible to prevent such appropriations as those under consideration.

Mr. MANN. Mr. Chairman, I am very sorry that my friend from New York is weakening in his virtue. When the Treasury was full and there was plenty of money for public buildings he took credit to himself for opposing their authorization, but when the Treasury is empty and no one knows where the money is coming from he plumes himself upon appropriating money for them. However, in justice to the gentleman, I might add that I believe his opposition to the public building bill was not wholly because of the provisions in the bill.

Mr. FITZGERALD. I never feel it is necessary either to apologize or to defend my conduct in the performance of my public duties. I believe, however, it is only fair to say this: That if I had the determination or if I occupied that responsible position in the Government that would be controlling in the determination of questions of what the expenditures of the Government should be in the next fiscal year, they would be at least $50,000,000 less than they will be. But I do not believe I have been commissioned to assume all of the burdens of Government. While I am a part of and cooperating with the administration, my views are not always in accord either with the majority here or in other places.

I am ready to do my part. I would not have hesitated, if the responsibility were mine, to have eliminated over $50,000,000 more than will be eliminated from the various appropriation bills to be enacted by Congress at this session; and I would do it with the absolute conviction that no material interest of the Government or of the public would be in the slightest degree impaired. [Applause.] But all over the country the cry has gone up that in order to relieve distress, in order to furnish employment, in order to keep turning the wheels of industry, that the Federal Government, the State governments, and local communities should rush public enterprises.

It reminds me of the history of Rome, when the Roman Emperors were compelled one day to give great games in order to entertain the populace and the next day to authorize public works in order to keep them out of mischief. Whenever we have a situation where the Government must provide food and amusement and work, we have arrived at that point where the discerning student of history can see the rocks ahead upon which the Government is bound to be wrecked.

Mr. MANN. That is good advice, but I hate to have it wasted on the House when there are so few present. I therefore make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Illinois makes the point of order that there is no quorum present.

Mr. FITZGERALD. I am sorry that it was made at that particular time in my remarks. I move that the committee rise.

The CHAIRMAN. Will not the gentleman withhold his point until the pro forma amendment can be disposed of, so that it will not be pending when the consideration of the bill is resumed?

Mr. MANN. I withdraw it, Mr. Chairman.

The CHAIRMAN. The pro forma amendment is withdrawn The gentleman from New York [Mr. FITZGERALD] moves that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. CRISP, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having under consideration the bill (H. R. 21318) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1916, and for other purposes, had directed him to report that it had come to no resolution thereon.

SENATE JOINT RESOLUTION REFERRED.

Under clause 2, Rule XXIV, Senate joint resolution of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. J. Res. 210. Joint resolution to authorize the President to invite certain Governments to send delegates to the Pan American Medical Congress; to the Committee on Foreign Affairs.

SPEAKER PRO TEMPORE FOR TO-MORROW.

The SPEAKER. The Chair designates the gentleman from New York [Mr. FITZGERALD] to preside to-morrow.

HOUR OF MEETING ON MONDAY.

Mr. FITZGERALD. Mr. Speaker, I ask unanimous consent that when the House adjourns to-morrow it adjourn to meet at 11 o'clock on Monday morning.

The SPEAKER. The gentleman from New York asks unanimous consent that when the House adjourns to-morrow, Sunday, it adjourn to meet at 11 o'clock on Monday morning. Is there objection?

Mr. MANN. Reserving the right to object, Mr. Speaker, is it the intention of the gentleman from New York to proceed on Monday with the consideration of the sundry civil appropriation bill?

Mr. FITZGERALD. It is my intention to ask the House to do so.

Mr. MANN. That is the same thing.

Mr. FITZGERALD. I believe it is the desire of all to pass this bill speedily and, so far as the House is concerned, to do everything possible to enact the appropriation bills in ample time at this session. I am quite sure I do not wish to go through the same grind after the 4th of March that I have had since Congress convened.

The SPEAKER. The gentleman from New York asks unanimous consent that when the House adjourns to-morrow it adjourn until 11 o'clock a. m. Monday. Is there objection?

There was no objection.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. HAYES, for one week, on account of important business.

To Mr. WATSON, for one day, on account of sickness.

WITHDRAWAL OF PAPERS.

Mr. STEPHENS of California, by unanimous consent, was granted leave to withdraw from the files of the House, without leaving copies, the papers in the case of Philip Gavin (H. R. 4859), no adverse report having been made thereon.

ADJOURNMENT.

Mr. FITZGERALD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 18 minutes p. m.) the House adjourned, pursuant to the order previously made, until to-morrow, Sunday, February 7, 1915, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the assistant clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Miles W. Elliott *v.* The United States (H. Doc. No. 1561); to the Committee on War Claims and ordered to be printed.

2. A letter from the assistant clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Susan E. Baylies, daughter and sole heir of William McE. Dye, *v.* The United States (H. Doc. No. 1562); to the Committe on War Claims and ordered to be printed.

3. A letter from the assistant clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of John A. Barnett *v.* The United States (H. Doc. No. 1563); to the Committee on War Claims and ordered to be printed.

4. A letter from the assistant clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Otto F. Peters, guardian in lunacy of Presley-Bishop, *v.* The United States (H. Doc. No. 1564); to the Committee on War Claims and ordered to be printed.

5. A letter from the assistant clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of John Blair *v.* The United States (H. Doc. No. 1565); to the Committee on War Claims and ordered to be printed.

6. Letter from the assistant clerk of the Court of Claims transmitting a copy of the findings of the court in the case of William O. Bidlack *v.* The United States (H. Doc. No. 1566); to the Committee on War Claims and ordered to be printed.

7. Letter from the assistant clerk of the Court of Claims transmitting a copy of the findings of the court in the case of Sallie Perdue, widow of Granville C. Perdue, *v.* The United States (H. Doc. No. 1567); to the Committee on War Claims and ordered to be printed.

8. Letter from the assistant clerk of the Court of Claims transmitting a copy of the findings of the court in the case of Richard F. Jacks *v.* The United States (H. Doc. No. 1568); to the Committee on War Claims and ordered to be printed.

9. Letter from the assistant clerk of the Court of Claims transmitting a copy of the findings of the court in the case of H. Grant Howarth, heir of Jonathan Howarth, deceased, *v.* The United States (H. Doc. No. 1569); to the Committee on War Claims and ordered to be printed.

10. Letter from the assistant clerk of the Court of Claims transmitting a copy of the findings of the court in the case of Edwin G. Munsell et al., heirs of Cyrus Hall, deceased, *v.* The United States (H. Doc. No. 1570); to the Committee on War Claims and ordered to be printed.

11. Letter from the assistant clerk of the Court of Claims transmitting a copy of the findings of the court in the case of Erastus Guy *v.* The United States (H. Doc. No. 1571); to the Committee on War Claims and ordered to be printed.

12. Letter from the assistant clerk of the Court of Claims transmitting a copy of the findings of the court in the case of Joseph E. Beatty *v.* The United States (H. Doc. No. 1572); to the Committee on War Claims and ordered to be printed.

13. Letter from the assistant clerk of the Court of Claims transmitting a copy of the findings of the court in the case of Duane D. Finch *v.* The United States (H. Doc. No. 1573); to the Committee on War Claims and ordered to be printed.

14. Letter from the Commissioner of Patents transmitting a report of the business of the Patent Office for the year ended December 31, 1914 (H. Doc. No. 1574); to the Committee on Patents and ordered to be printed.

15. Letter from the Secretary of the Treasury transmitting estimates of appropriations required by the several departments of the Government on account of the service of the fiscal year ending June 30, 1915, and for prior years (H. Doc. No. 1575); to the Committee on Appropriations and ordered to be printed.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. TEMPLE: A bill (H. R. 21349) providing for the purchase of a site and the erection thereon of a public building at Midland, in the State of Pennsylvania; to the Committee on Public Buildings and Grounds.

By Mr. FLOYD of Arkansas: A bill (H. R. 21350) to increase the limit of cost of the construction of a Federal building at Eureka Springs, Ark.; to the Committee on Public Buildings and Grounds.

By Mr. GALLAGHER: A bill (H. R. 21351) to provide for the construction of a suitable office for the United States customs barge service, and for other purposes; to the Committee on Public Buildings and Grounds.

By Mr. TAYLOR of New York: A bill (H. R. 21352) providing for the adjudication of a certain claim by the Court of Claims; to the Committee on Claims.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. EDWARDS: A bill (H. R. 21353) for the relief of J. A. Stanfield; to the Committee on War Claims.

By Mr. McKELLAR: A bill (H. R. 21354) granting a pension to David R. Locke; to the Committee on Pensions.

By Mr. O'HAIR: A bill (H. R. 21355) granting a pension to John McGowan; to the Committee on Invalid Pensions.

By Mr. TALCOTT of New York: A bill (H. R. 21356) granting a pension to Jennie W. Koehl; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Memorial of the Missouri-Kansas Turnbezik and various citizens of Boston, urging passage of House joint resolution 377, relative to export of war material; to the Committee on Foreign Affairs.

Also (by request), petition of California State Senate, favoring passage of rivers and harbors bill; to the Committee on Rivers and Harbors.

Also (by request), petition of inmates of the Confederate Memorial Home, Washington, D. C., favoring Works-Estopinal pension bill; to the Committee on Invalid Pensions.

By Mr. ALLEN: Memorial of Catholic Order of Foresters and Council of Cleves, Ohio., favoring passage of the civil-service

retirement bill; to the Committee on Reform in the Civil Service.

By Mr. ASHBROOK: Petition of Julius Juch and 80 others, of Newark, Ohio, urging passage of bills to prohibit export of war materials; to the Committee on Foreign Affairs.

By Mr. BAILEY: Petitions of Rev. H. L. Jacobs, John H. Shope, J. C. Day, A. P. Day, J. Heiss, Frank Turner, A. C. Wilt, D. McClure, and William Gilling, all of Altoona, Pa., protesting against passage of H. R. 20644, relative to a censorship of publications; to the Committee on the Post Office and Post Roads.

By Mr. BARTHOLDT: Petition of Barry-Wehmiller Machinery Co., of St. Louis, Mo., protesting against the ship-purchase bill; to the Committee on the Merchant Marine and Fisheries.

Also, petition of John J. Pfenninger and Nanewal Bread Co., of St. Louis, Mo., in favor of an embargo on wheat; to the Committee on Foreign Affairs.

Also, petition of Tenth Ward Improvement Association, of St. Louis, Mo., in favor of an appropriation by Congress for public works; to the Committee on Roads.

Also, petitions of 16 citizens of St. Louis, Mo., in favor of the Fitzgerald amendment to the Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

Also, petitions of citizens of St. Louis, Florissant, Clayton, Freedom, King City, and Creve Coeur, all in the State of Missouri, and Kansas-Missouri Turnbezirk, Leavenworth, Kans., in favor of bills providing for an embargo on arms; to the Committee on Foreign Affairs.

Also, petitions of German-American Alliance (552 members) of Wausaw, Wis.; Schiller Lodge, of Middletown, Conn.; and German Evangelical Church (1,000 members), of Brooklyn, N. Y., in favor of bills providing for an embargo on arms; to the Committee on Foreign Affairs.

Also, petition of National German-American Alliance of Hohenwald, Tenn., and resolutions of a mass meeting of citizens of Louisiana held at New Orleans, La., in favor of bills providing for an embargo on arms; to the Committee on Foreign Affairs.

By Mr. BROCKSON: Petition of C. E. Marshall, Samuel F. Adams, and other lighthouse keepers, favoring increase in ration money for lighthouse keepers; to the Committee on Rivers and Harbors.

By Mr. BURKE of Wisconsin: Petition of Rev. Joseph Oesch and 32 other citizens of Sheboygan rural route No. 5, Wisconsin, asking for the passage of a law at this session to levy an embargo on all material useful in war, save foodstuffs and wearing apparel and surgical supplies; to the Committee on Foreign Affairs.

By Mr. DALE: Memorial of American Association for Labor Legislation, favoring the passage of the Kern-McGillicuddy workmen's compensation bill (H. R. 15222); to the Committee on Labor.

Also, petition of New York Engravers' Union No. 1, favoring passage of the immigration bill over the President's veto; to the Committee on Immigration and Naturalization.

By Mr. DICKINSON: Memorial of Missouri-Kansas Turnbezirks, representing 2,000 citizens of Missouri and Kansas, also 165 citizens of the sixth district of Missouri, favoring resolution to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. EAGAN: Petitions of sundry citizens of New Jersey, favoring passage of resolution to prohibit export of war material; to the Committee on Foreign Affairs.

By Mr. GARDNER: Petition of National Independent Equal Rights League, Boston, Mass., against passage of "jim crow" law for the District of Columbia; to the Committee on the District of Columbia.
